Count von Resanoff, the Russian, envoy of the mighty Czar, Stood beside the deep embrasures where the brazen cannon are. He with grave provincial magnates long had held serene debate On the Treaty of Alliance and the high affairs of State He, from grave provincial magnates, oft had turned to talk apart With the Comandante's daughter, on the questions of the heart, With the Comandante's daugnter, on the questions of the near Until points of gravest import yielded slowly, one by one, And by love was consummated what diplomacy begun; Till beside the deep embrasures, where the brazen cannon are, He received the two-fold contract for approval of the Czar; Till beside the brazen cannon the betrothed bade adlen, And, from sally port and gateway, north the Russian eagles flew.

Long beside the deep embrasures, where the brazen cannon are, Did they wait the promised bridegroom and the answer of the Czar; Day by day on wail and bastion beat the hollow empty breeze—Day by day the sunlight clittered on the vacant, smiling seas; Week by week the near fills whitened in their dusty leather cloaks— Week by week the far hills darkened from the fringing plain of oaks; Till the rain came, and tar-breaking, on the fierce southwester tost, Dushed the whole long coast with color, and then vanished and were lost. So each year the seasons shifted; we had warm and drear and dry; Half a year of clouds and flowers—half a year of dust and sky. Still it brought no ship nor message—brought no tidings ill or meet For the statesman-like commander, for the daughter fair and sweet.

Yet she heard the varying message, voiceless to all ears beside:
"He will come," the flowers whispered; "come nonore" the dry fills sighed.
Still she found him with the waters lifted by the morning breeze— Still she lost him with the folding of the great white-tented seas; Until hollows chased the dimples from her cheeks of olive brown, Until hollows chased the dimples from her checks of clive brown, And at times a switt, shy moisture dragged the long sweet lashes down; Or the small mouth curved and quivered as for some denied careas, And the fair young brow was knitted in an infantile distress.

Then the grim commander, pacing where the brazen cannon are, Comforted the maid with proverbs—wladom gathered from afar; Bits of ancient observation by his fathers garnered, each As a pebble worn and polished in the current of his speech; "Throw who wait the coming rider travel twice as far as ke;" "Tired wench and coming batter never did in time agree." "He that gettch himself honey, though a clown, he shall have flies;" In the end God grinds the miller;" In the dark the mole has eyes." "In the end God grinds the miller;" In the dark the mole has eyes." "He what Salcalde. of his trial bath no fear."

"He whose father is Alcalde, of his trial hath no fear, 'he whose rather is Alcaide, of his trial bath no rear,'
And be sure the count has reasons that will make his conduct clear,''
Then the voice sententious faitered, and the wisdom it would teach
Lost itself in fondest trifles of his soft Castilian speech;
And on "Concha,'" "Conchitia,' and "Conchita" he would dwell
With the fond reiteration which the Spaniard knows so well.
So with proverbs and caresess, half in faith and half in doubt,
Every day some hope was kindled, flickered, faded, and went out.

Yearly, down the hillside sweeping, came the stately cavalcade, Yearly, down the fillside sweeping, came the stately cavalcade, Bringing revel to vaquero, joy and comfort to each maid; Bringing days of formal visit, social feast and rustic sport; Of bull-baiting on the plaza, of love-making in the court. Vainly then at Concha's lattice—vainly as the idle wind Rose the thin high Spanish tenor that bespoke the youth too kind; Vainly, leaning from their saddles, caballeros, bold and fleet, Plucked for her the buried chicken from beneath their mustang's feet; So in vain the barren fillsides with their gay serapes blazed—Blazed and vanished in the dust-cloud that their plying hoofs had raised. Then the drum called from the rameer, and once more with puttent mis-Then the drum culled from the rampart, and once more with patient mich then the drum culled from the rampart, and once more with patient mich The commands and his daughter each took up the dull routine— Each took up betty duties of a life apart and lone, Till the slow years wrought a music in its dreary monotone.

Forty years on wall and bastion swept the hollow idle breeze, Since the Russian eagle fluttered from the Californian seas. Forty years on wall and bastion wrought its slow but sure decay; And St. George's cross was lifted in the port of Monterey.
And the citadel was lighted, and the hall was gaily drest,
All to honor Sir George Simpson, famous traveler and guest.
Far and near the people gathered to the coetly banquet set, And exchanged congratulations with the English barone Till the formal speeches ended, and amidet the laugh and wine Some one spoke of Concha's lover—headless of the warning sign. Quickly cried Sir George Simpson: "Speak no ill of him, I pray, He is dead. He died, poor fellow, forty years ago this day." Died while speeding home to Russia, falling from a fractious horse, Lett a sweetheart too, they tell me. Married, I suppose, of course!" Lives she vet!" A death-like silence fell on banquet, guests and hall, And a trembling figure rising fixed the awe-struck gaze of all. Two black eyes in darkened orbits gleamed beneath the nun's white hood; Black serze hid the wasted figure, bowed and stricken where it stood. "Lives she yet!" Sir George repeated. Ail were hushed as Concha drew Closer yet her nun's attire. "Senor, pardon, she died too!" —Bret Harte, in Allantic Monthly. Till the formal speeches ended, and amidst the laugh and wine

Lecturing is a poor business. Even Ralph Waldo Emerson was a disappointment, and to compare small things with great J. B. Gongh, De Witt Talmage and Grace Greenwood were conspicuous failures. The only lecturers who draw are the parsons, and they only draw their own worshipers. They do their best, we have no doubt, but having heard several on Darwinism and other matters, we have no doubt, but having heard several on Darwinism and other matters, we conclude they had better remain in the pulpit where they have it all their own way. If they are to be criticised, however, like mere uninspired and fallable persons, we are for fairness. Of course no inteleigent man, woman or child in the community would be in the least influenced by any judgment which a Bulletin, Man or Call reporter would pass upon a lecture. But this is no justification for the system of garbled extracts, incomplete summaries, and one-sided criticism guided by personal feeling and sectarian influence. A lecturer should be judged as fairly as an actor or a singer. Twaddle is not originatily because it comes from the lips of the editor's pastor. Sound, carnest thought should not be "dammed with fairly praise" because we don't below to the same church as the lecturer. Yet this is, the way editor's pastor. Sound, earnest thought should not be "damned with faint praise" because we don't belong to the same charch as the lecturer. Yet this is the way in which the newspaper critecism in San Francisco is conducted. The critecism is very seldom fair either in praise or blame. Standing outside of all personal influences and all theological learnings, we venture the opinion that no lightly cultivated man or woman, familiar with the best literature of the day, won d, if their pindgment were not swayed by prejudice, pronounce Dr. Stone's recent lecture on "Reason and Instinct" anything cise than crude, loose, and shadow talk. If read as an essay it would be found disfigured by bad taste and absolutely guiltiess of original ideas. Such undignified, unchristian and unscientific smattering may please bis proude, but when the daily press combine to until it, in the name of the of original rocas. Such understand a few and the pull it, in the name of the remnant of our educated people, we demur. If Dr. Stone's new church was built that nonsense might therein be talked which would not be tolerated elsewhere, the thing is quite en rigle. Let its walls resound with the oldest ciercal jokes, and its gates be opened wide that all the beasts that ever found salvation in the Ark may gates be opened wide that all the beasts that ever found salvation in the Ark may walk in orderly after the pastor to the Christian's heaven. But the cloth cannot shield the Doctor from fair criticism when he steps forward as a lecturer. We can grant him no "benefit of clergy." He stands at the public judgment seat where he ought to be judged. When we hear him talk about "the young of she dogs we shall not appland his taste. When he brings science and religion into contempt by a burlesque of both, we shall not cry "it is the voice of a God."

## Candidates for Congress.

By a sort of common consent the present members of Congress from California. in the Lower House, will be left at home. There is great excitement in political circles as to their successors

In the Southern District, Wm. Archer, of San José, will be the Greeley Demo-

ratic candidate, as the District is Democratic.

In the Sargent District it now looks as though Nathan Porter would be the Republican candidate and Edward Tompkins as the Greeley Democratic fusion candidate, with the chances of success with Mr. Porter.

In the Coghlan District, General John Frisbie is mentioned for the Greeley Democratic standard-bearer.

In San Prancisco the Democrats expect to carry off the prize the fight now lying between Wun. A. Piper and Thomas Wand, with Judge Hager in the back-ground. The Greeley men would prefer A. J. Bryant, if he could be indorsed by the Bennocracy. The straight-out Republicans are divided between John F. Swift and Wm. Sears. Swift is taking the matter more coolly, hoping it may come to him without a scramble.

- The following extracts from the Congressional Globe of April 21, 1872, illustrate the influence and standing of the Atlantic and Pacific Railroad-the Company which some of our citizens are foolish enough to believe is going to build a seventy-million dollar railway from St. Louis to San Francisco:

MR. BLAIR, of Missouri, offered an amendment to the Texas Pacific Bill, which provided for three years' extension of time in which to build the Atlantic and Pa-

cific road.

cific road.

Senator Edmonds, of Vermont, rose and said: "The amendment states it is the Atlantic and Pacific. What I wish to know is, where this road begins and where It ends. The Senator says it is the Atlantic and Pacific. Very well. Does it begin at the Atlantic and end at the Pacific, or does it begin at the Pacific and go the other way and come around? [Laughter.] What I want to know is, where this corporation is located! where its line is located! and what are the grounds upon which we are asked to extend the time?

Mr. Blark.—I can hardly think it possible that the Senator from Vermont does not know where this railroad is to be located. I know that he is a very intelligent

Senator

MR. EDMONDS. - I assure the Scnator I do not know where it is. I never heard of

MR. EDMONDS.—I assure the Senator I do not know where it is. I never heard of this company before; but, of course, I have no right to insist on his telling me. I can only say, if he does not chose to inform me, then, of course, I shall know how to vote; that is, not to vote for a thing that I do not understant. MR. BLAIR.—This railroad is to be constructed over the Thirty-Fifth Parallel, from the western border of Missouri to California. \* \* \* \* The reason why this railroad company ask for this extension of time, is the fact that this road runs through what is known as the Indian Territory. All white persons are at present prohibited from entering that Territory, either for residing or making improvements there. Consequently it is very difficult for this company to construct this road there. [We should think it would be. T. C.]
MR. CONKLING.—I do not wish to force a discussion on an unwilling people. as

MR. CONKLING. - I do not wish to force a discussion on an unwilling people, as was said about a Constitution under Buchama, but I want to say a word in regard to this proposition. Now we have made one bargain with these Indians and given them by it these lands in fee through which this Atlantic and Pacific road—as you call it -runs, and we have also given these Indians exclusive control over them your carrier and the may a so give the lies manist see a specific over them you distributed them a government of their own, I hope we shall not break this compact by giving the railroad any further privileges which may in any manner conflict with the government of the Indian Privileges.

condict with the government of the Indian Territory.

Mr. EDMONDS—MAY Lask the Senator whether it was in contemplation of Congress that there should be four Pacific Railroads instead of three. I always had the impression that we had only intended to have three great lines across the contemplation of the Contral Pacific, already built, the Northern Pacific, being built to Puget Sound, and the Texase-Pacific—and yet it seems there is still another Pacific Railway, called the Attantic and Pacific. I never heard of it before. You claim that their charter and lands were granted in 1866. I was a member of the Senate then, but I have no recollection of any such bill.

Mr. Hahlam.—The Senator should refresh his memory.

The reasons why Congress should grant an extension of time to the Atlantic and Pacific are, that this road now runs about forty miles into the Indian country on lands controlled by the Cherokees—a tolerable well civilized tribe. Lying immediately west of this and

road now runs about forty miles into the Indian country on lands controlled by the Cherokees—a tolerable well civilized tribe. Living immediately west of this, and on the line of the proposed railroad, the Government has located a great many thousand Indians, collected from the plains—the Kiowas, Comanches, and Arrapahoes, and other wild tribes. Now it is self-evident that to compel this company to build their road at the rate of fifty miles a year, surrounded by these wild Indians, is asking too much. You would bring the railroad builders in contact with the very worst population that hovers on the frontier. [We wonder if Hagar, Sneath and Hopkins examined in person this portion of the Indian country through which the Atlantic and Pacific Railroad is compelled, if built, to run. Fancy the immaculate Hager and the gushing Sneath interviewing Comanche bucks and squaws.—T. C.]

For want of space we are compelled to mit much of this interesting debate in

the United States Senate. The result of the discussion was that Blair's amendment in favor of the Atlantic and Pacific was laughed out of court, and after enough in havor of the Admine halo reached was magned onto court, and arter choice ridicule was heaped upon this radinoad company to fill several columns of the Town Crier department, the amendment was withdrawn. To all of which we specially commend the attention of our famous Committee of One Hundred. Let them now pass resolutions denouncing these United States Senators for their uncalled for hilarity, and have the same telegraphed to Washington at once—and all will be well.

<sup>-</sup> It is reported that the stokers in Hell have struck for higher wages, and that It is reported that the stokers in Hell have struck for higher wages, and that Satan is in a quandary what to do; business is lively; new candidates coming in every day—in fact a perfect rush and more expected. With every prospect of a war between England and America, and all his boys off duty, the old fellow is full of trouble. Now, as a general thing, we are down on labor strikes. We are afone our sympathy is with the stokers down below, and we hope they will "keep up their lick" until the fires go out. Then just open an irrigating ditch into the inference concern and wait for a cold snap till it freezes over. We would prefer to the control of the cold of spend our purgatorial period in skating upon the ice rather than in suffering fumigation down below.

## Immense Traffic on the Central Pacific Railway.

Through the politeness of J. C. Stubbs, Esq., Assistant General Freight Agent of the Central Pacific Rulroad, we have received the returns of freight forwarded East for the month of May, as follows:

	Marysville.	Sac.	San Fran.	Total.
Tea		*****	207,855	207,855
Wine	26.676	41.670	273,740	346,086
Wool		351,410	2,690,374	3,141,684
Australian Wool			266 150	266.180
Leather			92.645	92.645
Silk			41.369	41,369
Coffee			99, 261	99.261
Flour	360,000	40,300	3,775,400	4.175,700
Fish		15,600	378,951	394.551
Seal Skins		10,000	405.234	405 234
Quicksilver			120,000	120,000
Merchandise	3.846	118,525	1,496,696	1,619,067

Fruit		5,396		5,396
Lumber		6,000		
Cotton		Options :		ft 6,000
Outon			31,315	31,315
			-	

	1870.	1571.	1872.
	129,997	967,872	3,087,285
February	144, 458	1,016, 37	1,520,982
March	724,537	1,794,858	8,478,428
April		3,469,953	4,781,186
May	679,963	5,244,565	10,863,525
Total De	2,450,672	12,493,580	25,026,406

The following comparative carnings of the Central Pacific Railroad Company show the rapidly increasing traffic:

May.	Five Mos.
1872 \$1,221,625	\$1,212,647
1871	3,249,706
1870	2,698,090
The state of the s	
Increase over 1871 \$329,254	\$962,941
Increase over 1871	\$962,941

These figures represent not only the growth of the railroad revenues but the swelling trade of San Francisco, since all those revenues represent only a percent age of the value of property which comes and goes accompanied by passengers. Under that induce the character of the city business is changing and improving. At this moment the number of visitors here is very great, and the hords crowded. All these bring with them new wants, the supplying of which becomes a necessity on the part of the shop-keepers. The railroad that brings furnishes the message side of prompt supplies of needed merchandise, and assortments are extended, styles varied and qualities diversified in a manner not known in previous years. The character of the shops, therefore, assumitates to that of the metropolitan warehouses of the East. When stocks may be repleatished in three weeks, much smaller stocks are required than when three months must chapse before renewa. Hence freshness and variety are insured with less capital where the merchant is careful and observant of the direction of public wants. A similar charge some years since overtook the trade of Eastern cities with respect to the West, following the opening of railroads. The former system of laying in stocks to meet the city traffic, and then shipping off the surplus at the close of the season to remote markets it was found would no longer work. Prompt and frequent communication with the great centers speedily developed in each market local tastes, and, to be successful, a merchant must deven and cater to those tastes. This city is first losing the quasi-provincial character with as well-defined characteristics, wants and tasis provincial character with as well-defined characteristics wants and tasis provincial character with as well-defined characteristics wants and tasis provincial character with as well-defined characteristics wants and tasis provincial character with as well-defined characteristics wants and fasses as any of the Eastern cities, and for some years its growing wan

## Special Brevities.

- The late Indian massacre at Howard's wells, in Texas, brings out a letter from General W. B. Hazen, of Iowa, who is laid up at this very time by a ball which he received in a fight at Howard's wells thirteen years ago. He says that these raids and massacres are the regular thing with the Camanches of the Staked plain, and that not a full moon comes but some marauding party leaves the reservation for a spree in Texas. He says in the two years that he had control of those regions he had occasion to report no less than twenty such affairs. The connection of "Mexicans and negroes" with these bands is inevitably reported, simply because the Indians have large numbers from these races whem they have stolen or captured in youth and naturalized to their savage state. General Hazen declares that "every grown man of the Camanche and Kiowa tribes to whom we issue rations is a murderer of many men, women and children." He is spices with not the kindest feelings toward those esteemed friends of Vincent Colyer, and puts our only safety from future outrage in the forcible dismounting and close surveillance of these professional land pirates.
- It is reported that Mr. Gilmore, on behalf of the Directors of the forthcoming monster musical festival at Boston, has offered Mile. Titiens £4,800, and all expenses to and from Boston, to sing two pieces of music each day for twelve consecutive days. This sum is double the amount Jenny Lind ever received for similar services, either in Europe or America. The tempting offer, which was made by Abantic cable, Mile. Titiens has been obliged to decline, in consequence of her public and private engagements in London being off more value to her impressing.
- The temperature in and around London in one day alternated in the most extraordinary manner; bright and genial weather at one moment being succeeded by a change of wind from south to north, bringing with it heavy showers of hail, rain and show, which practically put an end to all out-door amusements. A field-day at Wimbledon was carried out in the midst of a hail-storm. In other parts of the country the weather must have been still more severe, as the land for miles was covered with a slight fall of snow.
- Genton, who was shot recently for his participation in the murder of the Archbishop of Paris at La Roquette, could not walk without crutches, with the aid of which he stumped resolutely up to the fattal post in front of the firms party. He refused to allow his eyes to be bandaged. As soon as he saw the muskets leveled he tossed his hat high up in theair, shouted "Vive la Commune!" and the next instant dropped like a log with five bullets through his chest.
- The Moscow (iazelle states as a rumor, that however requires confirmation, that the Russian Government is about to lease those islands on the west coast of North America that still remain in their possession and have any value as whaling stations, for a very small sum to American speculators. It also adds that a private company of Americans are in treaty for taking a lease of the Kurile Islands for a similar purpose.
- A man at Exeter has, says a local paper, sold his wife for £50. It appears that the purchaser was smitten with the enerms of his friend's wife, who did not live on the best of terms with her husband, having too much "dash" for him; negotiations were entered into, an offer of £50 was accepted, and the man took the women to Plymouth, where the couple are now residing.
- The Lithographer says that a seaside painting is now exposed at the Hotel Bullion for sale, showing a nook at the beach at Entretat, with a boat run ashore, and a child playing with a crab. This picture is signed "Julie de Pave," the unfortunate lady who was poisoned by Dr. La Pomeraye, heir to her insurance policy, and decapitated ten or twelve years ago.
- The Superior Court of Cincinnati has decided that an action will lie in favor of a married woman against a third person for enticing away and harboring her husband. The English case of "Lynch vs. Knight" (9 H. L. Cas. 577) was regarded as an authority on the side of the wife.
- From April 1st to the 11th inst. the English Exchaquer receipts amounted to £8,357,770, as compared with £6,938,970 in the corresponding period of last year. The expenditure has been £9,298,399. The balance in the Barne of England on the 11th inst. was £6,755,454.
- The enterprising English Company which has already undertaken the navigation of the Amoor, has just had a great stroke of fortune in the discovery of some valuable silver mines in the neighborhood of Yamsk, to the north of the sea of Ochotsk.
- Rev. Calvin Stebbins, well known in this vicinity, and a brother of Rev. Heratio Stebbins of San Francisco, has resigned the Unitarian pastorate at Marlboro, after three years, and accepted a call to Detroit, where he is offered a salary of \$4,000.
- A great sword, about two yards long, has been found near Lutzen in Prussia. The guard or hilt is protected by a serpentine bar twenty inches in length, and on the blades there are hooks, probably for dragging the enemy off his horse.
- The Pope is said to have lately invested in a new set of croquet balls, wherewith to amuse the officers of his guard. That is certainly better than investing in rifle balls for a levy of Zonaves.
- The armor plates for the turrets of the Devastation are said to be the largest specimens of rolled iron work yet manufactured for the English Admiralty.

## Wayside Gushings.

[BY MRS. HARRIS.]

Of all the misfortins which befall human natur Than littery fame, I don't b'lieve there's a greater. The sweets of retirement and family joys,
Were wunst 'Arris's lot, far away from the noise
And bastle of Courts, black ink and Vite 'Ouses,
The hadmiration of men and the ate of their spouses. Now, ven 'Arris appears beven hinfants in harms You, the Arris appetrs and to screech at 'er charms, And wen hever she henters restaurants and cafs. The proprietors bows and the vaiters all laughs. She can't horder a chop without causin' a sensation, 'Mong them 'orrible hupstarts the risin' generation, And ven far away seekin' quiet she travels The rustice 'er helewated crakter unravels, And where Grant, Fish or Summer mightfravel incog
'Taint for 'Arris long undiskivered to jog.
My recent voyage, therefore, to the Trees and Yoshimmity
Did not bextend further than ten miles' proximity
To Ah Sam's two pair back for I found I was known Before I 'ad marched twenty steps from my own. Detore 1 at marched twenty steps from my own.
Vich was werry afflictin to a poet ses intent.
On communin' vith natur' and gettin' jolly as she went;
Vos Shakspar, I vunder, sa, 'orribay poplar,'
Or Lord Bacon, Ham's son, or Nooton or Kopler?
O apply the poetess as nobody knows And don't attrack notice wherever she goes!
They means it in kindness, poor critters, in course,
But I might as well be the great Voolly 'Orse, Or Nova Scotia daundree as is so much sought arter, As the hobject of hattentions as do make me a martyr. Eludin' hobservation, 'owever, I vent
Unbeknown to the mountings and springs, vhere I spent
A few veeks of repoge, and did ruminate much On the natur of mountings and 'ot springs and such, For I drank every day the most 'orrible dese-Of 'ot vater as do nauseate both stummicks and noses, And I werily b'lieve I should frequent 'ave burst But for mixin' it with brandy to halleviate thirst. And the consekens vas, I swole to sich a size As my knees vere inwisible to my hoptics or heyes. Vun day, bein hasked, I did climb an 'igh 'ill And could not get down, and I might be there still. The descent were that steep, but I gently slid down And in 'all' a jift arrove on the groom'. And the party all seemed for to think it a joke, But my back 'avin' previous bin pieoned with hoak, Likewaye 'ad bin shook werry bad by the stage, Vich joiting is dangerous to a voman of my age, I did take to my bed and wrote off to Sairah, A tellin' 'er to send 'erself hinstant by the bearer A tellin for to send easen minimal of the ocare.

To muss for old missus, and if 'twas my last farden,
I be seen that young critter would want a Do'ly Varden.
Vich I bought for as soon as ye came back to town, Vicin thought er as soon as we came back to town, Linew eys I did purchis myself a new gown "Grust the Fourth of July as vill soon come along Vith marchin' and music, likeways speeches and song,

### The Channel Passage Problem.

A plan which the London Times inelegantly calls "a third alternative" scheme for relieving the terrors of the channel passage, is beginning to attract attention. Captain Direy's proposal is to take an ordinary steamer, and out her into two halves across the middle. These two halves would be subsequently connected by iron girders, the puddle-boxes being placed in the middle, and a spacious deek had over the girders. This plan would, he thinks, give us a very bnoyant and at the same time a very steady vessel. O'l course, that latter point is the one to be aimed at, as the ordinary steamers are bnoyant enough. Some such device as that which Captain Direcy proposes to adopt is found to have the effect of neutralizing the action of the surf upon little vessels emproved on the Indian coasts. Captain Direcy's experiment, says the Etho, might as well be tried, for if it should be successful, the line between Dover and Calais is not the only one on which it would be employed, and its adoption now need not prejudice more complete schemes in the future.

### Court Chat.

Lady Holland once sent her page round the table to Macaulay to tell him to story talking. She told Rogers, "Your poetry is bad enough, so pray be sparing of your prose." At a dimer in South-street, she fidgeted Lord Me'bourne so much by making him shift his place when he was seated to his liking, that he rose, exclaiming, "I'll be — if I dine with you at all:" and walked off to his own house, fortunately at hand. She requested a celebrated dandy to move a little farther off, fortunately at hand. She requested a celebrated dandy to move a liftle tarther offi, on the ground that her olfactory nerves were offended by his blacking; the blacking which he vowed was diluted with champagne. Shortly after M. Van de Weyer's arrival in England as a Belgian Minister, he was dining with a distinguished party at Holland House, when Lady Holland suddenly 'urned to him and asked, ''How is Leopold'?' "Does your ladyship mean the King of the Belgians?" "I have heard," she rejoined, "of Flemings, Haimaulters, and Brabanters; but Belgians new to me." His reply was, "My lady, before I had the honor to be presented to went before the and the control of the ladys of the control of you, I have often heard you spoken of not only as a woman of intelligence and wit, but as a woman who had read much. Well, is it possible that you in your many readings have never met the book by a person named Julius Casar, who in his Commentaries gives to our population the name of the Belgians, and this name we have preserved till our days?'

· The following correspondence will be read with interest, as being prefatory

to Miss Nellie Grant's presentation to Queen Victoria:

LANGLEY'S HOTEL, May, 1872. My Dear Lady and Queen:—I am embarassed at the honor of an official request, given through a high officer (your Lord Chamberlain, I think), to be presented to your Majesty. I should dearly love to see you, that I might tell my mother and father that I have been thus honored. I am but a simple American girl; that I am the President's daughter gives me no claim to your recognition as a sovereign. If, with the kind lady who is acting as my chaperone, I might visit you, I should be very glad. Our Secretary of Legation hints at some political significance in this opportunity. I cannot so interpret it, and would not wish to be so received, because it would not be right, as I am nothing in American politics, and I am sure my father 

The following autograph letter was received by Miss Nellie from her Majesty the Queen, and the visit took place at the time indicated, and was very informal and pleasunt:

Windson Castle.

Miss Nelite Grant:—I have instructed Lady — to convey to you this note, and we shall receive you as the daughter of your honorable parents without the intervention of our high officers of State. I shall accept your visit as an "American girl," and there shall be no other significance in the factthan your kindly-expressed desire to see the lady and not the sovereign. I shall find it pleasant to forget that I am Queen in receiving you to-morrow afternoon at our palace of Windsor.

Emperor Francis Joseph of Austria has lost his most trusted prime minister—his mother. The archduchess of Austria, whose death is announced by cable, was of the house of Bavaria, and, after her older sister, Charlotte, had married Francis I., married his brother the archducke. She was one of those unscruppious, narrow-minded, fiercely tyranical females, who have had such a share in the government of Europe, and of Austria in particular. She brought her son to the throne amid the troubles of 1848, and marked with blood her triumph over the Hungarians, under Kossuth and the republicans and students of Vienna. It was a time indeed of blood. The liberal mob, on the one hand, hung at his own office window the Secretary of War, Count Latour, and one had but to count the rubies in the Archduchess' necklace at an evening soirce to know how many hostile no-bles had that day perished by her order. She brought up her emperor son to believe in personal power, and a life-time of ministerial defeats and national reverses has unfortunately not made him forget it. Her second son, Maximilian, was more liberal-minded, but lost his life in Mexico in trying to practice the imperialsm of which his mother and had but Burgone, who took the Empress from Trouville to

— Sir John and Lady Burgoyne, who took the Empress from Trouville to England in their yacht the Gazelle, in her flight from France, have been on a visit to American friends in Paris. The Gazelle has been sold at £100 advance, probably on account of the historic associations connected with her. Sir John Burgoyne's baronetcy is one of the oldest in angland. The deed is from John of Gaunt, and the new tool the property of the oldest in angland.

is in quaint old English-

" I, John of Gaunt, Do give and do grant To Johnie Burgoyne,

And heir of his loin, Sutton and Potten, Till the world 's rotten."

Viscount Parker, late an officer in the Grenadier Guards, and heir to theearddom of Macclesfield, having been adjudicated a bankrupt some months since,
failed to appear at the sittings of the Court. He is resident at New York, and application was made on May 14th to examine him there under a commission to be
granted by the Court. The Hon. W. C. Spring-Rice, though characterizing the application as a novel one, gave permission for the trustee to make the examination
in such mode as he might be advised.

— One of the most inferesting features of the London International Exhibition is the large case in the Jewelry Section, containing the articles contributed by the celebrated house of Hancock & Co., upon whom the Empress of Germany b stowed such a well-merited compliment on the occasion of her visit to the gallery the other day. "There is but one Hancock in the world," said her Majesty, and, truly, and cruly, and truly, and truly actions of the ornaments exhibited by the Lorens is a fiara (an ornament worn centuries ago by the medent Persians), necklet, carrings, and bracell, composed of emeralds of the finest coor, internixed with brilleants of the finest water. The stones are of an exquisite hue, and very rare; an idea of their costliness will be obtained when it is stated that the suite is valued at upwards of 40 none. Examily striking for heavily of form as well as to superiority of words. - One of the most interesting features of the London International Exhibition their costonics will be obtained when it is stated that the suite is varied at powerfis of £10,000. Equally striking for beauty of form as well as for superiority of work manship is a diamond riviere necklace, which receives universal enlogious, and justly so, for it contains no fewer than thrity-six exceptionally line by masts, almost matchless both as regards color and shape. Its pendant is composed of equally fine stones; and the price put upon necklet and pendant is £8,000. The collection altogether is an emburras de vi hasse, and one is puzzled where to stop and admire altogether is an ambirrous de richesse, and one is puzzled where to stop and natural. Amidst all the cloud of color, however, a seven-row neckace of pearls cannot fail to attract observation, for the pears are of extraordinary purity, and made all the more valuable because of the d'fillently of gatt no such fine ones. Matching this triumph of enterprise is a pair of carrings of brilliants and pearls, thun which nothing can be more handsome. A novelty of Messre, Hancock's coelectron which new and very popular "bangle" bracelet, of which there are many specimens, different in form, but adick remarkable for their beauty, and exhibited by the firm as typical of English goldsmiths' work. These ornaments are all set in the ruckast typical of Eng.3-h godsimus work. These of aments are an set in the richest manner with colored and precious-stenes; they were made almost specially for the present Exhibition, and they range in price from £300 to £1,000. A wonderful piece of diamond setting is observable in a plain broad collar of massive gad, flexible in its character, and thickly studded with diamonds and turquoises. The turquoises in Messey, Handeck's ornaments are the bearts of the stones, and they will be appreciated accordingly. There is a particularly notable sinte in gold and enamel, of Assyrian design, very massive, and made especially for the International Exhibition. It consists of necklace, earrings, and bracelet, and the enamel is green in hue a very unusual color to see upon gold, which must be of the finest quality in order to receive so vivid a color. One of the most attractive features of these exhibits is the varied collection of bracelets. There is one in the Holbein Style, made of rubies, diamonds, and pearls, with an emerald center, and colored channels, another is of opal, and competes for admiration with all the other treasures; a third bracelet its set forth with a flue collection of Scotch pearls, it is chassed and in the Italian twelfth century style; and there are single bandle brace ets, of and in the trainer weather century style, and there are single-basecsets, of different designs, worn in threes or pairs, and set in a dazzling array of colored stones. There is an opal here nearly an inch in length and of extraordinary quality, and a broad bangle bracelet, bistrous with sappliers, ribles and diamonder. tty; and a broad bangle bracciet, justicus with supplires, rubies and diamonds— the best in construction that London can produce. A bracelet of Greek pattern, composed of diamonds, emeraids, and immense pearls, is a mass of glitter and color that stands out even from the other "gens of purest ray screen," none of which can be said to "waste their fragrance" at Kensungton. Not a few visitors will be attracted by a "card" bracelet, in which figures every card in the pack, with the "court" cards delicately emanaded, whilst to those who unite a love of the chase with admiration of the beautiful the neighboring necklace, bracelet, and earnings of platinum and gold, exquisitely modeled, and abounding in spurs, whips carlings of patieles of the metage, will also prove attractive. Of cross-set there is a large and singularly beautiful collection in Byzantine and other designs. A large emetald and diamond cross is, to our view; the pretitest object of the powder's attraction. in the exhibition. Amongst a number of chastely wrought pendants is one which has created the greatest curiosity, consisting of a huge black pear, set in rubies and surrounded by a wide circle of briliants. Black pearls are as rare as black swam; and this one, which weighs 200 grains, and is worth at least 21,500, is considered to be almost the argest known. Very curious are the "toad carrings a sidered to be almost the argest known. Very curious are the "toad earrings a good example of diamond setting. Amongst the miscellaneous articles in these cases are diamonds "in the rough," precisely as they were found in Mother Earth at the Cape; some loose stones, consisting of emeraids, diamonds, rubies; black, pink and white pearls, suppliers, and eat'seve. The Devonshire gens form on of the principal teatures of Mesrs. Hancock s exhibits; by the kind permission of the Duke of Devonshire, they will remain on view until the closing of the Exhibition.

A very beautiful character has, it seems, lately passed away in Holland. Mr. Klaes, known by the name of the King of Smokers, died the other day near Rotterdam. Mr. Klaes had, according to the Beignan papers, amassed a large feature in the linen trade, and one portion of a mansion he had erected near Rotterdam was devoted to the arrangement of a collection of pipes, according to their nationality and chronological order. By his will, which he executed snorty before his death, he directed that all the smokers of the country should be invited to his finneral, and that each should be presented with ten pounds of tobacco and two Dutch pipe of the newest fushion, on which should be engaved the name, arms, and date of the decease of the testator. His relatives, friends, and funeral guests were strictly enjoined to keep their pipes alight during the funeral ceremony, and afterwards to empty the ashes from their pipes on the coffin. The poor of the reighborhood who attended to his last wishes were to receive annually on the anniversary of his death ten pounds of tobacco and a small cask of good beer. He further directed that his

oak coffin should be lined with the cedar of his old Havana cigar boxes, and that a box of French caporal and a packet of old Dutch tobacco should be placed at the foot of his coffin. His favorite pipe was to be placed by his side, with a box of matches, a flint and steel, and some tinder—for, as he truly said, there was no knowing what might happen. It has been calculated that the deceased gentleman, during his eighty years of life, smoked more than four tons of tobacco, and had drunk about five hundred thousand quarts of beer. It is said to reflect that one evidently possessed of such noble qualities should have been thus prematurely cut off at the early age of cighty, doubless owing to his unfortunate indulgence in a pernicious habit. His fate should be a warning to all smokers, and the British Auti-Tobacco Association will be quite justified in drawing a useful moral from his untimely end.—Paul Maul Gazette.

The following interesting seene is said to have occurred at the Palace of St. Cloud on the 18th of July, 1870, in the audience chamber of the Imperial Palace. The telegram announcing Prince Antony's renunciation of the crown of Spain in the name of his son has just arrived, and in the hands of the Emperor. A solemn silence prevails among the few who are present, and as the Duke de Grammont is about to speak the Emperor motions to him to keep still. The Empress is learning back in the recess of a window, conversing in an undertone with Nigra, and from time to time stealing a glance at her Imperial consort. Motionless the latter sits in his arm-chair, regarding the eventual telegram with a peculiar fixed look, which appears unrelieved by the shadow of a single thought. No one speaks, no one dares to interrupt his cogitations—in his brain war and peace are striving for the mastery, and the tranquility of Europe hangs upon his decision! Twenty minutes—eal peed the wenty weary minutes—and then the silent man raises himself from his bent position, throws his head slightly back, and with a metallic voice atters these words in a massal tone: "Once more will I give the world an example of my moderation." "Oh, how cowed you are," shricks the Empress, snatching the telegram from the Emperor's hand and tearing it to pieces with feverish excitement. Petticoal government asserted its sawy at that critical juncture, and all resistance was at an end. Napoleon required twenty minutes to decide in favor of peace; Eugenie determined upon war in a second.—Subse Times.

— Prince Arthur visited Liverpool recently, and formally opened Sefton Park, the last addition which the Corporation have made te the public parks of Liverpool at a cost of £400,000. His Royal Highness also attended a fancy fair in the park, and inspected the local volunteers.

# Special Brevities.

— The ill-effects of soda on linen has given rise to a new method of washing, which has been extensively adopted in Germany and introduced into Belgium. The operation consists in dissolving two pounds of soap in about three gallons of water as hot as the hand can bear, and adding to this one table-spoonful of terpentine and three of liquid ammonia; the mixture must then be well stirred, and the linen steeped in it for two or three hours, taking care to cover up the vessel which contains them as nearly hermed-ically as possible. The clothes are afterwards washed out and rinsed in the usual way. The soap and water may be reheated and used a second time, but, in that case, half a table-spoonful of turpentine and a table-spoonful of ammonia must be added. The process is said to cause a great concomy of time, labor and fuel. The linen scarcely suffers at all, as there is little necessity for rubbing, and its cleanliness and color are perfect. The ammonia and turpentine, although their detersive action is great, have no injurious effect upon the linen; and, while the former evaporates immediately, the smell of the latter is said to disappear entirely during the drying of the clothes.

— In the observance of Whit Monday as a holiday in London, fifty-six thousand sevon hundred and seventy-eight persons passed through the entrances to the Crystal Palace during the day. The Zoological Gardens were visited by forty-four thousand eight hundred and fifty-four persons, which was upwards of eight thousand more than were ever before known to be there in a single day. More than twenty-one thousand persons went to the Exhibition; some of the papers state that the visitors to the Surrey Gardens and the North Woolwich Gardens were upwards of thirty thousand in number at each place; and all the parks around London were thronged with holiday-makers. The river steamboats were crowded with passengers, and all the suburban railways were largely used. The number of excursioniets to the seaside was larger than on any previous occasion.

— The enterprising English company which has already undertaken the navigation of the river Amoor has just had a great stroke of fortune in the discovery of some valuable silver mines in the neighborhood of Yamsk, to the north of the Sea of Okhotsk. The wealth of some of the gold and silver mines in Siberia is scarcely known here. The firm of Nemchinoff, of Kiachta, for instance, last year realized £600,000 from their gold mines, and according to the estimate of the Government surveyor will realize this year about £1,000,000, and this immense yield is expected to continue for some fifty years.

The great island of Marajo, dividing the Para from the Amazon, became entirely inundated early in April, and it is calculated that ninety thousand head of cattle periahed.

- It has been ascertained that the proportion of insane to sane persons in America is 1 in 502; in Scotland it is 1 in every 574. In the agricultural districts of England the proportion is 1 to 820, while in London it is 1 in 400. It will be seen from this that insanity prevails to a greater extent in cities than in the country. Singularly enough it has been computed that in countries where a despotic government is in power insanity is rare, as in Turkey, China, and Russia. Insanity is uncommon in Spain outside of the large cities.
- The following paragraph, which appears in a Cabul news-letter, contains, if it be true, matter which is well worth thinking about, as it is another instance of the policy of Russia on our northern Indian outrages. "It was reported at Tashkurghan that the Russian Governor at Summercand had ordered two Afghan battalions to be raised, and that several Afghans who were residing in Turkistan were quietly making their way to Summercand. The Russian Governor, it is said, is advancing money to the Afghans who enlisted, and they are treated very kindly."—Bonduy Gazette.
- A rogue in London has been deceiving the doctors and living luxuriously by feigning paralysis, becoming an inmate of the different hospitals, and seemeng the best attention by pretending to make his will, leaving a legacy of \$1.000 to each institution. He has been made the subject of clinical fectures, and in several cases enthusiastic students sat up all night with him to watch and record the minutest symptoms of his case, when, in fact, there was nothing at all the matter with him.
- We have heard a good deal about early marriages amongst natives of this country esays an Indiana papers, but a writer in a native paper states that amongst the inhabitants of some forest tracts a totally different practice prevails, as there the daughters are not given in marriage "until they have passed the meridian of life, and the bloom and vigor of life have begun to give place to the infirmities of see."
- Mr. John Bellows, of Gloucester, prints for the British Government the blank forms for electric telegraph messages, and has to issue weekly three hundred thousand copies—that is 1,300,000 monthly, and 15,600,000 in the year; and the order involves the use of forty-two tons of paper in the twelve months. This paper is a strange composite; it is made of palm leaves, Esparto grass and bright out straw.
- Our dog crop is estimated at twenty-one million head. At a moderate computation each animal costs eight dollars a year, making a total of one hundred and sixty-eight million dollars. Of the number upwards of one hundred thousand go mad animally, and bite about ten thousand people. On the whole the crop cannot be said to pay.
- Applications are invited by Senor Don Carlos Gutlerrez, the Honduras Minister, for a ten per cent. Government Ship Railway Loan for affect million pounds sterling nominal capital. The object is to adapt the present Interoceanic Railway now in course of construction, to a ship railway across the republic of Honduras.
- Striking evidence of the blows which have recently fallen upon what is called "good society" in France, says the Pall Mall Gazette, is to be seen in the number of ladies, distinguished in Parisian Society as amateur vocalists, who since the war have found it necessary to subject their talent to public criticism.
- A Dublin correspondent states they had an excursion on Monday to Kingstown, and some other places on the coast, and the Roman Catholic clergymen in some of the places on Sunday warned their flocks to have nothing to do with the excursion parties, whose principles they denounced as Communistic!
- A story is told of Theodore Hook by Cornelius O'Dowd in one of his essays, to the effect that at some civic banquet, on the appearance of a fifth course of dainties, Hook laid down his knife and fork and declared that he would "take the rest out in money." The idea, O'Dowd declares, was "eminently British."
- T-afford, surveyor, were committed for trial on the 16th of last month by the English magistrates for obtaining \$\frac{4}{5},000\$ by false pretences, in regard to a mine in Dean Forest, from a merchant named Low.
- One of the most curious phenomena connected with the late eruption of Vecuvius has been its effect on the trees. The heat of the lava was so great as actually to boil their sap, and to cause them to emit noises of the strangest character. A moment later and they were destroyed.
- A little girl at Cedar Rapids suffered terribly from the ear ache, and no application could mitigate the pain. A physician finally made a thorough examination of her ear, and found a sprouting sunflower seed embedded in it. On removing the seed the ache ceased.
- According to the Jewish Chronicle, Ireland is the only country in Europe in which the Jews have never been persecuted, and it once had a chance of being sold to the Jews.
- A farmer living near Boyle, Ireland, was preparing to cut turf, and while so occupied he came across a bag filled with silver coins of the years 1566 and 1572.
- Mazzini's large fortune will be inherited by his grandniece, a young lady of considerable literary ability, and at present art critic of a daily paper at Turin.
- The American Consul at Rome is charged by the Freeman's Journal of New York with receiving presents in exchange for permits to visit the Vatican.

## Where Earth and Heaven Meet.

Whether between lie meadows green,
Where san and shadow play;
Or sileut snow-fields intervene,
With trees of leafless grey;
Or stately hills send down supplies
To blue lakes at their feet—
Beyond them all, I seek the line
Where earth and heaven meet.

'Tis there the fleecy clouds come forth To sail upon the sky; And there the summer showers arise When all the fields are dry; And thence into my thirsty heart Come thoughts both sad and sweet When gazing on that distant line Where earth and heaven meet.

Sometimes remote it seems, and dim, Through early mists that rise; Again, distinct and clear it stands Before my longing eyes. O face beloved I cannot see! O lips I may not greet!
Till Life's horizon line I reach, Where earth and heaven meet.

-Old and New.

# Compounding with a Thieving Policeman.

David Thomas Edwards, a police constable in the E division, was recently brought up on remand at Bow street, London, charged with burgiariously entering certain chambers in Gray's Inn, and with having stolen property therefrom. Sarah Edwards, aged twenty-eight, his wife, and Elizabeth Hopkins, her mother, were also charged with having aided and abetted him. Thomas Massey—I am a solicitor, having chambers at 5 Gray's Inn Square. My chambers are on the first floor, and are locked up after business hours, and the key taken to the porter's lodge. I was at my office on Saturday, the 17th of last February. I left there an iron box when I left my business. It contained a number of valuable securities, amongst them two United States Bonds for \$2,000 each, a bond of the Corporation of the City of London, and a very large number of documents, the agreeate value when I left my business. It contained a number of valuable securities, amongst them two United States Bonds for \$2,000 each, a bond of the Corporation of the City of London, and a very large number of documents, the aggregate value of which was £8,000. When I came to business on the following Monday I had occasion to go to the box, and found that it had gone. Search was made for it, but it was not to be found. I then issued a handbill offering a reward of £30 for two of the most important documents, with a reference to my bankers. Messrs, Scott, Stratton & Co. On the 21st I received this letter from my bankers: "Will Messrs, Steward & Hassey give the reward if the papers are restored without the box?" It was signed "H. W." Upon which I advertised, and the next day I received a letter dated 22d February, addressed to me, stating that if Messrs, S. and M. would deposi! the money at the post office, Gray's Inn Road, and ask no questions upon the delivery of the documents, they should be returned. I advertised accordingly on the 23d, and I received a letter in reply in the same handwriting, which I have destroyed. I destroyed all the letters from "H. W." except those which I handed to the police. The letter in question was to the effect that the writer had been a great fool for mentioning Messrs, Scott, Stratton & Co., but he did not mean to break faith. His difficulty was how to deliver up the documents without being found out, and that I must send him the money first. I sent a reply to "H. W. Post Office, Gray's Inn Road," suggesting that the documents should be sent in halves, by being out without defacing them, and that the money should be paid to the post office upon the deposit of the first hall at the porter's iodge. He replied that he did not like to deface the documents, and he could see I "meant lair." Eventually he sent one-half of the whole. The package was brought to me by the nead porter at Gray's Inn, with a letter enclosed. I sent him the money infour 45 notes, with a note enclosed, trusting that "H stolen anything, that it had been on his 'mind ever since, and that with God's how he would never steal again, but leave for Australia. The prisoner looks very def-fevent in his private dress from what he did in uniform. Some further evidence was given, and the prisoners were remanded.—Standard.

— A young American in Paris has designed, and is having prepared, a badge for the new order of Cincinnati. It is in the form of a Greek cross, illuminated with as many diamonds as there are stars in the national flag, and has in the center a portrait of Horace Greeley.

#### Euthanasia.

The Weekly Budget, a highly literary and popular family journal in London, discourses under the above heading as follows: "A happy life terminating in a painless death, are the great objects for which the ancients strove. Very often, it is supposed, the happy death was accelerated in cases where discass seemed to threaten linguistic tertures, and thus "enthanssia" became a word as familiar in men's mouths in Greece and Rome as the "happy dispatch" is in Japan Now, there are still not wanting men of advanced views who have considered most anxiously the delicate question of the right to put the hopelessly suffering out of their misery, by, say, an overdose of chloroform or some such mean. The proposition is very starting, though it is often presented in the cases of the lower annuals, whom we are always ready to "put out of their misery," when such misery is endured without hope of relief. The subject has just been treated of in a very emarkable pamphlet, circulating privately, written by Mr. S. D. Wilhams, Jr., of Wales, and read by him before the Birmingham Speculative Club. Here is precisely what Mr. Williams pronoses: "That in all cases of hippless and painful illness it shall be the recognized duty of the medical attendant, whenever so deserved by the patient, to administer chloroform, or such other amesthethe as may by and-by supersede chloroform, so as to destroy consciousness at once and put the sufferer to a quick and painless death—all needful precautions being adopted to prevent any possible abuse of such duty, and means being taken to estab ish helped proposition of the patient. Or doubt or question that the remedy was applied at the experiences wish of the patient. That this is an amazing suggestion is not to be desired; that it will need with general reproduction there can be little question—as little as that it will be chiefly on theological grounds. These Mr. Williams chiefly deals with in his remarks. For example, there is the objection as to "the saccedness of the calle of it is not hing of the

In further support of these arguments we are reminded that there was a tremendous outery among religious people when the use of chloreform was first hirroduced,
particularly for the purpose for which her Majesty set an early example of using it.
It was said to be a contravention of the Divine ediet, "In sorrow shalt them bring
forth. That coposition has been outlived, and the author now suburits that "it is difficult to understand why chloroform should rightly be resorted to to render
less paraful the naturally painful passage into life, and yet that it should be almost
an offence to so much as suggest a like occurrence to it in the still more painful
passage out of life."

Another argument in favor of permitting the hopeless sick to drag out their torture to the last gasp, is that of the beneficial urduence of the sick rosm on those who attend the last hours of the dying. On this Mr. Williams remarks: "As to the beneficent action on the heart of munistrations to the sick, there can be no doubt but that the praise commonly awarded to this service is well deserved; it is certain that the sick chamber is an excellent school; that very many precious qualities are fostered there; and that our characters often issue from that orderd, chastened, softened, humanized, as perhaps no other discupline could fashion them. But granting all this, there is no reason to suppose that the adoption of the plan advocated in the essay could appreciably interfere with such discipline for, in the first place, the instanctive love of life is so strong within us, that not every one struck down by first discusse would avail himself of the remedy it is proposed to set within his reach; and in the next place, illness from which all hope of recovery is not gone, are frequent enough and protracted enough to turnish all the training desirable."

Assinst these arguments must be set objections, not only of a theological but of a theroughly practical nature. It would be difficult, indeed, to define the conditions under which suicide should be permitted, not only on account of the dying, but of the survivors and of society in general. In the first place, medical men often make raistakes. They declare that a patient cannot hve, and the patient survives the doctor. They pronounce a disease morsal, and it is overcome instead of overcommer. The responsibility thrown on the medical man would be such as with the mevitable suspicions banging to it few indeed would be willing to undertake. Above all, there is the possibility of the abuse of the principle: for, as has been taken it would be fought with the most terrible dangers to persons, the terminations of whose lives might be advantageous to others. It is quite possible to making case in which the consent of the individual might be obtained where the act of the medical man in giving the opiate would be fittle, if anything, short of murder. The suffiguration of a medical certificate would be feat to worthers, short of murder a starsfy the requirements of society. Other points will suggest themselves to the thoughtful: at the same time a problem is involved worthy the most servous effects, and while it does not hesitate to have recourse to any and every expedient by which these turtures can be relieved, if may well ask whether it is composed to step short at the ultimate resource and measure of relief! At the same time of concentrations of the first particular and the step short at the ultimate resource and measure of relief! At the same time of concentrations of the first particular and the step short at the ultimate resource and measure of relief! At the same time of concentrations of the first particular and the same time of concentrations of the first particular and the particul

## Watching.

Yes, it will soon be the dawn, dear; the darkness is lingering still, But I know it is almost the morning, the air is so hushed and so chill. Can you lie silent no longer? Indeed, if you can, it is best, For sometimes you sleep towards morning; try to be quiet and rest. It is the pain that disturbs you? Your forchead feels hot to my palm. I hoped that the fever had left you, you lay there so patient and calm. Is it so hard to bear, dear? I know it is hard, by your smile. Ah! if I only could take is, and let you be free for a while!

Is it so hard to bear, dear? I know it is hard, by your smile.

Ah! if I only could take it, and let you be free for a while!

Weary? No, I am not weary; only of seeing you so.

Do not you trouble for me, dear: I rest in the daytime, you know.

Just let me straighten your pillow and darken the light from your sight:

All I can do is so little, the aid I can give is so slight!

Yes, I can see at the window, the dawning begins to grow strong. Though you are always so patient, I know that you find the hours long; But now that the pain is more easy, while yet the night-silence is deep, Perhaps you may still get some rest, deer; try to be quiet and sleep.

### Condition of American Workmen.

The annual report of the Massachusetts Bureau of Labor fills a somewhat bulky volume, and the information covers a large number of details relative to labor and the cost of living. A workman with a small family, even by the utmost fragality and industry, can carn little or nothing above the actual cost of living. He is not able to save anything, and in most cases is compelled to draw on past savings to eke out a livelihood. The increased deposits in savings banks proceed chiefly from large depositors of the middle classes, and not from the small savings of workmen. The following table shows the average earnings of 75,664 employés; Actual average annual earnings of 'men, &611; of women, &299; of young persons, &275; of children, \$162. An examination of the table of the cost of living shows that the average cost of the necessitues of life for a family of four persons calthough thousands of workmen have more than four in number) is divided as follows: Groccius, \$158; provisions, \$462; clothing, \$105; rent, \$114; fuel, \$42; light, \$7; sundries, \$57. In addition to these articles are the following; Furniture, \$27; stooks, pewspapers, stationery, etc., \$17; school books, etc., \$6; relicion, \$21; sickness, \$24; recreation, \$19; charity, \$8; societies, \$9; making the whole expenses, \$776. From these returns it is proved that wage-laborers must consume less groceries, clothing, fuel, and live in cheaper and worse houses in order to keep out of dobt, or else they must fraw on past carnings in order to skee out a livelihood. But the condition of the agriculturity interests is far worse and more discouraging than those of the manufacturing employés. The farms are passing into the hands of forciners, and the cash value of farms in the State has deteriorated \$7,000,000 in ten years. Very few natives can be found working for wages on farms, the majority of farm-helps being composed of frish, French, Canadians, Nova Scotians, and Germans. The reluctance of Americans to engage in agriculture is attributed to the increase of tax

# All the Same though Different.

A Schleswig correspondent says: A little time back a country woman was buying various articles at a store here, all of which seemed to indicate a projected emigration to America. The tradesman asked the woman if such was the case, and received the following reply: "You see I have two daughters, and one of them was engaged to a man who is gone out to America, and who promised that as soon as he had made enough money to support a wife, he would send out money for the journey, and that then they should be married. But several years have passed, and my daughter had found another sweetheart, when one day a letter comes from America with money to pay the pussage. Well, now, I made up my mind to send my second daughter instead of the eldest. The two lasses are as like as two blades of grass, and it will be all one to him which of 'em he gets for a wife."

## A Wonderful Fly Story.

The Melbourne correspondent of the New York World tells a wonderful story of the adventures of the ship A'thea which arrived in Australia, after cruising in Atlantic, Pacific, Southern, and Indian Oceans. The only part of this narrative which is of immediate interest to the public is the account of what took place during the last nine months, during part of which the Milea was in the Indian and Southern Oceans, and to this alone attention will ocealided. In November last the vessel was near Madagascar, and, in doubling Cape St. Mary, the southernmost part of the island, the watch suddenly noticed what seemed a denge black part of the same, water success water success was seemed a close based on the same the same the pation of a gale such as is common in the Indian Ocean, the sails were instantly pation of a gate such as is common in the Indian Ocean, the sails were instantly furfied, and all things made ready for the storm. But the cloud came on steadily, preceded by a deafening din, and in about twenty minutes it dissolved into a perfect rain of swarming files, which settled down upon the ship, where they were packed as densely upon each other as were the pieceous in South America, which Anduhon describes. They bit and stung, and buzzed till the men were almost crazed, but all hands were instantly piped to clean the decks and shovel the placate into the sea. They worked for about three hours, slashing and mashing and hammering the flies; but, so great was the weight added to the ship, that she was still in danger of floundering, when, melkily for them, a mighty wind swept down from the Red Mountains and blew the pests all away. The sailors, who did not know what to make of the affair, and were growing superstitious about it, unshed instantly to leave the track they were pursuing, and which was toward the mouth of Sofala River in Mozambique; but the captain refused to accord to their request. For days they proceeded on their path across Mozambique Channel, seeing no more of the flies until they were within about four days sail of Sofala, what for a Mozambique day their keel ran through miles of the rotten carcasses of those insects, which filled the air with a horrible and loathsome steach. Eight of the men were taken sick, and five of them died, their corpses being covered with postales somewhat resembling those of small-pox, but looking more malignant, while a yellowish green ichor distilled from them even in death. The men were on the verge of mutiny, but there was nothing for them to do but sail on, for now they had come to clear water, and evidently if would not do to sail over the course again. At last they tread which has been expended in the word inductive survival and the control of the meaning and most matignant type of small-pox, which had long ranged in the interior, and which the physicians held had been propagated by enormous swarms of the which the physicians held had been propagated by enormous swarms of the which the physicians held had been propagated by enormous swarms of the whole the propagated by the propagate had been bred and propagated in the unburied and rooting carcasses of victims which lay broiling in the san in that yast and almost unknown interior. The Althea sailed away northward towards the Comoro Islands, every day or two running through layers of the rotting flies; the crew again became sick and haif crazy, and were reduced almost to skeletons; half of them only were made to do duty for ten hours at a time, while the rest were confined in the dismicreted hold, where the surgeon, by means of some chemicals, made them breathe are sorcharged with oxygen, under the influence of which they came to sleep well and eat well, but they nervous systems deteriorated, and they became more and more in-sine. For some reason or other the Comero Islands secunt to be free from this pessit, since, and here the crew remained for three weeks, during which time they were greatly recuperated. Then they determined at last to get away from the horror as soon as possible, and set about to return homewards. But they went back to Mada assear, stopping midway between Cape Ambro and St. Andrew. Here the trees and shrubberly or great areas were covered and absolutely weighed down with enormous black flies, some of which were as large as humblebees, and occasionally vast clouds of them would whiz through the air, and, going down to the shore, would sette on the ship. What they lived on was the mistery for already they had strayed the tree or of leaves. Sometimes a limb loaded with their would fall and crush myradis of them to death, and the ground was covered with dense black masses of their decaying bodies, which festered there and filled the air with the most leading to the control of th men were taken ill, but with no small-pox symptoms, their malady being of an inmen were taken 111, but with no small-pox symptoms, their matady being of an in-tensely energating nature, and making them nervous and excetable to a degree. Four of them became insane, and jumped overboard. They set sail toward the north, and were driven by a gale up toward the Seychette Isiands, where they finally got rid of the plague, and after much stress of weather reached Melbourne, five more of the men having died on the passage. Phe captain himself was ill, but soon re-covered, and this is the take he tells. What seems to me the most dreadful suggestion in it is that small-pox and other diseases of a contagious nature may be propagated by flies, against which insect there seems to be no protection. They propagates of mes, against which insect there seems to be no provided and devour all manner of filth and diseased bodies, the particles of which stack within their hooked feet, by which they may be inserted in the human field. The enormous quantities of them which are spoken of need not be incredible to him who believes the Biblical account of the plague of flies in Egypt in the days of Moses.

<sup>—</sup> All the fragments of the Vendome column have been recovered except a small portion near the top and middle part of the shaft. It has now been ascertained that, in spite of the surveillance of the Commune, some foreigners in the surrounding hotels (Americans, it is said) were able to secure, at a high price, four large preces; in addition to which it has now become known that a Swiss, staying at the Hotel Chatham, became the proprietor of a fifth piece, weighing three pounds, six ounces, of which he has just made a present to an old friend of his.

#### Casus Belli.

Lines suggested by seeing a very spirited little picture of "A Duel by Torch-light," exhibited at the "Art Association." The picture is painted by Reginald Birch, a pupil of Toby Rosenthal and a very promising young artist:

Behold these warriors, crack up ! Full tilt at carte and tierce, The one has got his back up The other's low'ring fierce.

Yet only one short hour ago
Each call'd each "bosom friend!"

Now each counts each his deadly foe, And so life's friendships end!

But listen, while their tale I sing, By other's faults grow wise, And learn how very small a thing Can sever friendly ties,

In sweet communion they had pass'd

An hour or so together,
When, "On my word," said one at last,
"Tis very pleasant weather!"
The other answer'd, "On my word
I do protest it isn't."

Then naught for some time could be heard But "'tisn't-'tis-and 'tisn't."

At length one said-it was he who Had early had a mother "What you say, I say isn't true!"

"And I say-you're another !"

44 46 "Another! Now by all that's true Thou'lt eat that word, sans salt, And if it don't agree with you It will not be my fault."

"Oh! say no more! I'm ready quite-Stop blust'ring if you can-

And as you will compel a fight, 'Why! Come on! I'm your man."

Then each his trusty weapon drew-As pealed the midnight chime-(And well the standers by then knew

They'd have a bully time) "Lay on, thou red-faced, fat-calf'd lout," Cried he with legs in buff,

"And damned be he who first cries out, Hold hard !-- I've had enough !'

And there, in single combat, still The deadly strife goes on, And goodness only knows when will That dreadful fight be done.

MORAL Abstain from fighting if you can, And don't say, "You're another." But if your friend's a nice young man, Then kiss him—for his mother. And if you must a warfare wage,
Why! Choose some harmless strife— In single combat don't engage But try-a married life

# Woodhulf.

The Saturday Review devotes an article to Mrs. Woodhull, who is not worth the powder. Among other sensible things, the Saturday Review says: "It would be absurd, of course, to attribute any deep or serious influence to persons like Mrs. Woodhull, or to publications such as her weekly journal; but worthless straws will show how the wind blows; and the connection between the free-love movewill show how the wind blows; and the connection between the free-love movement in America and the agitation for what are called women's rights, is too close and conspicuous not to be remarked. Whatever gloss may be put upon it, there is no getting rid of the fact that the cardinal principle, underlying the demands which are raised for a female franchise, for the legal independence of married women, and so on, is simply that marriage shall cease to be an absolute and permanent union, in the sense in which it has hitherto been understood, and that it shall be union, in the sense in which it has hitherto been understood, and that it shall be reduced to a more commercial partnership, with limited liability. From this to free love is only a step, and not a very wide one. Under the new system, a woman would be taught to regard herself as a person with separate rights and interests from her husband; the legal facilities which would be provided, in order to enable her to assert her independence, would supply a constant incentive to do so; and whenever any serious difference of opinion or quarrel arose, the minds of husband and wife would be turned, not, as at present, in the direction of compromise and conciliation, but rather to immediate separation. When married people know that the the located cases of the property that the control of the property that the control of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the standard and the supplier to the second of the supplier to the that they must make the best of each other, they naturally try to do so; but if it were once to be understood that they have separate interests and possessions, and were once to be understood that they have separate interests and possessions, and a distinct legal existence, and that the only the between them is a mere matter of commercial convenience, the natural consequence would be to destroy that unity of thought and sentiment upon which the permanent happiness of such a union so vitally depends. Of course, if personal convenience is to be the ruling principle of marriage, it would seem to follow that the marriage should be dissolved when the convenience has ceased; and thus we get to Mrs. Woodbull's theory, that the duration of marriage should be measured solely by inclination, and that a woman has a right to take a new husband every day if she likes."

— The Rangoon Times publishes a warning to native boatmen not to go to steep in the bows of their boats, as the alligators have discovered that by a little exertion they can reach them. Several cases are said to have occurred lately of men being dragged off boats by these monsters.

# Why They are Not Appreciated?

There are thousands of men in this world who are constantly whining because they are not appreciated. They rail and sould against every body and everything. To them the world is upside down. They are Islamachtes, their bands rails against every man and every man's hand raised against them. Large cities are the Meccus of those discontented, unappreciated spirits. We find thun by armies in San Francisco, Cherago, New York, Boston and elsewhere. Is their indement of the world and of humanity correct? Is the world cold, crael, mer riess, unrelenting? Is humanity heartless and soulcess as the world have us be leve? We give a negative answer to all those questions. They are the interrogators of disappointed, disheartened, mismultropic spirits. The world is not cold; humanity is not heartless. On the context, every hard, every near who does it is not cold; humanity is not heartless. appointed, disheartened, misanthropic spirits. The world is not controlled in the controlled when the controlled source soul, every man who does his allotted work carnestly and well is intensely appreciated. The premising vonth is encouraged to go forward and meet the evigencies of life with a hopeful heart, fathers, mothers, elsers, brothers and friends counsel him with lowing words and genial smiles to jurisue his course in the path of honor and renown. Whenever fathers, mothers, sisters, brothers and friends counsel has with lowing words and genial solitest operate his course in the path of honor and remover. Whenever any noble man gives his life services to the welfare of the community do we not idolize him. Was it not the other day that the mourning thousands with reversibilities of the product of the community do we not idolize him. Was it not the other day that the mourning thousands with reversibilities and the mount of the spectant of the spectant of the summers of the spectant of the mount of the mount of the spectant has been more deeply appreciated than those given to this mounted and humented either. It is said that we are a learn these community in San Francisco. Let the numberable occasion mentioned, the one of many refute the benefits and chances our common welfare, when they secretice case, aware and selfishness to activity, abstrance and generosely, when, in pain  $\mu_{abstra}$ , when year the selfishness to activity, abstrance and generosely, when, in pain  $\mu_{abstra}$ , when they so out to them and do we not in silicosely, when "These creators of abore are the true gods of humanity. To venerate and worship them is the most exalted needs of the income soil. We will not enter into the life work those numerous men who sacrifice themselves for their feilow creatures, those herea men who is man. Pagan, Christan and Barbaric lands have to some extent broken the shackles which bound the body in slavery and the mind in superstition. Are not such sublime souls appreciated? Do not the mil flows reverence, worship their memory? But a man need not perform immortal deeds to be appreciated by his fellow creatures. In the plain walks of every day life, whether tollowing the plow, driving the jack-plane, hammering at the anyth, delying in the non-screening the driving the pack plane, harmoring it the anyl, delying in the n it is, because the sails, tolling at the cliterial dock, preaching from the pulpet, build negacifored, carrying out irrigation schemes, or other practical duties, it a man does it is work well and chose hilly is he not appreciated? Let every man's heart are swerthe question for himself. But fany man has the corrace, power, genies and herois in traits a above those things and plan new and practical duties for loss to loss for catures, ruse above these things and plan new and practice dutts for less lessow creatures, show them the way by which their material and spiritual happiness can be increased, sacriftee himself for their advancement in every way, how the weak and helpless, the strong and the powerful, alike admire him. Yes, the wor'd is booking and longing for grand, heroic, sublime souls who can make it better finantis. Humanity is the essence of worship. It must have it sidels, but with the enthusiasm of its worship is the leaven of common sense, the discernment between fine weekling the strength of the substitute of the s spasm of its worship is the leaven of common sense, the discernment between the but idle talk and noble, heroic action. It detects the drone indistant feely. The whiners who complain of not being appreciated must not slander their fellow creatures for withholding their appreciation. Let these whiters, if they have the ability and power, spring forth from their indocrace, beliargy and stepor to alie of practical activity and carnest work, then, and not fill then, will they be appreciated. In then presumptions variety they will have the world besieve that they like world persistently recognizes them as among the dead. The world must have self-surfile from those who would have its hallowed meense. There will be here and there cold, obdurate and yet impassioned souls, in whom was energies are locked up, souls whom neither the incense or hate of luminity can. move to action, strange, mysterious sons that never when or complain of the of in life; but even these human monsters are angels compared to that dass of men who are forever whining and rabling against themselves and their fellow creatment.

<sup>—</sup>How extremely anxious seem the clergy to gain a "realizing sense" of hell without zoing there! Reverends Newman Hall and Chyler have been experimenting upon the very edge of Vesuvius, smalling up the delicious brinstom, testing its quality, and comparing it with the kind they manufacture and dispense from the pulpit. The fiery lax flowing along the crevices beneath them awas them a delicious forctasts or fore-observation of the future fate of such of their audiences as do not contribute freely to the tund enabling these clericals to "four Europe." Hall even peeped into the pit itself, lying, as did the snake in Eden, on his belly, and was fascinated with this delightful miniature of tophet. Hereafter he and Cuyler will have a more "realizing sense" of the hell of their imagnations to which they consign all who do not believe in their fulumited bosh. Suppose the hell they preach should, like Vesuvius, cool off in some far future age of eternity! Would Newman, Cuyler & Co. he tempted to leave their snug season near the Throne, and go to explore the freezen "bottondess pit" that, like a new Pompeli, might contain the cinders of the souls of many of their parisbioners who did not drop freely into the contribution box!

## Wayside Gushings.

[BY MRS. HARRIS.]

"Mrs, 'Arris,' says Sayrah, "I do wish to be a Nun."
'Vy, 'ow is this, Sayrah? 'Votever 'ave you done,
As is only sixteen, to deserve sich a tortur?
I fear you've been a doin' of something you didn't oughter!"
I fain't a done nothing, dear missus,' says she,
But life 'ave lost all as was precious to me."
'What grief,' says I, "Sayrah, can so overwhelm
Ven youth's at the prow and pleasure at the 'elm'!
'That's vot it is, missus, as is troublin' of me;
There's xo youth at the prow!' "'Ave he fell in the sea?
He could never be so base after promising marriage

He could never be so base after promising marriage And treating you to supper, likeways to a carriage.
But if sich be the case, then vy should you care a
'Ang for the feller? So pray dry up, Sayrah,
Those hinnocent tears, if so be as he's drowned
And 'ave fell in the sea he vill never be found."

"'Ad he fell in the vater I should not repine—

He's fell in vith another gal as wowed he'd be mine!"

'Ere Sayrah set up sich an 'orrible squealing As did set all my hinnermost witals congealing, I did give 'er Sal wolatile out of the bottle And undid all 'er stays for fear she should throttle. 'Arter several minutes she 'eaved a deep sigh, And says I to 'er, gently, 'So, Sayrah, that's why You perspire toward a convent and vish to say good-bye To the world and to 'Arrıs as is more than a mother To the world and to 'Arris as is more than a mother To a gal as 'tweeren't heasy to find such another. Let us hargue the matter. Life hitself is a vade As reaches to the ground, and is like a long tail Cut off of a sudding. Be contented with that, And don't try to be a Habbess with a Cardinal's 'at.'' "Tain't that," says she, "Missus, I would not complain If he 'adn't 'ave took up with that minx Mary Jane." Ere she vept that promiseuous my feelins vos 'urt,
For my poor little Sayrah was never a flirt.
So to cheer 'er, says I, "Let us go to Platt's 'All,
And 'ear a real nun as 'ave bin through it all, And 'ear a real nun as 'ave bit through it all, Likeways frequent in love, includin' Saint Peter, At a werry early age, though hold enough to heat 'er.'' Sayrah, wild with delight at the projick, fell down As if I'd bin a Habbess and clung to my gown, Cryin', "Missus, dear missus, I longs for to 'ear it, For I'll take the vite wale, an' be a nun—never fear it." But doorin' the lectur I noticed 'er turn.

But doorin' the lectur I noticed 'er turn. Reether pale, vile ve both of us shuddered to learn Sich 'orrors, at vich my yeak sturmics, at vich my yeak sturmics, That the diet of nuns is a Diet of Worms,
And that 'idden beneath 'alf their 'eaven-pointin' Spires Is all manner of nastiness, likeways 'ell fires.

So we both vent 'ome singin', "I won't be a nun." And resolved to dewote all our footur't be a nul, For, says I, "Sayrah, Natur' vill still 'ave its vay, Let popes, priests and habbesses rail as they may." So, by vay of calmin' the poor young gal's sorrow, Says I, "Ve vill go to Voman's Suffrage to-morrow." Says I, "Ve will go to Voman's Sufrage to-morrow." At vich she turned that pale I thought she vould drop, And she gasped, "I would reether, mim, go to an 'op, Or to the theayter." "Yould you habdicate your sex," Says I, "by not goin' and your old missus wex?" So next day ve both vent to the Mercantile 'All, And the speakers was scraggy, some short and some tall; And ven the Chairvoman caught sight of my phiz. And ven the Charryoman caught sight of my pniz, She 'alted and cried, "Leddies and genlemen, there is A voman in this 'All as is waster in form, Likeways broader in views than us all, who can storm Tyrant man in 'is castle, and make 'im give in The rights as is our due, ven she's 'ad a drop of gin." Then the scraggy 'uns screamed, "Mrs. 'Arris, come on to The platform, and tell us vich side you belong to: Does your 'art beat for us, the unmarried and sour, Or har you a wassal of man's tyrant power?"
So with Sayrah vun side and my humbrella on th' other,
I ascended the stand. As a man and a brother
Werry heasy subdued, I vill tell you next veek The heloquent hideas your 'Arris did speak,

## The Secrets of the Pulpit.

The following curious and entertaining correspondence recently fell into the hands of the Liverpool Mercury, which vouches for its authenticity. Such a voucher, however, was scarcely necessary, as its gennineness is sufficiently proven by internal evidence. The correspondence consists of a series of letters which passed between a person who made it his trade to write sermons, and a Church some fine constant of England clergyman who made it his business to preach then in a church some forty or fitty miles from Liverpool. The sermon writer would appear to have been an obscure newspaper reporter out of work. The clerayman (who carried on the correspondence under a feigned name and had his letters and MSS, addressed under cover to his grocen, was a much-esteemed rector—none of your wild young curates, but a reputable, mixdle-aged parochial personage, with a living of his own to sub-The terms agreed on, after some higgling, were three sermons for twentyfive shillings. It would seem that two of the sermons have been delivered, and the writer of them, being either distrustful or "hard up," has appaied for something "on account." At all events, he gets this letter: "Dear sir. If you will send me a sermon forthwith on the Christian's victory over death, founded upon a similar passage to the one in 1st Corinthians, 15th chapter . The ast enemy, etc. and I approve of it, then will remit you the 25s, upon receipt of which you can send as soon as possible three more on stirring subjects suitable for Subbath evening uses. The sermon goes, and in reply comes this letter: Dear sir I have just received MS. Shall not need it to-morrow. Approve of it with one exception which I should like you to remedy. Will then remit you. Having given a description of man when death entered into the world, I think in as glowing language. as possible a description should be given of Christ's resurrection from the dead, when death was conquered and the devil defeated. Let us have this appendage as soon as possible. Will then fulfill before-mentioned agreement upon receipt of as possible. Will then fulfill before-mentioned agreement upon receipt of which you will please send two more at once on striking subjects, freesed in a glowing, flowery (italies in original) language as you like." At this point the correspondence, except so far as it relates to remittances, breaks off for a month, from which we judge that the writer haid on the color with a sufficiently ansparing hand. Then we get this: "Dear sir—Having been from home. I dol not receive yours until this day. Approve of it if you will please append a graphic description of God's love manifested in the gilt of his Son for sinners, coupi d with a glowing description of God's love manifested in the gilt of his Son for sinners, coupi d with a glowing description of Christ's dying on the Cross, the consummation of love. Was too late this evening for P. O. O. Will send it on Monday." The next letter sets both that "one of the last sent clint on "wheat and tares" could not be used, having taken the very same subject only a few Sundays before. "Can you take this back." The clergyman proceeds, "and send me two, one on the nature and avantages of faithful prayer, founded on such a subject as the syrophomeian woman should like that subject—the other on the rewards of a holy life, founded on such a passage as "Say ye to the righteous, etc.," or "There remains, therefore, a rest for the people of God. "Your attention will oblige." The concluding letter of the series is too long to quote in full. It begins about "the account" and "the remittance," and goes on to ask for a sermon on the words "Not by might, nor by power, but by my spirit, saith the Lord." The writer is to "adopt his own coarse in introduction," but he is to get in a description "in as foreble and graphu language as possible, "of the "first apostles—silbermen, tax gatherers, etc.," and contrast them with the "great ones, the leading ones of this day." He is also to "bring in the Reformation, Martin Luther, "etc., in "as glowing language as possible harde the Reformation, but t the reporter's power, or whether he got something better to do, does not appear.
All that does appear is, the correspondence suddenly ceases, and does not get resumed. We will only add that whenever the exhausted pulpiteers of San Francisco. are hard pressed for ideas, as is frequently the case to judge by their sermons, the Chaplain of the News Letter will be happy to supply them at the following moderate

An original discourse on she-dorgs and their purps, their present and future		
state, suited to Dr. Stone	\$ 5	00
Platonic discourses, in the style of Cudworth, adapted to Dr. Stebbins	10	
Highly pungent, dampatory, green seal	7	50
Hot and strong, damning everybody, and the Queen's English besides	6	00
Poetic, maudlin, pensive and pastoral; warranted to alleviate all female com-		
plaints on Sunday, suited to Dr. Carpenter	8	00
Very d-d hot indeed, for the heated term	5	00
Soothing, sedative, sentimental and sacerdotal, for good-looking curates	3	00

In the case of rery good-looking young elergymen, of steady habits and agreeable to young ladies, we are willing to take helf down and the balance after marriage with an heiress. Apply to Rev. Doxologus Pipes, D. D., News Letter Office.

## Leaves from a Lady's Diary.

June 15.—Santa Cruz. Really in the country at last—and such a country. No distortion of nature to create simulated landscapes, but the gentle hills rounding in soft undulations to the ocean, and the great mountains of the coast range, their sides covered with tall pines and an undergrowth of azalias and other flowers of every lue, such is my present enjoyment. And the town itself has such a comfortable look, the houses all of the ornate style, each costly nestled in its own garden. Bathed in the sea and thought, as I did, so that however great I might be in my own or even the world's esteem, what a very small speck I should make in the map of the Pacific, even at the scale of a yard to the mile. Found some old faces there that I had missed from San Francisco, among them Mrs. P.——. Three years ago I met her; she was looking old and careworn, but here in the quiet of the mountains her beauty has returned, and she is more lovely in her second youth than she was in her first. As Baizac says, "If a woman is good-looking she is in the perfection of her splendor at thirty; she is then a flower, before she was but a bud."

JUNE 16.—Sunday in a country town is a sectarian display; every one ranges under his or her creed, with a pious pity for those of the opposite faith. Went to a quiet little Roman Catholic church, clean and plain, where children channted the service. Mrs. P— was there, kneeling like a madonna, with her handsome grown up son by her side, on whom she gazed from time to time with proud love. After church the seets discuss the merits of the discourses they have heard. I can't say that I found it particularly lively on that day. There is a delicious Mrs. K. here, an oracular woman, tall, tanned, and parchment-like, with serpent-shaped eyes, of the color of crockery blue; she never looks one full in the face, and has a habit of clenching her hands as though in a moral agony, or under the influence of a dread that she would suppress. She believes in the converse with the outer world and is never at rest. I could not help contrasting these two, Mrs. P. and Mrs. K. The one moves calmly around like the spirit of good, the other is ever hovering around and among troubled waters like the demon of discord.

JENE 17. Went to Felton, a place about eight miles from Santa Cruz. The village consists of six edifices: one Episcopalian church, one blacksmith's shop, and four bar-rooms. The inhabitants appeared chiefly to inhabit the latter. Conews of Mr. Swain's death. The Coroner's jury treated him more mercifully in their verdict than it did in the case of poor Ploche, but then they had no insurance man among them. Went down to the beach and passed a lazy afternoon, picking up shells and pebbles. I thought of those lines of Alexander Smith:

"The bridegroom sea
Is toying with the shore, his wedded bride,
And in the fullness of his marriage joy
He decorates her tawny brow with shells,
Retires a space to see how fair she looks,
Then proud, runs up to kiss her."

JUNE 20.—Back to San Francisco tired, dusty, hungry, and glad to return to the comforts of my home. I love the country, but, after all, it is but a visit, as if one would enter a gallery of beautiful paintings—for who can paint like Nature—and the holdest artist dare not transfer to his canvas those brilliant hues with which she decks herself so lavishly. So, when I come back from the lovely scenery I am glad to return to the cold grey tints of my four walls, and hold commune with my books and the thousand and one comforts that time and custom have surrounded me with.

me with.

JUNE 21.—A lovely warm day. Drove out to the Cliff House in the afternoon. It was very pleasant; just enough air to temper the heat, which occasionally came, sorocco like, over the sand dunes. But the sky was clear, and we had lovely peeps of the bay, and the deep blue shadows on Tamalpais. Dined at the Cliff, and whilst waiting for dinner discovered that the E string of the piano was broken. Came back by moonlight. Even Henry, prosaic as he is, could not help being struck with the splendor of the night. Our enjoyment expressed itself by silence, for the night itself was so still that it forbade talk, so that nothing was heard but the monotonous ringing of the horses hoofs and the crunching of the wheels on the crisp gravel of the read. The distant bark of a dog would make the stillness more apparent, and the calm moon as it sailed through the heavens added its quota to the beauty of the scene. There was a hushed wind-murmur overhead as though the zephyrs were whispering secrets that they had caught from the sea. Maggie Mitchell is certainly a superior woman. Went to see Jane Eyre, more to wonder how they could dramatize that domestic novel than any thing else, and was agreeably surprised. The actress has a crisp, nervous way with her, that wins exceedingly; her struggle with and against her love for Rochester (who by the way is made a Lord in the play) is a perfect piece of acting. Before going there went to a wedding of an Italian lady to an Irishman. Neither of them speak the other's language, and she is an eminent musician, so it is to be expected that harmony will prevail in that household.

<sup>—</sup> With the view of ventilating the sewers of Glasgow, and destroying the foul emanations from them, the Police Board have resolved to connect them with several large chimneys throughout the city, including those of Messrs. Townsend, and Tennant & Co., the two highest in the world.

#### The Derby.

Cremorne has won the Derby. The electric wire might carry tidings of far heavier moment as, for example, that the Treaty of Washington is dead but we doubt whether a greater number of Englishmen wild be interested in the announcement. To say anothing new about the Derby is not easy; but what strikes us afresh every year is the thorough enjoyment which the day produces. To see, on the road-side, carriages of all kinds pulled up, while the horses much their hay and the travelers sit down under the hedge and commence an one aught on cold meat and beer from mighty jars to see, on the course, the general hatch immediately after the race, when Formum's mult todinots hampers are simultaneously opened, and there is a fusibate of champagne corks to notice how "chail" is perpetually interchanged all the white, yet what adm rab it imperprovanse must prove to any man that the English know how to keep horiday. And the mixture of classes is pleasant. As a certain rhymer once remarked—

"London is out upon Epson Downs -State-sinen and marquises, cads and clowns; Guards in a driving the choicest teams, Girls more sweet than you see in dreams— Bright are their eye, under drooping lids, As they speculate largely in Illac kids; The eager hock from the flask files fleet, As if twere longing their lips to meet."

Well, it may, is the immediate reflection. But when the "cager hock," the Cacquot, the sherry, the beatoly and seizer, the humber beer, are at zone, having had their effect when London is on its read home again, somewhat excited by the day's proceedings, it is not too much to say that there is very sittle of an objectionable character. There is no reason to granube at having a few dolls or a shower of peas thrown at you. We must draw the line somewhere, and we draw it at lobsters, which spots lattices foresses. It is entirely for the lades that we make may protest. The man who goes to the berby in a control excess about descrees to have it spoilt. But the fair are not prevented from carrying their nest vivid panasols, from wearing their choicest bounds and fractiset dresses. And we enture to that that, in his most busterous moments, your Englishmen should spare a lady's dress, even though it he reactions moments, wear frequishmen should spare a lady's dress, even though it he reaction accordance. And here comes a delicate reflection, Shall we inquire also carry the gayest parasols, wear the brightest bounds, come down to the hill in the best appointed drags. We will not ask the question. We leave such discussion to minor writers of the day, some of whom, Mr. Robert Buchman is not continued to the property of a certain sardonic journal.

The rises stratonics is not for us upon such a topic. Too terrible is the loss, too exquisite the beauty of that which is forever spoil, too sad the thought that such desceration is inevitable, for any man to treat the subject jesting y. And,

The risers satisfuncions is not for us upon such a topic. Too terrible is the loss, too exquisite the beauty of that which is forever spoid, too said the thought that such desceration is inevitable, for any man to treat the subject jesting y. And, therefore, we will cast no stone at the demi-mande. We will brish no color from the wings of those painted butterfles. The glorious sun shone upon them as upon us. Let us be charitable, it only one a year. We had good horses, a steady coachman, a good place on the hill, a well-choisen hamper, cool wine, a tolerably clear road home, and excelent dinner thereafter. What right have we, after so mach enjoyment, to be severe upon the failings of our fellow-creatures? Court Japan.

— Mrs. Frances Rose Mackinley, who divides with our sweet sister Woodhuil, the queendom of Free Love, is in our midst. The thought intuses a thrill cestatic and amatory through our youthful and godlike frame. We crave authence of of the pulse-quickening and voluptions creature whose ardent sexual imagnation has given is "Psyche to the Nineteenth Century: a Chain of Lovenund Freedom." But one thing my-tries us with these clorious Lovists. Why Mrs.? It is unjust to the poor cuckoids who so ingloriously share them with casual almities; or it is too great a condescension to the supersettion and conventionalism of a world that still "marries and is given in marriage." But O then most majestical and queenlike of the philanthropic isterhood! O That center oh, my dear, certainly—as Enems said on sight of Mrs. Venus, condescend to visit our abode and to behold in these manly proportions your long-sought ideal of Maic Beauty on the Paccific Coast. It is trace we have applied in vain for admission to the Oneida Community, but what of that. Their standard of manly beauty is derived wholly from Durhams and Southdowns. But if you want a god, as beautiful as any in those mythologies which have inflamed your soul, come, oh thon snowy Chopstra, to thine enamored and not particularly engaged Antony! The password is "Law's Foncere," to which we shall answer "Psyche," and our office hours are from two till four.

<sup>—</sup> Earl Granville has directed a selection of works—148 volumes—published by the Foreign Office, to be presented to the Chicago Library, on behalf of the English Government: the Bath and West of England Society sends a complete set of us transactions for the last twenty years, and a number of smaller donations have been received or announced during last week.

#### Counsel.

[ BY MRS. M. A. SHOREY. ]

Soar not too high ! Wait patiently the other birth.

The gods walk well Olympian hights, But not our fields of common earth. And mortal man,

Striving to cleave the upper sky To reel on earth, or prostrate lie.

Soar not too high! Not only fearful of too sudden fall, But that sweet flowers beneath thy feet,

May not remain ungathered all. Press heart to earth! Earth is thy well-appointed sphere:

triving to cleave the upper say
With unfit pinions, falls, heaven-drunk, Who walks it best, with most using the unfit pinions, falls, heaven-drunk, "Counteth its many joys most dear." Who walks it best, with most delight,

#### The Position of Affairs in France.

The Paris correspondent of the Times swrites as follows: There is something very remarkable in the sudden and unaccountable impulse which seems to have suggested to the public of Paris that there is no use in hesitating and trembling longer as if they were on the crust of a volcano; that they may as well assume that the Government is a permanent and stable Government; that Rabagas and M. that the Government's a permanent and statole Government, that Ranagas and M. Gambetta are right when they affirm that "there is no social question," that a period of unexampled peace and prosperity is before them; that the final evacuation of the country by the Germans is imminent; and that the sooner the horizontal prosperity is performed to the country by the Germans is imminent; and that the sooner the horizontal prosperity is performed to the country by the Germans is imminent; and that the sooner the horizontal prosperity is performed to the country by the Germans is imminent; and that the sooner the horizontal prosperity is performed to the country by the German in the country by the german in the country by the country by the grant prosperity is performed to the country by the grant prosperity is performed to the country by the grant prosperity is performed to the country by the grant prosperity is performed to the country by the grant prosperity is performed to the country by the grant prosperity is performed to the country by the grant prosperity is performed to the country by the grant prosperity is performed to the grant prosperity in the country by the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant prosperity is performed to the grant prosperity in the grant pr nightmare of the last two years vanishes from their memory the better. Some such magnetic current of feeling seems to have had a magical effect upon all classes of society, for Paris has become itself in everything except the weather, which is that of London in Pebruary, and even the depressing influence of unusual cold and rain fails to make itself felt. Scarcely ever has business been more active, the shops are overflowing with customers, and their proprietors are peuring large. profits than ever into their tills; the theatres, even those where the pieces are of unequaled dullness, are thought to excess, the inshionable world looks at itself mightly in crowded who is not to the profits of Legitimist or imperialist aristocency, and the "half world," as well as the whole, flaunts in the Bois de Boile on one days in gaudy colors, and comes pouring down the Champs Elysées, overflowing the town afterwards in a torrent of equipages as brilliant and numerous as in the days of the regimes gone by. As for the reforming, elevating and purifying influences, either of misfortunes or Republican forms of Government, they may be working somewhere underneath the surface, but they are not manifest upon it, the external fact being that neither the people nor the system under which they are governed seems to have undergone any change at all, except in the name of the individual who is governing them.

athor We see it stated that in a town in Massachusetts hundreds of women work athor in the manufacture of whips. This is a christianlike and civilizing demployment. How the tender sensibilities of these amiable matrons and madelens physics. One the tender sensitives of the strangers and natural must be come still more explicitly sensitive and pitying, as they turn off another and another score of those exceritors of the fest. How pleasant to eviden phate the pain unspeken and unspeakable of the solicies between the voiced prates. the pain unspoken and unspeakable of the voiceless brutes as the voiced brutes apply them, each lick salted down with full measure of godless oaths and imprecations. Unfortunately for the edification of these whip-making Christian women, their sisters of darker hue are no longer subjected to the howling descent of the Yankee-made lash, but fortunately for the market, there are still many brutes in the business of teaching in our schools, quite as brutal as formerly were our Northern men who drove "niggers" in Southern cotton fields; and many thousands of our white school boys will yet feel the scourging of some of those Westfield, women-made whips.

- We see it stated that convicts in Detroit write dime novels, and that jail life has no reformatory influence in this respect. This is a sad disappointment to us, who have been hoping long and prayerfully that some half dozen of the murderers of English and assassins of good taste in this city, who write atrocious articles for the Sunday papers, who droll out viscid sentiment in order to drone out viscid selections of the respective for this distribution of their moral polson and mental death-seed, have been hoping that the vacant cells of the State Prison, which have awaited their coming so long, would soon close upon them. But this Detroit announcement slits away the last block beneath the keel of our hope, and the soul glides out upon the sea of disappointment. There seems no escape from the spew-ings of "Bungletoe" and the cructations of "Woxcackle" and their chattering crowd of human magpies. Suicide is the only decent remedy.

- An Italian savant, M. Luigi Vallerio, of the Academy of Florence, has just discovered a new art, that might be called photo-painting; for not only are drawings reproduced, but the colors also with remarkable distinctness.

#### The Dew.

"Weep for me, gentle flowers, let your Plead for me with the light;" [tears So, tremblingly, before she disappears,

Whispers the Night.
"Amid creation, I am alone,
"Kollowing the floating Days [thro

Following the fleeting Day; [thrown The gray, mysterious spell around me Repels the gay. "What pleasure is it that to me belong The sweetest flower and bird, If by my ear the sad, beseeching song Alone be heard?

"He flies for ever from my yearning arms,
That glorious smiling sun; [charme,
I, bathed in tears, amid my starry

So, with a breath of sad and hopeless sighs,
Night bids the earth adien;

Night bids the earth adjeu;
And the pure tear-drops in the flower's eyes
We call the dew.

#### The Sale of the Effects of the Late F. L. A. Pioche.

The sale by the executors of the personal property of a man so well known for his good taste in art, ethnology, geology, as well as the more animal quality of gastronomy, could not but draw a crowd to the three days wherein the sale was divided. The first day's sale was domestic, the second as shotic, and the third Bacchic. To the first flocked all those who designt in turnture, marqueteric and antiquities; the third was crowded with men who linger at the table, and of whom had bingered at the table of bim who can no longer carry his class to his lips. The furniture and linen sold at prices that would bring water to the mouth of a marchand de brie à brac; the linen could have been bought cheaper quite new at the White House; the carved ivories and bronzes fetched fabulous prices, and the gams sold for more than their cost price. As for the wines, let us quote the words of one of our friends who was present: "The best brands were secured by our wealthy extigens for their private cellars, the dealers having little or no chance. How could they buy at a profit when Felton rolled out a price that would astound a Nabob, and Robinson and Bayerque and Theller and Johnson were crowding one another with bids. L. E. Brikesey was three sampling choice lots and badding without stant for those that sinted his palate. He had been there early and was seen emerging from the cellar with the look of a man who had struck it rich in the seven thous and the buy game, was straine out his money as lavishly as water, and Burkeley coolly picked up some choice lots of Bordeaux wines. We could say more about the quality of this cellar, one natural timidity having provented us from pushing torward to sample the wines at the sake, but if any purchaser wishes our candid opinion of his selection, he has only to forward an assortment to our office. We are an excellent judge of fine wines.

## Saigon [Cochin China].

Very stremous efforts have been made by the Government to increase the revenue of the Colony. Although import and export dutes have been eshewed as injurious to trade, more objectionable and irksome taxes have been adopted: more particularly an augmentation of the capitation tax on Chinese, to 25 francsammanly for coolies and other classes in proportion, the maximum rate being 300 francs. Moreover, in order to have a better control over the Chinese population, the Government have recently adopted the rother original system of photographing every Chinaman in Cochin China. A contract to perform this rather extensive operation was entered into by a Chinese artist, who undertook to produce two copies of every individual at 25 cents acqual to about 1 shillings. One copy of the photograph is registered, and another affixed to the individual s "Permit de Sejonr," an exception being made in favor of those paying 390 francs per annum. Further, a native spirit farm has been introduced, and thus considerably over a third of the entire revenue of the Colony is now derived from opium, gambling, and spirit licenses, and some idea of the habits of the people may be formed by the large sums realized thereby.—Loudon and China Express.

Three boys are reported as having been found dead in a field in Michigan, having feasted upon wild parsnips. Cannot some horticulturists—say, for instance, H. G.—fill all the lots in, and adjacent to, this city with that most benevolent of wild vegetables, so that any number of the sprouting Hoodhums of this burg may have a chance for a feast, the sexton a chance for his most satisfying labors, and the public a reason for rejoicing greater than all the patriotic emotions aroused by the recurrence of the Fourth of July can possibly equal. What a blessing it would be to this community were we allowed to select five thousand of these Hoodhums, deal out to them the wild parsnips, and then go quietly and bespeak five thou sand rough boxes and as many rough holes in "Potter's Fried!" The rejoicings that would follow the collapse of any one of these gallows birds would infinitely outweigh all the regrets following the last march of all of them.

## Magali.

The following beautiful song occurs in "Mirejo," a poem by Mistral, the great Provencal poet. It is translated by Rev. Charles T. Brooks:

O Magali! my darling dearest! Out from thy casement sweetly lean!

A morning sereneda thou hearest Of violin and tambouring The stars in heaven shine bright and keen,

The air is at its clearest,

But pale the morning star shall be At sight of thee !

"Thy morning serenade goes by me Unheeded as the morning breeze, While, like a slippery eel, I hie me Beneath the rocks in shining seas."

And fling thy net the prey to seize,
I, as a bird, o'er hill and hollow
Will fly away to the inland trees."

—O Magali! and shouldst thou flee Swift as a swallow

Then I will be a fowler free, And hunt for thee!

"The quail and the partridge that cringe For I an ivy vine will be entwining thee!

and cower,
For them mayst set thy snare with ease;
I, in the grass will hide that hour
Among the modest anemones." O Magali! if thee it please

To be a flower The morning brooklet I will be That drowneth thee!

"Glide as a brook through bush and

bower! I'll be a cloud and sail with ease To far America that hour, And there enjoy my liberties!" -O Magali! and shouldst thou flee

To Indian tower,

A breeze of the sea I straight will be, And carry thee! "And shouldst thou be the storm wind

blowing,
'Twill but prolong thy agonies;
For I will set warm currents flowing,

Ice-melting sunshine of the seas!
O Magali! and shouldst thou be Hot sunshine glowing,
A lizard green thou'lt find in me
To drink up thee!

"And shouldst thou be the salamander.

Through bush and brake that darts and flees.

Then I, pale moon, through heaven will wander,
Whose orb the enchanter gladly sees!"

O Magali! if thee it please

Full moonlight squander.

A veil of tender mist I'll be, And mantle thee!

"And shouldst thou be a mist-cloud tender.

Benéath the rôcks in shining seas."

—O Magail I if the at please
As fish to fly me,
Then I a fisherman will be,
And fish for thee!

"O no! when thou the shore dost follow, Then I the butterfly will be

That kisses thee !

"Well, quickly dart, fly, flutter, hover, Swift as the butterflies or bees, Beneath a huge oak's barky cover I'll hide among the forest trees !" O Magali! not even these

Shall cheat thy lover

"And think'st thou, now thine arms are round me

A shady tree alone they seize? I in Saint Blasin's cell have found me A refuge from thy witcheries !"

O Magali! no nunnery
With peace hath crowned thee; Father Confessor I will be,

And list to thee!

" Nay, if the mandate overleaping Thy entering step our cloister sees, There shalt thou hear the sisters, weep-

ing,
Chant o'er my corpse death's Litanies!"

O Magali! if thee I see In pale death sleeping.
To the cool carth I changed will be,
Then clasp I thee!

"Ah, now I see what thou hast spoken Was not in jest, thou noble youth;
Take from my hand this ring in token,
Forever, of my love and truth!"

O Magail I O word of sooth!

The morn has broken,
The stars have paled, O Magali,
At sight of thee!

That delicious little bijou of feminine sweetness, Rev. Annie A. Greene, of Watsonville, shed the light of her luminous and poetic eyes upon the Convention of cackling hens assembled at Mercantile Library Hall last week. The Rev. Annie has a heart as genial as sunshine, a soul as fragrant as the odor of new-mown hay and a spirit as gentle as a cooing dove. This frail, delicate, beautiful, intellectual conception of dust and divinity was sadly out of place among the Amazons who conception of dust and divinity was sadly out of place among the Amazons who made up the rank and file of the angular and ancient suffragists. She looked like an angel closeted with female Satans, or a timorous lamb in the midst of shewolves. With what rapturous, religious fervor the "gentle Annie" cast her saintly eyes toward Heaven and the Town Crier, as the mellow words fell from her redripe lips. There is something intoxicating in the voice of this clerical scraph. We wail over the delusion that places her amongst the women shriekers, to waste her sweetness on their sterile craniums. Gentle Annie, get thee to a nunnery, or stay in Watsonville, where lazy monks or bucolic bachelors may be edified with the canonic still lations of your matchless oths. savory scintillations of your matchless orbs.

<sup>—</sup> Now that the Woman's Suffrage Convention has adjourned, the small-pox makes its appearance. We are never without a plague of one kind or another.

### The Bails.

raising, wool gathering or wine making or intends to work mines, her own State offers an inviting field. The total amount of road built, single track, is from Franklin to Vineta, 328½ miles, and cost \$31,045,522 ld. This is the co-partnership to which San Francisco is invited—to co-operate in the construction of a road that within the bounds of Missouri cost \$100,000 per mile to build. In the name of God, how much will it cost when it gets into the mountains, plains, deserts and cañous of the interior continent? This mass of figures confuses us. This familiar mouthing of millions may do for men who either own no property to be taxed or who get paid an amount sufficient to balance their tax account. We submit the analysis of this long report and our conviction is that, unless as individuals we are willing to take stock in the enterprise, then as citizens we ought not to vote the amount of debt upon the city of San Francisco required for doing our part of this work, to wit, \$15,000,000.

# The Happy Solution of a Difficulty.

The agony is over and the cause of peace and good will among men has prevailed. For many weeks past contradictory and tantalizing cable messages in reference to the Washington treaty have sorely tried the patience of two great nations. In an evil hour Mr. Bancroft Davis was tempted, by way of rhetorical flourish, to insert the indirect claims in our case. What followed is well known. No later than a few days ago it was believed that the result must be the loss of the treaty. Fortunately, at the moment when the confusion seemed worst confounded, an unexpected and exceedingly happy way out of the difficulty was discovered. The arbitrators intimated their opinion that indirect claims were not properly the subject of a money award. Our agent, bowing gracefully, as we always expressed our readiness to do, to such an expression of opinion, withdrew the bone of contention and so ended the matter. At first sight this settlement seemed like a triumph for England, but the latest telegram shows incontestably that there was no such thing as a "triumph," in its partisan sense, on either side. To our own arbitrator, Charles Francis Adams, belongs whatever of victory there was in the happy solution arrived at. He it was who suggested it and paved the way for its adoption. As the London Times well says, he has "proved himself a true benefactor to both England and America," and his countrymen, so far from feeling any sense of defeat, will rejoice that when all around was confusion, it was their representative who, from the nettle danger, saw the way to pluck the flower safety. The cable informs us that "the indirect damages being settled, everything is definitely shaped, and as the arbitration goes on both sides are content with the result." This is, indeed, good news! The historically grand old city of Geneva has been the birthplace of many remarkable scenes, but even in her long experience, no such auspicious event is recorded as that which she witnesses to-day. Two great nations are setting an example to the world of submitt

— One of the saddest phases of political campaigning is the abominable trash indicted upon the readers of partisan papers in the shape of campaign songs. We may steel ourselves against the malice and uncharitableness of the political editorial, and we may survive the never-varying buncombe of the stump speech; but what protection have we against the political campaign song? Already are the columns of our exchanges blistering with the nuisance, and we are yet but upon the threshold of the great struggle in which "our liberty's existence hangs in the balance." which is to result for "the weal or woe, not only of ourselves and our children, but of millions yet unborn," and which, as usual, is to be "the most momentous event in our political history." Weak bardlings are eagerly seizing upon the occasion to get into print their inane and vapid stuff, and that puerlie and pitiable vacuity who exists in half a dozen localities upon the local fame of being "the most gifted poet of the Pacific coast," will not fail to add his miserable mite to the hateful pile of political songs. O, for relief from the impending infiction! Would that our voice were a keen-edged blade, that it might ruthlessly sever the windpipes of the puny poetasters! Would that we might be armed with a ponderous and far-reaching club, wherewith we could cruelly belabor und namercitully lambaste whoso should dare to lift up his cracked voice in puling peans to either Horace or Ulysses! Then would the people bless us as a means of grace to a happy deliverance, and the insufferable humbug called an election campaign would be freed, at least, from one intolerable nuisance. O Muses Nine! Earnestly we pray ye to blast and blister every pretentious and disreputable knave who ventures to insuli our intelligence by bringing before us a campaign song! Give us' the power, O Jove, and we will, with fierce delight, grasp every insignificant wretch who appears as a political poetaster and shake him over the sulphurous fires of Hades till he shall be but a crisp and

We Can Teach 'Em!

The Hon. Gavan Duffy. Prime Minister of the Colony of Victoria, Australia, recent-ly said to his fellow colonists: "We mant access to the U. States, because tree can be teach as the industrial and social arts." Buffy for Duffy! He evidently know how to treke us just right. Yes, we can teach 'em those things - particularly "the socia arts. For ways that are social and tricks of our own, our people are pecu iar, which we are free to maintain. Suppose, Master Duffy, you come over in one of the adeash ioned steamers we have, by aid of one of our "social arts," been "smart (mough to flatter you into hiring, when no one else would, and see how it is wounted As you have been so good as to speak handsomey of us, the News Letter conducy invites you. Come over and we li teach we the "social arts." But just take a fint before ye start. Be mindful to bring a thindering big title with ye. It must be onger and stronger than even the biggest sheldah that ever cracked a head in oned freland. Though a free people, we reat the loving people. How to acquire a title is one of our "social arts." Our own Mark Twain fels us that when the steamer was in motion that was about to take him away from San Francisco, he cailed out to a friend on the wharf, "Good-bye, Colone!" Three-fourths of the money crowd then assembled, believing, from the title used, that they were addressed, raised their hats and acknowledged the salute. A man a n't a man at an hereabonts if he is anything less than a Colonel. You may be Mister Duffy, a scholar, a poet and a patriot, but you will be esteemed in this land of the free greater than a lithese com-bined it you will only come to us announced as Lord Duffy, of the Barony of New Bindell yell without constant of all the Australias, etc. Within twenty-foot hours after your arriva; we would make a citizen of the United States of we that as to say, we would if the politicians needed your vote. Otherwise we would obey the law which only confers citizenship upon residents of some year's standing. It is one which only confers chizenship upon residents of some year's standing. It some of our national "social arts" that we have cultivated with assignity and success to obey the law only when it suits us. To be truly free a man must be no more a slave to the law than to anything else. The laws were made for man, not man for have to the laws. If it should happen that we required your vole, we fee assured you would not tall into the error of your countryman, who, having just landed as New York, and weng to that the first thing he must to do us to vote, replied, "Wed, if I must, I li go agin the government, as I've bin doing all my ite." No, Mister Duffy, that is a mistake you would be sure to avoid, for if the reports be correct that reach us, you have recently taken to voting for governments instead of "agin" them, as you were carryl trained to do. No wonder you have, for an Irishiman never votes "agin" himself, as you would have to do, seeing as how you are a government yourself, or leastways you are the best part of it-you are the head of one. More power toye, and glory be to ouid Ireland for that same honor to one of her sons. If we came among as and needed an office, you would be pretty like to get it, for in San Francisco Irisl men do a large share of the voting, though it is said they don't do quite all the office holding they ought to. The "social art of "voting early and voting often," is one, Mister Duffy, you wou d soon learn, for Irishinen are usually accredited with taking to it as concentally as does a dock to water. More power to them, for it a a useful as wen as a social art. It often e cets men who wouldn't otherwise be sected. It has, for instance, recently been the means of electing the whole City Government of Brookiya, New York. If you got an office among us, you would have to master our "social art" of steading well. We all stead well when we get into office. Men hones in private business look upon steading as one of the inalienable rights of office. We seldom or new the steady of the control of the cont upon steading as one of the inalienable rights of office. We seldom or never circt a man a second time unless be has stolen enough during his first term to be able to pay a high price for the provinge of steading about. If a man has filled a position of trust, and should happen to reture puon but honest (which he never does), so far from being rewarded with a pension, he would hardly receive the respect of his fellow circons, for he would be called a fool. Thus it comes that steading in office with us is a "social art." Australians, we believe, pension their poor office-hoders. We let ours stead well. It's only a difference in "the social art." which we can feach em. We observe in Mister Duffy a speech that he thinks the passing of some half dozen We observe in Mister Duily a speech that he thinks the passing of some haif dozen laws will be a good session's work. Bless his unneent soul, if he only understood our "social arts" of log rolling, lobbying, and "fixing things" beforehand, now making wouldn't give him such trouble. A recent Canfornia Legislature passed two nundred and seventy bills into statutes in less than two hours by the simple operation of reading their titles. Wouldn't that be a grand way. Mister Duily, of managing your infractable Assembly? Come over—it is a "social art" we can teach ye! It has many merits, not the least of which is, it cheats the newspapers. On the occasion ailuded to it took our daily press a whole fortuight to tell what had been done. When they got through they were too exhausted to turn to the useless task of criticizing what had actually been accomposited. Mister buffy, wouldn't ye like to truck the Argas and the lesser lights like that. Bh. Come over: It's a "accial art" we can leach ye. Our forelathers fought and bied for the right to tax "acciss art we can teach ye. Our foreathers longit and best for the right to ask themselves, and nobly have their children practiced the right, until it has become one of our "social arts." We utterly decline in this respect to be outdone by any effete monarchy. We disdain to yield to the subjects of any irro-heeled despotsom on earth a superior right to realize to its indest extent sydney smith; sides of being taxed from the cradic to the grave, than that which we claim to enjoy in our own persons, as free citizens of this glorious Republic, over which the star-spangled bwin persons, as the character of fourth of July orators—hands off! Then there are other "social arts " we can teach 'em, which in some down-trodden communities are only referred to in whispered tone, but which in our free land are thundred. forth from the public rostrum. We can teach 'em the very "social art" of free-love. Last week we had for four consecutive days a convention sitting in this city, made up mainly of female free-lovers intent upon disseminating their doctrines, and they were reported in the plainest terms in our daily press. Then, sure, hav'n't we our free-love candidate for President of the United States? Come over, Mister Duffy, free-love is a "social art" we can teach ye. If Mrs. Duffy happens to come along and objects, as she probably would, not having been taught our "social arts," why, she would only have to learn another of our "social arts," which dozens practice weekly, in order to set matters right. Lawyers offer to procure divorces without witnesses, without publicity and without cause. And they do it too. Man and wife have only to separate, when the law calls it "descrition," and divorce follows as a matter of course. If the lady should object to have the matter settled in that way, there is another of our "arts" the application of which would assuredly solve the difficulty. We refer to our often practiced "art" of "putting holes" in one another, which is a playful way we have of describing pistol shoofing. That is an "art" we are proficent in, though whether it ought to be chassed as an "industrial" or a "social" art, we are not quite certain. Perhaps it is all the of both, or six of one and half a dozen of the other. The Presidentess of our Woman's Suffrage Association tried to practice the art the other evening, at a public lecture, upon the body of one of our legislators. Her success was not great owing to an interfering reporter. We "put holes" in a hundred or so yearly. No one is ever hanged, and not one shootist in twenty ever goes to the State prison. It's a good way of getting rid of political opponents. Yes I by all means, come over, Mister Duffy, we can teach ye the "social arts."

# The Servantgalism of the Future.

The idea of combination among the servant girls for the purpose of asserting their "rights" is one that comes upon us like a thunder-clap. What will be the consequence? It is quite certain that the relation between master or mistress and servant must gravitate, like every other relation of the kind, towards becoming in the eye of the law and of society a matter of pure contract. The paternal or coddling element on the one side and the cringing or "obligated" element on the other must soon die out. So that whatever promotes a good understanding as to the basis of the relations between master or mistress and servant is a good thing. But when we consider the desperate and ludierons ignorance, even of common "right and wrong, in which the majority of servant girls have grown up, we can hardly see any limit to the immediate evil effects of any combination among them in the nature of a strike or a protective union. Hitherto female servants have been trusted by all kind masters and mistresses as belonging to the household, and on the strength of that hypothesis their little peculations have been lenically regarded. Jane puts on a pair of "borrowed" silk stockings, and nobody takes any notice. Mary Ann carries off half a joint and half a loaf of bread to her friends on the plea that she was not able to eat any dinner, and thought you would not mind it. Eliza charges you half-acrown for something which at the shop she only paid two shillings for. In fact, it may safely be asserted that but for the leniency of purely domestic constructions ninety out of every hundred servant girls are, by all the civil law in Christendon, swindlers and thieves. What will be the first result of a sort of trades' union among women of this stamp no human being can remotely groses. There is something portentious in the notion of women combining at all for any such ends, and we can only hope that the attempt which is reported from a town in the north of England may come to nothing. Fendal ideas are everywhere dying out, and that rapidly. In i

Bishop Amat having set apart five young Spanish-Americans by conferring upon them "sacred orders," whatever that may be, a rush to the confessional, where they shall sit behind the screen and tap consciences as a Vermont sugarmaker taps the maple and sets the sap running, may be looked for with certainty. Five non-producers added to the lazzaroni who live by mumbling prayers in excerable Latin which they do not understand, and playing the devil with the made and desires. If Satan existed, as represented, and were allowed to plan the most efficient means of getting at the glowing passions of the young, and taking advantage of the opportunities thus offered, he could not have more directly and efficiently accomplished the work than by the establishment of this same confessional system, by which the lewd priest, flushed with wine and vigorous with the consumption of rich viands which honest men have to pay for, is allowed to get at a woman's inmost passions and take advantage of her through her confessions.

#### Our Roses.

In a country so rich in flowers as California, and where roses form so bright and beautiful a feature in our gardens, the following interesting account of the history and culture of the rose, for which we are indebted to a communication in the Springfield Republican, will be of interest alike to horticulturists and amateurs :

Springfield Republican, will be of interest alike to horticulturists and amateurs:

The history of the rose is connected with remote antiquity. In the classic ages it was a highly prized flower, and its Greek and Latin names signify fullness and roundness. In those days, however, there were but four species known, viz: Centifolia, Pimpernel, Heptree and the Hedge-rose. The roses of Paestam were sparticularly beautiful, while those of Malta were the most fragrant, and those of Cyrene yielded the most ottar of rose. At the festivals of the ancients, roses were wound around the arches, turned about the statues, woven into garlands and suspended from the walls, and the banquetting halls were redolent with their perfunction, Everywhere were roses honored—the bride carried one beneath her purple veil as an emblem of purity: the host anspended a rose above his table as an emblem of accreey; at the public games Senators received roses from the addes, and after the downfall of Carthage, Æmilianus adorned the shields of his favorite legion with them: while the soldiers of the eighth legion, who first attacked Hannibal's camp, carried bouquets of roses at the triumphal celebration.

There was a perfect mania among the Romans with regard to the devotion offered

There was a perfect mania among the Romans with regard to the devotion offered to this, their favorite flower. They used it to adorn their feativals and their funerals; added it as a flavor to their wine, and a virtue to their medicine. Its perfume was infused into their clothing, napkins, tablecloths, and bed-linen. Honey of roses brightened their eyes; spirit of roses whitened their skin; symp of roses preroses brightened their eyes; spirit of roses whitened their skin; symp of roses prevented dyspepsis; vinegar of roses cured the headache; conserve of roses staunched the dowing of blood. After the fall of the Empire, the cultivation of the rose was neglected in Europe, excepting in the convent gardens; but at the East much attention was given to its culture, and Arab authors wrote many folios concerning its merits and treatment. In Persia it was highly cultivated, and the poet of the land sang its charms. In the seventeenth century Holland began to take an interest in this flower—yet only ten species are known to have been cultivated then, and in 1708 forty from species are known to have been cultivated then, and in 1798 forty-four species were described; while at this time there are more than seven thousand varieties known and esteemed.

The Empress Josephine was a passionate lover of roses, and her interest in the flower greatly increased its culture in France. At Malmaison she superintended Hower greatly increased its culture in France. At Maimaison she superintended the raising of the rarest species, and Dupont, her head gardener, prepared a bed of roses which formed her name. Rouen, Versailles and Lyons were celebrated for roses, and large green-houses were constructed for their use; at Luxembourg, Hardy became a most successful rosarian. The rose will grow all over the globe. On the rocky hights of the Alps we see the Rosa alpina and Rosa rubrifolia; under the snows of the Lapland flourish the fragrant Hosa majalis, and Rosa rubelis even on the borders of the desert of Sahara is found the white Moss-rose; and cruid the Role Moss-rose; and amid the Rocky Mountains of our own land, thousands of delicionaly sweet, single

amid the Rocky Mountains of our own land, thousands of delicionsly sweet, single roses bud and bloom in beauty and loveliness. Asia possesse a greater number of species and varieties than all the rest of the globe. Thirty-nume native species grow within her borders, and fifteen of them belong to China alone.

The effects produced upon the rose by careful cultivation are known but little. It is a plant which requires the richest soil and close pruning to show itself in perfection. We can hardly plant it in too rich a compost, and frequently Tea roses are planted in two years old horse manure with only a little mixture of sand, and thus fed, they will grow and bloom luxuriantly. Roses not only require a very rich soil when first planted, but they need to have it frequently enriched, and also require good drainage; and if the season is dry, copious waterings are also needful. Soap sands are particularly beneficial to roses, as she potash they contain is essential to the growth of the plant. The soil should be frequently stirred about the roots to give them an airing.

essential to the growth of the plant. The soil should be frequency surred about the roots to give them an airing.

When the first bloom of the Hybrid Perpetuals is passed they should be pruned closely, removing all the oldest stems and branches and cutting back for three or four inches all of the new growth. Pruning is a very important part of rose culfour inches all of the new growth. Fruning is a very important part of rose culture, especially with the varieties that are expected to bloom again the same season. The varieties of monthly and perpetual roses always produce their flowers upon young shoots of the present season a growth; so the more fresh shoots you can obtain the more rosebuds will be the result. After pruning severely, sparing not the branches, it is well to add a large supply of liquid manure, and, if a barnyard is not conveniently at hand, take one table spoonful of guano to a gallon of warm water, let it stand in the sun all day and apply it to the roots at night, taking care see the acceptable the letters with the

not to aprinkle the leaves with it.

When roses are set out, pruned and highly cultivated, we must be on the lookout for worms and insects of all kinds which infest the bushes, skeletonize the leaves for worms and insects of all kinds which infest the bushes, skeletonize the leaves and ruin the flowers. By picking off the worms and bugs, one can keep two or three bushes in leaf; but when one has many plants, hand-picking is too laboribus. A mineral "tertilizer" keeps our roses fresh and green, and if sprinkled over the leaves early in May will destroy every sing, rose-bug and worm. Air-slaked line will also prove an antidote; both of these remedies must be applied while the plants are wet with dew. Another remedy, which has been very successful, is one pint of salt and one quart of soft coupled in ten gallons of water, and syringed or sprinkled over the leaves. When the leaves become mildewed they stated the searched with sect from the strengths or in meaning. should be prinkled with soot from the stove-pipes or chimneys, and in twentyfour hours wash it off with the watering-pot. Still another antidote is found in sulphur and quick-lime, one quart of the latter to one pound of sulphur, add two gallons of hot water, and to one pint of this liquid add one gallon of water, and syringe not only roses but verbenas and ail plants that are affected with mildew or

Roses are very easily grown from cuttings. The shoot should not be too young, nor yet so old as to be woody. Peter Henderson says: "If a cutting will break readily it is in the best of condition to grow; but if it bends it will not root as quickly, if at all," It should be cut off just below a joint, trimming off the leaves at the bottom, and leaving not more than two buds with leaves at the top, and if at the bottom, and leaving not more than two buds with leaves at the top, and if these are large it is better to cut off one or two of them, for if there are too many leaves they will surely will. Clear sand is the heat to make all kinds of cuttings grow, but it must be thoroughly soaked with sand all the time, for if allowed to dry the cutting will surely die. Bottom heat is also essential to the successful growth of all kinds of cuttings, and if a hot-bed or hot water tank is not to be had, we must improvise one with a pan of hot water, placing the pots into it and changing it two or three times each day. The great secretin growing cuttings is in the even-ness of the temperature, which should not vary more than from 55 to 70 degrees; if if allowed to vary from 50 to 80 degrees they will rarely live. So, if possible, cover the cuttings with a glass, and remove it when it is very warm. If a large pot is filled only half full of sand and kept in warm water and covered with a piece of window disas, a very cood tiny hot-bed is procured. In Summer it is well to plant window glass, a very good tiny hot-bed is procured. In Summer it is well to plant cuttings out of doors in sand, with a partial shade from the sun, and enclose them in glass shades night and day. As soon as a few tiny leaves show that the rootlets are formed, the cuttings must be transplanted into the richest soil, for although sand is the best medium to force the roots, it will not nourish them sufficiently to form many leaves.

form many leaves.

Every man, woman and child can grow a rose-bush, and few can realize how much pleasure attends its culture until they raise one from the cutting to the perfection of the flower. Only a few years ago, cultivators of roses were but few in number, and now there are florists who own twenty acres of roses, and sell a million of plants yearly. There are a great number of new roses offered for sale, some of which are very beautiful, but only a few of them surpass our old favorities, and many differ so slightly from them that they do not add much variety to a collection. The Peerless is a very beautiful rose of the Hybrid Bourbon species, and was raised from seed by Walter Donald, of Astoria, L. I.; its flowers are borne in immense clusters, and it blooms very freely. The Bella is a new white Tea rose of very vigorous habit, and of bushey compact form. Among the new English rose mense clusters, and it blooms very freely. The Bella is a new white 'tea rose of very vigorous habit, and of bushy compact form. Among the new English roses introduced the past year, are Auguste Neumann, of a brilliant scarlet hue, and a large, full flower; it is highly recommended. The Candid, very clear flesh white, passing to pure white, is a charming flower. Comtesse d'Oxford is of a lovely carmine red, a very rich, bright color. Ferdinand de Lesseps, purple shaded with violet, is a first-class rose, very fine in color and form. Louis Van Houtet a splendid rose, of a scarlet crimson, and received a first-class certificate from the Pacual Hartisuthural Scatter.

Royal Horticultural Society.

Monthly roses make most beautiful hedges, and are quite the fashion at present. We saw a very perfect one, composed of the Hybrid Bourbon species, at Shaw's Gardens in St. Louis. After the Summer bloom has passed away, all the old growth is cut off or shortened in; the roots are liberally stimulated, so that fresh shoots push forth on every side, and in September such a hedge is a gorgeous mass of flowers.

— Cozzens has come, and our dear sisters who cry out for their rights are therefore stouter of heart. Cozzens is the chosen one who is to lead them to the happy land of Camann—the feminine Moses, who is to deliver them from hateful therefore stouter of heart. Cozzens is the chosen one who is to lead them to the happy land of Canasan—the feminine Moses, who is to deliver them from hateful bondage. Cozzens is a lawyer, who will confute the sophistries of those who deny that a Dolly Varden is a citizen; a spouter of fine words, who will shame even Barnes by the brilliancy of her speech. She is a tender and winsome virgin, rounded in form and beautiful in face, before whose transcendent loveliness even the scoffer of the Chronicle was compelled to bow down in involuntary admiration. The Town Crier is delighted. For years hath he lifted up his voice in supplication for such a visitant. Wearily hath he gazed upon the worn and faded features of the average suffrage shricker; with sadness bath he reflected, when amongst the dissatisfied sisterhood, that they are never things of beauty nor Joys at any time. Now the scene is changed. Cozzens is here; and the Town Crier, shaking off his lassitude, exclaims with Mazeppa, "Again I stand erect," and rushes with open arms to welcome the new-comer and imprint upon her forehead the kiss of peace. O Cozzens in most heartily do we acclaim thy advent. We pat thee benignantly on the back, and urge thee to go in and win. Smite the masculine hip and thigh and leave no soundness in them. Demand your rights at all times and in all places; and if you obtain them not, turn, we pray thee, to the Town Crier, who waits like a young lion to rush to thy rescene. With all his vehemence, and all the strength that dwelleth in his bones, will he labor in thy behalf; and he humbly believes that his exertions will not be without good fruit. Great is the Town Crier, Cozzy, in the cause of suffering women, and right gallantly and untiringly doth he demean himself. Suffer him to cleave unto thy cause, and reject him not, for of such is the kingdom of heaven. kingdom of heaven.

<sup>—</sup> It is considered the thing in London, for a lady to wear a smelling-bottle attached to her belt.

## Wayside Gushings.

BY MRS. HARRIS.

DEAR News LETTER: I did promise ven I wrote to you last veek. To report on Voman's Suffrage and the vords I then did speak. Them there 'ordi mild reporters of the San Francisco press 'Ave not done my speech firl justice, vich weren't heavy, I confess, For ven 'Arris vas proceedin' vith 'er speech and gettin 'ot, Up jumped a camankerous female and promounced or a bad lot. Mrs. Churchill, who's as ugly as a hinfant nooly nussed, Got up on the seat and 'coted, and the 'Arris platform cussed, 'Cos I said I could not 'old, but yot vun man vas quite enough 'Cos I said I could not 'old, but vot vun man vas quite enough For sich sweet, windictive creeturs as is scraegy, old and tough. Talk of cats upon an 'ousetop caterwaulin' late at night, I did never see sich telines as was spoilin' for a fight. 'Elter skelter quite promiseuous toward the piatform they did rush, 'Ollering at me, 'Base old 'Arris, we did think you meant to gush In our favor, or that leastways tow'rd polyg'my yord incline, As did make avay with 'Arris, likeways babes as wasn't thine.'

"Does the party mean to insinivate "--cre I raised my humbrella—
"That I suddingly made avay with 'Arris! If she says so, I do tell 'cre She is an howdwing critter, for my neighbors all cas sayer.

She is an howdacious crittur, for my neighbors all can swear She is an howdactous critur, for my neighbors all can awear 'Arris died of slow combustion, brought on by my constant care.''
Ven he died he died hexciaimin', 'Tilda Jane, I'm glad to go
For my life with you's a burden in this walley 'ere below.'
And says I to 'im, 'Dear 'Arris, since you've left me all you've got,
P'raps 'tis better you should leave me, though I fear you'll find it 'ot
Vhere you're goin', but the cooking vil most likely do you good,
For your kidneys vill be devited, likeways broiled vill be your food.' Says he, 'I am not partikler, for you've kept me in a stew Ever since our vedding morning, and I'm glad to bid adleu: Give us vun more drink, old lady. 'Ere's to 'im as takes my place In your vartuous conch connobial—cuesee on 'is ugly face!"

'Ere he sipped his gin and water and give me a parting kiss, As 'ad bin a troo wife to 'im, and vith rapture vent to bliss. Sich is 'Arris's brief record, and the infants I did nuss, Yen their board were not paid up, did frequent appen to grow wass, For we all know ow precarious is the raisin of a child Ven the parents is not vesithy and the milk is not drawed mild.

Ven I thus hexplained my views the Rights Vomen did give a screech, As did werry much disturb the equilibrium of my speech.
Sayrah 'oliverd, "You'll he mardered, missus, if you don't come down, By these 'ere cantankerous vild cats," but I hanswered vith a frown, And says I, "If Mrs. Loomis or Pitte-Stevens vants to talk, They must vait till I have finished, otherways they'd better walk, For I'm 'ere by hinwitation to hexpatiate voman's sphere, And hexplain the stituation to all them as vants to 'ear."
Then a wenerable chap got up, vich 'is name is Mr. Mecker, And in hacents mild be 'oliered, "Vomen's vomen, 'ear the speaker."
But Pitte-Stevens drew a pistol, and did haim it at 'is 'ead, And poor Mecker turned as ghastly as a rooster ven he's dead. And poor Meeker turned as ghastly as a rooster ven he's dead. Loomis, too, did square 'er helbows, and did scream, "If there is van And poor Mecker turned as ghasily as a rooster von he's dead.

Loomis, too, did square 'en helbows, and did scream, 'If there is van

As can tackle me at boxin', 'ere's my 'and: let 'im come on '!'

Sayrah she did scream 'perliceman,' 'and lav kickin' on 'er back,

And an 'andsome gont vith vhiskers vent and 'olbered for an 'ack.

The crowd made vay and quite conteons said, 'Lethus.' Arris pass,

For she is a wartnous voman and a vidder green as grass.

And hexceptin' Queen Wictoria there's no fady ranks so 'igh

For' er wirtnes as does 'Arr's in the ele community.

All your Voodhults and Mackinleys, Loomises and Hem'ly Pitts,

Vot is they compared to 'Arris, as can heavy give 'em fits

On the platform or on paper in 'er sweet hangelle wuss,

As 'ave von a glorious record both as poetess and uass.'

So they give three cheers for 'Arris, and the gents bowed quite purlite,

And said, '''Arris, we'll stand by yon in vour views, for they is right.'

Not an 'air upon your precious 'end shall these seraggy 'uns himpair'.'

Vich I think is werry likely, cos I 'aven't got no 'air.'

"Take Platt's 'All and let us ear you more at length your views discuss,

As was radely hinterrupted by the 'ens as made the muss.

You and Sayrah both is pop lar, and your woice is clear and loud,

As could heavy reach permiscuous any San Francisco crowd.

Ve vould all be glad to 'ear you on the Fourth of next July,

'Possibly.'' says I, ''lf passing hopposite Montgomery Block,

"Possibly," says I, "if passing hopposite Montgomery Block, You may see both me and Sayruh in 'er new meriner freek; Then should any leadin' citizen vish to ask me vot I think. I vill feel quite proud to speechify, if he will stand the drink !"

#### Court Chat.

—An Englishmen and his wife, not speaking a word of German, but having some knowledge of French, determined to visit the capital of Prussia and Saxony. They had been recommended to a hotel at Berlin, and were proceeding to it in a hired vehicle, when suddenly the lady espide an imposing looking building, on which was inscribed in large letters, "Hotel Radziwill." She immediately exclaimed, "There's a fine hotel, and what a nice open situation!" "Well, should you like to go there!" "Oh, yes!" No sooner said than done; the driver was made to set them down there. Several persons were around the door of the hotel, but no one that spoke English or French; they were made to understand, however, that the luggage was to be taken within doors, and with much ceremony they were introduced to an apartment. The lady made a icms to be shown a bed-group, which that the higgage was to be aken within doors, and wish intendered to an apartment. The lady made signs to be shown a bed-room, which was done, and, on her return, she said, "Well, I never saw a hotel so charmingly firmished as this! I should like you to step up and look at the bed-room; and such a dressing-room!" The husband, also, was full of admiration; he had been exfurnished as this! I should like you to step up and look at the bed-room; and such a dressing-room!" The husband, also, was full of admiration; he had been examining the few paintings which hung upon the walls, and pronounced them valuable pictures. Having made some necessary changes of apparel, they rang the bell and made the attendant acquainted that they would dine at five. On their return from a promenade, a gentlemanly looking man entered the salon, bowed, and said something in German, which was not understood, and the Englishman, thinking his manner somewhat free, carelessly replied with a "Good morning—how dive do?" and the stranger retired. A sumptious little dinner was served, and wine of a recherché character, and in due course coffee, and a chasse-caffe of some delicious liqueur. When the two servants left the room, the husband observed, "This is all very capital, my dear; I only hope we shall be as well satisfied when we see the hill." His wife rejoined, "I'm sure this is a very first-rate hotel, and very expensive; if I were you I would have the bill to-morrow morning, that we may know how we are going on." They went on, however, for a day or two, delighted with everything, and then the lady's prudent warning so far prevailed that the bill was directed to be brought the following morning at breakfast. Breakfast came, but no bill, and it was then peremptorily demanded, and when the room was cleared, the husband said, "I begin to partake of your suspicions. I don't half like this reluctance to bring the bill, and I expect when it does come it will be enormous." Very shortly the same personage who had made his appearance on their first arrival entered the room, and advancing toward them, the following dialogue took place in French: Stranger—"I am the Prince Radziwill." Englishman, rising and presenting a chair—"To what may I ascribe the honor of this visit!" Stranger—"You have evidently taken this to be a public hotel." Englishman, it is man a surprised to be one. The prince saw, and no doubt secretly joyed, their confusion, but expressed himself highly delighted at having had the opportunity, even by mistake, of extending his bospitality to a gentleman and lady from England, the inhabitants of which country, he was pleased to say, were always objects of interest and esteem. The Englishman having made a suitable reply, or attempted it, for his ideas continued somewhat confused, the prince went on to say that, if it met their convenience, he should be very glad if they would favor him with their company for a few days longer, when they would be more immediately his guests. The lady, however, declared to her husband, aside, that she shouldn't recover herself until they were out of the house; the invitation, therefore, was politely and gratefully declined. The Englishman contrived to give a handsome douceur to the domestics, and the prince insisted on sending them to their hotel in his carriage. On being asked afterward if he had given the prince his card, the Englishman replied, "No! what was the use of presenting him with a card with "Mr. Jones" upon it !"—Court Journal.

The Japanese never smoke opium. They have small pipes that will hold three good whiffs, and of the mildest Turkish tobacco. They have a club-house in Yokohama, of which the high officials are members. They have none at Yedo, the capital. They have games of chess, cards and dominoes. Their cards are different from ours, but the essential principles of the game are the same. Lutterly they have become large importers of billiard tables, and the game is fast assuming there high rank. They are great wrestlers, and every year the champion wrestler wins the embroidered apron, which he is allowed to wear one year. No Japanese is allowed to cut down a tree unless he plants another. Under the law, the mother is held responsible for the good conduct of her children. If a trouble occurs in the street, the parties living opposite are held responsible for it. Of course they try to make the parties "move on" and stop the row. The idea is, that every citizen must be a policeman. All married women have their eyebrows shaved. Married men have no distinctive mark. The Japanese are a jolly people. They have their illustrated Punch; besides that, sixteen newspapers, with three English—the Herald, the Mail and the News—published in Yokohama. The present Emperor is the one hundred and twenty-fourth in regular line. In these generations there have been eight females. The present Emperor, Moutsouhito, is six feet high, twenty-two years old, and a fine specimen of a man.

#### In June.

Brown in the blue of the river lies A shadowy, lazy trout: Who could trouble himself to rise, And get his tackle out? Let me do nothing but live for a day, Live and listen and look: Let there be truce between preyer and prey, Between the fish and the book. I will look on the midstream strong and even, And the eddy's brawling rush; I will rise with the lark to the gates of heaven,
I will love with the thrush. I will learn the song that the river sings, In varying time and tune Of this day the sweetest of all sweet things-in June. Low I lie on a soft green bed, Drinking the lazy air; Green is the canopy high o'er my head, The larch's fringe hangs fair. In scented darkness over my eyes, Bee-haunted brambles trail;
I know I feel the blue of the skies,
I need not sever their veil. Wild roses tangle the water above. Below my nook of rest;
If they win not the river, with all their love,
They may die on his breast. And the river, unwitting, wends his way, With pink and white spoils strewn: The love-born spoils of a wild-rose day-in June. Quiver, O larch ! till in evening's haze Your tarch this in evening's naze
Your taskets rise and fall.
Murmin, O bee! in the bramble sprays,
Till you find your home in the wall.
Sing, O thrush! in my listening cars,
As one sang to the monk of old. I could listen and lie for a hundred years, And deem that their sands ran gold. Ripple, O river! by bud and flower,
As long as my eyes may see;
Sweep, in the pride of your royal power, Past the town to the sea; Teach me the whole of your murmuring lay, The night comes all too soon:

#### Two Fat Geese.

The night, ah, me! of this glorious day-in June.

A lawyer was once called upon by a party to defend an action that had been brought against him. The attorney informed him that he had been retained by the opposite party; but he would give him a letter to another attorney, who was every way worthy. The applicant thanked him, and the attorney wrote the letter and handed it to him scaled. The defendant started of, but on his way to the office, upon thinking of the matter, he bad a great desire to know the contents of the letter, and it became so great that he broke the seal and read the following:

"BROTHER A: Here are two fat geese. You pluck one and I will pluck the other. Fraternally yours,

Shocked at such evident designs upon his purse, he hastened to make his peace with the plaintiff, and thus saved himself from great cost if not ruin. It is evident from the published contract entered into between the Atlantic and Pacific Railroad Company and the Eastern Commission, appointed by our Committee of One Hundred, that the cities of St. Louis and San Francisco are regarded as two very fat geese—that the former is to be plucked by the eastern end of the A. & P. R. & Co., while San Francisco is to be plucked by the committee of One Hundred, as both cities are to be induced to subscribe large amounts of stock; but Trustees are to vote on the stock and manage the interests of the city therein. Let the city, like the litizant, no longer war on the C. P. and S. P. R. & Companies, but like an honest municipality, go to them, settle all differences and give them such facilities for terminal purposes as will be sofficient, not for ad ay or year, but for all times

<sup>—</sup> The great island of Marajo, dividing the Para from the Amazon, became entirely inundated early in April, and it is calculated that 93,000 head of cattle periahed.

# Leaves from a Lady's Diary.

June 23.—Staid in bed all the morning lazily turning over a file of English newspapers, and thought, after all, with more or less talent in different cases, journalism is the same over the whole world. There is the same pandering to popular crise the same eagerness for slanderous news, the same denunciation of their adversaries and everywhere the same jealousy of their contemporaries. Drove out to the H's in the afternoon, where there is always an assembly of visitors on Sundays. Mr. W. told me a story about Nellie B. and young W. It appears that when they were engaged he had given her an old family ring, and after the match was broken off sent a friend to ask her for it. She began to cry and begged pitcously to be allowed to keep the only object that reminded her of her happy days, and pleaded so carnestly that the friend went back. Young W., however, was inflexible, and insisted on the ring being returned. Eventually Nellie was obliged to confess that she had sold it about six months ago.

she had sold it about six months ago.

June 24.—The town is full of globe trotters, mostly English. They may be known by their thick shoes, short trowsers and general disregard of the amenlities of dress. An Englishman would no more think of going to his Club in London where he is a member, in the clothes he thinks good enough for a Club here where he is a guest, than he would of going to the dress circle of a theater or to church in an old shooting coat, and yet he does both here. Mrs. V. had a favorite cat which Mr. D. was crucle enough to shoot one day. She said nothing, but set traps all over her house and gave some to her friends. When she had collected some seventy or eighty live mice, she put them into a neat bonnet-box and sent it to Mrs. D., who opened it in her drawing-room. Of course the mice all jumped out and filled the house. At the bottom of the box was a note conched in the following terms: "Madam—Your husband killed my cat, therefore I send you my mice."

JUNE 25.—W. M. has gone back to Lima, having lost all his money here. I went with his poor little wife to see him off by the steamer, but there was such bustle and crowd and confusion that leave taking was impossible; it only made her more nervous and tearful, and a man in such cases seeks to hide his feelings. A not

sufficiently known or appreciated poet says:—
"We parted in the sunshine and the crowd,

we parted in the substitute and the crowd, The inquisitive gaze of noon, the busy hum of men about the port, with strangers by; And cold convention with her tyrant forms Removed the solace and drove home the sting. We should have sundered on a lonely shore, Where slowly broadened o'er a misty sea. The shimmer of a large, low-lying moon My vessel should have loomed against the flight.

Any vessel should have loomed against the hight,

Nor shown impatience but by one flapped sail."

Nor shown impatience but by one flapped sail."

Barrett so much, and he looked the lean Cassius. But why does he pronounce this word Cashus and not Casyus? The scene of the Senate in council was splendid. How the public nowa-days must be supplied with fresh and ever-changing amusements. Last week modern drama in the shape of Dirocce, this week tragedy and next week Of subach's with frivolities. Aimée is world renowned, though what she is like it is impossible to say from the three potraits of her that are so liberally scattered over the town, for they are all three entirely different one from the other. A crop of women lecturers has sprung up here this last fornight, but on such barren soil that it speedily withered. I falti sono maschii, le parole femine, say the Italians.

What are we to do with the women-women? Have the "seven devils" entered into their chignous, or are the fautastic tricks they play the result of efforts made by the devils aircady in tnem in trying to get out again? Really, if any poor temporary exile from the sulphurous pit has been unfortunate enough to take up domicile with these unexeed disturbers of the peace, we pity him, rather than his entertainer. Only think of a woman that a good-sized man might pick up between thumb and finger, putting on the airs of a bully after having offended decency and decorum by conduct befitting only the blackguard, and demanding satisfaction with an empty pistol for show in her trembling hand! And demanding this, on the style of a male bravo, of the warlike Meeker! Gorry, what are we man to do to preserve our precious lives against smooth-bore pistols and caps, caps filled with percussion powder or percussion women? Are the bottomless pits prepared to take us all in 3

Many readers of descriptions of works of art, pictures, engravings, statues, and the like, experience doubts as to the meaning of the writer when he employs the terms "right" and "left." Although it is generally understood that these words refer to the right or left of the spectator, and not to that of the work in question, that convention is not always observed, and the respective sides of the design are occasionally intended. The simplest way of obviating all chances of misconstruction, one which we observe, is to write "our right" and "our left," a proceeding which can leave no one in doubt, and which we recommend for adoption by authors.—Alkenœum.

#### Earnings of the Atlantic and Pacific Railroad.

The report of Commissioners Sneath and Hopkins shows that the gross earnings of the Atlantic and Pacific for the first four months of this year amounted to hat \$342,668 07, or at the rate of \$1,028,004 per annum. The Commissioners say ings of the Atlantic and Facilic for the first four months of this year amounted to but \$342,688 07, or at the rate of \$1,028,009 per annum. The Commissioners say the length of the road completed is 328 miles, which divided into its annual earnings as above, gives a little over \$3,000 per mile as the annual carmings of the company. If there is any other railroad in the United States having as small earnings as this we have never heard of it. We have searched through Poorls Manual of "All the Railroads in the United States," and can find no road estraints. Manual of "All the Railroads in the United States," and can find no road estraing less than \$4,000 annually per mile, while this Atlantic and Pacific Company gains but about \$3,000 per mile. Why, here in our State, the much abused Casifornia Pacific, or Vallejo route, earned over \$6,000 a mile last year; the Central Pacific, \$9,000 a mile. We remember that the Napa Valley Railroad was soid out by the Sheriff when it was earning more per mile than this same Atlantic and Pacific is to-day—according to Sneath and Hopkins' own showing. No wonder that the following paragraph appears in Poor's Standard Railroad Manual for 1871-2, then referring to the Atlantic and Pacific It says: "This company refused to furnish us with a table of their earnings and expenditures." And this is the company, voters of San Francisco, you are asked to tax yourself to the tune of fitteen million dollars to assist! The truth is, the Atlantic and Pacific Railroad is a bankrupt concern—well known to be so in Wall street. Its stock cannot be sold for five cents on the dollar in any of the Eastern money markets. This Atlantic and Pacific Conna v was organized at St. Louis in 1899, and has been dragging its slow length. Compa y was organized at St. Louis in 1849, and has been dragging its slow length along for twenty-three years. It has ruined every party that has undertaken to build it, as Sneath's report fully shows, when it at tes how Fremont, and then Levi Parsons, and then several others, took hold of it at different times, but all were obliged to give it up and allow it to be forfeited to the State. What punishment, we ask, is severe enough for such men as Sneath, Hopkins, and L. L. Robinson. son, who are now trying to palm off upon this community this huge swindle, in their frantic efforts to get a fifteen million subscription to a railroad that is a mere shell at best, hopelessly in debt, and the stock of which cannot be sold for anything in the Eastern States .- California Republican.

## Woman Suffrage Convention, -- Platform.

Whereas, We, the Mrs. and Miss representatives of the women of the Pacific coast, assembled in San Francisco, this 21st day of June, 1872, believing that the deleterious effects of tobacco, whisky, etc., have weakened man's intellect, consider the proper time has arrived to form a new political party, under the name of the "Woman Suffrage Party," and declare the following platform:

1st. All women and some men are created exactly alike, with the exception of some slight anatomical differences, which don't amount to anything, and ought not to debar women from the rights of franchise and the unlimited pursuit of

2d. According to the whole constitutional amendments of the United States, women have the right of voting, and are debarred merely on account of man's

vicious habits and stupidity.

Pending the Supreme Court's verdict as to the full importance of these amendments, and taking into consideration the total impossibility of a fair decision, we do bully our husbands, destroy all our male infants and make bad tea till our wrongs are redressed.

We believe that all persons are alike before a mother-in-law, but not a

father-in-law

5th. All persons and all parties who oppose us shall be treated badly—if in business, their bills shall never be paid: if our husbands, the connubial couch shall be desolated and no buttons sewed on. 6th. Any candidate aiding us of the opposite sex shall have no end of slippers

and smoking-caps worked for him, and be kissed by us all whenever and wherever we may meet him.

7th. As a political party, we unite on this (un)common platform, and totally disregard the laws of nations, religion, sex and condition.

Adopted unanimously.

#### The Atlantic and Pacific has no Lands.

Much stress is left by Sneath and Hopkins upon the variable land grants in possession of the Atlantic and Pacific Raifroad. Now, the truth of the whole matter is, all the lands granted that Company by Congress have been forfeited. This fact is well known at Washington. The conditions Congress imposed upon the Atlantic and Pacific Company were that they were to build fifty miles per annum from the year 1888. That Company's own report shews that they have built but 134 miles during the time that they should have built 200 miles. They tried to get their time extended three years during the last session of Congress, but the bill failed to pass, and the Atlantic and Pacific to-day is a landless, moneyless, and we believe brain-less corroration. less, corporation.

<sup>-</sup> Nilsson received a thousand dollars per night at the Drury-Lane Theater.

# Preferred Shares or Common Stock--You Pays Your Money and You Takes Your Choice.

Money and You Takes Your Choice.

As we show, from their own report, the Atlantic and Pacific is unable, by more than a million dollars, to pay the coupons on their mortgage debt, the question that naturally suggests itself from such a showing is this: "What can the shares be worth? What is even the preferred stock worth? Will some of our readers among the bankers and brokers on California street please answer these questions? But then, Sneath & Hopkins say that the preferred stock is to bear interest, payable in the common stock. Indeed, wonderful to tell! Here is a railroad that cannot pay the interest on its mortgage debt out of its earnings, seriously proposing to pay interest on its own stock by issuing other stock. We have heard of a rattle-snake swallowing its own tail, but never before of a bankrupt railroad paying interest on its shares when it could not keep up the interest on its mortgages. This is something new under the sun. Let a leather medal be at once donated to Messrs. Sneath & Hopkins for their new invention; and also let them charter the largest printing house in the State, for they will require it to strike off the immense new stock that will constantly be required to pay the interest on these "preferred shares."

The report of Messrs. Sneath, Hopkins and Hager shows that the net earnings, over operating expenses of the Atlantic and Pacific Railroad, from July 1, 1888, to October 31, 1870, a period of twenty-eight months, were \$611,860 12. The bonded indebtedness of the same Company (See column 4 of the Bulletin's report) is \$13,-033,133 00, which, hearing interest at 7 per cent., would require \$912,319 31 per annum to pay the interest alone. And for the twenty-eight months above alluded to, the amount required to pay interest on the Atlantic and Pacific bonded debt. No wonder they are crying out so loud for San Francisco to help them out of such a dilemma as this. "Help me, San Francisco, or I perish" is the Macedonian yell that comes to us from these St. Louis railroad men. O. Mr. Pickeri

## M. G. Upton.

The gentleman named, for ten or eleven years leading editor of the Alla Callfornia, has sundered his connection with that journal. We have often flung a harmless dart at him, for "'its our vocation, Hal." But there has been no malice in these squibs, and they were not penned nor printed to injure him, but simply as a contribution to fun. Mr. Upton is a cultivated gentleman, towards whom we feel cordiality and the sentiments of fellow-craft as a member of the press. The Alta alludes to Mr. Upton and the close of his connection with that paper in the following paragraph, which we transfer to our own columns with full indorsement. For, like the lawyers, we men of the press—

\* \* \* though ever so keen,

" Ne'er cut ourselves but what's between."

"Ne'er cut ourselves but what's between."

Says the Alla: "It is not easy to part with an associate for years without feeling something of regret, and perhaps sadness. The changes of life in association, friendship, business, may be necessary, but often, like a passing cloud, make the world about us for a while look darker. For some ten or eleven years the leading editorial position on this paper has been filled by Mr. M. G. Upton. During that time great questions have been at issue, great events have occurred, and they have been discussed in this journal, we believe, in a manner honorable to the paper, to the country, to the principles and laws of an enlightened humanity. In the views advanced, the proprietors, the patrons and the editors of this journal have been generally in accord. How faithfully and well the duties of their positions toward the public have been performed by proprietors and editors, we leave the public to decide. Mr. Upton has chosen to close his connection with this journal to engage in other business. In this proposed course we trust he has decided wisely for his own good. But in thus sundering the connection of years, we cannot avoid giving the parting blessing, the friendly farewell, and the expression of a sincere hope that his future may bring to him the fruition of all ligitimate hopes and ambitions." bitions."

# The Way of the Transgressor is Hard.

We don't enry the feelings of remorse that must take possession of Sneath and Hopkins when their bare-faced attempts to get some millions of money for a rail-road swindle have become thoroughly ventilated and shown up in this community. Their white-washing report of the Atlantic and Pacific concern will deceive nobody as soon as the dissecting knife of Truth opens the frauds these Commissioners thought they were ingenious enough to cover up. The utter rottenness of this St. Louis Railroad can be proven beyond a doubt, and you, Messrs. Sneath and Hopkins, will soon be called to account for your bold and unscrupious attempt to get money from this city by false pretences. Like many who have gone before, you will then truly find that "the way of the transgressor is hard"—very hard.

#### Levison Bros.

The new and magnificent establishment of the California Jeweiry Co. (Levison Bros.), No. 134 Sutter street, is one of the most usarked manufacturing outerprises on the Pacific coast. The building is very unjosing, baving 68 feet front by 120 feet deep. The lot and building cost \$130,000, and are owned by the firm. In passing through the various elegariments of the establishment we were deeply interested. The workshop is a wonder in itself. There are fifteen lathes and furnaces of various sizes for meding and alloying gold. About forty-five sky, of workshop is a wonder in itself. There are fifteen lathes and furnaces of various sizes for meding and alloying gold. About forty-five sky, of workshop is a wonder in itself. There are fifteen lathes and furnaces of various sizes for meding and alloying gold. About forty-five sky, of workshop is a various size of constances the only one of the kind run by steam on this coast. Is a very remarkable and valuable investion. The firm make a speciality of gold and silver quartz work. The sets of breastpins and carstrings look beautiful. We have never seen anything to qual their exquisite workmanship and finish. Among the principal art class manufactured are stone cameos, mounted in pearls or damonds, heautful rages of every description, seesee and shirt buttons of exquisite pattern, gentlemen's broastpare of cheets and elegant mod, came heads of endiess variety, and gwess of except description. The goods requisite for the Masonic, Odd Fellows, Knights of Pythias and other societies are of great beauty. In the other departments attractions meet the eye on every side. The general sales room contains a vast amount of geodery of the most perfect work. The high standage and commercial worth of the Levison Bros, have prought them the agencies of the most prominent and soft watch Company, Howard Watch Company, Charles C. Jacot was been, farter, Howkins & Dodd s line jewery, Meridan Britannia Co. s, and Rogers Bros plated were. The firm imports all kinds of watches, jewery, damond s

## The Duty on India-Rubber.

As it is now become the duty of government to proteger the citizen with the minutest care from the cradle to the grave, taking care that he support home industry, drank no beer and vote right, we wish to call the attention of the authorates to a matter in which his interests are not properly watched over. We have it on the authority of a cene-lawe of Chiengo doctors that the use of rubber plating for false teeth not only irrities the guns and gives rise to soreness, but also encourages of a handsomer set that won tache. If this goes on, the result will doubtless be that we she I gradually become as toothiess as mobilists. Our bakes, by judicious natural selection among the parents, would soon cease to feel the interests of teething, and would thus be enabled to everate their lives too precently of sanitiments to which the afflicted and tempted infants of the present cannot aspire. Of one should be a subcient certificate of the right to vote, It would, however, he severeon the dentities and pain-kilners, and for their sakes we ought to reflect. But there is another consideration which should give us pause, and that is the rapidly extending use of rubber appliances for introducing upon women's spince. If permitted to go on, rubber will probably usurp the cuttre-field now occupied by the fair sex, tell the Venus de Mi o is the only remaining semblance of a creature as extinct as the dode. Let Mr. Kelley see to it that the duty on caontchous and guttapercha be put at a figure that will reform these tendencies.

I. Landsberger & Co.'s Sparkling Champagnes may justly lead in the growing fame and high reputation of California Wines. The shipments Easter sweeting to form a most important item in our commercial statistics, and the consumption is becoming general throughout the State. The people have become divorced from their undiscerning bass in favor of imported wines as against our native product, the purity and superiority of which is undisputed, even by those whose pampered palates have heretofore beguiled a chimera on their judgment.

The splendid display of photographs and crayon drawings at the entrance to Bradley & Ruloison's, No. 421 Montgomery street, is a source of attraction for the admiring multitude ever passing that thoroughfare, and convinces all who even but glance at the collection there exhibited, that the "highest perfection yet obtained in the photographic art" is the just praise due Mesers. Bradley & Ruloidevi

# ASSESSMENT ROLL OF NINETY-SIX MEMBERS OF THE COMMITTEE OF ONE HUNDRED.—STARTLING FIGURES.

The following most interesting and important statistics show that ninety-six members out of the "One Hundred Railroad Committee" who have appointed themselves our guardians, represent less than \$1,000,000 in real estate, and but \$307,455 of personal property. While the last Assessment Roll shows that there is over \$300,000,000 of property in San Francisco, this Committee own, collectively, but \$\frac{1}{2}\$ of one per cent. of it. The other two hundred and ninety-nine millions have no voice in this celebrated Committee of "The One Hundred." Further than this, should the proposed subsidy of \$15,000,000 be donated to the Atlantic and Pacific Company, these ninety-six men would have to pay just \$60,05751. They can, therefore, well afford to be liberal with other people's money, especially when they are to have the handling of it. The following table needs no further comment. What assurance and check they exhibit on the part of these ninety-six men, who are trying to rule or ruin poor San Francisco:

JAS. G. STEELE & CO., Chemists and Apothecaries,

521 Montgomery St. bet. Olay and Commercial, San Francisco

Price per Copy, 15 Cts.] ESTABLISHED JULY 20, 1856. [Annual Subscription, \$10

### California Advertiser.

Devoted to the Leading Interests of California and the Pacific Coast

The News Letter is the most reliable organ representing the moneyed and substantial interests of the City of San Francisco and State of California; its Banking, Real Estate, Commerce, Insurance, Mining and other Stocks. It reflects the times as they pass: men, manners, literature, theatricals and follies. It is piquant and pungent by turns—

WISE, WITTY, GRAVE, GAY, LIVELY AND SEVERE.

THE

### Mentor, Whip and Mirror of the Town

### The Marked Superiority of the Articles

Appearing in the News Letter to those which have the run of Newspaper and Magazine Literature, justify their appearance in a more permanent and referable form—in the California Mail Bag. The selections throughout are judiciously made: all the articles are clear and vigorous, and their substance is such as to imply in every instance much reading and vigorous thought. The utility of the acts of the men of progress are herein made clear, and the indomitable tendencies of the people inhabiting the Pacific Coast made most plain.

### HENRY M. NEWHALL.

Henry M. Newhall was born in Saugus, Mass., May 23, 1825. Till the age of thirteen years he lived in his native town, and picked up as much schooling as usually fell to the lot of boys in a Massachusetts country town fifty years ago, before the labors of Horace Mann and his co-workers had established in that State the common school system which has been the parent of the systems now in operation in every State of the Union. Young Newhall had learned to read, write and cypher indifferently, when, in 1838, he left Saugus, with a stout heart and unbounded energy for his capital, to seek his fortune. The first thing he did was to go to sca. In the capacity of ship's boy he sailed to the East Indies, and after knocking about the world, enduring hardships that were incident of "Poor Jack's" life in those days of wet forecastles, bad provisions and hard shipmasters, young Newhall found himself in Philadelphia, nearly as poor in purse as when he set out, and richer only by one lesson of experience-which was, not to go to sea again. Here he at once sought work and found it, subsequently in the largest auction house in Philadelphia. He found his vocation, and to it he served a faithful apprenticeship. From Philadelphia he removed to Nashville, Tenn., where he prosecuted the auction business till the gold fever broke out in 1849. The old spirit of adventure then welled up anew, and in the winter of 1849-50, Mr. Newhall set out for California. In common with so many hundred others who made the trip at that season, he found himself detained for months at the Isthmus of Panama. He arrived in San Francisco on the 6th of July, 1850. California then presented such an opportunity as has been offered by no other part of the world in this century for a man of Mr. Newhall's composition. He was of that calibre of men who make new countries and give them the history which reads like romance to the citizens of the old and established orders of society. Among men of inexhaustible energy, quick practical sagacity, fertile in resources, decisive in policy and bold in action-firm in their faith in the future of the country of their adoption-he was speedily acknowledged to take a foremost place. His qualities were reco, nized and estimated at their real value. His enterprise equaled his executive abilities, and so he is found foremost among those who, in discerning the needs of the growing State, set about supplying them. The results were mutually advantageous; and to-day, after twenty-two years of labor, unsurpassed in the intensity of its application by that of any one among the hardest worked Californians, he is to-day the possessor of a handsome fortune, which he enjoys with a full recognition of its duties as well as privileges.

Upon landing in California, Mr. Newhall first went to the mines, and was an honest, hard-working miner, at Douglas Flat, for a short time. Subsequently he went into the auction business. It is related of him that his first sale was made from the head of a barrel, and that the invoice

offered consisted of his surplus wardrobe! Of clothing he had some, but of money he had none, and eggs were a dollar apiece in those days. Business came to him in volume that taxed all his energy and iron endurance to dispose of. Ships' cargoes were often sold by the manifest from the auctioneer's pulpit, and sometimes the accounts of sales showed many hundred per cent. profit, and sometimes failed to realize the amount of freight and charges. But there were no warehouses, and goods had to be sold on arrival, and the auction-room was the channel through which they passed. Those were the "golden days ' of this as of some other branches of business in San Francisco, and during that time Mr. Newhall laid the foundation of his fortune, and proceeded somewhat with the superstructure. The foundation was a reputation for probity and business ability of the first order-promptness, thoroughness, and withal a special personal capacity to make sales. When the "golden days" had passed away and profits were smaller and the volume of business diminished, then the depth and breadth of this foundation which he had builded in the estimation of his fellow citizens became apparent. He had the best share of the business that offered in his line; and later, when the system of trade sales became established in certain branches, his auction rooms became recognized as the headquarters of the business. Such they continue to be at this day. Successive buildings have been erected by him for the accommodation of his business, and each remove has furnished a fresh evidence of his practical sagacity. In these well known premises he has held sales for many years past with unfailing regularity, himself "calling" through a catalogue of fifteen hundred to two thousand lots, often continuing through ten successive hours, and involving physical exertion which few men are capable of exerting even in emergency. Yet Mr. Newhall has performed this feat through the sales of a season to all appearance unaffeeted by the drafts upon his powers of action and endurance. That Mr. Newhall's devotion to his work has been hearty as well as absorbing is shown by the steady energy with which he continues to follow it up,

Although the career thus described has been of an activity sufficient to fill the measure of most men's powers, it constitutes but a part of his work in California, and not that part which has brought him most prominently before the general public. In 1865 he became interested in the San Francisco and San Jose Railroad. The finances of the enterprise were in a state of confusion bordering on insolveney and on a "receivership," which is a legal term for ruin in an enterprise of this character. Mr. Newhall threw himself with all his energy into the work of rescuing the enterprise from its difficulties, and pressing it to a successful conclusion. He was elected President of the Board in 1866, a position which he continued to hold until the sale of the road to the Southern Pacific Railroad Company in 1870. From the moment Mr. Newhall took hold of the road, its success became assured. He placed its finances on a sound basis, associating with himself Peter Donahue, who by their joint means prosecuted the work to completion. This one operation—the construction of fifty miles of railroad almost wholly from the private means of three men-was the most considerable enterprise of the kind in California at that time. The only other railroad in the State was the short Sacramento Valley road, which had been financially a failure, and, so far as its example taught, was not encouraging for enterprises of the same kind. Newhall saw for himself that the business resources of the San Francisco and San Jose Road would warrant its construction, and upon that issue was willing to adventure an amount of money which

not even his ample means could well spare to lose. To appreciate this judgment it is necessary to be understood that the other capitalists of San Francisco—men not deficient either in foresight or enterprise—were unwilling to embark in the undertaking. The railroad was completed and proved a profitable property. Three years later, the road, still under Mr. Newhall's Presidency, was extended to Gilroy, thirty miles beyond San Jose, adding to the value of the line and its business and adding, as the original line had done, many millions in value to the property of the valley which it penetrated.

The outlines thus briefly sketched of Mr. Newhall's varied and active career afford sufficient warrant of his soundness of judgment and lovalty to the best interests of that city with which his own are all identified. When recently the approach of the Texas Pacific Railroad under its new management presented the opportunity to connect San Francisco with the Mississippi Valley by a competing trans-continental railroad, which at the same time would open up to development territory adjacent to California and give an impulse to the progress of all the southern counties of the State, Henry M. Newhall was foremost to appreciate the situation and its opportunities. An independent California railroad owned and operated forever in the interest of California to connect with the coming trans-continental road at the southern boundary of the State, and free to connect with all that might come, was, to his mind, the requirement of the hour. He took part in the counsels which led to the organization of the San Francisco and Colorado River Railroad Company on the basis here indicated, was one of the largest subscribers to the capital stock, and was elected Vice-President of the organization. Should this enterprise, pregnant with good for California and the city of San Francisco, be conducted to a successful end, a fair share of the credit of the work must be accorded to him.

To Mr. Newhall's private life, allusion may only be so far made as to record that no man's hand is more ready to relieve distress nor more generously open to the deserving needy. His heart is as tender in feeling as it is stout in endurance; his hand is as ready in relief as it is strong in action; his head is as just in judgment as it is clear in discernment. Mr. Newhall's character commands equal respect whether as a useful citizen or a good man.

#### Mr. Harrison on the Monarchy.

It has been the misfortune of Mr. Disraeli to herald the doom of the institutions that he has chosen to take under his wing. And he never did less service to an ancient part of our glorious constitution than when he rushed to the rescue of the Crown from the attacks of -nobody. The speech in which he glorified the throne on account of the eminent services of George III., would have been sufficient to destroy any institution less deeply rooted. But damaging as was the uncalled-for oratory of Mr. Disraeli, the supreme folly of his conduct only became manifest when the rejoinders to it appeared. The incisive logic and stinging invective of Mr. Frederick Harrison's paper in the Fortinghthy Review will do more to shake the monarchy than Mr. Disraeli, with the Tory party at his back, can do to galvanize it into life. The truest friends of the monarchy are those who say least about t. "Practical politicians," as Mr. Harrison says, "have every ground to discialm an attack on the established monarchic form." The cry of the "Throne in danger" is so absurd, that nothing but the utter want of a policy could ever have led any man to resort to it. But, although the throne is for the present safe enough, the true reason of that safety is seldom distinctly understood. "As to the tableau vivant, which sentimentalists are pleased to call our English monarchy, we can take off our hat decently when it passes our way, as judicious Voltaireuns do to the Host. We must all allow that it seldom gives us that trouble. To us it is a bit of bread; to some of our fellow citizens it is an incarnate deity." The real truth is that the safety of our monarchy lies in its harmlessness; it is recommended to us, as castor oil is often recommended, on the ground that if it does no good it will do little harm. The king can do no wrong because the king can do nothing. Ever since the revolution of 1688 the monarchy has been struck with paralysis. The form is keeplup, but the substance is changed. We have followed, in a different track, the footsteps o

well-bred young lady."

The first question to decide, says Mr. Harrison, in arguing about the monarchy, is whether there is a monarchy to discuss. What is a monarchy? And what is a republic! "The republic is that State, the principle of which is not privilege, but merit, where all public power is a free gift, and is freely intrusted to those who seem able to use it best." In a republic, the President, by whatever name he may be called, is the servant of the people, he belongs to them; in a monarchy, the people belong to the King. His right is hereditary, independent of their wishes, and he consults their convenience just so far as it seems good in his own eyes. Russia is a monarchy. Turkey is a monarchy. "In Prussia and in Austria, though the monarchy is far less real, still it is the effective center round which the governing machine revolves." Charles I. lost his life in trying to be King; the assertion of true monarchical rights led, by a short path, to the block. When the bungling and bigoted James II. revived the controversy, his dutful subjects did not take the trouble to hang him; they let him depart in peace. Since the reign of William III. no King or Queen has exercised a veto on an Act of Parliament; and an attempt od so would probably cost a rash monarch his place, or lead to the abolition of the abourd practice of granting, by a Royal Commission, the assent that must not be refused. It is the boast of our constitutional writers that our sovereign is above the turnoil of parties. "Alas! too far above, like the gods of Epicurus, so far above as to be a mere legal formula; and, for any practical purpose, so far above that itsignifies little if it be there at all." Such, indeed, is the mere common-place of constitutional law, and it is a sort of learning far more useful to the politican than edifying to the enthusiastic loyalists. What Mr. Disraelf's injudicious championship has done is to bring down our "Venetian constitution" into discussion, and to substitute for the god-natured indifference of sensi

their contempt—their pity for the lady who fills the throne, and their contempt for those who call upon them to fall down and worship the "venerable ided" of the British constitution. No republican grudges her "wearisome sinceure" to the Queen, who, "devoted by destiny to a life of public drudgery, in a sphere which is one long plantasmagoria, has left society to its dance of fashion, and toils on silently at her melancholy office."

silently at her melancholy office." The most ardent republican, however eager he may be that the form of government should express rather than misrepresent its substance, must recognize the inexpediency of attacking the throne. Its time is not yet come. Whether the practical question will be left to our children, as Mr. Bright suggests, is of small consequence, if we decide that it is not for us. At the same time, the discussion that Mr. Disrucel has provoked will carry lessons of political instruction to many dark places. We shall probably get rid of the sickening can which has been hitherto considered the "correct thing." While "we are not Japanese kolowing to a Mikado, or Chinamen licking the dust to the brother of the sun and moon," we shall yet know to pay proper respect to the person who, for the time, is the flag, if not the captain of the ship. And when we begin to sak what service the monarchy does, we are at a loss to answer. We cannot hold with Mr. Disrucit that the Crown has made the ann to shipe and our crops to grow, and neither do we hold it redoes, we are as a loss to answer. We cannot now with air, Dismost that the Crown has made the son to shine and our crops to grow, and neither do we hold it responsible for the political bondage in which the farmers have been kept, or the equalid poverty of the tillers of the soil, or the wretched system of land-laws by which the progress of agriculture and the good of the country are sacrificed to the antiquated pomp of a small class.

A great argument against the monarchy is that it is a sham, a "monarchy-in-buckram;" that "our whole public life, which we strive to make serious and true, culminates and is embodied in a conscious mesquerade, "that we are "a republic, which, with a make-believe democracy and a wax-work sovereign, is governed by a cort of counting-house aristocracy. We confess to a prejudice against shame of all sortes thu occasionally they serve a purpose. Mr. Harrison says, "The governing order in Engand could no more manage the plebians without the mysterical rights of monarchy than the Roman aristocracy could have ruled without augurs and sacred chickens." The day of the families is, however, rapidly passing away, and the monarchy serves as a transition to a new order of things. Fiction, once apon a time, served an important function in the development of law. cushled a superstitious people to combine the reality of change with the appearance of continuity. They served as a bridge to connect a stationary with a progressive state of society. In like manner, the fiction of a monarchy has reconciled our governing classes to the surrender of their power.—London Examiner.

Does Mr. Harrison want to abolish the monarchy? Not a bit of it. He is a "thoughtful man" who "sees that the ultimate adoption of the republican form "thoughtful man" who "sees that the ultimate adoption of the republican form is as certain as the rising of to-morrow's sun." But he is also "a practical man," and is "agreed," with all other practical men, "to await its coming," as a thing of "the indefinite future," and to leave the rival claims of monarchies and republics to be decided "only in the bloodless arens of debating clubs. "After this the "rey Bardolphs and Bohemians," on whom Mr. Harrison is so bitter, can afford to let him have his will, and sound his rattle at his leisure. He is, indeed, the representative champion of our Oxford Liberalism in more seases than one. He is a Jacobin of the Salon, kid-gloved, redolent of chocolate and rout cakes. His lnen-brations remind us of Colonel Newcome's wonderful misquotation, "Ingenuos didicises fieldlifer arises, Finodium mores nee sinuises feras." There is any amount about him of chen philosophy, of rattlessake whit and buzz. of Carlvieses wogla-conintont him of cheap philosophy, of rattlesnake whit and buzz, of Carlylese word-coining. But as tor the real genuine Bradlaugh ring, the ignorant heartinese of Delegalize, the fanatic earnestness of Marta and Robesplerre—for these we have the "Ra-tahtah" and the "Bounce."—Observer.

- How delicious it must be to be an itinerant missionary, like Brother Cunningham. Nothing to do but to ed, not an itinerant missionary, like Brother Cunningham. Nothing to do but to ed, and drink and sleep and beg and write "Notes of Travel" to the Pucific theorem. "I had a pleasant call," says our Christian brother, "upon Father and Mother Brown. She requests me to say that she is 'still making shirts." Now what in called's name does the religious public care. 'etili making shirts.' Now what in calico's name does the religious public care whether Mother Brown is making shirts or not! We fear her shirt making is only whether Mother Brown is making shirts or not! We fear her shirt making is only a make shift with the brother because he has nothing to say. Besides, how do we know whether these shirts will be accepted when the dread question is put to Mother Brown and her sixty-four children, grandchildren, and great-grandchildren, as well as to Brother Cunningham himself, "how camest thou in hither, not having on a wedding garment?" Will it avail poor Stiggins in that hour to say, "I have not on, it is true, a wedding garment, but I have on me a shirt made by good Mrs. Brown." Non taily austilio neck—but the brother does not understand a classical allusion. How learful would be his "posish" if ordered to "a tail unfold," to wit, the tail of one of Mother Brown's shirts, and to receive fifty issess with a red-hot poker on his carnally minded and unregenerate back. We fear, with a red-hot poker on his carnally minded and unregenerate back. We fear, brother, there is danger in this shirt making. Convey our blessing to Mrs. Brown, with the enclosed measure for half a dozen new shirts, with best linen front. and say to her :

> O good Mother Brown, while you're still making shirts, The flames of perdition are singeing your skirts.
> A shirt's but scant dress for ascending the air,
> So, my dear Mrs. Brown, you had better take care
> Lest in that upper realm you have "nothing to wear!"

### Pyramus and Thisbe .-- A Classickall Balladde.

Two lovers lived in Babylon. A pair of gushing creatures; The maid, of course, was beautiful In figure, form, and features.

The youth, one scarcely needs to add, Handsomest of his sex; Since lovers, in each other's eyes,

Are always treble X.

So constant, too-he'd but one wish That she some day might his be:
The lover's name was Pyramus,
His lady-love's was Thisbe.

Yet still for them love's gentle stream
Ran, as it oft does, roughly:
Since Thisbe's parents snubbed the youth Which Pyramus discovered, and And spoke to him quite gruffly.

But when did ever lovers fail Though pa and ma upbraided? Mostly they love each other more;

At least, I'm sure that they did.

They lived next door, which made love's Now, all you youths and maidens be
If anything, run faster; [stream, Sedate as crones and grannics,
And Babylon, like London, was
And never with a love next door
Talk all night long at crannics,

And thus would Pyramus exclaim: "My own, my darling Thisbe,
Your voice is beautful, but O,

How scrumptious must your phiz be!"

They met sometimes, at Ninus' tomb, Out in the cemetery;

They spooned among the gravestones, and They found it pleasant-very.

One day when Thisbe got there first. A lion-such a critter-Attacked her; but she bolted, so

The monster never bit her.

Went in for suicide.

Thisbe returned, and found him hanged Up to a mulberry tree; And when she sees that fellow, she

Becomes felo de se.

So in their bedrooms, late at nights, Don't make appointments. Such things They never slept at all; A danger past belief; [are But spent the small hours talking through And like this pair of lovers, you A cranny in the wall. May one day come to grief. —Hornet.

### A Bit of Sylvan Life in California.

Two weeks were at our disposal, to be passed out of the city. Twelve children, ages ranging from sixteen to six years, clamored loudly for "camp life." Being the dominant portion of our party, and in this "happy country" the majority always ruling, of course their voices prevailed, and a "life in the woods" was decided upon. The requisite stores, provisions and bedding being provided, a China boy was engaged and we were just on the eve of departure when he basely descreted us, declaring he was afraid to go "so far from his uncle." Determined not be despoiled of our anticipated pleasure by this little contre temps, we bravely assumed the whole burden of the cuisine and scullionary department, and immediately felt. "All Right." Everything was placed on a pretty yeach, and a part of our party accompanying "the luggage," it set sail at eight o'clock P. M., and in a few hours arrived at the little cove which opened upon the farm where our "lodge in the wilderness" was to be made. Another part look steamer for San Rafael, and passing a pleasant night at the Tamalpais Hotel, at ten o'clock next morning entered the carriage and bowled away under the blue and breezy dome of heaven. entered the carriage and bowled away under the blue and breezy dome of heaven. entered the carriage and bowled away under the blue and breezy dome of heaven. The ride was refreshing and invigorating in the extreme, the road winding on the shores of the bay, "up hill and down dale," until it brought us to our companions. Looking around, we could not withhold a shout of intense gratification as we surveyed the beauty of our location. It was a lovely little cañon, surrounded on all sides by undulating hills, except the narrow entrance which gave us admittance to this home of the sylvan gods. Under the "greenwood tree" our tent was pitched; a well of pure cold water, with a "pump attachment." was at our door, and near by rippled and gurgled a little brook whose music has never ceased in the dryest seasons. We began to arrange our menage. Hoes, rakes and brooms were vigorously worked, impromptu tables and seats made under the trees, shelves not not for crockery, provisions, etc., the hollow trunk of a large laurel was seized. put up for crockery, provisions, etc., the hollow trunk of a large laurel was seized upon as a pantry, and in it were stowed our lunch baskets, laden with "good things." The gentlemen built a nice little "range" of adobe, stones, bricks and iron bars, which served us admirably for all culinary purposes, and the wilderness soon began to assume "a local habitation and a name." These things being ness soon began to assume "a local habitation and a name." These things being arranged, the croquet ground and a suitable place for the swing had to be selected, and were soon chosen bo our satisfaction. As the gentlemen and boys were to occupy the tent, and, moreover, being "lords of creation," of course their comfort was to be attended to first. There were no Women's Rights women amongst us, and everything was nicely arranged. Looking around upon the sweet, clean, cool spot, the gentle breeze fanning our heated faces, and the sunlight glinting through the leaves, we gave a sigh of satisfaction and then bethought us of our wants. A few yards in front of us abrupily arose an Indian shell mound, twenty feet in high, leveled at the aper, with an area of sixty feet in diameter, on which stood the furn house, surrounded by beautiful trees. In the upper story was a large unoccupied room, which we were to have for our "dormitory." Three windows opened on the entrance to the cafion, and gave us a lovely view of the Bay. There being no partitions, we recorted to the plan of General Lee, or "revolutionary" fame (not our noble General—God bless him), and marked our boundaries with imaginary lines. Most of us being wanderers from dear "Old Dixie," and having no fear of the "truly loyal" in that isolated spot, we revived the dear old memories, and Dixie, Rebel and Southern avenues proclaimed our sentiments. A load of freshly-cut hay was placed upon each named place, mixed with sweet clover, spread out smoothly, covered with sheets, blankets, comforts and pillows, they formed three nice large beds, capable of holding, not accommodating, twenty persons. Basins, pitchers, brushes, combs, towels, and last, not least, mirrors, twelve inches by six, being arranged, the westering sun warned us to prepare for dinner. On going down to the tent we found a bright fire in the "range" and a huge coffee and teap to on the bars. The table literally creaked under its burden of beef, ham, tongue, pickles, jellies, tards, cakes, breads, etc. The richest and sweetest of cream, milk and butter in unlimited quantities were to be had at the farm house, and our healthy appetites being sharpened by the unwonted exercise, we literally fensed, and the crowning glory of the feast was, as it should be, the coffee, whose delicious aroms would have shamed the fabled nectar of the gods. The whole of the surroundings were lovely and inspiring to the last degree. In front of us rose the "everlasting hills, on whose tops the setting sun glowed like an attar flame." The groups of oak which dotted them seemed calmly resting upon their shadows, The "everlasting fills, on whose tops the setting sun glowed like an attar fiame." The groups of oak which dotted them seemed calmly resting upon their shadows, reminding us of the time when our little barks, after passing life's stormy ocean, shall also rest upon their shadows in that haven of eternal peace. To our left opened a long, wide avenue, entirely shielded from the sun by the deep green foliage of the trees, and through this came trooping the younger members of the party; a verifiable Robin Hood and his followers, nor was the traditionary bow and arrow wanting to complete the illusion of the scene. Here and there, as far as the vision extended in this current work seen even down therefore here it was the traditional trees and the control of the scene. Ing to complete the illusion of the scene. Here and there, as far as the vision extended in this avenue, were seen cool, dewy, lovely dells, where Titania would not have disdained to hold her clifn court, and many a "peas blossom" and colweb have sported in wild delight on the small green knolls when they shimmered in the silvery moonbeams. The next morning at break of day, the gentlemen and boys were "over the hills and far away" with guns and gune bags, and at an early hour all were satir in the camp, for breakfast was to be prepared for twenty persons, and the children had the appetites of cormorants. With plenty of fresh eggs added to our stock, this was by no means a difficult achievement. Just as all was ready to be served the hunters came in with plenty of game, which was to be eggs added to our stock, this was by no means a difficult achievement. Just as all was ready to be served, the hunters came in with plenty of game, which was to be cooked in real "gipsy style." Breakfast being over, a large kettle, half-filled with water, was placed over a slow fire on the bars, the game cut up and put in, the requisite "seasoning" added by those who well knew how to concost savory dishes, and all being put in "ship shape," we left it to its fate and went off on our first "tramp," real gipsies, you know. Nothing on earth can be lovelier than a lovely Californian morning, and this was one of her loveliest. The pure air brought our tower how, and demond away delicate, oneling the non-the hills the contractor. lovely Californian morning, and this was one of her lovelest. The pure air brought out every line and deepend every delicate opaline that upon the hills, the soft golden sun-hime poured its aweet radiance over all, the blue waters of the Bay sparkled with delight in its gladdening beams, and all nature seemed to worship at the feet of her Creator with one throb of universal joy. At such a time life is felt as a boson of inexpressible mercy, and every breath ascends in praise of "Him who giveth fife." We alternately walked, loftered and sat under the trees until it was time to direct our steps homeward. We found the "gapsy stew" a "perfect success." The children had scattered like particiges up the cahon, in search of blackberries, and brought back enough for a "roly-poly," which was made and served up with rich cream sauce. Do you ask if the meal was enjoyed. Oh, News Letter,' you should have been there to have inhaled the savory ofor and felt the additional impulse given to your salivary glands. Then having a plate placed before you, filled with the steaming viands, and a bottle of cool claret to accompany it, cating and sipping at your leisure, with all these lovely scener around, above and beneath you, you would have pronounced it a banquet worthy of the Olympian gods—or the King of the Gipsies. The next day the gentlemen returned to their various avocations in the city, and at noon the last installment of our party, to their various avocations in the city, and at noon the last installment of our party to their various avocations in the city, and at noon the last installment of our party, bringing with them a China boy, drove up and were welcomed with shouts and waving handkerchiefs. Walking, riding, reading, chatting, croqueting, swinging, overlooking the menage, our time passed rapidly until Saturday, which was our gain day, as the gentlemen were to return, bringing some visitors who were to pass. Sunday with us. Ah thu bestirred himself with broom and rake until every pastice of "trash" was out of sight. When finished, he gave proof of his civilization of the strength of the str tic.e of "trash" was out of sight. When finished, he gave proof of his civilization by careering up and down on horseback like an olive-colored centaur. Green boughs were hung around the "parlor," sofas and seats improvised, vases filled with wild flowers set upon the table, children scrubbed and combed, and when all was en regle below, the ladies mounted to their "dornntory" to array themselves in all the glory of their "Dolly Vardens" to welcome their coming lords. The wagon entered the casion, and soon the air was made vocal with their shouts as they drove up, like a company of happy boys just released from the tranmels of the school house. They enjoyed this holiday to their "utmost bent," and the "camp" presented a lively scene whilst they remained. But all things must have an end, and our pleasant days, "barring" a few aches and groans, the result of our unaccustomed beds, having expired, amidst the indiguant protests of the children, and their urgent entreaties for "just a few more days," we packed up what remained of our wardrobe and regretfully turned our faces homeward, the gayest, healthiest and—I must say it—the "gipsiest" looking party to be found in California.

During the Whitsuntide holidays at Berlin twenty-five stray children were picked up by the police.

#### If We Knew.

If we knew the woe and heartache That awaits us on the road; If our lips could taste the wormwood, If our backs could feel the load; Would we waste to-day in wishing For a time that ne'er may be,

For a time that ne'er may be, Would we wait in such impatience For our ships to come from sea?

If we knew the baby fingers
Pressed against the window pane,
Would be cold and stiff to-morrow—
Never trouble us again;
Would the bright eyes of our darling

Catch the frown upon our brow; Would the print of rosy fingers Vex us then as they do now !

Ah! those little ice-cold fingers, How they point our memories back To the hasty words and actions Strewn along the backward track! How those little hands remind us

As in snowy grace they lie, Not to scatter thorns, but roses For our reaping by and by. Strauge, we never prize the music Till the sweet-voiced birds have flown; Strange, that we should slight the violets Till the lovely flowers are gone.

Strange, that summer skies and sunshine Never seem one-half so fair

As when Winter's snowy pinions Shake the white down in the air.

Lips from which the seal of silence None but God can roll away, Never blossomed in such beauty

As adorns the mouth to-day.

And sweet words that freight our memory

With their beautiful perfume, Come to us in sweeter accents Through the portals of the tomb.

Let us gather up the sunbeams
Lying all around our path,
Let us keep the wheat and roses,
Casting out the thorns and chaff.
Let us find our sweetest comfort
In the blessings of the day,
With a patient hand removing
All the briars from our way.

#### Progressive Japan.

It is over three centuries ago since the adventurous Marco Paulo invaded Japan. That country was then a sealed book to European nations. In 1594 the celebrated missionary, Francis Xavier, landed there with the avowed purpose of converting its inhabitants to the Catholic faith. The efforts of the Jesuits to convert the Japanese were not successful. It was not until 1854, when Commodore Perry concluded a treaty between the United States and Japan, that the western world commenced to exert a marked influence upon the destiny of that country. England, France and the United States have been the great rivals for the trade and commerce of Japan. The geographical position of the United States, together with a state diplomacy, has of late years given this country a commanding influence with the Japanese. The progress of foreign Governments with our Oriental neighbor has been, however, greatly retarded by the machinations of Christian missionaries who, failing to impress the better classes with their delusions, converted a few outcasts, outlaws and murderers. The Japanese authorities, in attempting to bring to justice these vile and lawless individuals, were accused of presecuting native Christians and of being intensely hostile to the Caristian religion. The conduct of the Jesuits and Protestant missionaries, representing various seets, aroused the Japanese Government. For some centuries, to teach or profess Christianty was a high offense, punishable with death. It must be remembered that the Japanese had a most contemptible opinion of missionaries; they say the second It is over three centuries ago since the adventurous Marco Paulo invaded Japan, that the Japanese had a most contemptible opinion of missionaries; they saw these disciples of Christ wrangle and fight with one another; saw them claw the same would-be convert, until a half dozen of them would almost tear the unfortunate creature to pieces. The Catholic missionary would by force lead the convert to Christ in his particular way, and the Protestant missionary, Episcopalian, Presby-terian or Baptist, play a like role. The contempt the Japanese had for the mis-sionaries spread to the nations from whence the missionaries came. It was arrund, and with justness, that nations represented by such wolves in sheeps clothing must be weak and rotten. In time the Japanese learned that the missionaries only must be weak and rotten. In time the Japanese learned that the missionaries only represented the idle, shiftless, fanatical. As the mercantile classes of the western world impressed the Japanese with the honor, integrity, industry, skill and enterprise of the nations they represented, our Oriental neighbors had a more exalted opinion of the outside barbarians. To-day Japan is thoroughly Anglo-Americanized. She not only does not fear the influence of England and the United States, but courts that influence to advance her material interests. Our railroad, telegraphic, commercial and monetary systems are being rapidly introduced. Agricultural Societies, State Fairs, Schools and Colleges for young men and women are making their power felt throughout the entire land. While Japan is making wonderful strides in the material sense, her advance in political and religious liberty has been no less marked. One of the most remarkable religious edicts ever promulgated by a great sovereign has lately been issued by the Tenno, an edict which forever abolishes all decrees and penalties against the ministers, teachers and proforeer abolishes all decrees and penalties against the ministers, teachers and promulgated by a great sovereign has lately been issued by the Tenno, an edict which forever abolishes all decrees and penalties against the ministers, teachers and professors of Christianity. Thus the prejudices of centuries are blotted out by this humane, noble and enlightened act. Hereafter Pagan, Jew. Mohammedan ind Christian stand upon equal footing in Japan. But while the Japanese have shown themselves eager to adopt the innovations a lirendy mentioned, they show no desire to profess Christianity. With their religion and the internal affairs of government themselves eager to adopt the innovations already mentioned, they show no desire to profess Christianity. With their religion and the internal affairs of government they are content. The decree abolishing the penalties against Christians has not resulted from the benefits which missionaries exercised in Japan, but is rather a concession made to the foreign merchants, business men and residents who profess Christianity as a sentiment of the heart, and not as means to exist as drones upon the credibility and impraces of the people. the credulity and ignorance of the people.

— Thirty-nine monks, banished from Guatemala, have arrived in Frisco. They resemble the "Thirty-nine Articles" in appearance, and look as if they had received "forty stripes save one." like St. Paul. They have no shoes nor stockings, neither purse nor scrip. The delicacy of our prudish ladies was offended at their scant apparel, and the venerable Mrs. Harris exclaimed, "but their stockings be darned," an imprecation which set the thirty-nine Guatemala friars mambding their Pater nosters. They need not starve, poor old boys, anyhow, for California is verily a land of promise (where nobody keeps his word and a land flowing with milk quanchs and decleras. Free lanches can be had here, and their steck brethren, the Frist Tucke of San Francisco, will stand them drinks. This is all that is needed to make life endurable to priests or laymen. As a holy blahop once sang:

"Let back and side go bare, go bare, Let foot and hand grow cold, But, belly, God give thee good ale enough, Whether it be new or old!"

As soon as the venerable monks landed from the steamship Sacramento, they were escorted by 999 priests and 99 virgins to St. Mary's Cathelea', where the Most Reverend the Archbishop was waiting to receive them in full canonicals. Ad-

dressing the odd looking band in much the same language as that of Didoto Æneas and his crew, the following response was given by Brother Bellyodorus, the Sacristan of the Gatetemals monastery: THE STORY OF THE MONKS OF GUATEMALA. Poor monks are we from over the sea, Omnes pauperes sumus-From the depths of Central Amerikee; While singing Gremus as became us, So if you can room us In one of your convents we'll cry gratias, We were seized by the soldiers, who did Though we can't read and write, For meddling in politics: [blame as We are competent quite [Mass.

To assist all your clergy in saying the And told as to cut our sticks From the port of Champerico. Da shoes nostris pertibus Put us all in clean beddibus, Non nobis Domine-We all lived on hominy For we're all of us horribly troubled with And fricaseed toads in Guatemala. Et pro spiritu tuo, And irreases to the were sea-sick, We'll say masses a lew ou.

On the voyage we were sea-sick, [sailor, And stay in Francisco as long as you And all had to take physick, [sailor. For a fasting monk makes a very bad please. Beati pacificatores -Dona nobis a stocking In that country where war is [a plot For fear of our shocking They accused us poor monks of raising The eyes and the delicate nerves famin-And Joining a secret scheme for many and poining a secret scheme for when walking the street And the President said to "skeddaddie With these bare legs and feet [scare 'em. Here afraid if we met any ladies we'd We're afraid if we met any ladies we'd In excelsis gloria --We stand here before you And now, Nunc dimittis, Bare-backed, we confess, for our clothes We assure you that it is we've outwore 'em: With pain that your reverend ears we thus We've nothing on but our drawers, For Ave Maria. For which Domino laus We did never aspire To anything else than the fare of a friar. In sæcula saculorum! Therefore, Oro pro nobis, Whose only robe is Wherefore, Pax vobiscum, Whose only role is [hair shirt, Our lives we did risk 'em A pair of drawers each and a ragged in crossing the sea such a harbor to find; But we'll soon feel quite hearty Pro omnibus sanctis, And sing Jubilate. [a skirt. Your Reverence thanked is, If your Reverence will cover our legs with For treating us all in a manner so kind.

Chicago is not without cruel people. Kate Higgins, a widow, addicted to the flowing bowl, jumped into the river about a week ago, during a lucid interval. We call that sensible. If she had been permitted to soak for a couple of days, the whisky would have been count of her, and she would have been cleaned and purified by the execution. purified by the aqueous fluid, which is unrivaled as a washing medium. It is possible that her soul, if she has such a thing, might have been drowned out of her whisky-sodden careass during that period. But what matter? What is one widow more or less in Chicago? And if a person deliberately sets about taking a protracted bath, by what right do people officiously fish them out and insist on their remaining on dry land? We feel moved to say that such conduct is an outrage. remaining on rapidity we refull moved to say that such contact is an outrage. Yet this course was pursued by certain chuckheaded Chicagoans, and Kate has returned to her gin-bottle in disgust. There are always a lot of men ready to prevent a woman's doing a sensible thing. We fear that if Mrs. Steve Pitzens should conceive and carry out the brilliant idea of jumping off Meigzs wharf, there would be some infernal fool from Chicago who would insist on dragging her out.

An exchange says that Sheffield uses seventy tons of ivory a year in manufactures. Our Southern States should ship a few cargoes of their surplus niggers there.

#### Special Brevities.

The scientific committees, who are continually employed at the Royal Arsonal in making investigations for the improvement of war material, have opened as new field of inquiry. The experimental 18-ton gun, whose bore was pierced through and through in twenty places for the insertion of crusher-gauges and other indicators, and has endured notwithstanding many hundred rounds with such heavy charges as to stamp it as one of the strongest guns in the world, has now had its bore enlarged from ten to eleven inches in diameter, and a further series of trials have commenced in order to determine, amongst other facts, in what degree the internal pressure upon the gun and the velocity of the projectile are affected by the increase of calibre, the weight of shot and the charge of powder remaining the same as before. Paring an inch off the barrel of the gun may be expected to diminish its strength, but in practice it has proved itself already capable of marvelous endurance.

sion, and found they could not get back to Lausanne. When they were missed a stelescope was used, and the boat was seen among the waves in evident distress. A boat manned by five men started for her, and on approaching they were surprised to see the men motionless, kneeling in the bottom of the boat, holding a cane to which a bandkerchief was tied. The boat was nearly half full of water, they were quite exhausted, and the skin was stripped from their hands by the frantic efforts they had made to regain the shore. Five minutes later they would have been lost.

The Times, in its Clty article, remarks that, according to the various financial advices from Germany, the extent and buoyancy of business are astounding. The Berlin Discount Company have paid a dividend at the rate of 24 per cent, for the past twelve months, besides placing to the reserve fund about a million thalers, and paying to the directors for their management of their concern 500,000 thalers (£75,000). Money is very easy, and railway shares are in good demand. A large business is being effected in Austrian Silver Rentles, at advancing prices. From Hungary there are most favorable reports of the crops.

— The latest novelty from the Eastern States is paper cab wheels. The tire is of steel, and when turned up ready for the filling it is made taper inside, so that the inside diameter on the flange is  $\frac{1}{2}$  inch smaller than on the other. The body of the wheel is a paper block made of strawboard cut into circles, 30 inches in diameter, pasted together with ordinary paste, and consolidated ander an hydraulic pressure of about 300 tons. This block, after being slowly dried for nearly two weeks in a dry-house, is turned and fitted in a common pattern lathe.

It is chronicled that among recent presentations to the Pope was 'hat of Mr. Cox, the linen manufacturer of Dundee, who, having upwards of 2,500 Irish Catholic workmen in his employment, was desirous of gratifying their devotion to wards the Poutiff by conveying to them the blessing of his Holiness. The Pope conversed with Mr. Cox very affably about his extensive establishment, and sent an especial blessing to the Roman Catholic workmen and their families.

On June 3d an immense conflagration broke out at Torbane Hill Works, Bathgate, eighteen miles from Edinburgh, in a heap of 20,000 tons of mineral coal, from which paraffin is manufactured. Engines from Edinburgh and Glasgow were endeavoring to extinguish it, but the supply of water was limited. The loss is expected to be at least £70,000. The works belong to Mr. Simpson, of Benhard Collery, and others.

— At the High Court of Judiclary in Edinburgh, James Glassall, carter, was charged with the murder of Louisa Purdie on March 24th, in Queen's Park, Edinburgh. From the evidence it appeared that there were no fewer than 100 wounds on the body. The jury returned a verdict of "Gullty of culpable homicide," and the judges sentenced Glassall to fifteen years' peans servitude.

— Captain Burton, the well-known traveler, is at present in Edinburgh, en route for Iceland, where the stated, he is to be engaged in certain scientific inquiries. Captain Burton has "ented to Professor Archer, of the Glasgow Museum, a lock of hair which he brought from the Palmyran "tomb-towers."

The Independance Belge announces the death of M. François de Pouhon, director of the National Bank. He was seventy-five years of age. In an obituary notice the Independance says M. de Pouhon was one of the most justly esteemed men in Belgium.

We understand that the original picture, by Sir George Hayter, of "The Burning of Latimer and Ridley at Oxford," has left England for Philadelphia, having been purchased by Mr. Latimer, a direct descendant of the mattyr.

——From New Zealand comes the intelligence that the administration of kerosene has had a most decided effect in the cure of chronic rheumatism. The dose is a teaspoonful in a wine-glassful of water every other night.

A Philadelphia woman who had broken her leg, was so modest that she would not permit the surgeon to set it, and there being no female doctor around, mortification ensued, which resulted in death.

— A politico-religious romance will appear shortly, called "The True History of Joshua Davidson, toid by his Friend John." A sort of Christian Socialism, the Athenaeum hears, will be advocated in it.

— Carl Russell has succeeded George Grote, the historian of Greece, as President of the Historical Society.

### Crowing Hens.

I walked within my poultry yard-

When, lo! one day a prodigy
My wondering fancies struck;
The hens they all began to crow,

And the chanticleers to cluck A feeble, twittery sort of crow Raised those aspiring hens; And straightway all the cocks retired

To sit within the pens. It struck me in my poultry yard

As being a variety; And yet, I fancied I had seen The same out in society.

I'd seen the antitype of hens I'm fond of doing so—
T'm fond of doing so—
To hear the hens go 'cluck, cluck, cluck, 'I n all those spotting lady-folk-And the cocks-doodles crow.

Favorets and Lydis Beckers. Fawcetts and Lydia Beckers.

Soon shall we see the counterpart -The men, poor senseless gabies— Will look the things up for the wash, And nurse and dress the babies.

Whilst women of the lower ranks Will talkee-talk at pubs;

Or. If they be a bit genteel. Go in for Berners Clubs

Chaos will soon have come again, And earth be veiled in Nox When all the cocks are turned to hens And all the hens to cocks.

Such was the moral that I learnt There in my poultry pens: Our prodigy at present is Just this one-Crowing Hens.

- Hornet

— The religious press is much exercised on the subject of dancing. May a Christian dance? that is the question. The Pacific Observer, with its wonted richness, says that "to dance or not to dance is an old question" with pastors, adding that "come religious societies have incorporated it with their social life." But whether they have incorporated the incorporated it with their second me. But whether they have incorporated dancing or not dancing is not stated. The Observer is as clear as Sir John Fulstaff, who, when told "My master bade me ask you whether it were his good fortune to have her or no." It proceeds to argue: First, that "the dance, as it is, is not promotive of true Christian growth in the grace of the other dance, as its, is not productive of the Charlest growth in the grace of ageingt. This objection may be urged against walking, riding, fishing and every other physical exercise. Dancing answers its purpose if it promote growth in grace of another kind, for "those walk the easiest who have learned to dance." Secondly, says the Observer, "Nothing can be more illogical than the dance of modern society." If it were more different would suit our contemporary. A good can solvery. In tweet once acceptance is would said our contemporary. A group deal depends, however, upon the premises one dances on the anomal than a drawing room. There is a great difference between dancing with a Moor Premise at a military ball and with a Moor at a boarding-school hop. But, sider all, why should dancing be legical if it is sufficiently legical? There is too much the legical dancing nowadays for our taste. One partners must have neat ankles. all, why should dancing be teneral it is summerably teneral. There is too much sill-leg and dancing nowadays for our taste. Our partners must have neat ankles. Thirdly, "Dancing rests upon no solid argument." This don't matter, brother, if the floor be solid and not liable to the "illicit process" of giving way. Fourthly, "Did Jesus ever approve anything like it!" Yest for he was a Jew, and they danced as well as the heathen. The maidens danced as they played upon the timbrels. David, "the man after God's own heart," danced before the Ark, and though he was laughed at because he was not in full dress we will bet that the edithough he was laughed at because he was not in full dress we will bet that the editor of the Pacific Observer and all the parsons in 'Frisco can't dance any better. Fightly, "Would it have been consistent with his teaching for Jesus to have been present and taken part in a dance such as prevails in our modern society?" Tempora mulantur nos et mulantur in illis, but Jesus would feel quite as much at home in a modern dancing room as in a modern church. Who can imagine him as taking part in a religious or political meeting in San Francisco to-day': Surfuly, "Is there anything in what He has taught us as Christian duty with which our dance does not in some way conflict?" The editor who could seriously ask a question so absurd as this should never talk about logic in future. A quadrille does not "conflict" with love to one's meighbor. A polity does not extraprish charter. absurd as this should never talk about logic in future. A quadrille does not "conflict" with love to one's neighbor. A polks does not extinguish charity. A schot-tuche is compatible with doing to others as we would that they should do unto us; and there is no Christian temper destroyed by Sir Roger de Coverly except the temper of this egreejonsly pious donkey of an editor. Seventially, and lastly, "What," asks our Christian brother mournfully, "shall be done with the incorrigible?"—that is, with believers who still dance after reading his article. "Suppension," he says, "would, of course, be the shorter method, but would it be the best in the end? Would he be more readily convinced after suspension than before." We should say decidedly not, if you suspend him effectually. Hanging is certainly the shortest method to cure a Christian of dancing. Suspended by our reverend brother, who is a theological Jack Ketch, the dancing believer would perform a pas sent for the last time. Only as an amendment let us suggest that the gibbet erected for the plous who dance be devoted untexed to this uncraceful. form a pus sent for the last time. Only as an amendment let up suggest that sucgibbet erected for the pious who dance be devoted instead to this ungraceful, bandy-legged editor, who might learn dancing with advantage. Let the Town Crier be the hangman and we will teach him to dance as gracefully as the best performer on the tight rope, and David's dance before the Ark shall be a slow saltation compared with our respected brother's Highland, or Presbyterian "Fling!"

#### Court Chat.

January 14th, 1848.—Dined at Henry II., Count Reuss's (who resides at Leipsic). Met the four Princesses of Schleswig-Holstein fat, fair and forty—daughters of the decessed Prince Emilius, and cousins of Duke Christian, the bedd of the family. The ladles spoke warmly for the cause of the duchies, and against the pretencions of the Danish king to get hold of the succession. One of them asked me if I did not think Lord Palmerston would be disposed to help them. I said I hoped so. Count Reuss observed what a fine fellow Lord Palmerston was, and that he would have been a very handsome man but for the loss of his eye. I protested against this assumption, declaring Lord P. had two as good eyes as any-body present. But Count Reuss persisting, and one of the ladies having heard the same story, it was carried against me, and the party separated, I regret to say, in the firm belief that my official chief was a one-eyed minister.—From "Experiences of a Diplomatist," by John Ward, C.R.

— The evening party given by the Countess of Airlie at Holyrood was an exceedingly brilliant affair—as brilliant, indeed, as fair faces and bright eyes, military rausic, lights, flowers, showy uniforms, and the sheen of silks could make it. The only drawback was that during the evening the Throne Gallery was so crowded that it was almost literally impossible to move, and you might be within a foot or two of the man or woman you desired most to see without the slightest chance of ever getting nearer. It was a well-dressed mob, but a mob nevertheless, in which the weakest went to the wall, and the strongest reached the refreshment tables. It is to be feared that the next day many sighs were wasted over dresses that reached home in a very fragmentary state, far beyond any hope of restoration; but the night at the Palace will supply conversation in many a country manse for a long time to come.

— The English papers notice the appearance in London of Mdlle. Marie, who is introducing to London society a class of entertainment which, though well known in France, had not found a place in English drawing-nooms. We observe that this lady has returned to town after a professional visit to St. Petersburg, where her "Saynétes de Salon" elicited expressions of high praise from the press, and that she intends remaining during the London season. M dle. Dumas is gifted with histrionic talent of a high order, besides being a perfect mistress of the art of elocution, and we doubt not that by her efforts the refined entertainments she is now introducing will become a necessary adjunct to the vocal and instrumental music upon which the after-dinner amusement of the British aristocracy almost entirely depends at present.

A duel with swords took place on June 1st in the neighborhood of Vincennes between M. Paul do Cassagnac, of the Pays, and M. Edonard Lockroy, of the Peys Sourevain. The cause of the affair was an article published in the latter journal on May 28th, containing a personal attack on the Emperor Napoleon III., the same being followed by a reply in the Pays of such asperity that M. Lockroy felt bound to demand satisfaction. The seconds were, for M. de Cassagnac, M. Antoine Blanc and Count Maurice d'Irisson d'Herrison; and for his antagonist, M. François Victor Hugo and M. Henri Alain-Targé. After six encounters M. Lockroy received a wound in the right hand, which, according to the declaration of the two surgeons present, necessitated the cessation of the combat.

At a recent sitting of the French Assembly, the Duc d'Aumale spoke with some little fervor of the tricolor as the flag of France. For this he has been taken to task by a Legitimist member of the House, who declares that he felt the most poignant grief when he heard a Bourbon "openly repudiate the symbol of the greatest and noblest family it was ever the privilege of the world to admire and bless." He therefore warns the Duke that he who appeals to revolution is inevitably devoured by revolution, and professes himself a Royalist only because he places the future of his country above every other consideration. The Duke, in a very brief reply, says that he considers be has been faithful to the traditions of his family in speaking as he has spoken of the flag of France.

The papers inform us that a grand dinner took place at the Russian Embassy. Prince Orloff recently dismissed his cook for making him pay a shilling for a bunch of radishes. Ten candidates sent in their names for the vacant post, and the Ambassador invited the chief aristocratic gournels of the capital to come and try their skill. Every candidate had fourteen dishes to prepare; the banquet, therefore, comprised 140 dishes in all. It is not suprising that, after such a tasting feed, the jury postponed their decision.—Echo's Paris Correspondent.

With respect to the decoration of the Legion of Honor, so singularly judged and depreciated by General Trochu in a late debate, Marshal de MacMahon's opinion on the same subject is as follows: "When I receive a salute from an officer, I of course return it; but when I meet a simple soldier with the cross, I always commence."

— The death of Count Hegnenberg-Dux, chief of the Ministry of Bavaria, is announced. It is feared the event may have grave consequences in regard to the present position of the kingdom.

— The Levant Times says that Serkis Bey, the Sultan's architect, has been raised to the rank of bala, a high grade held by very few Christian functionaries.

Rumor says that Prince Arthur is going to contribute to one of the magazines a series of articles on certain customs in the army.

# Wayside Gushings.

[BY MES. HARRIS.]

DEAR NEWS LETTER: - The Fourth of each July Comes only vunce a year, and that's the reason vy I'll celebrate it now in a new sort of werse, So that critics may say as my style is terse Grand Marshal Cole, who's a good old soul, Did ask me if I vould patrol Vith all the big vigs, and he said I might take Sayrah as my aide.
"Vould you prefer, Mrs. 'Arris," says he,
"To be van of the cavity or infantry?"
Says I, "I do not tish to cavil,
But vith infants I've been used to travel; And I vill not valk beside the Red Men Nor vish the dram corpse, for I can't bear dead men; But if the city vill pay for an 'oss As both me and Sayrah can straddle across, Ve'll ride vith Colone! Barnes in the van, For I 'ear as he's quite a ladies' man, And 'Arris vill protect 'im as vell as she can. For Barnes and his infants marches fuet, Vith their Grannies and Meres, as is but just, And I 'ope as 'ow their shells von't bust.' So ven the 'oss was brought to the door, I hordered Sayrah to get on before;
For says I, "I'd better 'old on to the tail,
In case as the vind should blow a gale, And, Sayrah, you cling on to 'is 'air—
Vich ain't no chignon, but nat'ral 'oes 'air—
And if a perliceman gets in the vay,
Say 'tis 'Arris' 'oes, as is 'ired for the day." The critter seemed werry gentle and kind, And cast a retrospect be ind, As I got up with the aid of the staff Of Barnes's regiment, as did some of 'em laugh, And said, "Mrs. 'Arrie, you'll pull out the tail If you tug so 'ard, for 'oss 'air's frail, And is put there for hornament not for use"-And I thought it did feel rayther loose. Ven we both was mounted the 'oss he reared Ven we both was mounted the "os or "oster And kicked that savage I was much afeard We'd be pitched off, but he started full trot Toward the Colonel, who into his saddle had got, And the Colonel's 'ose of a sudding shied, And the Colonel's 'oss of a sudding shied', And threw his rider off on the other side. They picked up Barnes and put 'lm on 'is 'oss, And I fancied as 'ow be looked rayther cross, And, says he, "I'm d—d if ever I see'd A milintary female ride at sich speed As that old 'Arris, for yen she do charge As that old 'Arris, for ven she do charge She's wiss than a viid helephant at large. I'd a werry good mind to send 'im to the rear For passin' sich remarks for me to 'ear, And says I, "the 'oss, though well bred, ain't able. To tell the difference between Barnes and 'is stable. At this hinstant the hanthem did hupward roll. Which were, "Old King Cole is a jol'y old soul," And the Drum Corpoes played as they marched before us, And the 'oss and Sayrah did join in the chorus, But through hagitation I'd lost my woice. A sittin' tail end on this "'Obson's choice." We was both wedged in as tight as bricks, We was both wedged in as tignt as brincies, A listening to "the Spirit of "76," And though we couldn't 'ear the vords of the stanza, I was pleased with the wolce of Miss Speranza. Fred Lyster he roared like a sucking dove, And Sayrah said, "Missue, O, ain't he a love! With a woice as loud as a ball of Bashan, "And have the saited to stahe the consider " And hexackly suited to sich an occasion !" The Prayer sounded like old Boreas a meanin'
Through the trees of the forest and did set me a greanin',
And the angels must 'ave werry long ears As is able to conwey it correct to the spheres. I asked a young man if he'd give me a lift. To see the Oration by John F. Swift, But he said I was too much avoirdapois. I suppose he was one of them 'Oodium boys.

The Declaration of Independence did tickle Sayrah, And says she, "Dear Missus, no words would be fairer, But votsomdever do they mean," says she, "By saying as 'all men are created free?"" Says I, "'Vy, Sayrah, 'ave you reached sixteen And yet do continue so werry green, And yet do continue so werry green,
As 'av got two eyes and yet can't see
As the men in their manners is all of em free?
Indeed their himperence 'ave reached sich a point
That, as Shakepar says, 'the times are out of joint,'
For a wirtnous female can't valk in the street
But some wagabone reskil as she 'appens to meet
Is sure to be takin' of some liberty,
'Cos the men 'aye all been created free.'

"O, is that the meanin, missus ?" Sayrah says,
"Then the Declaration's true, I must confess;
But ven Voman's Rights and Snuffrage 'ave von the day,
The male sect's freedoms vill be done away, And no more takin' liberties vill be allowed And no more takin' liberties vill be allowed By young men as vun 'appens to meet in a crowd, Who think if they treat you to supper and an 'ack They've a right to your vaist, likeways to a smack. But for my part, dear missus, I think sin is in it, And I'm glad the American Constitution's agin it." 'Taint all constitutions,' says I, "is the same, But I readl'y agrees as the men is to blame, Yet since they 'ave all been created thus free, 'Tis our dooty as Christians to go on a spree Vith them vunce in a vile, otherways they might des

'Tis our dooty as Christians to go on a spree
Vith them vunce in a vile, otherways they might despair
And take up vith sich vomen as Mansfield and Fair;
For if wirthous beauty 'olds its 'ed up too 'igh
Young men 'ill seek pleasure vere they didn't ought to try.
But worse than the liberties as is took by the men Is the boldness and brass of each Voman's Rights hen As cants of free love, 'cos no vun man vill love 'er,
And don't respect 'erself nor the vomen that's above 'er.
And if they 'ad their vay they vould soon make it rather
Tryin' for a child to know its own father;
But thank God,'' says I, ''Sayrah, these United States ain't rotten,
But still respect the withyes in viet they was become? But still respect the wirtues in vich they was begotten.

A religious newspaper, reviewing a recent work on the torments of the damned, says: "The Christian philosopher will find this an entertaining work. It is well written and beautifully printed." This strikes us as a waste of sweetness. Why damn us so artistically? For our part, we would as soon be proved reprobate in a one-cent tract or one distributed gratis as on the best cream-laid, with gilt edges. When the Devil puts us on his gridiron it will be small comfort to season us with Worcestershire sauce or mushroom ketchup.

— The Rev. Father Burke, who tells the people of America that Englishmen cannot be Christians, says: "One of the strongest proofs that the Catholic Church offers to the world of her truth is the charity within her." If Father Tom is a sample of Christian cnarity, then commend us to the tender mercies of the devil and the fidelity of Judas Iscariot.

" O for the rarity Of christian charity Under the sun !'

There is a fine opening for another gambler at Salt Lake. A place has been left vacant by the untimely decease of Mr. Charles Dolson, whose presence in town was so objectionable to Colonel Obey that the gallant Colonel emptied his revolver into him. Salt Lake City is a pleasant place to live in, and we do not doubt that some one of our sporting men would find it to his interest to go there. We trust to be speedily able to report more openings of the same kind.

— Father Tom Burke, the latest personification of ecclesiastical buncombe, asks in his farewell lecture in New York, "What is the bark of Peter!" We can tell him that if Peter's bark is anything like the bark of Father Burke, it is the bark of a very mad dog indeed.

Dr. Stone tells us that "getting rich by speculation engenders evil passions." This is the Doctor's last aphorism. He is personally safe, anyhow. "There is no speculation in those eyes"—only a bleared theology and a blinking, hazy philosophy.

# The Strike in Hell.

FIRST TABLEAU SCENE Hell, I wester a . I many small Double.

LICIPER Gentlemen, I tell you I am very much dissatisfied! Hell is no longer warm! Every moment I run the risk of overhearing disagreeable remarks. Only Warn. Every monion I run the test of averhearing disagreeau remarks, only this merion, I found by others and desin disagrees taking a quiet little game of cards in a corner, instead of grashing their teeft as they should, of course I confiscated the cards. Who the dence lef these eards get in, I wonder? (\*\*Course Salenes\*\*) Now listen to me, one and all of you! This state of things can last no longer. Why, your formaces are not even warm. One might sit on them!

As I view Davit country! That is owing to the strike?

Li current—And what the devil is a strike! I know of no such thing. What

mean you ! UNDER DEVIL Why, you see the coal no longer comes, so we are obliged to burn coke

I CLUBER Well! What difference does that make, I would like to know! Coke! the Eterna' pays for esp!, what odds is it to me! However, I intend to make a If the literan pays for osc. what odds is it to me. However, I intend to make a compount above about all this. Mark me well. Exit to a rage.

First I voice Devit. What say you, gentlemen? Do you all intend to submit

quiet's to this toul abuse for forty sons a day? What say you? Second UNDER DRYH - I say it is inflamous!

FIRST UNDER DEVIL Listen to me, then. He says he don't know what a "strike" is. Let us have one.

"SETIES" IS. Let us universally a good idea.

For new David. But if we bese our pieces! It is all very well for you Upper
For new David. But if we bese our pieces! It is all very well for you Upper
Fouris, but I have seven bittle best to take care of who do nothing but eat
First Divit. What a feel you are! How can be do without us! Suppose the Exernal had to blow the fire himself, or get His angels to do it, would their white robos look well in a little while '

Second Devil. For my part I would give a hundred some to see that idle fellow Gabrie farn coal-heaver

Fuser Divil — Come, then, are we agreed. Let us strike for twenty some increase of pay, and we can drop to be. What say on all?
Fuser Divil — Sure. Year. He can't revise
ALL.—The strike. The strike. (Great conjunion.)

SECOND TABLEAU - Inner Chamber of Hell

RATERIC - Well, Dapa Voltaire, so we can't have our sittle game of cards to-day?

VOLTAIRE DON'T speak to me about it. The boss has countiscated the care.

He was in a dov't of a humor, too. I suppose he had had a row with Madame.

ROUSSEAU - This Devict is a brute! But what are you looking for, Voltaire,

on the ground !

on the ground?

Very view "when his feety." Nething only my feet are informally cold. I wonder what can be the marfer with the furnaces. I never feet so cold in Hell before.

D'ALPERSON "which his hearth." There is no doubt that the temperature of Heil has coosed very much of late. What can be the marfer?

Alperson are Messey. While, I find it charming.

Very view "wester". O't course are do yout because us all complain. [Aside.]

I never liked that common man. His description with a substitute of my memory.

Marks area. I cannot explain this change in the temperature at all? Now, were

Mine cred. I cannot expean the change in the temperature at all. Now, were we warmed the arm, beings, by a sin which reversed around the earth. Galilla Ta-ta tat Will you never have any sense. The sun never revolves around anything. Haven't I explained that up there above more than (wenty (imes '

MERCATOR. Yes, but without convincing me. VOLTAINE We'l, no matter Don't quarrel over it here. (Shicering) By

George 1 It is getting as coid as Jericho!

FREDERICK THE CREAT advancing arapped up in circle). Gentlemen, do you know what has happened? The fires are all out. All the Devils have refused to work any more

SUSSEAU - The devil take them, I say! Why, this is a palpable violation of Informal Constitution - We can Laubmit to this

the Internal Constitution We can I submit to this Balkac.—That's true; but if we complain they can roast us!

VOLTAIRE. Well, let them rosst | I m used to it. ALPHED DE MISSET circle. The old ogotist!

D'ALKMRERT We must send a deputation to Lucifer. DIDERGY Or write a communication in the News Letter.

Roteshar Let us rather appoint a committee.
Franchick the Garart — There comes luciter. Let us hear him first.
Liveress — Gentlemen!
And.—This examinations: An abuse of power: An abumination—a violation of the "Constitution."

Lectron Don't all speak at once. I fully understand your grievances; but what can I do? My bevils are all on a "strike!"
D Alexangar Pshawi That is no excuse.

D'ALEMBERT. PSHAW! THAT IS TO EXCUSE PARTIES AND ADDRESS AS A STATE OF THE PARTIES A LIST APPEAL TO THE TOTAL THAT AND ADDRESS A LIST APPEAL TO THE MEAN WHILE. SO YOU AND THE COMPANY OF THE PARTIES AND ADDRESS AND THE PARTIES AND THE PART ground to warm them, for this is the only consolation I can give you. [Alrif.]

### TABLEAU THIRD .- Heaven.

JESUS (to the Eternal.)—I say, Father, give them their forty sous. What difference does it make to you; you are rich!
St. Peter. -Consider, O Father, the enormous wrong which our situation may bring upon us all. Suppose it were known on earth that the fires of hell had gone

MARY.—Oh! this is intolerable! Every time the door opens there comes up such a draft of cold air that I get chilled. Yesterday I was obliged to pass most of the time in the kitchen. I don't think I will far that again, for (to the Elernat) did you not tell me that St. Luke was to wash the vegetables?

you not tell me 'Lak' Bt. Luke was to wash the vegetables ?

THE ETERNAL.—That was to rid us of his presence.

MARY.—I understand. But I was awake all of last night. Why don't you decide upon something, and put an end to this run among the devils?

ETERNAL.—What say yon, Peter? Suppose we offer them five sons.

JESUS.—Why, Father, they have already reduced their demand one half. There is no use of triding. Meanness won't accomplish anything.

ETERNAL—Who talks of meanness! I must look to economy. Already are my money chests greatly reduced. These rascals have been warming well with coke and charging me with coal. I can't stand it any longer.

St. Peter.—But we must look to the necessity of our situation.

ETERNAL.—Ah! Here comes Lucifer; (to Peter) you talked too loud. I hope he

did not hear you.

LUCIFER (aside).—They thought I did not hear them. I know their affairs as well as my own. (Aloud.) Signor, my devils are in a state of revolt; in short they are all on a "strike," and insist that unless their demands are compiled with

they are all on a "strike," and insist that unless their demands are compiled with that they will ask more.

JESUS.—You see, Papa!

LUCIFER.—Besides, there is another difficulty. The "damned" souls have offered to make the fires themselves, without pay. The state of hell is getting desperate. The pumps are all frozen and the water-closets——

"MARY.—Well, never mind the details—proceed.

ETERNAL.—Well, if the "damned" will agree to make their own fires, it seems to me that that would be a great economy.

MARY.—Have you lost your senses! What would they think on earth wereit known there! They have been taught to believe that in hell they will only have to omash their teeth forever. gnash their teeth forever.

LUCIFER. -Yes! until their teeth are worn down to the gums, and then they will have to use their gums.

ETERNAL (to Lucifer).—No hellish wit here. Remember you are in Paradise. LUCIFER (aside).—Yes! a famous old barrack! where one cannot even have his I would not live here for one hundred sous an hour. (Aloud)-Signor, what shall I tell them?

JESUS. - Tell them they shall have their ten sous, and it Papa will not pay it I will give it out of my own purse.

MARY.—Wonderful child! You know I would not let you do that. [They all

disperse. A calm reigns in Heaven and in Hell.] CURTAIN.

### Small-Pox in Trinidad.

West India papers contain statistics of some importance relating to the treatment West India papers contain statistics of some importance relating to the treatment of cases of that terrible disease, small-pox, in the village of Arima, and in the Arima Ward Union, in Trinidad, during March last. We take the following from the Barbados Globe: "The returns are extraordinary in the large proportions of recoveries to death, as compared with other experience in the colony. They are extraordinary also in the cause of this large immunity from loss—water, cold water, with proper diet and care, and plenty of fresh air being the only therapeutic agents employed. While drugs, bleedings, warm applications, herbal and nondescript practices failed, this never did when the patient was uninjured by previous improper treatment, or was not suffering from a dangerous complication of diseases. proper treatment, or was not suffering from a dangerous complication of diseases. In point of fact, out of a total number of 97 treated in the village last month, only If lided for 88 who recovered, and out of the 41 reacted hydropathically, only will died for 88 who recovered. The Warden shows how the two casualities failed to take their place in the long list of recoveries. Many of those who figure in the take their place in the long list of recoveries. Many of those who figure in the village list are persons who were carried into it sick from the neighboring country. In the whole Union there were 214 persons ill of small-pox during the month, 34 of whom died and 144 recovered. 104 out of the whole number were treated on hydropathic principies, and of these only two died (the two of the village already stated), the creole and allopathic treatment having disposed of 32 unfortunates out of the one hundred and ten treated on their rules (including the nine in the village); so that while old methods, creole and orthodox, killed 28 in the country districts of Arima out of 70 treated, not one died of the 57 who followed the water treatment: 18 remained sick on the 31st of the 117 afflicted with the disease in the country district in March, and the same number in the village, of its 97.

Will Filed.—The last will and testament of John Center has been filed for probate. Testator bequeaths to his wife, Etta A. Center, all his property and real estate, and appoints her executrix without being required to give bonds.

# To Coour Volage.

THINKING OF TOU: A MOORE-ISH BALLAD.

I am oftentimes thinking of you. The language of passion is sweet, And it falls on the soul like the dew;

But I know it but lures to deceive. Then why am I thinking of you "

Could I fly from this wilderness world To a heart that was loving and true, Could I live all my life by your side,
I would live and die thinking of you.

- [ Temple Bar.

I thought that my heart had grown cold, But I know when a season had passed
And to loving had sighed its adieu;
But in spite of myself and of fate
You would fly to a love that was new
And I, in my sorrow forsaken, You would fly to a love that was new, And I, in my sorrow forsaken, Should ever be thinking of you.

The chaplet alone love should weave Is of amaranth fadeless and blue: But yours is of roses that wither,

And the roses are mingled with rue. I have suffered too deeply already

My brow with such wreath to endue: Lay it low at the feet of another,
For I will have done thinking of you.

# Great Railroad Meeting.

The "You tickle me and I'll tickle you" Society met again on last Monday evening, at Mercantile Hall, and stirred the pot to the boiling heat the same platform statuary, the same spoken, the same old stereotyped abuse of every body with does not run in their groove, the same everlasting, never ending, eternally ascending incense to the greatness of San Francisco "Sitting ake a queen at the go'den gates of commerce, stretching out her Briorean arms to the Orient and I.d. we are tired of this thing and it must stop. We are tired of Sneath, and he must dry up. We insist upon it, and this is the last time we are going to speak of this matter before doing something decisive.

### RICHARD G. SNEATH, ESQ.,

RICHARD 6. SNEATH, ESQ.,

RICHARD 6. SNEATH, ESQ.,

RICHARD 6. SNEATH, ESQ.,

RICHARD 6. SNEATH, ESQ.,

the "vensi press" and "danging stinkpots." etc. Sneath stood in a draft and smell his own breath. As for the "vensi press," the Alva, Bulletin and Call must defend themselves. If these journais will go into the business of scange the people, in order to buy up real estate, and will get up railread quarrels to be bought off by the railroad people, they deserve the censure of Sneath, and should be brayed at by every honest jackness, Sneath included. Sneath is honest, because he said so on Monday night, and he ought to know, as he is a self-made man. God Almighty is not all responsible for Sneath. With what seorn and indignation did has whose head glow when he denounced, by name, Messus, Ra'ston, Atherton, Stanterd and Huntington. This imprecuntous adventurer, who does not pay one do lar of axes in San Francisco, to have the presumptious andacity to quest on the motives of the most honored and honorable citizens of San Francisco! Oh, for a muzzle or a Poundanster. Next came master. Next came

### CASPAR HOPKINS.

Well, Hopkins was at least intelligent and acted like a gentleman, and gave the very best that could be said for the Atlantic and Pacific Company, and while he spoke carnesty, did not speak offensively. There is something in blood, so we will address a few sober questions to Mr. Hopkins. Would you put your own money into a concern in Missouri, which you do not and cannot central, which has 33 miles of railroad and \$31,000,000 of debt, that cost \$15,000,000 to construct, that has \$10,000,000 of preferred stock against \$3,000,000 of common stock? Do you not know, Mr. Hopkins, as a matter of law, that the lands of the Indian Territory belong to them by virtue of a national treaty, to which the selemn faith and honor of the country is pledeed, and that the absolute fee, simple sittle is in the Indian, and that it cannot be taken from him, except by parchase, and that there is no law to deprive him of it and can be none. You might as well talk of running the mairead across the Comstock vein and confiscating it, or through the city of San Francisco, and "returing," as you term is, the titles to our property. Do you not also know, Mr. Hopkurs, that the charier of this Atlantic and Pacific Railroad was passed in 1886, providing for the construction of fifty miles during the first two years, west from Springfield, and fifty miles each year thereafter, under penalty of foriciture, and that in six years only one hundred and twenty-four miles of road have been constructed, and that

THE CHARTER OF THE ATLANTIC AND PACIFIC RAILROAD IS NOW FORFEITED? Do you not know, Mr. Hopkins, that the Company have no charter and never had to run from the Colorado river to San Francisco, but that the act of their incorperation provides that they shall run from the Colorado in the most direct line to the Pucific (Accuse, and that the same bill authorized the Southern Pacific Railread to Pareije Greate, and that the same Bill authorized the Southern Pareine Railroad to intercept the A and P. road at the Colorado, and gave them the lands and withdrew them from sale, and that the Southern Pareine Company have aircady built more milesin California, from San Francisco toward the Colorado, than your road have built in Missouri! Do you not know, Mr. Hopkins, that the city of St. Louis has never taken a dollar of money from her treasury to subsidize the or any other railroad, and that by the law she cannot do it except by a two-third vote of her registered electors, and that with all the fuss and resolutions and public speechmaking, that the city of St. Louis does not intend to give a single greenback to aid this enterprise, and that the whole thing is a dead blik, and that you, Oh Caspar, are being played by ROBINSON Crusoe for his man Friday.

# T. GUY PHELPS FOR CONGRESS.

Mr. Phelps is a Spiritualist, and believes in communicating with the shades of the dead and in getting messages from the ghosts of the departed. Phelps has been in Congress, and the old ghost rises up and beckons him forward, and he wants to go again, so he pitched in. His voice was as solemn as the inscription upon a moss-covered tombstone, and as sepulchral as a seal lion that had faken cold by sleeping on the wet rocks. Phelps made his very hoots talk, he stamped like a sleeping on the wel rocks. Purips induct its very notice tails, he sampled like a pile-driver upon an obstinate pine; he roared as the calf roars in anticipation of heing manufactured into weal pie; he ranted and turned red in the face and make a spiendid bid for Congress; invoked the Vigilance Committee, as did Hopkins de splendid bid for Congress; invoked the Vigilance Committee, as did Hopkins and Jim Dow, and brought down thunders of applause in the happy prospect of hanging somebody who does not agree with them on this business proposition. He abused Stanford and defield him and shook his red face at him and made up mouths and defiel the Bank and everybody. Then came little Wheeler with a set of resolutions. Wheeler is a short horse, and was soon curried, and then came a young man from the Mission, we did not catch his name, who said something about his being also willing to go to Congress, and about San Francisco sitting at the golden gate of commerce, stretching out her Briorean arms to gather all the Congressmen from China and Japan. The next on the carpet was

#### OLD JIM DOW.

Who really made the most interesting and intelligent speech of the evening. Mr. Dow is a classical and elegant speaker - his figures and tropes and things are beautiful. He wants to have a Vigilance Committee to hang every honest man in town, knowing that he will escape. His language is nasty, his heart is bad, his temper is wicked, his form is ungainly, his face is the mirror of his soul, and in his soul he hates every living being. He manufactures whisky for a livelihood, and makes speeches of buffoonry through the pure love of making a d-d fool of himself. An apprentice boy from one of the foundries then took the stand. He commenced by saving that Son Francisco sits at the golden gate of comparers stratching and the soul forms. by saying that San Francisco sits at the golden gate of commerce, stretching out her Briorean arms to gather old iron from Corea and the South Pacific Islands and —. We came away, and the meeting broke up with three rousing cheers for Alfred Wheeler, Esq., thanking him for the able and impartial manner with which he had managed the Committee of One Hundred.

# An Exciting Ghost Story.

A most curious case was heard at Lisbellaw (County Fermanagh) petty sessions, A most curious case was heard at Lisbellaw (County Fermanagh) petty sessions. James Allen prosecuted Francis Armstrong, a domestic servant, for leaving his service without giving notice. The old man, Armstrong, had an impediment in his speech and appeared nearly blind. Captain Butler—What do you say to this charge? Armstrong—Oh! your honor, sir, at night, when all was asleep the house was nearly thrown down, the way things were rattled in the kitchen. I saw lights round me, and —— Captain Butler—What! was it ghosts troubled you? Armstrong—I don't know, sir dear, what unearthly thing it was; but I heard it and saw the lights, and then a white woman came to my bed. (Oh! oh! Laughter.) Mr. Sankey—Did he complain of this when leaving? Allen—He said he would not come back to the house at night for the broad earth. He asserted that my mother was dead in England and that he whost came to him. I have a letter here (on.) come back to the house at night for the broad earth. He asserted that my mother was dead in England and that her ghost came to him. I have a letter here (produced) to prove my mother is a living woman—as live as ever. (Great laughter.) Mr. Graham, solicitor—Bosh, sir; it does not signify a single farthing to this case whether she is living or dead. Captain Butler—This is an extraordinary case. What are we to do? Armstrong—Oh, your reverences—your worships—(laughter)—I was scared to death in it. Before the white woman came, many a night the great heavy things rolled over me in my bed and crushed me to death. I leave myself to the mercy of the Court. Punish me as light as you can, but for God's sake don't bid me go back when I escaped with my life. I would not take the whole wide world and ones it another nicht. Cantain Butler—Let him he de the sake nor to but me go oack when tescaped with my life. I would not take the whole wide world and go near it another night. Captain Butler—Let him be discharged and paid for the period he served. Armstrong—May the Lord keep your worships from all dangers. (Laughter)—Saunder's News Letter.

- There is now every prospect that the getting of coal by machinery will be more generally adopted than has hitherto been the case. At present it has only been adopted at a few places; but a new machine, patented by Messrs. Gillot & Copley, has just been tested at the Wharneliffe Silkstone Colliery, near Barnsley, in the has just been tested at the Wharneliffe Silkstone Colliery, near Barnsley, in the presence of a number of nining engineers from various parts of the kingdom, and with most satisfactory results. In 136 minutes a bank of coal, fifty-eight yards long, and four feet eight inches thick, was cut to a depth of three feet one inch. The quantity of coal so cut would be about eighty tons in the time stated. In connection with coal machinery a hydraulic coal-breaker, patented by Mr. Chubb, of London, has just been very successfully tested at the Oaks Colliery, Barnsley. It brings down the coal in vast blocks, effecting a great saving by making little or no slack, as wedges, and gunpowder make from twenty-five to forty per cent. The owners of the Oaks Colliery are so satisfied with the machine that they have given orders for four of them.

# An Upright Judge.

The fanatics in Ireland have been burning Judge Keogh in efficy, because, although a strict and consistent Catholic, he has not allowed ecclesiastical projudices to interfere with his administration of the law. The Lord Chancellor of Ireland, O'Hagam, and, we believe, a majority of the Judges are Roman Catholics. So long as they act with the conscientionaness and impartiality of Judge Keogh there can be no objection to this; but no religious affinities, any more than political, should be allowed for an instant to bias a judicial decision. It is in this that the Judges of Great Britain compare so favorably with the Barnaris, Cardozzo and McCunns, of New York. The former are the declarers and administrators of law, and, therefore, the protectors of the people's rights; the latter are the creatures of intrague, bribery, corruption and Ring despotism. If priests defaming man by name at the rights of persons. In the Gaiway election case the Irish Court of Common Pleas have justly decided that Captain Trench, the defeated candidate, was entitled to seat in the House of Commons, vacated by the unscating of Captain Nolan. Judge Lawson, who devered the judgment, said. "The law not only condemned the exercise of sparitual influence in private transactions in life, but they knew it was contrary to the moral law, and that the best instincts of their nature revolted against it. What judgment should the Court pronounce when a numister of religion, standing on the after in the seared robes of his order, claiming the power to biind and loose, used his position to denounce and hold up to public odhum those who dared to exercise their rights and franchises in a way he disapproved of? He decided this case on its own special facts, which he hoped were of rare occurrence. He believed the conclusion at which the tourt had arrived would promote the free dom of ection, for a candidate would hesitate before invoking to his ad spiritual intuinidation. If it were decided that the result of employing such tremendous weapons would be admin

#### Patience.

Patience! why, 'tis the soul of peace;
Of all the virtues, 'tis the nearest kin to heaven;
It makes men look like gods. The best of men
That e'er wore earth about him, was a sufferer,
A soft, weak, patient, humble, tranquil spirit.

-Decker.

The Court Journal records the death of a very eccentric character: "An Iriehman died last week in London, whose career and attainments entitle him to a mehe in the annals of interature. The deceased was about fifty years of age, and was as odd a figure as one could meet in a day's ride. He was small but firmly knit, generally were a white hat and a dress cost, and always had an old voiume under his arm. He was a confirmed bookworm. Mezzofanto was hardly a more accomplished linguist. Mortimer was a graduate of the University of Dublin, and deeply versed in classic lore, but he added a polish to his enadation by his intimacy with at least a dozen modern torques. He spoke French, German, Russan, Polish, Spanish, Italian, modern Greck, Turkish, Arabic, Irish, Weish, and Danish with fluency. In his youth he had been cabin-buy in an American bark, and subsequently became a medical student in Paris, but had to leave it on account of his connection with the June insurrection of "48. He was a very strong man, and utilized his strength by taking an engagement as a Hercules in a circus in Anstadia. By turns he gave bectures on Shakspeare through Germany; was a Greek professor at Hambure. India troop of Spanish ballet-dancers in Holland; and was the companion of Sir William Don, the baronet-actor, in his wildest continental frolics. In his time he had been tutor to Charles Lever's children at Florence. He cameto the curface one day in the employment of Tom Thumb; another in the company of Murphy, the Irish gant, who was a distant cousin. He had been in London since the Franco-Prussian war, which ruined him in fortune. His learning was of little profit to him, for he died very poor in a ward of a hospital, and is buried in the nameless grave of the pauper's corner of some overgrown cemetery."

# Iris.

# [BY BAYARD TAYLOR.]

I am born from the womb of the cloud, For some have stolen the grace And the strength of the ardent sun. That is hidden in rest or strife, When the winds have ceased to be loud, And some have copied the face And the rivers of rain to run.

Then light on my sevenfold arch I swing in the silence of air, While the vapors beneath me march, And leave the sweet earth bare.

For a moment I hover and gleam On the skirts of the sinking storm, And I die in the bliss of the beam That gave me being and form. I fade, as in human hearts

The rapture that mocks the will; I pass as a dream departs
That cannot itself fulfill?

Beyond the bridges I have spanned The fields of the poet unfold, And the riches of fairyland At my bases of misty gold! I keep the wealth of the spheres,

Which the high gods never have won; And I coin, from their airy tears, The diadem of the sun!

Or echoed the voice of Life; And some have woven of sound A chain of the sweetest control. And some have fabled or found The key to the human soul; But I, from the blank of the air
And the white of the barren beam, Have wrought the colors that flare

In the forms of a painter's dream.
I gather the souls of the flowers,
And the sparks of the gems, to me;
Till pale are the blossoming bowers, And dim the chameleon sea!

By the soul's bright sun, the eye, I am thrown on the artist's brain; He follows me, and I fly;
He pauses, I stand again.
O'er the reach of the painted world
My chorded colors I hold,

On a canvas of cloud impearled, Drawn with a brush of gold!

# Woman Smugglers.

Women are frequently smugglers of fine laces, but rarely of jewels. able jewels were, however, recently seized, having been found quilted into an underskirt. A quiet-looking Frau, recently landed from Bremen, had a double-quilted petticoat filled with Shetland shawis, caps, and stockings. Another had a underskirt. A quiet-looking Frau, recently landed from Bremen, had a double-quilited petitica filled with Shetland shawis, caps, and stockings. Another had a quantity of the finest silk bindings, two valuable watches, two silk dress patterns, two odzen silver spoons, a dozen silver forks, and eight pieces of silk galloon quilted into a skirt of serge. A companion had seventy-three bundles of sewing calk and twenty-nine pairs of kid gloves secreted on her person, scarcely concealed, however, as the foolish Fraulein had tied strong cords about her hips, and the smuggled articles were suspended in such a way that she was scarcely able to reach the dock. The muff is a very ordinary cover for smuggled laces. An English-woman had the cotton removed from her muff, and its place filled with valuable laces. The muff was strapped to her person, where it stood for embonyoint. In one petticoat of this were found gloves in quantity; in the facings in her dress, cigars; and in the voluminous gathers of a second petticoat were meerschaum pipes in sections. A Frenchwoman, extravagantly dressed, and moving about suspiciously, was invited into the room of the Inspectress recently. Her petticoat proved to be nine yards of superior black velvet, one of selvedge being gathered into a waist-band, which also held a dress pattern of Ponson silk. The facing of the velvet petticoat, which was put on with the nicest care, was well padded with Chantilly laces, cunningly run together; and the ruffle on the bottom of this imperial under-garment consisted of five rows of rich Chantilly iouncing, caught together, quite likely, in the hope that it would be taken for one piece. An immense seizure of English open-faced watches has recently been made upon the person of a well-appearing American woman, who had them neatly incased in the tucks of a heavy flannel pen-faced watches has recently been made upon the person of a well-appearing American woman, who had them neatly incased in the tucks of a heavy flannel pen-faced watches has the German wom hanging nine watch chains about one's neck, with a valuable watch at the end of each chain. Frau Stumf said she had been told that watches were worn by the passengers, and the officers did not take them. A desperate-looking woman, coming on one of the English steamers lately, on being examined exhibited an amnesing spectacle, with a silver cake basket lashed to each hip, and two huge dress patterns festooned as "filling," there and thereabouts. On being detected, this woman, in terrible rage, drew a knife on the Inspectress. Some of the smuggling expedients are, of course, extremely amusing. A spiritualle little Frenchwoman had on her husband's red flannel drawers, and these were tied in puffs here and there. On being "unpacked," there came forth a Bohemian glass toilet set, two dozen sait cellars, three dozen sitver forks, several little articles of bijouterie in bronze and crystal, and some fine Swiss wood carvings, all of which were put up in the softest tissue paper and paper-shavings, that they might not strike against each other. When the little body was unloaded, no one laughed more heartily than she.—Scribner's Monthly.

<sup>-</sup> We (Court Journal) have heard a story that the ladies of the congregation of a popular preacher are subscribing to a fund to procure him a divorce.

# The Spoils of Culloden.

Calling upon the Misses Macdonald of Achtriachtan the other day, at Fort William, we were shown some very fine old silver plate, having a history of its own, to the recital of which we listened with no small interest. After the battle of Culloden, a party of "red coat" soldiers entered Lochaber and employed themselves in pillaging and plandering in all directions. Hearing that visitors so unwelcome were in the neighborhood, Mrs. Cameron of Glenewis, a lady of great spirit and decision of character, had all her silver piate, china, and other valuables, buried deep in the ground outside the garden wall, after which she removed, with her children and personal attendants, to a spacious cave called Lainth Shandhairte (Samuel's Cave), far up the glon, in the southeastern shoulder of Ben Nevis. Meanwhile the soldiers visited Glenevis House, but, disappointed at not finding the valuables they looked for in such a residence, they burned and plandered the glen without mercy, the terrified inhabitants taking to the mountains, only too glad to escape with their lives, while their homesteads were in flames, and their cattle cither driven away or slangthered of. the spot. Lady Glenevis was at last discovered in her cave by a party of soldiers who had somehow heard of her place of retreat, and had to undergo much rude treatment at their hands, because, in dediscovered in her cave by a party of so,diers who had somehow heard of her pide of retreat, and had to undergo much rude treatment at their hands, because, in defiance of all their threats, she refused to tell where the valuables of which they were in search had been hidden away. As they were about to leave the cave, one of the soldiers, observing that she had something bulky in her breast, of which she seemed very careful, and over which her plaid, fastened by a silver brooch, was carefully drawn, made a snatch at the trinket and when the lady resisted, drew his sword and made a thrust which cut open the plaid at its point of fasten-ing, wounding her infant son at the same moment in the neck, for the hidden treasure in her bosom, though the soldier doubtless thought it might turn out to be something of more marketable value, was a child only a few weeks old. The soldiers at last departed, carrying with them the brooch and plaid as the only trophies diers at last departed, carrying with them the brooch and plaid as the only trophics of their victory over the defenceless lady of the cave. The wounded child recovered, though he bore the mark of the swordthrust to his dying day. He hved to be laird of Glenevis, was father of the late much-respected Mrs. Macdonald of Achtriachtan, and grandfather of the ladies above mentioned. We remember hearing the late Dr. Macintyre of Kilmonivaig, repeating some very fine Gaelic lines to a waterfall, something in the style of Southey's address to "Lodor;" which he said were by the Mrs. Cameron of Glenevis abovementioned, and composed by her while hiding in the cave. When quieter times came round, the buried valuables were of course exhumed, and were found to be none the worse of their temporary interment.—Inverness Courier.

A Lady with Frogs in Her Stomach.

Dr. Cabarus, who died at Paris last year, was one of those jovial physicians whose presence is equally sought in the sick-room as in society, and who effect more with humor and pleasantry than by medicine. Being a brother-in-law of Lesseps, the celebrated engineer, and nearly related to a princely family of his native land, he moved in aristocratic circles, which deeply felt his loss. One cure, by which, at the commencement of his career, he achieved a great reputation, is characteristic of the man. The Duchess of D., one of the most aristocratic ladies of the Faubourg St. Germain, had got possessed of the idea that she had swallowed a frog. She felt this said frog, she declared she did, and its presence robbed her of peace of mind, sleep, and even of health. The Parisian physicians had the rudeness to deny the existence of this animal, ignorant as they were that the poor lady ness to deny the existence of this animal, ignorant as they were that the poor lady suffered martyrdom. A fortunate chance made her acquainted with Dr. Cabarus, and to him she told her tale of woe. He felt, with a seriousness worthy of Hippocrates himself, the pulse of the fair patient, inquired after various symptoms, and, when the charming aristocrat had exhausted all her store of arguments to prove her pet delusion, the youthful doctor said, after a well-feigued pause, "Madame, the frog is there, but I will remove it." He then prescribed an inuocent emetic, and went to the nearest flower-shop, where he bought a small green frog. Arned with this confederate, he presented himself once more before the duchess, and placed a large bash of water in readiness. The emetic began to take effect, the duchess's eyes filled with tears, and our doctor took advantage of the opportunity to slip the green frog into the bash. On seeing the frog a load was removed from the duchess's heart, and for an instant all seemed well. The next moment she turned pale, and, as Dr. Cabarus supported her tottering frame, she cried in a deapairing tone, "Oh, doctor, I am not yet cured, for the frog has left little ones behind her." "Stop," cried Cabarus, without allowing a frace of embarrassment to be seen in his manner, "that we shall soon see." He then threw a searching glance upon the frog, which he had by this time taken in his hand, and uttered, with a certainty that settled the whole question, these words: "Madame, that is an impossibility, for the frog is a male!"—Swisz Three.

<sup>-</sup> Some idea of the value of land in the crowded business portions of the city of London can be gleaned from the fact that a small plot in Lombard street, containing an area of 1,500 square feet—about twenty-five feet by sixty feet—was recently sold for £60,000. This averages over £39 or about \$195 per square foot.

# Pixley and Sneath.

R. G. Sneath, the most egotistical, conceited and shallow-pated ass in San Francisco, presides as Chairman over the Committee of One Hundred. Now, we like Sneath, we are of the opinion that Pixley ought to be arrested for cruelty to this particular animal. Pixley has pricked Sneath's bubble and let the wind out of his gass-bag so completely that he has fallen flat, and would have injured himself if he had not struck upon the top of his head, which, having nothing in it, was uninjured. Sneath tries to snub Pixley, and every time gets a set back. Pixley "openly defiantly and contumnaciously" refused to contribute to Sneath's expenses to St. Louis, and Sneath moved Pixley to be turned out of the Committee; the vole stood 30 for Pixley and 2 for Sneath, Sneath voting for himself. The only notice Pixley took of the incident was to call out in a loud whisper: "What's the matter with you, Sneath, are you dramk?" Sneath pays tax on \$50 worth of property: Pixley pays on \$150,000 worth of real estate. Sneath goes to St. Louis, Boston and Washington at somehody else's expense; Pixley stays at home. Sneath gets wined and dined and excursioned by a railroad company that is confessedly insolvent, comes back to Sun Francisco and fights to steal \$15,000,000 out of the Treasury, to give this company; and while he is so apparently working for pay, and on the moneyed side, he is insolent toward and quarrels with every gentleman of the Committee who differs from him, and charges them with being bought. Sneath was once a Supervisor. The Committee of One Hundred has petered out. It now numbers about forty active men. Little Alf. Wheeler, who hash't a cert; old Hatch, who expects to furnish ties for the new company; Hopkins, who "ate and drank and slept with the St. Louis people for six weeks," who hashe traveling at somebody else's expense and having a good time, and who, if taxed five per cent. on his property for a railroad, would pny less than tendollars; McRuer, who wants to go to Congress on the issue; John T. Doyle, who does n

— Since his release on ball, the most tempting offers have been made to the Tichborne claimant by enterprising managers of public entertainments. The first he received was from the proprietor of a large traveling caravansera. The terms were somewhat enticing—21,500 for three months; but that was completely overshadowed by the disinterested thoughtfulness of no less than three lessees of leading London theaters—the first suggested £1,700 for two months; the second, £1,000 for three months; and the third, £2,000. They only require that the claimant appear in two scenes of a dramatic novelty, in which he was represented, that he might feel quite at home.

— Serious disturbances occurred at Dewsbury, in Yorkshire. The Rev. Father Kenney, a Roman Catholic priest, was fined by the magistrates for being drunk and riotous. Large numbers of Irish gathered round the premises of a man named Carberry, a green-grocer, who it is supposed caused Kenney's apprehension. The mob smashed his windows and threathened him with further violence. Extra police were brought from Huddersfield and other districts to quell the disturbances. It is stated that Carberry has received a letter advising him the next time he goes to Wakefield market to take his coffin with him, as he might find it useful.

— One of those fellows who are always getting up strange statistics has discovered "that the combined mouths of the 25,000 singers of the Boston Jubilee will form a cavity of 736 square feet," We have done a little sum, too, and our opinion is that the combined brains of the 25,000,000 people who, it is stated, will go to hear this hullabaloo and call it music, would, if flung into that cavity, bear to it the same relation that is borne by ten grains of lead to the interior of the shottower down which it is flung.

<sup>—</sup> Mile. Titiens will leave England for America early in the autumn, after the musical festivals, and will return to England at Easter, 1873.

# Important Letter.

The following interesting and clearly-worded letter we have been permitted to The following interesting and clearly-worded retter we have been permitted to publish by Judge Hastings. It is in reply to some questions which were suggested to Judge Hastings by hearing the outrageous and false statements made use of by C. T. Hopkins and Loren Pickering in their bland and malicious speeches helper the Committee of One Hundred, ou Monday last. Mr. Curtis knows exactly what he is writing about in the following. He completely upsets the faisechoods of Messis. Hopkins, Pickering and others in their attempts to injure the credit of the Central Pacific Railroad, as this letter is in itself the best possible proof

Grand Hotel, San Francisco, July 8, 1872.

Hon. S. C. Hastings—Dear Str. I have read the speeches of Mr. C. T. Hopkins and others made before the Committee of One Hundred on Friday last, and reply to the inquiries you did me the honor to address to me as to the truth of the reply to the inquiries you do me the monor to address to the as to the truth of the statements made in those speeches in their showing of the debts and obligations of the Southern and Central Pacific Railroad Companies, permit me to state that up to this time the number of miles of railroad constructed and owned by the Southern Pacific Railroad is 140, on which there is a bonded debt of about \$5,000,000, or \$35,713 per mile. The carnings of the Southern Pacific are at the rate of about Paritle Railfold in Pay, the Santings of the Southern Pacific are at the rate of another \$35,713 per mile. The carnings of the Southern Pacific are at the rate of another \$3,000 per annum per mile, which, after deducting running expenses, leaves ample funds to meet all the interest on these bonds and a considerable sum for the sinking fund besides. There are few Eastern railways bonded for as little as is the Southfund besides. There are few Eastern railways bonded for as little as is the Southfund besides. rung oesines. I acts are two bassern rainways opined for as little as it the South-ern Paculic to-day, and fewer still that peneirate a more fertile, well populated and cultivated region than the Santa Clara and Pajaro valleys, through the center of which the Southern Pacific is located. For these reasons the bonds of this Cali-fornia Raijroad command a premium in Wall street, notwithstanding the repealed forms ranfoar command a premum wan street, however, the repended attempts of late by certain newspapers and interested persons to mjure the credit of this Company. As to the ₹8,00,0,000 of bonds allided to in the debates before the honorable Committee of One Hundred, and which will probably some day be the nonoranic committee of the relative company, allow me to say that they are in the hands of Trustees to be issued as the road progresses in construction, and in exact proportions to the miles completed. The surveys of the Southern Pacific proper and of a branch authorized by Congress to be built from near Tehancapec Pass to a on branch authorized by Congress to be built from hear Tenancapec Pass to a point near San Diego, stretch across a country 1,032 miles in length, and the entire amount of these \$22,000,000 of bonds will only be issued when the whole 1,032 miles of road above mentioned shall have been completed. Eastern capitalists and Ruropean money lenders are satisfied to invest their funds in the mortgages of a

mines of road solve incinned shad nave occur completed. Season explaints a fine for road so well located as this and at a rate of less than \$28,000 per mile, which is all be Directors of the Southern Facific propose to mortgage it for.

As to the Central Pacific having a bonded debt of \$71,000,000, or, as Mr. Pickering states, a mortgage of \$82,000,000 per mile, nothing could be more erroneous. \$31,000,000 is the exact amount of the first mortgage bonds upon the Central Pacific property. There is a second mortgage of \$24,000,000 held by the Government of the United States; but neither the principal or interest of the same is due for twenty-five years yet. And besides, this being a second mortgage, it in twenty-five years yet. And besides, this being a second mortgage, it in the weather the personal creditors of the Central Pacific, as their bonds take precedence. \$31,500,000 is considered a very light mortgage upon a road nearly 1,300 miles in length, the receipts from which were \$1,221,000 in the month of May, or at the rate of nearly \$15,000,000 per annum. The Central Pacific is uponed as nearly 14,000,000 overse of \$10,000,000 covers all its lands and nothing else. These lands are worth considerably more than the amount for which they are mortgaged, viz., about eighty cents an acre. This fact must be apparent to even the most obstinate and prejudiced member of your Committee of One Hundred.

member of your Committee of One Hundred

member of your Communes of the may be, and probably is, mortgaged for a little more than it is worth to-day. But it was not the Central Pacific Directors that did it. Its large debt was contracted before Messrs. Stanford, Huntington and Hopkins took hold of it. But they believe that the California Pacific is so advantageously located as to prove a good investment in time, even with the large debt now hanging over it. At any rate they are willing to pay the interest on these bonds out of their own pockets, in case the road does not earn enough to square said interest account without it, and then wait for a return in, I believe, the not very distant future thus saving the credit or reputation of the State and of all the railroads in it. I close with an assertion I am prepared to prove, and it is this: Take all the railroads together which are controlled by the Central Pacific Board of Directors, rantonus together which are controlled by the Central Pacific Board of Directors, and they are mortgaged for less and are carning more per fille in proportion to their indebtedness than any other 1,600 miles of connected railroads in the United States. I will at this time give but a single proof of this, and it will be found in the quotations of railroad bonds in Wall street. The Central and Southern Pacific bonds rank account to no other railroads in this country. Their six per cents selling for a handsome premium above par. If any one chooses to try and damage so honorable a railroad record and credit as this which Californians have established by much enterprise and hard work, he is welcome to do it. a peculiar ambition which I as a Californian cannot envy. I will only say he has EDWARD CURTIS. Very truly yours,

— The Rev. George Rodgers, of Dorsetshire, is coming to America next month to choose a western site for the establishment of an English colony.

# A Farewell.

Farewell-farewell! thou wert the last, The latest of my store. But thou art gone—the die is cast, The foolish dream is o'er! I weakly hoped with thee to buy Some beer, some bread, some tripe— Plum duff mayhap, or e'en eel-pie, And bird's eye for my pipe.

I clung to you with all my might, Till hunger cried aloud; And then at last to appetite Reluctantly I bowed. They took thee from my trembling grasp, The only coin I had,
My breath all fled in one long gasp, When they declared thee-bad!

Upon the counter there and then They sternly nailed thee down, And left me wretchedest of men, My last-my bad half-crown.

-Fun.

# Mechanical Shorthand.

The taking down a discourse by mechanical means is a problem amongst mechanicians. The bulletin of the Société d'Encouragement de Paris declares that the object has at length been effected, and that an apparatus is now regularly emthe object has at length been effected, and that an apparatus is now regularly employed in stenographing the discourses before the society, which answers its purpose completely. M. Gensonl, the inventor of the apparatus, has adopted a novel mode of striking simultaneously all the letters of each syllable. The apparatus is thus described in the bulletin above named: It is composed of three small keyboards, each containing four double keys, and the combination of these represent all the consonants and vowels. The keyboard to the left, which occupies the four fingers of the left hand is devoted to the initial consonants of syllables, while that on the right hand expresses the final consonants. The central keyboard, which is played by the two thumbs, is devoted to the median vowels. In addition the above there are two supplementary keys, played by the wrists; one of them marks e mute. The operator touches at once all the letters of a syllable, just as a musician static syllable. e muce. The operator touches at once an time letters of a great reference to the color a piano, and this action takes no more time than the emission of the voice which produced the syllable. The mechanism of than the emission of the voice which produced the syllable. The mechanism of the apparatus is so arranged that each key brings down a type, which after being laked by a pencil, impresses its mark on a band of paper, moved forward by clock-work, but which is held in position for an instant at the moment each type is ready to make its impression. The marks are therefore made as rapid as necessary, and to make its impression. The marks are therefore made as rapid as necessary, and they are made equally perfect however fast the apparatus is operated upon: they represent the stenographic discourse in all its integrity. With the knowledge of the characters employed, the bands may be read off at any time with facility. The mechanical stenography caused no sensible fatigue of mind or body, but an operator requires some months' practice before he can keep up with a speaker. In conclusion, the report adds that such an appearatus might be placed in communication with a telegraphic apparatus and a speech thus telegraphed and printed tany distance with the same rapidity that it is traced on the band of the apparatus. -Journal of the Society of Arts.

#### A New Cure for Blindness.

About a year ago, Professor Nagel, of Tübingen, published reports of cases in which he had, by the use of strychnia, restored sight to patients suffering from decay of vision or from blindness. Strychnia, as is well known, is a deadly poison, but it has a wonderful effect in stimulating the nerves, and Prof. Nagel found that in diseases of the optic nerve, whether functional or organic, its operation was alike speedy and efficacious. The quantity used is sof course exceedingly small, one-fortieth of a grain, mixed with water, and this solution is not to be swallowed, but is injected under the skin of one of the arms, which seems to render the result the more remarkable. This remedy has been tried by oculists elsewhere with marked success; and among recent instances occurs a naval captain, aged fifty-two, whose sight was so much impaired that he required to be led about. Within a few minutes after the injection, as above described, the fog which darkened has eyes became less dense, and an impression of light was perceptible. After three days' use of the remedy (an injection night and morning.) he could make out the furniture of the ward with sufficient clearness to guide himself about without feeling; "and, on the fourth day of treatment, without help, he succeeded at midday in walking alone through the thoroughfares of the city to the home of his family, a mile from the infirmary." May we not hope from this experience that henceforth the number of cases of blindness will be largely diminished?

—Chambers' Journal. -Chambers' Journal.

Strike of the Washerwomen.—The Leamington town crier was heard on Friday week making the following announcement in the streets of that fashionoble inland watering place: "Oh, yes; oh, yes; this is to give notice to all mistresses of laundresses, that at an open air meeting held in Leamington by ladies of the wash-tub, it was resolved that on and after the 1st day of June, no washerwoman would work for less than 1s 6d per day, her board and beer included. By order of the ladies of the wash-tub. God save the Queen!"

# A Transcendental Prayer.

Exalted and living Will, whom no name can express and no idea embrace. I yet may raise my heart to thee, for thou and I art not divided. Thy voice is audible within me. In thee, the Incomprehensible, my own nature and the whole world become intelligible to me; every riddle of my existence is solved, and perfect harmony reigns in my soul. I veit my face before thee, I lay my hand upon my lips. Such as thou really art. such as thou appearest unto thyself—I can no more helod thee than I can become like thee. After thousands of thousands of lives such as superior spirits live, I should be as little able to understand thee as in this house of clay. What I understand is, from my very understanding it, finite, and by no progression can ever be transformed into the infinite. Thou differest from the finite, not in degree, but in kind. I will not attempt that which my finite nature forbids. I will not seek to know the nature and essence of thy being. But thy relations to myself and all that is finite lie open before my eyes. Thou creatects in me the concentrations. In the contemplation of this thy relation to my finite nature, I will be transition, nor need to know. Thou knowest my thoughts and acceptest my intentions. In the contemplation of this thy relation to my finite nature, I will be transitionally and without cavil, for it is thy voice that commands me, and the strength with which I perform my duty is thy strength. I am trangul under every even to the world, for it is thy world. Whatever happens forms part of the plan of the eleman world and of the goodness—what in this plan is positive good and what in good—this is senough for me, and in this faith I stand fast, but what in thy world its mere germ, and what biossom, and wat the perfect fruit, I know not. The only thing which is important to me is the progress of reason and of mornity through the in more than the perfect fruit, I know not. The only thing which is important to me is the progress of the dead cumbrous masses which universe appears to my eye, in a gl

### Death in the Milk Pail.

Not long since, Professor Low, of Cornell University, U.S., observed a peculiarity in the milk fornished by the milkman. It appeared to be ropy, and on subjecting it to an examination under a powerful microscope, it was found to contain a number of living organisms in different stages of growth. Pushing his investigations further, the Professor called upon the mikman to inquire concerning the manner in which the milk was cared for. He found, on looking over the premises, that the cows for want of good, clean water—the season being unusually drywere forced to slack their thirst at a stagmant pool located in a middy swale. Taking specimens of the water and examining it under the microscope, the same class of organism was found as those in the milk. It was now pretty evident where the cause of the trouble lay, but to make the matter more clear, specimens of blood were taken from the cows and examined under the microscope, when these also were found to contain the same organisms. The animals, on applying thermometer tests tor determining health or disease, were found to be hot and fewer ish, thus showing that these living organisms, introduced through the medium of the filthy water, and taken into the circulation, by their power of reproduction and multiplication in the blood, became the source of disease. Investigating still further, a particle of the filthy water was introduced into milk free from such organisms multiplied and took possession in vast numbers, producing the same character of milk as that first noticed. Other experiments and investigations were made, but all similar in result to those we have described. These facts are of very great importance to dairymen, and although it was known that milk from cows drunking the putrid or foul water of sloughs and mud holes had caused much trouble at cheese factories, still, dairymen hardly appreciated the full extent of the rouble, or were aware of the precise nature of the injury caused by such water.

# A New Firm.

During a long residence in San Francisco-this growing city of which we are proud we have been able to number among our friends many men of public spirit and fine business qualities, whose material success has been to us a cause of gratification. We are called upon this week to notice the fact that our oid and esteemed friend, Mr. David Porter, has entered upon a foreign commission business, under the firm mame of Porter, Donaldson & Co. The News Letter heartily wishes for the new firm the most abundant success, and takes pleasure in commending it in strong terms to the business community. Mr. Porters has business at and knowledge of general trade operations cannot fail to be productive of the happiest results to the affairs of the firm, which will enter upon a career that must be profitable to its members and to those who have transactions with it.

<sup>—</sup> There is more than one hundred per cent, profit on every glass of soda water sold for ten cents.

# Special Brevities.

- According to the nineteenth annual report of the British Anti-Tobacco Society, the sum of £18,000,000 per annum was squandered on tobacco. "that enemy to health, that dishonor to the Creator, and that derogator from purity and sobriety," producing heart disease, insanity, parulysis, and diminishing the physical powers of the population of both sexes. Smoking filled the workhouses, lunstic asylums, hospitals and prisons, and was the "chief factor of disease in the present day."
- In his "General View of the Agriculture of Berwickshire," Mr. Arthur Bruce says: "I must here take the liberty to mention an individual of our own species, born in the Merse, who, for his gigantic stature, it is believed, is not at present equaled in Britain, George Buickles. His age at this time is about twenty-six years; his hight seven feet four inches; according to others seven feet six. He teaches a school in the Merse."
- In a paper communicated to the Academy of Sciences, Dr. Decaisne gives some interesting statistics concerning what he calls the progress of depopulation in France. "In Prussia," says the doctor, "100 marriages produce 460 children, while in France they hardly give 300; and taking a million inhabitants, the births in Prussia exceed the deaths by 13,300, while in France the excess is only 2,400."
- It is worthy of note that about two centuries ago Parliament did not adjourn on account of races, but races adjourned on account of Parliament. For instance, Peppy relates in his diary that on the 5th of July, 1663, he intended to go to Banslead Downs to see "a famous race," but heard it was "put off, because the Lords do sit in Parliament to-day,"
- A Germany tragedy by a Turk was recently produced at the Hofburg Theater, at Vienna. The tragedy, which is called *Selim III.*, is remarkable for its poetic diction, and is, on the whole, considered a success. Its author is Murad Effendi, Turkish Consul at Temesvar.
- Statistics have been compiled, from which it appears that during the first four months of 1872 the amount of money sought to be raised for new loans, banks, and industrial undertakings brought out in England, America and on the Continent, was about £160,000,000.
- The Scotch manufacturers, especially those engaged in iron and ship-building, are said to be accumulating enormous fortunes. The Bairds, of Gartsherric, leading iron-masters, are reported to be making nearly three million dollars per annum clear profit.
- According to the provisions of a new military law, every Frenchman is now subject to personal military service from twenty to forty, either in the active army or in the reserve; there are no more enlistment bounties; the system of substitutes is abolished.
- The returns of the emigration officers show that during the past month no fewer than 32,066 persons sailed from the Mersey to various parts of the world, but chiefly to the United States. This is an increase of 4,764 as compared with the same month last year.
- Some railroad surveyors between Astoria and Cornelius, Oregon, having found some characters engraved on a rock, traced them up and found a box containing five thousand seven hundred dollars' worth of old Spanish coin and jew-
- According to a report just published, the amount of whisky consumed in Scotland during the last year amounted to five millions of the fourteen millions of gallons manufactured, or about a gallon and a half for every man, woman and child in the kingdom.
- The original picture, by Sir George Hayter, of "The Burning of Latimer and Ridley at Oxford," has left England for Philadelphia, having been purchased by Mr. Latimer, a direct descendant of the martyr.
- From a memorandum on the expenditure of the German War Department, it appears that up to the year 1871 the cost of the war to North Germany was 355,611,122 thalers; about £64,000,000.
- Daniel O'Connell, grandson of the "Liberator," was drowned in the late yacht match at Kingstown. His yacht, the Peri, was only five tons, and it went down suddenly in a heavy sea.
- A postal convention, says L'Italie Financiere, between England and Italy is
  on the point of being concluded, under which post-office orders payable in coin will
  be reciprocally granted.
- Small-pox is reported by the local papers to be raging at Lucknow, and a few cases of sporadic cholera have appeared. The dengue fever has now made its appearance in Rangoon.
- We are sorry to see it stated that Mr. Carlyle has lost the use of his right hand. His writing is now done by a Dunfries-shire lady, his niece.
- Toads sell freely in the English market for twenty-five cents apiece. They are used in gardens to catch flies and clean the shrubs of insects.
- Mr. Algernon C. Swinburne is about to publish a reply to a certain recent hostile critic, to be entitled "Under the Microscope."

#### Court Chat.

— Very shortly the first Sovereign of Persia that has ever visited the English shores may be expected in England. Connected with this visit of the ruler of Persia—a sovereignty of 4,000 years' historic interest—is the organization of a might enterprise, that with the adoption of Mr. Fowler's International Communication settleme will enable a traveler to go from London to India without change of carriage.

— A curious discovery has just been made at the Charterhouse, in the shape of an autograph of Sir Henry Havelock when a boy at that school. It has on it the date of his leaving, and was probably pushed by his own hands behind the wainscot of his cupboard or locker, where the mice and rats have very kindly and considerately spared it for upwards of half a century.

The case of the bankruptcy of the Earl of Orkney recently came before the London Court of Bankruptcy. The habilities were stated at £11,131, and the assets £870. Resolutions have been come to by the creditors accepting £2,000 in incharge of their claim, all costs being paid by the bankrupt, and annulling the bankrupt.

One of the most commendable things a landlord can do in dealing with his tenantry has just been done by the Marquis of Huntly. He has renewed for nineteen years the leases of no fewer than thirty-seven of his tenants, three, and in several cases more than three, years before the expiry of their current leases.

— The new telegraph line between Berlin and London was opened on the 7th ult, at Berlin, and was inaugurated by a telegram sent from the Emperor to Queen Victoria at Balmoral, expressing the hope that Germany and Britain may, by this new means of communication, be bound together still more close and affectionately.

— The King of Denmark solemnly opened the North of Europe Industrial Exhibition at Copenhagen on the 13th ult. The Crown Prince and Crown Princess, as well as Prince Waldemar, were present. The Scandinavian Kingdoms were represented by numerous exhibitors from foreign countries.

The marriage of Mile. Musurus (e'dest daughter of the Turkish Ambassador) with Mr. Warner Heriot, was solemnized recently at St. Paul's, Wilton-place, Knightsbridge. The service was performed by the Bishop of Winchester, assisted by the Hon. and Rev. E. Liddell.

The splendid train, consisting of eight saloon carriages, built a few years ago by the East of France Railway for the use of the Emperor Napoleon and his family, has been purchased by the Roumelian Railway Company for the Sultan, and was landed a few days ago at Stamboul.

The King of Sweden embarked at Calmar, on the Royal frigate Maërewarte, for Boulogne. His majesty, on his arrival in France, traveled incognito, merely passing through Paris on his way to Pau. He will take the name of his grandfather, the Prince of Ponte-Corvo.

A Paris fashionable paper complains that some of the most noble families of France send their servants to the Paris market to sell the fruit and vegetables grown in the grannds of their country houses. Good friend, remember that if noblesse oblige, so does a short income.

The young Duc de Feltre, who was attaché at London under Prince de la Tour d'Asivergne, is about to be married to Mile. Piroin, of one of the most distinguished and opnient families of the East of France. Their residence is at Lisle.

— A marriage is announced between Lady Ida Feilding, daughter of the late Earl of Denbigh, and Mr. Malcolm Low, eldest son of General Sir John Low, K. C. B., of Clatto Park, St. Andrews.

— The Deihi Gazette says it is rumored that H. R. H. Prince Arthur will join C. A. Battery Royal Horse Artillery at Peshawur as second captain, at the close of the year.

At a special meeting of the Jockey Club, held in their private stand at Ascot, Priace Arthur and the Duke of Cambridge were unanimously elected members of the Club.

On dit that a young French nobleman (whose name is kept secret), on arriving home late at night, blew out his brains. He had lost 60,000 francs at cards.

On dit that a series of articles, to be written by Prince Arthur on certain customs in the army, will shortly appear in one of the magazines.

— A rumor is in circulation to the effect that negotiations are going forward for the purchase of Adare Castle and demesne (Ireland) for the Prince of Wales.

— The Queen of Holland is very literary in her tastes and habits, expending two-thirds of her income in this direction.

— It is reported that the eldest son of a most influential English Duke is about to be received into the Roman Catholic Church.

The Princess Louisa and the Marquis of Lorn are staying at Turnbridge Wella. The Marquis was much indisposed.

— The King of the Belgians has abandoned his intended visit to Chantilly, the the Queen's acconchement being expected.

Sir Edward Landseer is said to be hopelessly deranged.

# Guardian Angels.

[BY J. E. CARPENTER.]

Guardian angels, do we doubt them! Guardian angels, do we doubt them I Night by night and day by day, Could we guide our steps without them, Where would wavering fancy stray? Every noble thought that's spoken, Every smile and every sigh. Are they not a sign—a token

That some guardian angel's by?

Guardian angels, hovering o'er us Keep the soul in mercy pure; Had we not bright hope before us, Could we this frail world endure? Then, be sure that ever near us Voices come from forms unseen, Breathed by angels sent to cheer us-Watching earth and Heaven between!

# Can Hydrophobia Be Cured?

Every few months we read in the daily papers an account of some new case of hydrophobia. We do not know of any more terrible and shocking form of disease. bydrophobia. We do not know of any more terrible and shocking form of disease. It is harrowing to one's feelings to merely read a description of the sufferings of its victims. Is there any cure for it? A correspondent describes a case where the man was in convulsions and barked like a dog, but which seems to have been successfully treated. The writer says—"During these convulsions the patient would seize the pillows from his bed in his teeth, and shake and rend them with all the seeming ferocity of an angry dog. An intense dread of water also exhibited itself. The doctors decided to place the patient under the same treatment which had been successfull in a former case, which, for the aid it may be to others who suffer from this disease, we here give as follows: The injection under the skin of large doses of morphine, and the administration of large doses of castor, which is a powerful this disease, we here give as follows: The injection under the skin of large doses of morphine, and the administration of large doses of castor, which is a powerful anti-spasmodic. About one grain of sulphate of morphine was injected under the skin once in four hours, and half a drachm of the powdered castor, mixed with syrup, given internally. The effect was to produce sleep in about half an hour, which lasted about an hour and a half, when the convulsions returned at intervals of an hour to an hour and a half, when the convulsion returned at intervals convulsion occurred, after which he suffered severely from obstinate vomiting until Monday at 10 o'clock, when that also ceased, leaving the patient comparatively easy, but very much prostrated. Since that time he has gradually improved, and now is, to all appearance, quite well.—In addition to the above treatment small quantities of 'chloroform were inhaled at times, and on Sunday morning the patient was wrapped in a woolen blanket, wrung out of a warm solution of muriate of ammonia, 18 to 20 grains to the ounce. This was the treatment which checked the fearful malady, and which the doctors for the sake of humanity, are anxious should be published to the world and thoroughly tested."—Times.

# Extraordinary Lapse of Memory.

haps think it very strange that I have not been down to see you during the last few days, but I hope you will excuse me when I tell you the reason. I suddenly remembered last week end that I had been married in Blackburn about three years ago, and I left my wife soon after; and I forgot all about it till last week, when my wife sen me her portrait with two twins sitting on her knee. I have only been married once, and I don't think I shall live with my wife again, because I never loved her as I love you. Jonathan does not know that I am married, and I hope you will not tell him, love, as I do not want anybody to know but yourself, and I do not think this outent to keep us from going together as usual. I have been teeton three weeks, and I am saving money fast; and I would do anything for you, so I hope you will consider the matter, and do not let two loving hearts be parted, for I feel that I could not live without you. Please write by return of post, as I am longing to hear from you, love. I send you my best love, and dozens of kisses. From your true love till death, John Henry Boyes." The young lady's reply was short and sharp: "Sir:—I desire that you will keep from the place where I live, for you are a scamp coarser than any brute in creation. Let this note be sufficient, or I shall give you into the hands of the police."

### Amusing Scene in Paris.

The Gare ou Nord in Paris was the scene lately of an amusing occurrence. The Gare on Nord in Paris was the scene lately of an amusing occurrence. A dozen Englishmen who had come to visit paris with tourist tickets under the gaidance of a "Cicerone," had just left the train coming from Culais. It seems that during the journey the "Cicerone" had boasted his knowledge of all the leading men in Paris, and, as a proof of his talent, he pointed out an officer who happened to pass by on horseback as General Ladmirault. "Oh! oh!" exclaimed the English visitors. Encouraged by his success, the "Cicerone" seeing a person dresed in black with a parcel under his arm, pointed him out as Jules Favre, with his portfolio. The strangers again exclaimed "Oh," and continued to advance, when unfortunately they came close to the man who had been designated as Jules Targe, and who turned out to he an undertaker carrying the coffin of an infant Targe. amortunately they came close to the man who had been designated as Jules Favre, and who turned out to be an undertaker carrying the coffin of an infant. The clients of the unfortunate guide administered without a moment's hesitation the correction he deserved (a good beating), which was only stopped by the interference of the police.—Swiss Times.

### To Lake Tahoe and Back.

We left San Francisco at seven o'clock in the morning of the 4th July, leaving We left san Francisco at seven o clock in the morning of the surface behind us the roar of bombshells and splattering of Independence-day crackers. Oakland was still shronded in its mantle of mist drawn from the bay, but the tope of the mountains shone bright and clear in the rising sun. Tamapias positively flashed with a welcome to the morn, and the more solid Monte Diabio littled its cold grey head far above the forgs of the lowlands. Our trainglided like a serpent along the base of the Contra Costa Hills, seeking an opening through which to pass, which having found, it dasted its tortious way along the banks of the San Leandro through the beautiful scenery extending from Niles Station to Livernoics After that the view is monotonous until Sacramento is passed. Nevertheless there are many points of interest even in this flat, treeless line of country. At every station are piles of grain in sacks waiting their turn to be transported to San Francisco. are piles of grain in sacks waiting their turn to be transported to San Francisco. Again there are the lines running to the Calaveras Big Trees, the Yosemité Valley, and, what is of more real importance, the partially finished southern line running the entire length of the fertile valley of the San Joaquin, bringing the harvests of Tulaire and Visalia to the Golden Gate, and opening out a was tract of arable and pasture land. Stockton, too, with its countless windmills and its beautiful asylum buildings, making one sad to think how great is the insanity in proportion to the population of this State. For now the two finished asylums, one for male and the other for lunatics of the opposite sex, are not sufficient, and a third is in course of construction. On we can and the done of the Cauliol stands in our of the crows other for lunatics of the opposite sex, are not sufficient, and a third is in course of construction. On we go, and the dome of the Capitol stands up out of the groves of trees that envelop Sacramento. The town was very prettily decorated in honor of the day. The streets leading from the levee, where the train stopped, were lined with evergreens reaching up to the balcony of the second story, giving the appearence of avenues, decorated with flags and streamers. Everything wore a most holiday look. The rail almost makes the circuit of the city, and then after crossing the American river takes its course toward the foothills of the Sierras. Passengers, who from the heat and duliness of the scenery had hitherto been torpid, now from the increasing interest of the surroundines iound to the arilweine nature. gers, who from the neat and dulines of the exchery and attherto been torpid, now from the increasing interest of the surroundings, joined to the entivening nature of the refreshments which the twenty minutes pause at Sacramento had enabled them to take, begin to be lively and talkative. We must not omit one feature in the shape of a boy. He came on board at Oakland. After we had got through the Livermore Pass and everybody was getting dull, he emerged from somewhere with a bundle of novels under his arm of the Charles Reade and Wilkie Collins stamp, and laid one on the lap of every passenger in the car. About ten minutes afterwards he returned like a fisherman who had spread his nets, and found he had caught about two customers. Heretired with the remainder of his stock to come back in half an hour's time with a change of temptation, in the shape of illustrated comic books, not over refined, which he subjected to the same test of inspection as before, with not over refined, which he subjected to the same test of in-spection as betore, with an increased number of vicetims. His next appearance was with those lottery candy boxes, a prize in each; they soid readily where young ladies were being escorted by young gentlemen, and there was a momentary excitement where a real half dollar was found in one. We thought he was exhausted, but no, he had cherries and peaches when we left Sacramento, and capped the climax after dinner at Colfax by going round with "cigars, gents." That boy will make a fortune. To return to our trip: Rosewille is the junction of the northern line to Marysville and Chico. Rocklin, the next station, is interesting on account of its extensive grantic quarries. Here also is the grand depot for the engines of the C. P. R. R. A semicurel of granite stalls, each stall holding an engine, some of them with their fires banked, ready to start at a moment's notice, others waiting their turn of service, but all burnished like silver and ready for action. This building gives a good idea of the perfect order and workmanship of the company, at the same time there is a sense of discipline and method that matils a feeling of security in the passenger. Now we are among the bills and approaching the mining districts. We look down upon Newcastle, nestled in the valley, with its flumes and datches high up on the mounof discipline and method that maths a feeling of security in the passenger. Now we are among the hills and approaching the mining districts. We look down upon Newcastle, nestled in the valley, with its flumes and ditches high up on the mountain's sides, and then Auburn, which has yielded so bountifully, where the great gaunt rocks, bare as the ribs of a skeleton, stand up on the plain, bearing witness to the relentless hydraulic washing that has strepped them of their earth-covering with its precious contents. Ever mounting, through Clipper Gap we arrive at length at Colfax, two thousand four hundred feet above the level of the sea. A length at Coffax, two thousand four hundred feet above the level of the sea. A busy minin, center, where you get a good dinner or supper, according as you are town or country. The next station is the famous Cape Horn. It is only four miles from Coffax, and yet it is 22; feet higher. That is not all. The cars are running on the shelf of a mountain, the sides of which are nearly perpendicular; many hundred feet below you is a thread of water which you are told is the American river; on the other side of the river the mountains rise equally abruptly; you see a line of railroad running parallel to your own, and are told that it is a continuation of the line. A sharp curve and you are slowly rumbling over a treatic bridge that looks so slight, and yet is so strong; again you turn ever most sharply to the right, and are slowly ascending that line you erstwhile saw from the other side. You appear to be approaching the brink of a precipice, over which you must inevitably plungs when very slowly and carefully, like one treading a path in darkness, the train cings round a bluff and emerges once more into the straight running. This is Capellorn. Gold Run, Dutch Flat, Alts, rich in their mineral wealth, tunneted, dritted, blasted, hydranlic-washed, torn, rent, distorted, and that speck of the world's surface laid bare to its granite foundations in the search for gold, all these are passed, and the shades of night begun to close around us when we enter a gallery; thick, wooden beams, bolted and dove-tailed together, supporting a roof of three-inch

planking. These are the snow sheds. In the middle of one of these is an opening like the side aisle of a church. At the end of this aisle, instead of an aitar, is a nice, comfortable hotel and restaurant, all under the sheltering wing of the snowshed. This is Summit Station, 7.017 feet above the level of the sea. It was now quite dark, and our companion, wearied with her long ride, was fast asleep, so that after passing through galleries of snow-sheds for fourteen miles more, we were glad to get to Truckee, where we found an excellent botel with clean, well-furnished bed-rooms, and, although the house was full, a most obliging landlord, at the same time he had not the least idea that we were taking notes. The following morning arose at daybreak, and after a capital breakfast, wherein trout of course figured, set off for Lake Tahoe by stage. In an instant the exactitude and order of the C. P. R. R. was wanting. The stage service to the lake is in the hands of a private indi-R. R. was wanting. The stage service to the lake is in the hands of a private individual named Campbell, who, although he had most emphatically affirmed over-night that he would start at eight the following morning, yet acted on the principle of the old-fashioned ships that would postively sail on a certain day or until cargo aboard. So our living freight was not stowed away until past nine in a Concord coach. It was our luck to have the back seat, with the mother and grandmother of the majority of the passengers more than filling the other two places. We congratmated ourselves on the fact that the mother, who, although stout, was soft and yielding, was next to us, so that at every jolt we merely experienced the effect of going into a well-stuffed cushion, but 4½ miles from Truckee there was a change, yielding, was next to us, so that at every jott we merely experienced the effect of going into a well-stuffed cushion, but 4½ miles from Truckee there was a change, and the large, angular grand-dame, all bone and dessicated muscle, took her place. We suffered in silence for three hours. Why we stopped at this 4½ mile house was to visit a piscicultural establishment, where we witnessed the interesting operation of rearing trout. The spawn or eggs are brought from Lake Tahoe, andsplaced on shallow trays, the bottoms of which are covered with gravel, over which the river water constantly flows. At the end of forty days—during which time constant care is taken to remove the dead eggs, known by their white color—the young fry makes its appearance: It is then a beautiful little fish, nearly of the color of gold fish, but soon changes to a more sober grey. The young ones are then removed to another tank by means of a trough attached to the breeding trays, along which as stream of water conveys them. Here they remain for a year, when they are about two inches long. After that age they grow rapidly, until at four years old they are from two to three pounds in weight. They are fed regularly on a mess of chopped liver and other meat, and their fiesh is not so firm and well-flavored as their less pampered brethren of the river or the lake, who have to work for a living. The road from Truckee to Lake Tahoe follows the Truckee river almost the entire distance. There is hardly a more beautiful drive in all California. At one moment you are by the side of the river, dark; deep, and moving on in a silent mass; a turn of the road, and the waters are torn and twisted and eddying and foaming, as with an agony of passion. Again your der catches a distant roar, and after a time you an agony of passion. Again your car catches a distant roar, and after a time you come to a spot where the hand of man has erected a barrier, over which the waters come to a spot where the hand of man has erected a barrier, over which the waters fall in one solid plunge, whilst the blockaded stream above rests in a sullen captivity. On either side of the river's bank rise the mountains of the Sierras, from under whose everlasting snows constantly stream down the thousand rivulets that feed the main river. We have no space to describe the ever-changing exquisite scenery of this road. After fifteen miles of enjoyment, spite of the discomfort of compressed animation, the stage crosses a bridge, turns a corner, and Lake Tahoe is before us.

Thirty-five miles by fifteen of glass is a fit mirror for Heaven. And that mirror is set in a frame of mountains such as the eye kindles to look upon. The head of this unruffled sheet of water, which reflects the deep blue of the unclouded sky, is formed by a chain of peaks whose sharp outlines, covered with snow, gleam in the bright sun and reappear in the depths of the lake they guard. On the east side rise the gray barren walls of Nevada; the western shore is covered with dark pine forests, and the south is broken into inlets and islands, and boiling springs and broad grass lands, beyond which, however, lie the eternal hills. But that is not the charm of the lake. It is the perfect beauty of repose, not slumber, but the dignity of absolute caim. It is impossible to gaze down into its crystal depths, far deeper than any other known water permits the eye to sound, without feeling that there is a mystery and grandeur about this mountain lake which others do not possess. Thus far no plummet has sounded its greatest depth. Thus far it has never found, although the search for their remains was prolonged for days. Tahoe, or more properly, Tāhu, is the generic Indian term for a collection of waters or lake. A distinguishing adjective is ordinarily prefixed, such as Red Lake, Hot Spring Lake, etc.; but this the Indians call simply Tāhu, or the lake—and it well deserves the title. To turn to more ordinary matters. There is a capital hotel, called the Tahoe House, with nice, well furnished, clean bed-rooms. The house commands the finest view of the lake, and steps from it lead the visitors to boat-houses, whence, at a moderate rate of fifty cents an hour, they can transport themselves to Emerald Bay, the hot springs, Cornelian Beach and the various fishing grounds. One great desideratum is that of a good steamboat, to go unceasingly paddling about the lake to the different points of interest. The little, wheezy, unsafe arrangement that bobs spasmodically across the bay, won't give a private flap of its propeller under

the lake is idle amusement and good for the pot. You take a boat; if at early morning, go to one of the points that jut off shore or near the mouth of one of the many streams that flow from the mountains, where the minnows abound. Later in the day you must pull out into deep water, and there, having baited your hook with a live minnow, you troll gently along, imitating as much as possible the action of a fish, by jerking the line connected with your bait. Sometimes you will suffer your line to drop plumb down, and there, at the depth of sixty feet, you will see your bait and the greedy, hungry, yet suspicious fish prowling all around it. For tront, whilst as rapacious and cruel as Indians, are equally subtle with You can distinguish five-pounders from two-pounders, and hold your breath them in painful suspense. At length one fellow, rasher or more hungry than the others, can stand it no longer, and makes a rush at your minow: there is a quick jerk of your line upward, and then yoo have hooked him. One spash, and all his companions are off in a hurry, with, "serve him right: he might have known there was a hook there." for the world lives under water as well as above it; and you hand up, hand over hand, until a flooping, gasping, speckled silver trout is repent-ing of the sin of gluttony at the bottom of your boat. Lake Takeo hears every mark of filling the crater of an exhausted volcano. The surrounding mountains show traces of volcanic action. Masses of ecoria protrude in many places, hot springs rise under the waters of the lake and hubble on the surface; the centre, if not fathomiess, is of great depth: the form is that of a circle, and the general appearance of the surrounding country favors the impression. The river Truckee peases over beds of lava, and volcanic rocks jut out above its banks. No thorough geological survey has yet been made of this interesting water, the only slight one having pen taken when the boundary line between California and Nevada, which passes through the lake, was run. One peculiar feature of this water is that it never freezes, even in the most severe winter. Its specific gravity is considerably less than that of water, rendering it, as before mentioned, less boyant. For six months of the year its borders are snow-bound, sometimes to the depth of eight feet, but during the summer months it is the loveliest resort in our State. At part of the year its borders are snow-bound, sometimes to the depth of eight feet, but during the summer months it is the loveliest resort in our State. At part of the year its borders are snow-bound, sometimes to the depth of eight feet, but during the summer months it is the loveliest resort in our State. At part of the year is the part of the year of sent there is not one tenth of the fish in the lake that there were ten years ago, and the unpunished system of trapping the fish as they run up the small streams will eventually render them scarce. Our market is supplied with this peached, inferior, out-of-season quality, which is rejected at the lake. There are four kinds of trout Out-of-season quanty, which is rejected at the large. I here are four annue of growthere. The silver trout, which is the best, the brook trout, the showler or mud frout and the brown trout. There is also a large white fish with scales, which, from the description given us, seems to be a kind of chubb, and another very rate. and delicate fish, analagoue, from what we heard, to the char; but we saw neither of them.

We have purposely refrained from noticing the scenery of the Sierra Nevada, through which the C. P. R. R. passes, until our return trip, commencing at daylight. We came back from Taboe to Truckee at midnight, and, late as it was, were well cared-for at the Truckee Hotel. At daybreak we arose and strolled about the town. The present location is not the same as the old town which was burnt down some short time back, for new Truckee has crept down the bill and lined each side of the rairoad, particularly the northern side, where a row of well built and well filled brick stores betoken the prosperity that clusters round the principal station of a trunk line. Indians abound here: they fish in the river Truckee and Douner Lake, reding many strips of trout to passengers. There are very few about Lake Taboe, for, as one of the setters informed us, "they don't find much favor in these parts," a figure of speech which carries its own meaning. Precisely at ten minutes past five. A. B. schedule time; we started from the station and slowly ascended nearly a thousand feet to the Summit, where we had a capital and welcome breakfast. On our way we had many climpaes through the snow hedds of Donner, a adden unveilling of lovely scenery, and then, crash! and we are in the semi-obscurity of the long galleries. And yet these snow sheds have their peculiar charm. The senses are never the d by pazing on the same landscape, ever changing it is granted, but at the same time with a change so gradual that it may be more properly termed merging or inclining one into the other than change, whereas here the scene passes, like the shdes of a panorama. An opening in the sheds, "View of Lake Donner, looking west." A still, dark sheet of water, shut in by mountains, whose sides are covered with pines down to the water's edge, with the exception of one end, where there is a shelving beach. You are a long way shove it, and the lake appears to be upheld, contrary to the laws of nature, for you see lower I and the lake appears to be upheld, contra

One theory, and possibly the true one, about the extreme purity as well as rarily of the water of Lake Tahoe, is that the supply is subterranean. The surface water is doubtlessly termsised by the melting assured to the supply in the real living foundation, but the real living foundation, springs from the grant forms and the probable depths below. Streamsflow-in the matter, but this water, flowing from the mystery of the inner world, is free from all taint of the outer crust. Another feature of the Lake is that only a high breeze creates waves. The storm-wind, as it sweeps over it, gathers up the ethereal water in the form of spray, and bears it away on its wings, but never lashes it into the fury of breakers.

striking the creat of snow and making even shades of white. You have just time to turn to your companion and exclaim: "How beautiful!" when you are again rattling along in darkness. For forty miles you enjoy this gallery of paintings, all by one Master; from glimpses of mountain tarns that look so small one would think they were made for the deer and wild animals to drink at, to the dark, bare, rugged rocks, scathed by the tempest and scorning again to put on their mantle of green. Once more in the light and sunshine and you come upon a smiling valley, where all is fertile and prosperous. A small river winds through its centre; you can almost fancy you hear the lowing of the cows as they stream from the homestead over their rich patture. Neat honges, with gardens and vineyards, are dotted over this secluded vale; your fancy takes you to a village many hundred miles away, when you are again crashing through the gloom, and the next seene shows you the everlasting hills with their endless variety of light, shade, form and color. Therefore we say that there is a charm in the constantly shifting scene of the snow sheds. We have now returned to Blue Cahon, where we left off coming up. We could write a volume on the wondrously beautiful scenery through which the C.P.R. R. passes, but space is not allowed us; yet we cannot lay aside our pen without paying our tribute of praise to the admirable efficiency in the management of the Central Pacific. Here were we at Truckee, three thousand miles from the starting point of this train and its connections; we were told that it would be at this point from that distant point precisely at the P. m., and precisely at that hour the train swept round the curve and stood before the botel. The cars are all that can be desired for comfort and cleanliness; the officers are all pot their work, and there is that unmistakable token of order and system which evinces the master mind controlling all. One thing struck our companion, and that was, the difference in one respect between the setti

The case of Mrs. Louisa Mighells, reported in the city papers a few days ago, furnishes a forcible argument in layor of the capacity of woman to become a good business man. Mrs. Mighells, if not a sole trader, deserved to be one. There are sole traders, we must all admit, who conduct their affairs with great discrimination. Mrs. Mighells was a woman of great executive ability. She was hampered with a husband whose presence and ways were unpleasant to her; and she proceeded, with commendable alacrity and persistency, to render his existence a burden to the unhappy man, by such devices as are known only to a clever woman. She sent him on a trip to the South Seas, from which he insisted on returning slive. She had him locked up in the Insane Asylum, and managed to get all his property into her possession, being careful never to return it after his release. Finally, the poor man went to England, where no doubt he is at this date. Mrs. Mighells was thus left in quiet ownership of property worth some \$300,000. Now, we think that this is a most notable instance of womanly sagacity and management. If there is nothing so successful as success, surely this exploit of Mrs. Mighells must have an excellent effect upon the advancement of woman's cause. Neither Mrs. Pitts-Stevens' paper, nor Miss Couzins' eloquence can effect so much as the praiseworthy course of this shrewd and calculating lady. Hers must take a leading place among the "successful doings" of women of which the suffrage papers tell us so much; and we doubt not she would have reached a proud position among her sisters, were it not that an unfortunate predilection for the gin bottle has rendered it necessary for the myrmidons of the law to cause her incarceration in the Insane Asylum. It is earnestly to be hoped that her mental affliction will be but temporary, that she may return to us with the remarkable powers of mind fully restored, that she may thereafter restrict herself to the use of a better quality of gin, and that she may the reafter assume that promi

<sup>—</sup> The Baptist State Convention of Imbeciles and Pharisaical Christians has been in session again. We know them not; we should gather our cloak about us if the passed their place of meeting, and pass on in grim scorn. We have a heart full of charity for all who are truly moral and unobtrusively charitable; but we have no patience with the Pecksniffs. These religious Conventions are all of a piece—all full of cant and twaddle, bigotry and intolerance. Their members are all of a set—barren of benevolent or useful ideas and prone to idleness and duplicity. Had we our way, we would flay them every day until they went to work at something—wood-sawing, teaching country schools, holding the plow, or some other occupation that would be of benefit to their fellows.

# Leaves from a Lady's Diary.

JULY 6.-Passed by the scene of the late firework combustion, on Washington street, and as I looked on the fragments of pottery belonging to the Giant Cement Co. I moralized on the vanity of advertisements, and wondered whether the company were going to verify their assertions by mending their own china. Returning along Montgomery street, stopped an instant to scrutinize the crowd that was looking in at Bradley & Rulofson's show window of photographs. There were young girls who admired the long, flowing robes and treases, old and not over good-lookgirls who admired the long, flowing robes and treases, old and not over good-looking ones who criticised acquaintances and found them awhilly flattered; but the majority of the gazers was composed of young men of vulgar minds, who can indulge in a good critical stare, unblushingly and unreproved, at beautiful faces and shoulders coming out of low-necked dresses, and can feed their imagination even to satiety upon charms which they can only behold in the shadow. W— M—brought me a book of MSS, poems to look over. They are of the harmless singsong pattern, where dove rhymes with love, and hate is governed by fate. But there is no sacred fire; he is one of those of whom Keats', I think, said:

"With a pulling in man't's force.

They sway themselves upon a rocking-horse, And call that Pegasus."

JULY 8.—For the first time in California heard a real nightingale. Henry took me down below San José, and in the woods, in the stillness of the night, came the well remembered note of the much loved home bird. There was the long, deep guttural call, followed by the throbbing sustained trill we knew so theroughly. This morning Henry brought me the male bird. It is brown, with a yellow breast, This morning Henry brought me the male bird. It is brown, with a vellow breast, and he says that the female is precisely similar to the European. They make their nest on the ground, as in the old country, and, as a farmer told us, lay four green eggs. What a strange thing is criticism. Many of my triends on whose judgment I rely went to see Les Brigands the first night, and returned saying it was very bad; others went the second night and came back delighted. Now I want to go, but if I do, and am pleased, I shall be looked upon by No. I, in whose musical estimation I stand rather high, as deficient in taste. If I am not pleased my money is wasted, and if I don't go ant all, No. 2 will tell me I missed the best opera of the season. Called in the evening on the E—s. What a hateful man be can be when he is out of temper, or something has gone wrong abroad. He came home with a brow as black as Erebus, and sat in a corner making faces and snapping his jaws as if he were catching flies. People are accustomed to him and take no more notice, or are more alraid of his contortions than the passers-by in Market street shrink from the grotesque faces on Bancroft's building, which, with all their grimaces, are as harmless to people without as they are useless to people without a grimaces, are as harmless to people without as they are useless to people within.

JULY 10.—I don't meddle much in public matters but cannot shut my ears to the din around. What a chaos of conflicting interests. Railroad magnates exciting discontent in distant provinces. Ultras of the most opposite opinions combining to defeat one they mutually detest. What annaes me is, the little value men set on their words now-a-days. The Committee of 100, or as Henry says, the Committee of one, the other two are naughts, make beautiful speeches, urge the immediate expenditure of millions to build a new railroad, but not one backs his immediate expenditure of millions to build a new railroad, but not one backs his argument by a subscription. Formerly a man's word was his bond, to-day his words would lay the bonds on others. How common a thing is it to see in the papers. "Shocking murder at X... a woman the cause." Men always seem to be glad when they can say with cowardly Adam, "the woman tempted me." I was thinking of that as I read the Stokes trial, where the public would fain accuse Josephine Mansfield as the instigator. Poor woman, she has sins enough of her own to answer for. For my part, I should esteem a man a selfish coward, whom I might pity, but I don't think I could ever love, if in any way he did wrong for my sake. Shakspeare knew that, when he makes Lady Macbeth's love for her husband field after his crime. fade after his crime.

# Scorning Public Opinion.

When Supervisor Story, as the Bulletin said, explained his vote on the passage to print of Stanford's street order, he went out of his way to scorn public opinion, the Executive Committee of the Committee of One Hundred being the Bulk-thr's public, Mr. Story said, "we behold a happy family." Saucelito (MacCrellish), South Bench (Dewcy), Visitaction Ranch (Wheeler), Ravenswood (Doyler, Alameda Point (Pickering and Fitch), all united in righting (Goal Island. A happy family, indeed! In the East is rising a sun on the face of which we read, "Five per centalizad subsidy, \$10,000,000. By the light of that sun we must view this happy family. Ere long Goal Island will be retired, and a Kilkenny fight will break out in this happy family, as all the interests cannot possibly be harmonized." This constituted Story's scorn of public opinion. His prophecy is fulfilled in less than one month.

<sup>-</sup> At a meeting of the Produce Exchange Association, held yesterday, appropriate resolutions relative to the death of P. L. Webb, of Littlefield, Webb & Co.,

<sup>-</sup> A dividend of \$300,000 was yesterday paid by the Crown Point Mining Company.

# Our Commerce-Six Months' Development.

The records of the commerce of the port of San Francisco show a degree of development during the past ix months of present prosperity and future promise unprecedented in any similar term during the past ten years. The money market is fairly supplied for legitimate requirements, and an increase in capital at a rate exceeding \$3,000,000 per month is in progress. The grain surplus will be in enormous excess of any preceding harvest, and will realize upwards of \$15,000,000. The wool clip of 14,000,000 pounds will produce \$4,000,000. Of wines and brandies, the value exported by sea alone during the six months has been over \$5,000,000. Ships are doing a profitable business. For grain to Europe, £45 shas been offered and refused. The average freight paid per registered ton on the inward tonnage of the half year was \$15 against \$13 30 per ton for the corresponding period last year. There is now a feet of 151 vessels advised us bound for this port against \$119 vessels at the same date last year. The merchandise exports by sea have been \$7,687,403 against \$6,597,588 for the corresponding term of 1871. The treasure exports, exclusive of the movement through the United States Mails, have been \$4,378,004 48 against \$8,685,234 69; but these figures do not indicate the relative yield of the mines for the periods under review. The amount of coin paid in at the Custom House for duties has been \$3,906,910 against, in 1871, \$3,418,005, not-withstanding important reductions in the bariff rates during the current year. The coinage at the San Francisco Branch Mint for the six months has been \$9,284,500 against \$8,565,775 in 1871. The reason of the decreased coinage is reflected in market price for builton, which opened at \$800,885, advanced in Marcu to \$81, not receding until June to \$80,0886, and closing at \$800,870. The passenger movement of the port shows a gain in the number of arrivals over departures of 5,210 against, during the first six months of 1871, 4,200. Real estate has been in very elightly improved demand, the transac

MONTHS,	1869.	1870.	1871.	1872.
January. February March April May	\$7,964,734 6,818,644 6,954,145 7,266,211 6,961,913	\$3,857,789 3,139,433 6,662,996 5,972,748 4,558,765	\$7,686,934 7,256,645 12,758,146 9,770,935 12,511,546	\$17,778,915 24,774,331 17,629,387 36,359,646 19,781,296
June.	6,536,337 \$42,501,984	\$29,837,521	13,470,665	\$124,554,381

It will be observed what an impetus mining shares obtained during the first five months of the current year, as compared with any period since the establishment of the Board. The break in the market is very apparent in the June transactions. The figures in the foregoing paragraph have been extracted from the comprehensive and reliable Commercial Herald in its issue of yesterday.

— The bloody pistol lent by the meek and dark-eyed Churchill to the fair and blushing Emily Pits Stevens for the purpose of perforating the tottering clay of Father Mecker is now in the possession of the Town Crier. Like Emily, it is small in size, and like her also it goes off at half-cock. This death-dealing instrument has a revolutionary history. Washington wore it next his heart, and at his death willed it to one General Jackson. "Old Hickory" pawned it to a New Orleans Jew, from whom it was rescued for the sum of two bits by the body servant of the aforesaid Jackson. Upon the death of the oddy servant he willed the article to the great grandfather of the existing dark-eyed Churchill. That venerable cues left it to his third wife, on condition that she should never advocate the cance of woman suffrage, or marry a man with a glass eye. She did both, and the pistol was lost for three generations. A woman named Frost, the "champion lecturer" of he nineteenth century, came into its possession, we know not how and the pistol again turned up at Platt's Hall, in the village of San Francisco. We learn, from the most unreliable sources, that the death-dealing instruments to wit, Emily Pitts Stevens, the dark-eyed Churchill and the pistol storesaid are to be on exhibition at the City Gardens. Ditto, a stuffed monkey and a petrified pig.

<sup>—</sup> Appleton's Journal, of July 6th, contained the opening chapters of a new serial story, by James De Mille, entitled "An Open Question." It promises to excel his "Awarican Baron" and "Dodge Family" in Interest.

# Stings from the London Hornet.

- An individual writes to the Lancet to tell how he put a Cornhill Magazine and an Rhostveted London News in a bag suspended at a railway station to receive such contributions for the benefit of a hospital. The generous soul signs himself "Americus," and we believe he is. We have been merry. Once, in our joy at the conclusion of a very hard-baked charity sermon, we put a pantaloon button real brass into the plate; another time we gave a humptions snob a thrashing without being asked to do so. Late one night, or rather early one morning, we gave achana a han-sovereign in mistake for a sixpence for driving us from Whitechapel to the New Cut. We sent a pair of boots that we couldn't use any longer to Cheago for the hencefit of the sufferers by the late fire. In short, we've performed countless acts of benevolence; but we never—no, never—have been clever gnough to get them advertised for nothing.
- We are awfully distressed to hear that Miss Patti Josephs and Miss Amy Sheridau are shortly to sail for New York, there to join the Lydia Thempson troupe. Whether we shall ever recover the fearful blow—the agonizing loss which will be inflicted on the English classic drama by their departure will be recorded by such of our posterity as escape drowning in the great flood of our tears. The onion market, we hear, has, since this harrowing announcement, ominiously fluctuated.
- One of the ostriches in the Zoological Gardens, Regent's Park, died the other day, he having been killed by the kindness of the Whitsuntide holiday folks. At the pied mortem examination, an entire copy of the Daily Telegraph was found in his crop. No wonder he died! The manuscating leaders of the durmal twaddler are too much for even the digestion of an ostrich. May thus said affair of the poor ostrich be a warning to other geese—we mean other voracious devourers of the Daily Telegraph.
- Mr. Phear has applied for an injunction against Mr. Strange, of the Royal Surrey Gardens, to restrain that gentleman from bombarding his client's house, and produced a formidable-looking witness, in the shape of a shell, nine inches in diameter, which had made its way into complainant's back garden a reasonable cause for the Strange Phear. Mr. Strange may have lavished a mint of money upon the improvements of his grounds, but he musn't get "shelling out" in this extravgent manner.
- upon the improvements or many contents are also assertion that "not mel ibi apes" means "where there are bees there are monkeys." Decidedly not; what the old classic intended to convey was this. "Where there is Honey there are Bery meaning, of course, Bancrofts. We must request "Ignoranus" in future to address such problems to the Editor, whose answers to correspondents are a caution to School Boards and a blessing to the uncivilized.
- and Some gentlemen who relieved a medical student of his watch, chain, rings, and superfluous cash, in the Bromley Road, after purioning him and rendering him insensible, was so considerate as to leave in his pocket his keys, a railway ticket and suxpence—that sum being exidently meant to allow him light refreshment on his home journey after the unexpected exertions he had undergone.
- Miss Kute Sautley, while playing at Washington, was presented by twaking, the Ambassador from Jupan, with deveral Jupanese articles of value, as tokens of his admiration for her beauty and accomplishments. This suggests a new future for burlesque ladies, who might make the best missionaries at Yokohama, and prove saintly charmers with the Celestials.
- "It is no leved that in future, when the country is fully developed, America will be able to feed four times as many persons as a rc in the world to-day." We suppose this carehation is founded upon the same figures by which America comes to the conclusion that she is in a position to "chaw up" the rest of the world now.
- According to the Times' telegram, the late cyclone at Madras "appears to have been so disastrons from want of competent headship." The telegram had been some sentences before speaking of recriminations between the Government astronomer and officials.
- The Globe, of Friday, June 14th, reviewing a novel called "Sweet Bells Jangled," by Timothy Jones—or whatever his name was headed the notice thus: "Sweet Bells. Jangled by Timothy Jones." After this let no one call the Saturday Review scartfying.
- Realism has reached its zenith at San Francisco, where genuine leaves were introduced in the Forest of Arden. Miss Carlotta Leclercq was voted charming as "Rosa"ind," but advices do not state if she was supported by real sticks."
- Professor Airy, the Astronomer Royal, is to be made a Knight Commander of the Bath. The reason why Mr. Airy is to be made a Knight Commander must be obvious, or ought to be—astronomers are generally off duty by day.
- At the late boat-race, the crowd that lined the banks at Putney gave the American crew three cheers. Had they given them four-coars it would have been more to the purpose.
- Truly, " $\pounds$ s. d." in any perceptible quantity, will be a new comedy called " $\pounds$ s. d." Truly, " $\pounds$ s. d.," in any perceptible quantity, will be a novelty indeed at that highly prosperous house.
- What Exhibition of Academical dress took place at the late Commemoration at Oxford?—The University College Millenary.

# Poetical Parliament .- The Galliant Granadiers.

[BY A FEMALE MEMBER-IN POSSE.]

O que j'aime les militaires!"
And I own it made me stare,
When I heard our household bands Could be sent to foreign lands.

Cardwell-Cambridge give you leave! That I never will believe-Leave to banish each red-coater-Did he now, Lord Yarmouth-bloater?

But if you could prove your words, Sure fine feathers make fine birds. Still we'll stick to each red-coater, Won't we, Earl of Yarmouth-bloater?

No, they shan't-that band so spanky-Tootle-too for any Yankee; If they do it, I from hence shall Sue for damage consequential.

Nor will I believe that mee, Even though you kissed the Bible; Thus to take them from the panace. That those bandsmen—warbling dears, But that damage is remoter, That those bandsmen—warbling dears, Thanks to you, my good Lord Bloater.

# Letter from Dr. Livingstone.

Stanley, the correspondent of the New York Herald, has brought a letter from Dr. Livingstone, dated Ujiji, November, 1871. After detailing his sufferings among the Ujijians, and the manner in which supplies forwarded him from England were appropriated and squandered by those to whose care they had been entrusted, and

appropriate and season whose care they had been entrusted, and who reported him dead, be says:

"Well, when we had got to shout the lowest verge, vague runors of English visitors reached me. I thought of myself as the man who went down from Jerusa-"weit, when we had got to about the lowest verge, vague rumors of English visitors reached me. I thought of myself as the man who went down from Jerusalem to Jericho, but neither Priest, Levite nor Samaritan could possibly pass my way. Yet a good Samaritan was close at hand, and one of my people rushed up at the top of his speed, and in great excitement gasped out, 'An Englishman coming, I see him,' and off he darted to meet him. The American flag, the first seen in these parts, at the head of a caravan, told me the nationality of the stranger. I am cold, and undemonstrative, as we I slanders are usually reputed to be, but your kindness made my frame thrill. It was indeed overwhelming, and I said in my soul, 'Let the richest blessings descend on you and yours.'

"The news that Stanley had to tell me was thrilling. The mighty political changes on the continent, the success of the Atlantic Cables, the election of Gerail Grant, and many other topics riveted my attention for days, and had an immediate and beneficial effect on my health. I had been without news from home for years, save what I could glean from a few Saturday Reviews and Punch, of 1868. My appetite revived, and in a week I began to feel strong again.

"Mr. Stanley brought me a most kind and encouraging dispatch from Lord Clarendon, whose loss I sincerely deplore, the first I had received from the Foreign Office since 1866, and information that the British Government had kindly sent one thousand pounds sterling to my aid. Up to his arrival I was not aware of any pecuniary aid, and I became dissatisfied; but this want is now happily repaired, and I am anxious that you and all my friends should know that, though uncheer

and I am anxious that you and all my friends should know that, though uncheeredly, I have stuck to the task which my friend Sir Roderick Murchison set me with

John Bull tenacity, believing that all would come right at last.

The water-shed of Southern Central Africa is over seven hundred miles in length. The fountains thereon are almost innumerable; that is, it would take a man's life The fountains thereon are almost innumerable; that is, it would take a man's life time to count them. From the water-shed they converge into four large rivers, and these again into two mighty streams in the Nile Valley, which begins in ten degrees South latitude. It was long ere light dawned on the ancient problem and gave me a clear idea of the drainage. I had to feel my way every step of the way, and was generally groping in the dark; for who cared where the rivers ran? They went and drank their fill and let them run by. The natives, who visited the Chambeel, asked for stores, and I heard nothing else. I asked about the waters, questioned and cross-questioned until I was almost afraid of being set down as afflicted with hydronybride.

drophobia.

"My last work, in which I have been greatly hindered from want of suitable attendants, was following the central line of drainage down the country of Kivibal, tendants, was following the central line of drainage down four lakes in line of drainage has four lakes in called Manyuema or, shortly, Manyema. This line of drainage has four lakes in it, the fourth I was near when obliged to return. It is from one to three miles broad, and never can be reached at any point or at any time of the year. The two western drain Luguira or Bartle Fries river, which flow into it at Lake Ramolono; the great river Lomaine flows through Lake Lincoln into it, too, and seems to form the western arm of the Nile on which Petherick traded.

"Now, I know of about six hundred miles of water-shed, and unfortunately the "Now, I know of about six hundred miles of water-shed, and unfortunately the seventh hundred is the most interesting of the whole; for in it, if I am not mistaken, four fountains arise from an earthen mound, and the last of the four becomes at no great distance off a large river. Two of these run north and two run south. I have heard of them so often, and at great distances off, that I cannot doubt their existence, and in spite of a sore longing for home that seizes me every time I think of my family, I want to finish up by their rediscovery.

"Five hundred pounds sterling worth of goods have again unaccountably been entrusted to slaves, and have been over a year on the way, instead of four months. I must go where these fountains lie, ere I can put a completion to my work."—San Francisco News Letter, July 27th.

### The Butler Family.

Benjamin F. Butler, of Massachusetts, may be set down as one of the ablest Benjamin F. Butler, of Massachusetts, may be set down as one of the ablest and most unscrapious of the present public men of the United States. Commencing as a criminal lawyer in a New England village, he became the terror of capital as the advocate of factory girs. As a Democratic pointinian he became the terror of a national organization and added to destroy it by adhering to the interests of the Slave Democracy. He turns war Democrat, and by force of his political genius became a General in the armyonly to display ha eminent disqualification for the position. He is made Military Governor of Lonisiana, distinguished for administrative ability, and for a reckless confissation of the personal property of the enemy, whereby he becomes rich. He quarrels with the Adminisproperty of the enemy, whereby he becomes rich. He quarrels with the Administration, and only becomes reconciled the price of his adherence is paid in influence and office. Andrew Jackson Butler is a brother of Brajanin. He was charged, when in California, with having been particeps cranic is to the forzing of the wild of the Hon. David C. Broderick, and escaped punishment for the offense through a technical construction of the law, which decided the probate of a will may not be distarbed after one year her elapsis. He went to New Orleans, and after accumulating much spoil, died poor. Benjanin I' was his executor. George W Butler is a son of Andrew Jackson, and while in our State was noted for his want of first respect; went to New York and became the companion of actors and actresses; noted for his quarrelsome disposition; assau ted Smonton of the Buildin; married Rose Eytinge, an actress; and on the reconciliation of his uncle Benjamin with the President was made Consul General to Egypt. Two years ago he caused great scandal by encouraging a fight between the natives of the upper Nice. These barbarians, for money, strip naked and light each other with a black-snake winp, every cut of the lash drawing bood ake a bown karle. A brutal and ftendish exhibition which public option thought a Consul occurrance ought not to encourage. The ast act of Mr. Butler was the attempted as-assination of one of the Knedive's American officers, for which he iled from two and has been by the President removed from office. We shall watch the career of this promising young man with interest.

A Scandal on Humanity.

A Scandal on Humanity.

The South Pacific Times, published at Celluo, has a remarkable article on the subject of Chin se emigration to Pera and the horrors attending it. During the eleven years ending with the year 18-1, there arrived in that it public 38-618 Chinnen. This number was the residue of the 13-301 shipped from Masco, the because, 4,693, having dued on the passage, being a little more than 9 per cent. On the 16th of May last the National fregate Loise University at the data of May last the National fregate Loise University at the at called having on board 547 celestuds. The vessel made the trip in less than a month and during that time 182 duel from "dysentery," as the correspondents have it. "Egilt years ago," says the Tenses, "we are credibly informed that out of a cargo of 300 only 30 arrived at Callon, 270 deaths occurring on the voyage, whilst two years since, about 120 died out of the number of 210." The editor says: "It is evident to us that the vessels in which the unfortunate Chin ninea are packed, are selected without to vessels in which the unfortunate Charamen are packed, are selected without consideration as to their sustability for the trade, and are loaded with such a quantity of human freight as can be obtained, without regard to their carrying capacity."
Editornally and through its correspondents, the Times demands that the good name of Peru be no longer tarnished by the scandal on humanity committed in the emigrant traffic under her flag. Our contemporary, as the representative of English and American interests in Peru, does not forget that Chmainen are human beings, and that slavery in any form is obnoxious and incompatible with such interests.

### International Courtesies.

The Court Circular gives an account of the reception of a party of distinguished Americans by Queen Vectoria at the Marine residence of her Majesty. Among those presented to the Queen were General Sherman and Admiral Aiden. The Prince and Princess of Wales visited the American fleet, and afterwards entertained a dumer party in the Royal yacht, which included Admiral Aiden, General Sherman, Munster Schenck, all the Captann of the fleet, and others. Many other honors have recently been shown to Americans in England. The Manchester General ors have recently seen should be Americans in Jagana. The Stationary of the first state of Peers, says: "Some distinguished strangers have visited St. Stephen's during the week. On Monday the covers which conceal the throne and royal cheers of state in the House of Lowest were removed in honor of a visit from Mass Neilhe Grant, daughter of the President of the United States. This is a compliment which has never been paid to a royal visitor. These extraordinary contresies shown to Americans by the Queen and Royal family are an earnest of the hearty desire of England that an intende or dialect. may be firmly established between the two countries.

One of the lunatics who are proud to exhibit their agility as amateur gymnasts has kindly relieved the usual tedium of such displays by falling off a trapeze and masting limesef. This was in Marysville. We should be peased to attend such an exhiberating exhibition here.

# The San Francisco Daily Press.

From our acknowledged position as head of the California press, we are constrained to look down upon the struggling mass of less important contemporaries and give them some good advice. We are pained at their small jeudouses and evil contentions, and, like the wise mentor that we are, we counsel them to stop this wrangling and devote themselves to legitimate journalism. We remember their small beginnings and know their early struggles, the accident of their birth and the incidents of their various lives. We remember the Alla when its carriers' routes were more valuable than the newspaper itself. A kindly paragraph to the murdered Joseph King of William gave it a new lease of life; an unkind paragraph let Frank Soule's Chronich languish and die, and the blood of the martyred King was the seed of the church that gave life and value to the Bulletin. This one tragic incident killed two papers and gave life to two. The Call is the old Town Talk of Pat Hull & Co., the first cheap paper. The Chronich is all charleting the Third, born with teeth, like Minerus, full grown and full armed, it came into existence; and the sooner Mr. Pickering recognizes that it is a definite and fixed fact, the sooner will the foolish quarrel between the two journals be ended. The Paul is an infant yet, and has all its infantile diseases yet to undergo—teething, mamps, croop and cholers infantum. From its size, it is but a seven monthis child, but sometimes they live. Its paper is too small; its price is too low. The Republican is the last edition to the founding asylum of journais. It was untimely ripped from its mother's womb and laid upon the Custom House door-steps. The Ohee-holders refused to take the infant in, and it was carried over to the Republican it possible to take the infant in, and it was carried over to the Republican it possible and and hence their journals languish and grow this; but as the Feraminar goes for Greeley, and all Greeleyites are bound to read, drink water and (who knows?) may live to a green and vigorous o'd

— The town is in a broad grin over the performances of the excellent Sneath. That worthy gentleman has a keen eye for the welfare of the greatest number, which, in his estimation, is eminently No. 1. He invests in real estate in a county where the Assessor has a happy knack of keeping down values; and although he disputes with Dog Jack about the amount of personal tax paid by each, no one seems to have any very definite idea as to the extent of his personal possessions. He pulls off his coat to do battle with the Central, and makes himself the prominent figure of the Atlantic and Pacific ring. All this extraordinary zeal is now explained by the current rumor that he was actually engaged by Governor Stanford to advocate the St. Louis scheme. The shrewd Railrond King thought he saw his way clear to triumph over the whole combination of his enemies by the simple maneuver of employing the biggest fool in the State to howl at him, well knowing that all sensible people would be at once disgusted. Sagacious Stanford! Useful Sneath! Unhappy St. Louis!

The poor convicts at San Quentin have at last made known what it is that they most desire. It is a canary bird. Under the sweet influence of a feathered songster their souls would be filled with peace. Were a canary bird within reach, they would have possessed it long since. None being handy, they ask some one to send them one. Itad these benighted creatures read Mr. Greeley's book, they would have planted a few canary seeds and made the yard alive with canaries.

<sup>—</sup> The Levant Times publishes a horrible story of cannibalism at Flamastani in Persia, during the famine. Nine persons were found to have stolen and caten three children. Two of them, women, were hanged, and the others sentenced by the Grand Vizier to death by starvation. At the end of a week all were dead, and it was found that five of them had eaten the other two.

### OUR FOREIGN HORNET'S NEST.

FROM THE LONDON COMIC JOURNALS.

A very untortunate Fish,

If hungry, or suffering from drouth,

Who had opened too widely his favess, Remember, dear Fish, if you're wise,
Has gulped, very much 'gainst his wish, It's as well, while you open your mouth,
A dose of the hottest of sauces 
Not to close so, completely recorded. Oh, wasn't that Fish very flat!

Oh, dear! what a flounder you look! He opened his mouth very wide-For claims indirect - and that's flat -To enlarge it what trouble he took ! Directly your claims will pay cost; By trying to snap at a sprat,
You a mackerel clearly have lost-He expected some millions inside, And he gotall he wished with a hook !

You've got all you asked -with a hook! Oh, wasn't be savage at that!

At the Wadsworth Police-court a young lady was summoned for assaulting a donestic. On a slight provocation the defendant called plaintiff a blackguard, threw knives and forks at her, cast gooseberry pudding in her face, and otherwise ill-used her. There are some who would object to being the butt for small-arm practice; but there are comparatively few, very few, who could patiently bear the external application of gooseberry pudding. Goosberry pudding—warm goosberry pudding—has an inconvenient habit of bursting, when projected with any considerable force against so hard a substance as the head of a domestic, and when burst, of scattering its basicious contents in several directions, which contents import an unseenly amperature for the objects they attach themselves made. Betale burst, of scattering its inscious contents in several directions, which contents impart an unseemly appearance to the objects they attach themselves unto. Retailation is, unhappily, instructive to the female bosom; and, when the domestic discovered the mess into which she had been brought by the young lady, she maturally desired to get that young lady in a like condition. So the young lady had to pay about three pounds sterling, and received a caution from the magistrate, together, presumably, with a rebuke from her mamma.—Hornet.

> ODGER VERSUS ROGER. A rather rumbustions old codger Was asked for subscriptions for Odger, When he said "Oh! I see! Exchange R for a D, And you've Roger, and Odger and Dodger."

The Swiss Times tells a deeply interesting story: Felix Pyat, when the The Siteus Times tells a deeply interesting story: Felix Fyat, when the Communic's fall was imminent, asked aloud in the Assembly for an instantaneous poison to prevent his capture by the Versailles troops. A friend, with truly Christian consideration, took him a small bottle of prussic acid: but Pyat, on neuring that if the cork came out it would be dangerous of course if the cork never did come out a tellow might carry a phial of it forevers, declared he would prefer a poniard. Nevertheless he went home and took it. The prussic acid? No! The poniard? Not very! What then? He took flight.—Fun.

The acouchement of the Queen of the Belgians is expected hourly! Continental journals say, "The cannon have been drawn up on the Champs de Maunental journals say, "The cannon have been drawn up on the Champs de Manouvres, ready to fire a salute of 101 rounds in case of a princes." The advent of twins does not appear to have been provided for, and the emergency of triplets would probably be very awkward indeed. The big guns are all animation, and are prepared to go off with the news at once-meanwhile, the world awaits!—Hornet.

APE-PARTMENTS TO LET!

Discusted Uncle to young Nutcracker, who never can keep a situation anywhere.

"'I'll tell you what it is, my boy. I fancy I know just the thing for you. Plenty to eat and nothing to do! You've heard the Chipanzee's dead at the Zoo! Well, I don't think they've got anything yet in his place."

First Aberdonian (from the road)—"Fat's the man-nie deein?" Second ditto (who has got over the wall to inspect)—"He's draain wi' paint." First Boy—"Fat's draain 'I s't bonny?" Second ditto (after a pause, critically)—"O, na, it's onything but bonny?"

A "Knock-Down" Blow.

Gus (gushing)—"Hannah, you're the dearest girl in the world!" Hannah—
"Don't be foolish, Gus, you talk like an auctioneer, or what's-his-name!"
Gus—"Explain, love!" Hannah—"Why, don't you see, goosey, you're Hannah—

Drawing-room Minstrels.

(What they have to put up with sometimes.)—Affable Duchess to Amateur Tenor, who has just been warbling M. Gound's last: "Charming! charming! You must really get somebody to introduce you to me!"

# Night and Morning.

How pleasant it is after midnight has past
To be quaffing, and joking, and smoking;—
"Its too bad that forever the pleasures don't last,
But give place to reaction provoking!
For the wine may be bright and the weeds may be right,
But, believe an old roisterer's warning,
You buy the delight and the mirth of to-night
With a head-ache the following morning.
Oh, the higher you soar, the more fearful the fall;—
The more the champagne has been sparkling,
The worse will its memory be to recall,
On awaking, with agony darkling.
For the greater the hight, to which joy took a flight,
The earth's dull sobriety scorning,
The worse is your plight, when the mirth of to-night
Brings its head-ache the following morning.

No matter! 'tis better to suffer the pain,
Than forego all indulgence in pleasure;
Do not balance too closely the loss and the gain,
But believe that you get the full measure.
Then we'll revel, despite of the thorns hid from sight,
Mid the roses our temples adorning,
Though the fates will requite the delight of to-night
With a head-ache the following morning.

### Another Letter from Dr. Livingstone.

The Herald has another letter from Dr. Livingstone, cabled from London, and addressed to James Gordon Bennett, of which the following is an extract: "In trying to make the eastern African slave trade better known to Americans, I indulge hopes that I am aiding, though in a small degree, the good time coming yet, when slavery will, as piracy, be chased from the world. Many have but a faint iden of the evils that trading in slaves inflicts on its victims, and the authors of its atrocities. Slaves generally, and especially those on the West Coast, at Zanzibar and elsewhere, are extremely ugly. I have no prejudice against their color; indeed, any one who lives long among them foregets that they are black, and feels that they are just tellow men; but the low, retreating forchead, pugnacious jaws, lank heels, and other physical peculiarities common among slaves and the West African necroes, always awaken some feelings of remorse. I would not utter a sylabele calculated to press down either class more deeply in the mire in which it is already snuk, but livish to point out that these are not typical Africans, any more than typical Englishmen, and that the natives on nearly all the high lands in the interior of the Continent are, as a rule, fair average specimens of humanity.

Continent are, as a rule, fair average specimens of humanity.

I happened to be present when all the head men of the great chief Msema, who lives west of the south end of Tangyanycka, had come together to make pence with certain Arabs, who had burned their chief town, and I am certain one could not see more finely formed intellectual heads in any assembly in London or Paris, and the faces and forms corresponded finely with the shape of the heads. Msema himself had been a sort of Napoleon for fighting and conquering in his younger days. Many of the women were very pretty, and, like all ladies, would have been much prettier if they had only let themselves alone. Fortunately, the dears could not change charming black eyes, beautiful foreheads, nicely rounded limbs, well-shaped forms and small hands and feet, but must adorn themselves: and this they do by filling their splendid teeth to points like cats' teeth. They are not black, but of a warm brown color. In Cazembe, the queen, Maraia: Nyombe by name, would be esteemed a real beauty either in London. Paris or New York, and yet she had a small hole through the cartilage near the tip of her fine, slightly aquiline nose."

The Doctor details the peculiarities of the people, called Rua, and rells of a number of them who were captives, dying of a broken heart. He also tells of a water shed or broad tree covered upland, some seven hundred miles in length, from west to east, with a general altitude of more than five thousand feet above the sea, having mountains standing on it at various points, between six and seven thoasand feet above the ocean level. On this water shed, springs rise, which are well nigh innumerable. These springs join each other and form brooks, which again converge and become rivers, or say, streams of twenty, forty or eighty vards wide, that never dry, and all flow towards the center of an immense valley, which he believed to be the Valley of the Gile. In this trough we have at first three large rivers, then tell units in one enormous lacustrine river, the central line of the drainage of which he named Webster Lualaba.

named Webster Lualaba.

In this great valley there are also five great lakes—one near the upper end called Lake Bemba, but it is not a source of the Nile. No large river begins in a lake. It is supplied by a river called the Chambesei, and several others which may be considered its sources. Out of it flows a larger river, the Luapula, which forms Leke Moera, and comes ont as the great lake river Lulusba to form Lake Komalondo. West of Komalonda, but still in the great valley, lies Lake Lincoln, which he named as a tribute of love to the great and good man of America, whose friendship

he enjoyed for some time. The last one of three great rivers he named Bartle Freres Luffra. This false into the Komaloudo, and Lake Lincoln becomes a lacenstrine river, and joins the central "neerinange. But lower down all these united forms a fifth lake, at which the shares sent to me instead of men, forced me to my great grief to eave as the unknown lake. By my reckoning, the chronometers being all dead, it is five degrees of longitude west of Speke's position at Ujij. This makes it probable that the great location are recommended in the walter is the western branch of Petherick's Nile—the Bahar-Ghazal—and not the eastern branch, which Speke, Grant and Baker bell-ved to be the river of Egypt. If correct, these would make it the Nile. After the Bahar-Ghazal enters the eastern arm, he found that the mighty river left its washing and flowed right away to the North. The two great western arms drain the Lufra and Tomaine, and running northeast before joining the central line or main streams. He had been told by the natives that the western side of the great valuey was high, like the castern, and as this main stream is reported to go into large reedy lakes, it can scarcely be anglit else than the western arm of the Nile. But besides all this, in which it is quite possible he might be mistaken, there were two fountains of probably seven hundred miles of water-shed, and giving rise to two divers—the Leambi, or Upper Zambezi, and the Kafne, which after the probable of the sides and the rich soit raises everything planted in great luxuriance. A friend of mane-treed rice, and in between three and four months the crop increased one hundred and twenty fold; three measures of seed yielded 300 measures. Matte is so abundant that I have seen forty-flye loads, each of about sixty pounds weight, given for a single goot. Maize, dury or below, songhum, hambistine, cashound with goats, sheep, hogs and fowls, while clephants, buffalo and zebras, abound with goats, sheep, hogs and fowls, while clephants, buffalo and zebras abound w

# The Diamonds, Rubies and Sapphires now on Deposit with the Bank of California

The first parcel of precious stones obtained from the American Diamond and Ruby Mines recently discovered, are now on deposit with the Bank of Cabfornia. The diamonds number about one thousand; the rubbes and garnets amount to about lour pounds weight. There are also a number of large supplies. Most of the one thousand diamonds obtained by Mr. Janin are sund, we infringation to careful the largest is eight carats; one obtained before Mr. Janin visited the place weights one hunered carats, but is black and of little value relatively. There are 100 carats in an avordapors onner, so that a diamond weighing a carat is a small affair, but yet if ever and well-shaped it may be worth from \$15 to \$50. The value of the larger gams is greater relatively than that of the smaller ones, going up to more than \$2,000 per carat in some cases. Some of the suppliers are as large as pigeon eggs.

— A little party of young Christians, last Monday, happening to stroil past the garden of a leathen, became possessed of the singular idea that some carrots would add to their happiness. They began to purk the ascious fruit. The heathen appeared upon the scene, and after reviling them without effect, attempted to expel them from his premises. Of course, he was promptly killed. This is in accordance with the spirite of our institutions. Both of our great positical parties recognize the equacirables of all men. Carrots must be common property. The Tenno of Japan, who is coming here, should take warning of the fate of this illiberal Chinaman. Foreigness must be made to understand and respect our system, which is the best in the world. Our chimate, also, is the best in the world, except for the heathen who thinks he has a right to the exclusive ownership of the carrots which he grows, or indeed any other right.

"Boware of the wimmen," said a wase paternal to his offspring; "keep away from the wimmen, lad; if it hadn't been for my marryin' your mother, you and your dad might hat been in South Ameriky huntin' durons, my son," Similar reflections will pass through the minds of unhappy married men at this time, when the Frontoneal Postsorieth has made public the intelligence from the new diamond fields in New Mexico; and the foolishly yoked will have to remain here and toil, while the Town Urier and his bachelor friends hie them to the mines and adorn themselves with diamonds that will cause them to outshine even the great Boss Tweed or the lamented Fisk.

We rejoice with an exceeding great joy over the tribulations of the spiritnaists who went upon the Cocos Island treasure-hunting expedition. We only regret that their experience was not more bitter. We shed tears of cestacy over the narrative of their long and fruitless toil.

### The Atrocities of Religious Butchers.

The last number of Human Nature, a monthly magazine published in London, contains a remarkable article entitled "A Mad World." We would gladly publish it entire, but its length prevents us. We give the spirit of it, however. The article treats of the fearful delusions that have in various epochs seized the minds of men, and through which the most bideous cruckly has been practiced. History affords too many instances of the madness of mobs, crusades, holy wars, inquisitions, St. Bartholmew massacres, and epodemic insanity of like character. The murders committed through the pretext of witcheraft receive special attention. In 1405, a formidable manifesto was issued by Pope Innocent VIII., by which he called the nations of Europe to the rescue of the Church of Christ upon earth, imperiled by the arts of Satan, and he appointed inquisitors in every country, armed with the apostolic power to convict, punish, and torture to death the unfortunate creatures charged with witchery. For fear the zeal of the enemies of Satan should cool, coarged with witchery. For lear the zeal of the enemies of Satan should coll, successive Popes appointed new commissions. One was issued by Alexander VI. in 1494, another by Leo X. in 1521, and a third by Adrian VI. in 1522. The authorities were all armed with the same powers to hunt out and destroy, and but too rapidly executed their fearful functions. In Geneva alone 500 persons were burned in the years 1515 and 1516, under the title of the Protestant witches. No less than 1,000 persons suffered death for witcheraft in the district of Como in the year 1524, Again persons suitered death for whicheraft in the district of Como in the year 1524, and for several years afterwards the average number of victims exceeded 100 annually. One inquisitor, a priest named Remigius, took great credit to himself for having, during fifteen years, convicted and burned nine hundred persons. In France, about the year 1520, fires for the execution of witches blazed in almost every town. France, Germany and Switzerland were the countries which suffered weet from the turnish together. most from the terrible madness. In Germany the victims were so numerous, that were they not to be found in the official records of the tribunals, it would be almost impossible to believe that mankind could ever have been so deluded and maddened. impossible to believe that mankind could ever have been so definded and mandement. All the great cities of Europe were madhouses. Cologne burned 300 witches annually. Nuremberg, Geneva, Paris, Toulouse, 1,000 victims a year. The district of Romberg had its 400 sacrifices yearly. The madness spread to Sweden, and in the village of Mohra, province of Dalcarlin, 70 persons were condemned to death at one time as late as 1699. Of these 23 were burned to death in one fire in the presence of thousands, of delighted, frenzied spectators. On the following day 15 presence of Indusands of delighted, frenzied spectators. On the following day 15 children were murdered in the same manner, victims to the bloody Moloch of superstition. The remaining 32 were executed at the neighboring town of Tahluna. Besides these, 55 children were found guilty of witcheraft in a minor degree and suffered tortures. Of all the records of the witch trials, preserved to startle future generations, that of Würzburg, from 1627 to 1629, is the most frightful. This record, which brightes to the city only and not to the province of Würzburg, contains the generations, that of Würzburg, from 1627 to 1629, is the most frightful. This record, which relates to the city only, and not to the province of Würzburg, contains the names of 157 persons who were burned in two years, in twenty-nine burnings. The list comprises actors, hote-keepers, common councilmen, fourteen vicars of the cathedral, choristers of the cathedral, the burgomaster's wife; the wife, two sons and daughter of Councellor Stoizenburg and Fraulein Babelin, the handsomest Foung woman in the town. We cannot enumerate any more of the terrible atrocities committed in Europe, but must come to the witch madness as it prevailed in Europa. The statute of Elizabeth in 1652 was the first which recognized witchcraft as a distinct crime of the highest magnitude. From that date it raged with frightful violence both in England and Scotland. During the forty years preceding the accession of James to the throne, the average number of executions for witchcraft in Scotland alone was more than 400 annually, or 17,000 allogether! ceding the accession of James to the throne, the average number of executions for witchcraft in Scotland alone was more than 400 annually, or 17,000 altogether I During the whole of James' reign, amid the civil war of his successor, the sway of the Long Parliament and Cronwell, and the reign of Charles II. the persecutions continued. Dr. Zachary Gray says that he himself perused a list of 3,000 witches, who were executed in the time of the Long Parliament alone. During forty-eight years of the seventeenth century the number executed in England has been estimated. mated at 500 annually, making the frightful total of 40,000 victims! The Lutherans and Calviniets became even more demoniacal as witch burners than the Catholics. Another mental madness called lycanthropy seized the learned doctors and disciples of Christ. This means a temporary change of men into wolves, the entire possibility of the change being based upon the history of Nebuchadnezzar. Thouspossibility of the change dead gased upon the inversion reconstituents. House, ands, men, women and children, convicted of lycanthropy, were burned to death. We leave this frightful subject, and can only hope in our heart of hearts that the religious butchers of the past may never have their counterparts in the future. If we are not vigilant, ecclesiastical butchers of all sects will return to their vomit of human blood.

<sup>—</sup> The Rev. Bramble, who has long been a plous thorn in the side of this wicked community, feels that the Lord calls him to accept a bgiger salary in New York. We trust that the congregation here will have grace to hang their altar linen upon some more luxuriant bush.

<sup>—</sup> The Police Commissioners have removed a policeman for no other cause than that he insulted a citizen and pushed him off the sidewalk. This is astounding. We look for an indignation meeting of our efficient guardians of the peace, whose time-honored rights are thus assailed.

# Wayside Gushings.

[BY MRS. HARRIS.]

DEAR NEWS LETTER: Quite frequently I hear the people say That San Francisco, as a place, is the gayest of the gay; But for my part I think this week it's been unkimum slow, For when the theater's shat up one don't know where to go. Of hopera buff we've had enough, though I hope that sweet Aimée Will come back before werry long, for I loves a good French play. Two nights this week Sayrah and I did go to 'ear the Nun Tell all about the Popes and Priests, and the wictory she'd won Over them wile detectives, as swore through thick and thin, They'd known 'er in Australia, and 'ad seen 'er buying gin. Sayrah did laugh so werry much I thought that it would 'urt 'er, Yen she 'eard about that Pope Joan. whose true name was Gilberta. Says she, "Dear missus, p'raps if you was now to take the wale, You, too, might be elected Pope, though a helderly female." I felt so tickled at 'er words I thought that I should bust, A-fancying myself made Pope Matilda Jane the Fust.
The Nun did prove as clear as day that all the Popes 'ave erred,
And are no more than sinful men, either in deed or word. And are no more than singul men, either in deed or word.

And in her second lectur's he showed that prests may stray
Like other folks from honest paths and wirtue's 'evunly way.

There are good Priests, good Popes, good Nuns, as all men must allow,
But wirtue ain't in any dress, nor yet in any vow.

It is the man, and not the creed, at which we all should look,
For evil minds have evil thoughts in spite of bell and book.

Vun day, vile valking, Sayrah cried, "Lor what a lovely creatur,
Sich holegares I rower too. of the in form or forms." Sich helegance I never see, either in form or featur! Sich helegance I never see, either in form or featur!"
And she pointed to a picture I 'ad never seen before,
Of a lady with a long silk train, dressed a lat Pompadour;
Leastways that's vot I card folks say ven apeaking of 'er vaist,
Though I did think the pictur' showed more wanity than taste.
Vile looking at 'er warious charms, I' card a youth say, "Crikey!
That is the voman as did write the hamorous pocm, 'Payche,'
Vich is so werry shocking no publisher dare print it,
And as for vot it advocates, 'faint proper for to 'int it.'
This made poor Sayrah beg that I would take 'er to Platt's Hall
To 'ear this naughty voman speak on Voman's Rights and all
That endless stuff of 'ow the vorid is to be born again
Ven yoman triumphs and begins 'er universal relgn. Ven voman triumphs and begins 'er universal reign Ven voman triumphs and begins 'er universal reign.
The lecture were a fine epun yarn on voman's vondrous mind
And 'er 'lgh mission to subdue and govern all mankind.
'Aif of 'er vords was stretched that long they quite perplexed poor Salrey,
Who 'oliered, "I do vish we'd brought a Vebster's Dictionary!''
Ven ve got out, says I to 'er, "Stick to your catechism,
For all this, Smillrage and Free Love is heresy and schiem; The place for wirtuous voman ain't the platform or the polls, But in a 'umble, 'appy' ome, where true and modest souls Will find quite work enough to do for this brief span of life, Will and quite work enough to do for this orier span of life."
Without loud talking on the stage and politicans' strife."
Says she, "Ven I am asked to vote for Greeley or for Grant,
The only answer I shall give will be the vords 'I shant,'
For Greeley swears, and Grant do smoke, and so I do not care
Vich of the 'orrid monsters 'as the Presidential chair!" I was much pleased that Sayrah 'eld sich 'ighly proper views, And I promised she should ave a treat votever she might choose. Says she. "Dear Missus, them old friars as come across the sea, Next veek is to be treated to a most tremenjous spree; The folks is giving them old clothes, so if you 'ave a gownd Or pettent to give away, the valet would just go round Some of the monks as is grown stont since coming to this city And being fed on fatted calf through generous people's pity. And to the picnic we will go, where 'Arris pr'aps may waitz
With some of the more hactive moults, although their views is false."

We have heard a horse laugh, have been amused at the caperings of the playful billy-goat, and have noted occasional friskiness in the usually stolid mule. We have also been glad to see an effort on the part of the local-sketcher of the Call to kick up his hee's like a lively coit, to launch the shart of screams at those who sneer at him, and to gibe his bigger neighbors. This is as it should be. Let us not always be mildly bored, thou giant of the Call. Munch thy peanuts more merrity, and let the shells rattle upon the pales of those who are within reach. Put on the cap and hells and disport thee; with patience and long practice, thou mayest become a passable joster. Meanwhile the cautions Town Crier will approach the Bohemian lair and inscribe this warning: "Don't str up the monkeys."

### Court Chat.

- Two great weddings which have been solemnized according to the Ritual of the Roman Catholic Church have taken place this season. The first was the marriage of the Marquis of Bute at the Oratory at Brompton, and on Thursday Prince Liechtenstein espoused Miss Marie Fox, the adopted daughter of Lord Holland, at the Pro-Cathedral at Kensington. At a few minutes after eleven o'clock the organ began to play the "Austrian Hymn," and the young bridegroom, his Highness the Prince Aloyse Liechtenstein, entered, accompanied by his brothers Prince Alfred and Prince Henri. The bridegroom was dressed in the uniform of the Liechtensteinscher regiment of Hussars, and Prince Henri, who officiated as groomsman, wore the uniform of the Knights of Multa. Hardly had the congregation, who stood up to have a look at the Prince, resumed their seats, than the organ again pealed forth, and the bridegroom, rising quickly, walked up the aisle to meet the bride. Miss Fox entered, leaning upon the arm of Earl Granville and followed by her bridesmaids, with the Prince and Lady Granville bringing up the rear. The bride wore a dress of white faille trimmed with two flounces of Brussels lace carried up at the front of the dress, and looped up on the sides by garhands of orangerical parts. the Roman Catholic Church have taken place this season. The first was the married up at the front of the dress, and looped up on the sides by garlands of orange flowers; and the bodice was also trimmed with small bunches of orange blossoms. She were a wreath en diadeene of orange blossom and trails falling at the back over her halr. The only jewels she wore were magnificent diamond carrings, a present from the bridegroom's father. The brideamalds, six in number, were very simply attired in white gaze de Lyon, with satin stripes, demi-trin skirts, with flounces of the same material, white tulle veils, and pink oleanders. Each of the youthful ladies wore a gold bracelet, given by the bridegroom, engraved with cypher, and containing photographs of both bride and bridegroom. The bridesmaids were—Miss Caroline Coventry, Lady Emily Fitzmaurice; Miss Powys, Miss Florence Herbert, of Llanarth; Miss Callender, Miss Ponsonby. The bride knelt for a few moments at the priedien, and then was led by Earl Granville into the vestry, Lady Holland following with the bridegroom. At half-past twelve the organ pealing forth the "National Anthem" amounced the arrival of the Prince of Wales, who led the Princess of Wales to her seat before the sanctuary. Prince Arthur and the Duke and the Duchess of Teck followed. The Royal Princes and the Duke of Cambridge were dressed in simple morning costume. The Princess of Wales were a train skirt of purple velvet, funic of blue-gray crepe de chine trimmed with lace, tight-fatting jacket, quite plain and sleeveless. Her bonnet was of blue crepe de chine piped with purple velvet, small gray-blue feathers. The arrival of the Royal party was the signal for the re-appearance of the bridal party, who came out of the vestry led by the bridegroom, Earl Granville again conducted the bride. Lady Holland knelt at the prie-clieu, Earl Granville stood by his chair, and, the Archbishop advancing to the steps of the sanctuary, the Prince led Miss Fox up, and the ceremony commenced. Without any pracace, the Archbishop, following the usage of the Roman Catholic marriage ceremony, at on ried up at the front of the dress, and looped up on the sides by garlands of orange flowers; and the bodice was also trimmed with small bunches of orange blossoms. ceremony proceeded in mear accordance with the Clurch of England ritual up to the point where the Archbishop, making the sign of the cross, pronounced the couple man and wife. Then he sprinkled them with holy water, and receiving a ring from the bridegroom, blessed it, sprinkled it also with holy water, and returning it to the Prince. The latter took it, and giving to the bride some pieces of gold and silver, said, following the dictation of the Archbishop, "With this ring I thee wed; this gold and silver I thee give; with my body I thee worship; and with all my worldy goods I thee endow." Next he placed the ring on the thumb of the left hand of the bride, saying, "In the name of the Eather," then on the second finger, saying, "In the name of the Son," then on the third finger, saying, "And of the Holy Shost," lastly on the fourth finger, saying, "Amen." After a brief prayer the service was concluded, and the bridal party moved into the chapel of the Sacred Heart, where the register was signed. The Archbishop's address over, the bride and bridegroom left the church for Holland House, whither Lady Holland and the members of the Royal family proceeded for breakfast, the organ pealing forth, as the company left the church, "Mendelssohn's Wedding March." The bridal presents, displayed in the library, were very numerous, and some from the bridegroom's relatives of considerable value, the most notable being a superb tiara of diamonds, forming leaves and fruit, from the Princess Dietrichstein, Prince the fisher of the bridegroom, among other presents, gave a pair of diamond ear. ceremony proceeded in near accordance with the Church of England ritual up to Louis' aunt, who also sent the bride a beautiful pendant set with the emeralds. The father of the bridegroom, among other presents, gave a pair of diamond carrings (which the bride wore at her marriage), formed of wreaths of diamonds and a diamond pendant en suite, also an emerald brooch and earrings en suite, enriched with diamonds, also a heautiful diamond and pearl locket, formed of acorns and rosebuds, the acorns being formed of diamonds and the buds of pink pearls. The Princess Julie Liechtenstein, mother of Prince Louis, presented her daughterinlaw with a magnificent pearl necklace consisting of five rows of large Oriental pearls containing alls howels and a invalid class set with three americals are pearls, containing 215 pearls, and a jeweled class set with three emeralds sur-rounded by brilliants; also a diamond sprig of oak leaves and acorn cups formed of diamonds, the acorns being of pearls of remarkable size and color. The reign-ing Prince of Liechtenstein's presents was a beautiful fan of Valenciennes lace, the polished ivory frame being set with a monogram and coronet in diamonds and rubies. In addition there were upwards of 250 bridal presents, including several

valuable gifts from Lady Holland; and among other donors may be included the Princes and Princess of Wales. Princess Dolgorosk, Prince and Princess Corace Carafar, the Duke and Duchess di Bruzzano, and many others. The band of the First Life Guards, conducted by Mr. Waterson, the bandmaster, played during the aftermoon a varied programme of music, and at the termination of the performance "God save the Queen,"—Court Circular, June 20th.

Among the most accomplished Enguists in Europe are sons of some of the kings and emperors. The Crown Prince Rudolph of Austria spacks six languages and understands three more. The eddest son of the Crown Prince of Prinssia, Frederick Wilsam, who one day hopes to be Emperor of Germany, fluently speaks terman, Pobsh, Danish, Frederick Wilsam, who one day hopes to be Emperor of Germany, fluently speaks terman, Pobsh, Danish, Frederick Wilsam, who one day hopes to be ing fauntiar with all the numerous didects speaks in Italy The Crown Prince Frederick of Denmark speaks Denish, Swedsh, German, French and Russian; and the eddest son of the Emperor A exader II. of Russia can converse with you in Russian, Polish, German, French, Danish, and English.

Another marriage to chronicle, that of Victorien Sardon to Mdlle, Soniić, It was a ceremony performed with a right royal mine en even, the properties being of a regal rather than of a republisem character. The multiple fled to one was been not been sounded in the chapel of Louis XIV, at Versailles, and gorgeous Suisse colled in a livery of scarlet and god, and armed with a halberd that formerly belonged to the King's Guards, led the procession to the altar.

— Pope Pius has signalized this new era of his sovereignty by causing copies of a sort of Encyclical letter to be distributed among the members of the dipomatic copys. The document, which has been made public, touches on the present state of political and religious affairs in Europe.

The Prince of Wales has conveyed to the inhabitants of Bethnal Green his sense of the gratification afforded to him by the opening of the East London Massum, and of his benef in the beneficial results likely to arise from the establishment of that institution.

The Town Unior bath for many years been strong and steadfast in the faith, and bath kept the standard of his Master duly excited above the banners of the and both kept the standard of his Master duly excited above the hanners of the pulpit chuntrebers and other pions frands who have vainly sought to divert the attention of the people from the enjoyment of the true things of this fits to the fabled glories of the New Jerusalem. He hath been Satanic at all times and in all places, and teaches his innumerable renders to despease all things commonly held satered, to cast away the deutsions of pretentions revelation, and to hood fast only to that which is substantial. He hath made of Satan at once the personification of realism and the ideaustic essence of all that is purely voluptions and sensually subline in the wondrous and cestatic thing that we call Nature. He hath ever had ready the homeons what to denily satirs and the buting eight to hearth ever had snother in the wondrous and cestate thing that we call Nature. He hath ever had ready the pieus-ant shart of genial savire and the bring gibe to larunch swiftly at cant and twaddle, and he hath made it the object of his glorious life to strike down hypoerrsy and error wherever found. In this good work he grieves that he has been left to stand alone. The world has gone on in its treless round, and preachers have droubed, quacks have ensuared, and humbigs have flourished on all sides, with none to strike at them but the Tome Criev. At various times false laths have appeared, but have gone out in darkness, Under the genery name of Reform, many offers have how now made but all increasing to be taken in being. Shrinkers, many efforts have been made, but all have proved to be talse in basis. Shricking women and howling men have appeared, to meet with deserved neglect and scorn. Women reformers, hard-faced and shaped like things of evil, have brazeniy preached that which is justly repudiated by our truer humanity and progression. Occasionally we have had hopes. The mild eyes of the dove-like Couzins shone upon us as stars set in the East, and raised our hopes high; but they have been dashed. And now comes a new enchantress, waited on gales of adulation, and clothed in such exquisite form of voluptuousness as Cleopatra may have displayed to subdue the fierce Antony. But again is the Town Urier doomed to bitter disappointment. He wanteth not the platitudes of the lecture-room, wherewith he hath been disgusted these many years. He looketh for something purifying and ennobling, and is not to be put off with the stale Woodhul vagary, no matter how pleasantly proferred him. He will crown this syren Queen of Free Love, if her spirit asks nothing better; but he will then dismiss her, robed in parple, but reci-ing with decay, and her vitals gnawed by insatinte and unattainable desires. The ing with decay, and her vitals gnawed by insatiate and unattainable desires. The T. C. repulates the mere adoration of passion. His godike frame may be enaptured by the voluptuous visitor who chants of love and freedom, he may not refuse to respond to her passionate appeals, but he yet puts all this heliuid him as not being the name of his desires nor the object of his far-reaching sont. As a plaything, he doubteth not be might derive from her some very pretty fooling; but as a goddess of Reform—ah! no. Again he asks, why "Mrs."? Why do all assected delight to find affinity in many? Why brand as cuckoids every day and hour the poor worms who are but a part of their voluptaous system? Let them marry and be "Mrs." or love freely and often and disdain to seek the poor retuge of a cuckoid a name? Think of this, sweet Rose; be true to thy theory, fair Frances; be thyself, glorious Mackiniey. The Torne Order welcomes the ewith open arms as "Psyche;" but he must fair reject thee as a reformer. He sees with pain that he must walk alone the path of genuine progression, although he may rest in that he must walk alone the path of genuine progression, although he may rest for odd moments of sweet dailying with such as thee.

# The Daisy.

Daisy, I have heard it uttered That thy magic leaves can tell, By their numbers rightly reckoned, If our loved ones love us well.

Tell me, therefore, tell me truly, What I long so much to know, If the love I bear my loved one Is requited? "Aye," or "No?" Yes, I'll risk thy answer, Daisy, Though thereon lies all my bliss;

Tell me, then, but tell me truly-Read me not my lot amiss.

One by one I plucked its leaves off, Saying as I let them fall: "Much" or "little," "fond" or "fickle," "Not at all," or "all in all?"

And these words came three times over, Whilst my heart beat more and more, Till at last my fingers trembled-

Face and features quivered o'er. For I thought the fickle flow'reis Falling from my feeble hold Counted wrongly, yet not falsely, And a saddened fate foretold.

But my sight had reckoned falsely, And the leaflet last let fall Fell with words which said my loved one Loved me truly—"All in all!"

# The Japanese Abroad.

The Mikado, or Tenor, or Emperor of Japan, with his Tycoons and Damios, his Princes and Dukes, has determined to go abroad, strange countries for to see. It is not settled whether this young gentleman will go first to Europe or come first to America. He will create a sensation when he does come, and all the marriageable young ladies will be on the qui rive to see his Royal Mikadoship. The Prince of Wales, the young Duke of relimburg, the Crown Prince Alexis of Russia, Prince of Endo of America, and the Princess Nellie, will all be celipsed by this fairy Prince of the island in the sea. 'Certainly the world moves. Twenty years ago Japan was a mysterious land; the Mikado was a velied prophet, invisible to his own people—a sort of Grand Llama, half god and half mortal, approached upon the belly and with the most abject humilitation. His Government was run by a Tycoon. Foreigners were put to death who by accident reached the land. Japanese were never permitted to return if driven by storm or tempest from their own waters. All religious, save their own, were forbidden. Now everything is changed—Embassadors abroad in Europe; Commissioners seeking the latest foreign novelties and inventions; foreigners invited to Japan, and all foreign manners and customs counventions; foreigners invited to Japan, and all foreign manners and customs countenanced and encouraged; railroads, telegraphs, postoffices; streets paved after the European fashion, guarded by police, lighted by gas; soldiers armed with repeating rifles, drilled and disciplined in the use of foreign arms; citizens clothed in the dress of foreign countries: codes of laws adopted from Europe; a mint for the coinage of money; a financial system and a system for the collection of revenue, modeled after the outside world; their young people sent abroad to America, England and France for education; teachers introduced from those countries to Japan; forty millions of people introduced to the civilized world, anxious for all the new inventions and new processes to be engrafted upon their old ways; an ingenious, inventive, progressive race, occupying a splendid country on the coast of Chinanan unrivaled commercial position. Already they have a steam navy and a splendid army, Embassadors abroad, a royal court, foreign Ministers resident at their capital. This nation has arisen like an exhalation from the sea. It is like a fairy tale This intro has arisen lake an exhaution from the sea. It is like a larry die for genii. It is a magic story; and now the young fairy Prince goes abroad to mary the king's daughter. We hope he may escape all the traps and springs of artful royal mammas in Europe, and we will give him our Princess Nellie for his bride; or, perhaps, by the time he reaches America we may have changed our Mikado, and if so, he shall have the Princess Ida Greeley, and her illustrious sire shall send him our young men to teach his people farming, and thus we shall be bound to Japan in bonds of love and friendship, of trade and commerce.

— The back track is now being very rapidly traversed by the old granny Alta.

Our Mrs. Gamp of California street has suddenly discovered that Leland Standford Our Mrs. Gamp of California street has suddenly discovered that Leland Standford is doing great things in the southern portion of our city. The senile female has just found out that Governor Stanford has an army of men at work in our city; that a quarter of a million of dollars has been expended by the C. P. R. R. in depots, warehouses, and great, massive, substantial buildings. The names of Mills, Raiston, Peter Donahne, George Howard, et. id. om., have had a marvelous effect upon the optic nerves of Mackerel-ish. They do say that Governor Stanford, having a corps of engineers unemployed, sent them over to Saucelito to operate for a few days. There was quite a humorous twinkle in the Governor's black eye as he gave the order, and it seems from Granny's a! ered tone that the little movement has had its effect. has had its effect.

<sup>—</sup> A Yankee, on being told that a person to whom he was introduced was "a self-made man," said he was glad to hear it. On being asked why, he answered, "Wall I recken it relieves the Creator from a nile of reanonsibility." "Wall, I reckon it relieves the Creator from a pile of responsibility.

# Special Breveties.

Success still attends the Turkish troops in South Western Arabia. From Aden, it is said that on the 24th April the victorious Ottoman commander, Ahmed Mukhtar Pasha marched with his army to the oid capital of Suana, and there received the submission of the deposed Iman Ghaith, and took formal possession of the city. The Pasha was welcomed by the inhabitants with great demonstrations of cordiality, and he granted them a free pardon for all past offences against the Turkish Government. After hoisting the royal standard under a saints of 101 zuns, the Pasha visited the city, and on the 26th chastised, with a detachment of his forces, the refractory chiefs in the neighborhood, killed twenty of their chief men, and demolished their most important stronghoid. It is rumored that the Pasha is about to send an expedition against the other robber tribes who have long rendered the approaches to Saana almost impassable for travelers. No news has been made public recently as to the position of the Turkish invaders in Central Arabia and the Wahabi Terrifory.

— The power of the novelist's pen lives after him. In the Times there is a change of surname evidently owing to Mr. Charles Dickens, who, forty-five years ago, traveling through Bath, hired horses from a very respectable postmaster whose patronymic is now known over the world—Pickwick. This appellation, after having been applied to hats, coats, confectionery, and little cigars—to which object it still adheres—has become so suggestive of comedy that Charles Henry Sains-bury Pickwick, Esq., of Bradford-on-Avon, notifies to all the world that thereafter he abandons for ever "his own family name of Pickwick," and takes in lieu thereof that of Sains-bury. This hard to be laughed out of a surname, even by a master novelist, especially if that name be of the knight'y origin of Pickwick—i. c. Piquez-vite' spur fast, or spur onwards. Mr. Sainsbury has not changed his name for the better. But what will not one do for a quelt life?

A court martial has been held at Versailles, the delinquent being a captain of the French Mobiles, who has been tried for deserting to the enemy in 1879. The accused pleaded, by way of justification, that he had taken the outh of sillegiance to the Emperor Napoleon, that when the Emperor fell he considered he was no longer bound to serve, and therefore placed himself and his wife under the protection of the Germans and went to Wiesbaden. He was so convinced he had acted legally that he returned to Paris last June and had no idea that proceedings would be taken against him. The court, however sentenced him to death. Hard tate; surely mercy might be extended to such an one?

A new description of "honeyed sweetness" comes under our notice. The strong hand of the law has been upon a certain rural flyman. The bailiffs sought to take possession of some of his household goods. The cabman, ever ready in an emergency, brought in his bees, and, freeing the hive, suggested to the bailiffs that they should seize the honey-makers. The bees, as is their wont under provisation, took the law into their own hands, and setzed the bailiffs, but, unhappily for the truculent debtor, their assaults were laid at his door. As he has thereby been ordered to pay an extra forty shillings, and has probably lost his swarm of bees, it will be a caution to bee-masters not to copy this novel way of entertaining unwelower visitors.

— The Tichborne Gazetle is a big paper, very well written, with summaries of the principal facts in the Claimant's favor. And it would seem that the proprietors anticipate a steady demand for it during a lengthened person as they announce that "Subscribers can ensure having a copy by post on Wednesday mornings for half a year by sending 3s. 3d. to the editor, Southampton Buildness, Chancery Lane." On reading this, one is tempted to ask whether it is possible that the interest or the case will "stretch out to the crack of doon." The Tichborne Times I have not seen, but am told that it is creditable. The third paper represents the opposition.

— It seems the penny postal card system is to receive a severe trial at the beginning through the irrepressible propensity of the live American to "advertise." Letters are pouring into the department asking when the cards will be ready. New York merchants have made applications for over two millions, to be used as advertising cards. Firms in Boston, Providence, Philadelphia, Pitsburgh, Cincinnati, St. Louis and other large cities have similar requests filed, and it is believed that at least one-half of the first lot will be immediately disposed of to corporations and business houses.

— Notice has just been issued by the British Postoffice that a telegraphic message of twenty words can be sent to Queensland, in Australia, for £10, and that it will be forwarded to Port Darwin by cable, and thence to its destination by horse express and telegraph. The whole distance such a message will travel will be some 14,000 miles, and it will reach its destination in about thirty hours. It will go from London to the Land's End on land wires, will enter the sea and resappear at Alexandria, pass over Egypt, re-enter the sea at Suez, and again appear at Port Darwin.

— A lottery project has been set on foot by the Union Club of Berlin (under the same anspices that the fund for the purchase of Blue Gown was raised) to buy as many marce and stallions at the approaching sale of the Middle Park stud as possible, with the object of improving the breed of horses in Germany. For this purpose the sum of 100,000 thalers is to be subscribed in shares of two thalers each.

— General Cushing expressed his opinion at Geneva, before things came to their end, that "if he and Sir Roundell Palmer had been left alone for a few hours some months back, they could have settled the whole matter to the satisfaction of both countries. Perhaps not now; matters have gone too far." "Then you are for 'amart solicitor' theory, general?" "Precisely so, sir," was the reply.

— Madame Peschka-Leutner has been offered and refused \$100,000 for 200 concerts in the United States; the French band had also refused a New Yorker's offer of \$1,800 a day in gold for six concerts, with all expenses paid and \$200 thrown in for incidentals, while Strauss has consented to accept \$1,100 a night for two or three concerts in New York.

The French Cable Company has divided 12 per cent, and has a surplus of 291,295 for the reserve fund. This company was aided by the Anglo-American, for which the latter was to receive 52 per cent. and the French company 48 per cent. of the receipts. The Telegraph Construction Company, in the meantime, divides 25 per cent. for 1871.

A dealer in old books in London occasions a good deal of amusement to those who inspect his stock by the curious labels which he attaches to different works. What, for instance, would Dr. Johnson say to the following I: "Lundun, and 'ow to see hit;" and another labelled "Leives of they Poyats—price 'arf a crown."

London will soon know its Blue-coat school-boys no more. Christ's Hospital is to be removed into the country, and the well-known building in Newgate street, dear to Charles Lamb, has been sold to the Mid-London Railway Company for £600,000.

— The French language is not to be supplanted by German in Alsace until January, 1878, and judicial office-holders who are willing to become naturalized Germans are to be paid full compensation for damages sustained during the war.

Ludgate Hill, London's great thoroughfare, is to be paved with wood pavement.

- A new federal census for New York city is to be commenced at once.

# Let the Weary World Go Round.

Let the weary world go round;
What care I?
Life's a surfetting of sound;
I would die.
It would be so sweet to lie
Under waving grasses,
Where a maiden's footstep sly,
Tremulous for a lover nigh,
Sometimes passes.

O Death! beautiful Death!
Why do they thee disfigure?
To me thy fouch—thy breath—
Hath no alarm or rigor.
Thee do I long await;
I think thee very late;
I pine much to be going.
Others have gone before;
I hunger more and more
To know what they are knowing.

Heart, heart! be thou content!
Accept thy banishment;
Like other sorrows, life will end for thee.
Yet for a little while
Bear with this harsh exile,
And Death will soften and will send for thee.

— It is amazing to note the number of asses in this community. One after another come humbugs of all kinds and delinde the besorted public in to patronizing their trashy "lectures." The most ridiculous exhibition of all is that of a crowd listening to the stale and worthless mouthings of a peripatetic "doctor." The amount of information derivable from a thousand of the lectures of one of these "doctors" may be summed up in a 0; and yet the ignorant boobies gather and gawk and think they are being enlightened. As long as there are so many noodles in the community, so long, we suppose, will these mountebanks find eager listeners and liberal customers.

— A lady writes to the Academy of Sciences that she has at last found the principle which differentiates the finite from the infinite. She demands that five other academies shall join the Academy of Sciences, and that together they shall pay her a sum of one million sterling. At this price she will yield up her secret. The Academy has declined to refer this vast and indirect claim to arbitration.

— The Town Crier lays down the thong, and, gathering flowers, weaves a garland for the brow of a young man who risked his life to save that of a lad who fell into the bay a few days ago. Such noble efforts deserve recognition and praise from all; and we grieve that the modesty of this brave youth has withheld his name.

'Frisco Lyrics .-- What I Should Like.

Shall I telt you what I'd like to do!—

I should like mand, a job's full moon,
On acquist and private balcony,
Should sike, too, an evening in June;
Should sike, too, an evening in June;

On acquiet and private balcony,
From Fresco's distractions afar,
Just smoking a tragrant cigar
With my dear little, nice ditte crony.

And spooning by moonizeful most pleasant.

I should like you to let down your hair— We diforget, though the hours sped away, Tes so golden, so saky, so fair. That there was such a thing as the day, And my longers, I know, won digo straying Or business, or labor, or sorrow.

The the insents of that untreast maze. That s the notion we both of us like,
The the most fascinating of plays
So, dearest, it's go out on a strike
With amanden, s sort looks to be playing. Gainst that odd in-titution to-morrow

## The Carping Press.

A few prominent gentlemen, some time since, were tordated enough to obtain control of valuable damord field. They quietly proceeded to perfect ther title, and took messages to secretic the view of their acquisition of the proceeding to be present the restriction of the proceeding o

## San Francisco Transfer Co.

In the Stock Reports to-day will be noted the first sales of the shares in the S. F. Transfer Company. This Company has the exemisce pravilege of checking and delivering all baggage to and from the Central Pacific Rayroad, the Cardornia Pacific, the Southern Pacific, and on all the hoats of the old Steam Navigation Company. It owns the burding in which are its offices, No. 6 New Mont once, Steep, opposite the Grand Hotel, and employes twenty-the men and system teams. Its present carmins are stated to be something over \$100 a day, and excessing. Its present carmins are stated to be something over \$100 a day, and excessing a addition to its baggage business, the S. F. Transfer Company has the contracts for delivering the U. S. Mails from the Post Office to and from all the trains and stransfer Companies in Lastern crites are said to have become weathy, and to have divided very large smax in dividends. Sales of the stock to-day were made at \$50. There are two thousand shares of capital. It is stated that out of its present carnings a unvidend at the rate of one per cent a month can be paid. With increasing business, this rate may be increased.

<sup>—</sup> The preachers are going to discuss as to how to put down hoodlumism. If the hoodlums should determine to put down the preachers, the effect will be more marked.

The Town Crier is selling out his Nevada stocks, and going in on the diamond line. "And he shall walk in silk attire, and diamonds had in plenty."

## Leaves from a Lady's Diary.

JULY 29.—Went to see the last painting from Hill's prolific brush. It is called "The Sources of the Saco," and in some points I like it as well as anything that he has painted. His foreground is, as usual, a minute detail of shrub and flower, as, very mosaic of color, but further on, from a gorge in the stern, ragged mountains, there winds a small river, which, as it approaches the beholder, changes to a gush of living waters, white and foaming among the boulders and hurrying over the obstructing rocks to a large, deep, still pool, where the vexed waters rest under the shade of overlanging bushes. Therein lay, to me, the charm of the picture. Saco, I found, is somewhere in the White Mountains. Apropos of paintings, their Imperial Majesties of Prussia are duly stared at through a window in Montgomery street by the gaping mob which leves to gaze on royalty. Henry calls the portraits "Court plaster for the German Hospital." "The Sources of the Saco," and in some points I like it as well as anything that he

JULY 30.—House hunting all day, than which nothing is more tiresome. Went to see one tenement that must have been built by a servant, out of her savings. to see one tenement that must have been built by a servain, our or net saying. There were two small parlors subdivided up states by one and a half bedrooms, but there were seven different rooms appropriated for different domestic duties servants in this case ought to pay the rent. Read a translation of Reclus called "The Earth." The author travels over his subject like an electric telegraph. At one moment he is in the Himalayas and the next paragraph is wandering over one moment he is in the tunanyas and the next paragraph is wanded ing over the South American pampas. One thing struck me and that was, how great a portion of our globe is unknown to us. Central Asia, Central Alrica, Central Australia, even the center of Borneo is at present a seaded book. Herein I can ifter that one world is very young, or that man is very young upon it. We have only yet hecome acquainted with the fringe of our habitation, are but at the threshold of our home and have not yet explored the yast halls and corridors of the interior. or our nome and mave not yet explored the vast items and corridors of the litterior. The maps of thirty years ago settled the African question by "sandy deserts without water," to-day we more humbly say "unexplored regions." I always thought that California was great in ferns, but having received some moss from Organ which was wrapped up in dried fern, out of curiosity, I unrolled an adiantom and

which was wrapped up in dried fern, out of curiosity, I unrolled an adiandum and it spread out to the size of three feet.

July 31.—Went to hear Mrs. Mackinlay lecture, and do think that discourses upon training, etc., are so many vain words. There is no machinery for modeling the minds of woman or man, no steam unrse to nourish an infant. It is true that Hood says, "As the twig is bent so the tree's inclined;" but the human twig is less likely to be bent if let to the natural care of its mother. Young B.— was there as handsome and defiant of the world as ever, and Fannie M.— was with him. To look at her one would say sin had never crossed her path. She looks as lovely and pure as she did when I was at school with her. I could not help thinking of

those dark lines-

I had dipped in life's struggle and out again; Bore specks of it here—there—easy to see. When I found my swan and the cure was plain,
The dull turned bright, as I caught your white
On my bosom—you saved me—saved in vain, If you ruined yourself, and all through me. Yes! all through the speckled beast that I am, Who taught you to stoop. You gave me yourself, And bound your soul by the vows that damn; Since, on better thought, you break, as you ought, Yows, words no angel set down, some elf Mistook for an oath--an epigram But what will God say? Oh, my sweet, Think, and be sorry you did this thing;

Though earth were unworthy to feel your feet,
There's a heaven above may deserve your love. Should you forfeit heaven for a snapt gold ring, And a promise broke, were it just or meet?

After all, she must love him very dearly, indeed, to be so calm and apparently so contented, whilst the whole world shans her-

Woe to the maiden, or mother, or wife, tempted by pity to name her, Even a thought of the sisterless one, charity given, would shame her, Mothers will speak of the motherless one, only to shudder and blame her,

Was amused to-day when Sam B— insisted upon reading aloud a bit of Wordsworth, and came to the line, "The man that made this plaint was one of iron mould." By putting the accent solely on the word "iron," he made it appear that the individual had just come from the wash.

An apparently well founded report says that Miss Julia, daughter of General Robert C. Schenck, American Minister to the court of St. James, is the fiancee of Mr. Sturgis, a well-known London millionaire.

<sup>-</sup> A new temperance organ is advertised; it is called a "first-glass paper." Surely, there must be a misprint somewhere.

## Ho for the Diamond Fields!

Diamonds are discovered in New Mexico! Good! Just what we wanted, Gold and silver are becoming too plenty; the precious metals are a drug in the market; precious jewels, diamonds and rubies, are the necessity of the age. It was a matter of national pride that we should discover a diamond mine. The English had found dismonds at the Cape of Good Hope, and we are determined that the blasted Britishers shall not excel us in anything, so we turn to and find jewels the biased privates shall be called a many in business and politics. Fisk wore of the first water. Diamonds are a necessity in business and politics. Fisk wore a splendid stone, and Boss Tweed had a gorgeous jewel. Our shodd, and petroleum females must adorn their persons with blazing sparklers. We hope these mines are extensive, so that all our flash females, all our swindling rairoad chiefs, mines are extensive, so that all our hash females, all our swindling ratifoad chiefs, and all our thereing politicians may have at least one each. Herestoloris the exercise has driven some of our ambitious ones to wear posts. Now that the harvest is over, we advise everybody to go to New Mexico at once. Do not delity. Remember Gold Lake, Kern Rever, Fraser River, Gold Buil, and the other excitements of Washoe, W ite Pine, Pioche, and Paraneghut. Those who get there first well get the largest and most precious jewels. Every one is sure to get rich and return.

> With rings on his fingers and bells on his toes, Blazing with diamonds wherever he goes.

# Affairs in British Columbia.

The survey of the Canadian Pacific Railway is being pushed through rapidly, According to the British Colomis, Mr. Marque Smith left Victoria on the 19th for the manifold, and will proceed at once to the Chilcoaten Plans to un-pect the Teelthe mainland, and will proceed at once to the Chilcoaten Phans to uspect the Techeman surveyurg party. Returning to the Fraser, he will ascend to the head waters, where he will meet Mr. Sandford Fleming, Chief Engener, and return with that gentleman to Victoria. On their homeward trip Messrs- Fisming and Smith will inspect all the surveying parties now engaged on the British Columbia section of the Canadian Pacific. The surveys on this department will, it is thought, be completed by next Christmas. The Nanahimo coal exports for the half year ending June 30, 1872, were as follows: San Francisco, 14,135 tens; Honoidiu, 1,300 tons; Mazadian, 360 tons; Portland, 397 tons; to will, Cundaiska, 392 tons; Youth tons; Agent tons; Mazadian, 400 tons; Portland, 597 tons; to will constitute the Special Columbia of the Chiliwhack, at the head waters of the North Branch of the Chiliwhack river, about thirts-five miles from where it emptes into the Franch of the Chiliwhack river, about thirts-five miles from where it emptes into the Franch of the Chiliwhack river, about what, at the beau waters of the North Drahen of the Chillwhatk river, about thirty-five miles from where it emptes into the Fraser. The iedge is of great thickness, and has been traced for a distance of about two miles. The ore was assayed at the Government office, New Westminster, with the following results: Silver, 594-1-2 owners per ton of twenty cwt; 200d, traces; copper, a large percentage. The Ominica mines present 200d prospects. In the Cariboo mining districts and the Upper Country generally, the mines are being worked extensively. The \$250 premium offered by the Government for the best essay on the resources of the Province was awarded to Mr. A. C. Anderson of Sannich, who had attack one. the Province, was awarded to Mr. A. C. Anderson of Saanich, who had eight competitors.

#### The Judge and the Carpenter.

The Dorset Chronecle reports that during the progress of the Assize business in Dorchester, recently, Mr. Baron Bramwell was repeatedly interrupted by the noise of the chief and hammer. The learned Judge dispatched a messenger to request that the work should be put off, but he had again to inquire, "Who's that knocking!" which was loud and incessant. The answer to the third inquiry that knocking. Which was fold and incessant. The answer to the third inquiry was that the industrious carpenter did not see the force of obeying the Judge, and had put the query, "Who's to pay me, I should like to know, my day's wages!"

The learned paron, vexed at the man's persistent knocking, but amused at his impudence, said, "Go and tell him to come and show cause why he stant not be fined £50 for contempt of Court!" Away went the messenger, and no longer were law and justice impaded, or the dignity of "my lord Judge" slighted by "that knocking" within the precincts of the Court.

German Immigration.

Our excellent contemporary, the California Journal and Sonntage-Gast, a German weekly newspaper published in this city, translates from and credits the News Letter with an editorial which recently appeared in our columns on the subject of German immigration to the United States, in which we commented most favorably arm the above for the distance and recently above for the States. upon the sobriety, industry and peaceful habits of our German-American popula-tion. We take it that such acts of courtesy and such interminging of ideas must have a most beneficial effect at home and abroad. The Germans of the Fatherinand who desire to immigrate, upon reading the article referred to, will find that the Americans have a high opinion of their worth, and that every avenue, political or social, is open to him. We repeat that it would be a benefit and a bleasing to the commonwealth of California if, within the coming year, five hundred thousand stardy, and healthy German implicants landed moon our shores. sturdy and healthy German immigrants landed upon our shores.

## Sweetheart, Good-By!

A SONG.

Sweetheart, good-by! Our varied day Is closing into twilight gray, And up from bare, bleak wastes of sea The storm-wind rises mournfully; A mystic prescience, strange and drear, Doth haunt the shuddering twilight air; It fills the earth, it chills the sky-Sweetheart, good-by

Sweetheart, good-by! Our joys are past, Sweetheart, good-by! The vapors rolled And night with silence comes at last:

Athwart you distant, deploying world All things must end-yea, even love-Nor know we if, reborn above The heart-blooms of our earthly prime Shall flower beyond these bounds of time.

"Ah! death alone is sure!" we cry—
Sweetheart, good-by!

Pass the pale phantoms of our years, Once bright with spring, or subtly strong When Summer's noontide thrilled with song;

Now wan, wild-eyed, forlornly bowed, Each rayless as an Autumn cloud Fading on dull September's sky-Sweetheart, good-by !

Athwart you distant, darkening wold, Are types of what our world doth know Of tenderest loves of long ago; And thus, when all is done and said, Our life lived out, our passion dead, What can their wavering record be But tinted mists of memory?

Sweetheart, good-by! Through mist and Oh! clasp and kiss me ere we die-Sweetheart, good-by!
Paul H. Hayne in Appleton's Journal for August. tears

## The Mysterious Milliken.

Milliken was a mystery—not only to his neighbors, but even to his wife. When she married him he was a stout hale man, with constant work as a theatrical bill-poster, and a merry, jovial disposition. For many years all went on well. Little Millikens were born and bred with a success that spoke volumes for the salubrious air of New North street, Red Lion square. Their father stuck to his trade-sometimes his trade stuck to him, for it was a pasty one—and in the busy season he was sticking bills all day long. His habits were not bad ones. He did not burke his bills, and bury them stealthily in the bit of ground at the back of his residence, to save the paste, and the trouble of putting them up. No, he displayed them on every available wall and hoarding, like a man, and then came home, and sat in the bosom of his family, willing away the hours by reading out back numbers of the San Francisco News Letter aloud, and making a scrap-book for his youngest child out of theatrical wood-blocks which he had a chance of collecting in his business. But, presently, a change came. All at once he ceased to stick bills, and sold his paste-can and brushes to a neighbor in the same line. From that time he appeared to have no trade or calling. He loafed about all day, and at night would mysteri-Milliken was a mystery-not only to his neighbors, but even to his wife.

paste-can and brushes to a neighbor in the same line. From that time he appeared to have no trade or calling. He loafed about all day, and at night would mysteriously disappear about half-past six o'clock, and not return till after midnight. These disappearances did not happen every night. On Saturdays, as a rule, he was always out; but on other nights he seemed to have no rule. His wife remarked that as evening draw on, he would always anxiously scan the inside page of his newspaper. If, as he read down the columns, he sighed heavily, and mouned, she knew he would certainly put on his best clothes, and go out. If, on the other hand, he smiled as he read, he always stayed home, and spent a pleasant evening with her and the children, unless he took her out to a neighboring music hall, when he

her and the children, unless he look her out to a heighboring mann and always placidly slept.

The change in his life did not disadvantageously affect his monetary prospects. He brought home his wife more money than before. Still she was pricked to the heart to note how his new way of life affected him. Instead of being hale and stout as before, he gradually grew weak and thin. From being merry and joint, he became morose and peevish, and it was easy to see his new mode of living was

rapidly wearing him out.

His wife often asked him to tell her all, to unburden his soul to her, and tell of

His wife often asked him to tell her all, to unburden his soul to her, and tell of his mysterious grief. But with a shudder and a groan he would change the subject. Poor Mrs. Milliken felt all this keenly. It was no satisfaction to her that her husband brought home more money; she dreaded to think how he came by it, when she saw him grow daily more dejected and dismal.

One thing struck her especially. That was the very thick-soled boots her husband would always wear, and the unusually quick period in which he wore them out. She also remarked that generally when he came back after an evening's absence his voice was terribly hoarse, and his hands so tender, that she had to cut up his meat supper, which she always kept waiting for him.

Time went on, and Milliken grew sadder, and paler, and thinner. He became an absolutely melancholy sight. He failed to get his rest at nights, and would often start up in his broken sleep, give hysterical shouts of "Bravo!" laugh deliriously and knock violently with one of his boots against the bed-post. By day he preserved a tacitum silence, and seemed to have no heart for anything. He took no interest in his old trade. Anything in the shape of a theatrical bill or programme made him break out into a violent rage; and he actually raised his hand to strike his wife one night, when she innocently proposed he should take her to the theater. The Summer of 186-came. All the play-houses were open, and theatrical novelties were being almost incessantly produced; but for some occult reason the successes amongst them were very rare. Runs of only a week or a fortnight were

frequent, and the dramatic critics had a hard and a hot time of it. About this time. too, Milliken was absent from his home nearly every night, and his poor wife saw, with great grief, that his bad symptoms were becoming more aggravated. Money was never more pleutiful; but, alas! Milliken was never less able to enjoy it. A strange whim entered into his head. In the mornings, as he laid weak and wan on his horselair sois, he would send out his wife to get all the papers. Then he would tell her to turn to the dramatic columns and read him all the criticisms. As she read, if the critique happened to be a severe one, he would chucke gleefully and eat large funches; and on one occasion, after hearing two columns of very severe "slate" on a comedy which was only played one night, he so far came back bo his old self, that he kiased all his children and embraced his wife with effusion.

But, also ! it was only a temporary relief. The end came at last. He had been

But, suss' it was only a temporary relief. The end came at last. He had been out for four nights in succession, and on the morning of the fitth day he was too exhausted to rise from his bed. He never rose again, nor, indeed, was he conscious. The following Sunday, about half-past two in the afternoon, as his wife entered the room, he caught up a jug of wall-flowers which were on a table by his bed-side, and flung it at her feet. Then jumping from the bed, he gave three hysterical cheers, shouted "hathout?" at the tun of his waits decreased. bed-side, and flung it at her feet. Then jumping from the bed, he gave three hysterical cheers, shouted "Author!" at the top of ke's voice, drammed with ins bare feet upon the floor, and then fell back insensible. Before nightfall Mrs. Milliken

was a widow.

Three days after the funeral, a theatrical agent called upon her. "Ah, my dear madam," be said, "we miss your husband more than we like to confess. I never knew one man make so much noise on a first night as John Milliken did, in the whole course of my experience. He was invaluable madam and I telt safe about the fate of a piece when I had him well posted in the front row of the pit, with his well-known Bluchers on. He could stamp and clap down a hundred hissers. I fear, madam, we shall never have his like again. He was cheap at a dollar a night."

Then Mrs. Milliken knew that her John had been a "claqueur;" and if she had
only known what he had to analysis again.

only known what he had to applaud, she would have ceased to wonder she was a

widow.

### Advice to Lecture Committees.

1. Don't hire enny man tew lektur for yu (never mind how moral he iz) unless yu kan make munny on him. 2. Selekt ten ov yure best looking and most talking members tew meet the lekturer at the depot. 3. Don't fail tew tell the lekturer at members lew meet the texturer at the depot. So Journal texture at the least fourteen times on yure way from the depot tew the hotel that yo hav got the smartest town in kreashun, and sevral men in it that are wouth over a milyum. 4. When you reach the hotel introduce the lecturer immediately to at least twenty-five over the that are the three times in the latter of the contract that the second of the contract that the second of the contract the second of the contract that the second of the contract the contract that the second of the contract that the contract the contract that the contract the contract the contract that the contract that the contract that the contract the contract that the contract the contract that the contract the contract that the contract the contract that the contract the contract that the contr ov yire first kas crizens, if you not eve send out or incin. 3. When the leadurer's room is reddy go with him in masse to hiz room and remind him four or the more times that yo had over three thousand people in yure city at the hat census, and area talking about having an opera house. 6. Don't leave the leakturer about in his room over fifteen minutes at once; he might take a drink out ov his flask on the sli if yu did. 7. When yu Introjuce the lekturer tew the sudience don't fail tew make a speech ten or twelve feet long, occupying half an hour, and it yn kan ring make a speech ten or twelve leet long, occupying and an lour, and it yn kan ring in sunthing about the growth or ynre butfful city, so mutch the better. 8. Always seat nine or ten or the kommitty on the stage, and then if it iz a kommit lektur, and the kommitty don't lan a good deal, the audience will konklude that the lektur iz a failure; and if they do laft a good deal, the aujence will konklude that they are stool pigeons. 9. Jist az soon az the lektur iz thru bring some seventy-five or eighty ov the richest ov yure populashun up onto the stage and let them squeeze the hand and exchange talk with the lecturer. 10. Go with the lecturer from the hall tw hiz room in a bunch, and remind him once or twice more on the way that yure city iz a growing very rapidly, and ask him if he don't think so. II. If the hall to whit room in a bunch, and remind that once of tweet more of the way that yure citty is a growing very rapidly, and ask him if he don't think so. II. If the lekturer should inquire how the comik lekturers had succeeded who had preceded him, don't forget tow tell him that they were all failures. This will enable him tow. guess what they will say about him just az soon az he gits out ov town. 12. If the lekturer's fee should be a hundred dollars or more, don't hesitate to pay him next legarers are should be a hindred dollars or more, don't hesitate to pay him next morning, about five minnits before the train leaves, in old, lop eared one-dollar bibls, with a liberal sandwitching or tobbakko-stained shinplasters. 13. I forgot to say that the fast thing ya should tell a lectarer, after you had soffeiently informed him of the immense growth of yure city, it, that yure people are not edukated up tow leckturs yet, but are grate on neger-ministrels. 14. If it is knownien, i would always a borrest use allies are tew lekturs yet, but are grate on nugger-minstrels. 14. If it is konvenient, a would alwas hav a boy or two selling peanuts among the aujence, during the lekture, at 5 cents a kupfull. 15. Never fail tew ask the lekturer whare he finds the most appreshiated aujences, and he won't fail tew tell yu (if he is an honest man) that thare ain't no state in the Union that begins tew kompare with yures. 16. If the night iz wet, and the inkum of the house won't pay expenses, don't hesitate tew make it pay by taking a chunk out or the lekturer's fee. The lekturer's all like this, but they are too modest, as a klass, tew say so. 18. I know of several other good rules tew follow, but the abuv will do tew begin with. —Josh Billings.

<sup>-</sup> The village of Watsonville contains one whom we should crucify, but we do not desire to be cruel to animals. He has been guilty of opening and reading a lady's letter, and attempting to reseal it so as to avoid detection. The utter meanness of such an act should make Watsouville too small to hold the scapegrace.

# Horticultural Display.

The Horticultural Hall Association is an outgrowth of the Horticultural Society, whose exhibitions in conjunction with the fairs of the Mechanics' Institute have been very attractive and successful. The officers of the Association are: President, Hon. H. N. Bolander; Secretary, F. A. Miller: Treasurer, Hon. Robert J. Betge; Managers (including the foregoing), C. Stephens, E. L. Reimer, Wm. Meyer, F. Weisenborn, F. Luderman. The object of the projectors of this new and praise worthy enterprise is to provide for the people of San Francisco a place of resort where the advancement of hosticulture and accidentary may be seen any design. Weisenborn, F. Luderman. The object of the projectors of this new and praise-worthy enterprise is to provide for the people of San Francisco a place of resort where the advancement of horticulture and agriculture may be seen and studied with pleasure and profit, and the best music may be heard. The exhibition, it is believed, will be a great agency in the education and refinement of our people. The Association has purchased the buildings on the corner of Post and Stockton streets lately owned by the Skating Rink Association. The Islank, together with the stores adjacent, have been purchased for this purpose. The hall is 100×200 feet in size, with an excellent floor. The roof has been raised and galleries constructed, with orchestra platforms at each end. The galleries, as well as the whole roof, rest on twenty-four massive columns, which are decorated with rustic composite, resembling the walls of a grotto. On each side of the orchestra at the end urthest from the entrance is a beautiful grotto, through the arched roof of which will fall a stream of sparkling water. The rippling waters and mossy sides will be lit up by brilliant reflecting lights hid away by the sides of the grotto. In the center of the hall will be a large standing gaslight in the form of a palm tree. It is about twenty feet high. Surrounded by a miniature garden, it will be elevated above the heads of the gay promenaders, shedding an effugent light on all. The main floor will be reserved exclusively for promenades, after the European style. The galleries will accommodate about twenty-five hundred spectators, for whom seats will be provided. Between six and seven thousand persons can be brought together in the Pavillion. The construction of the orchestra, the roof and the arches over the galleries, are such that the whole volume of sound coming from eighteen pieces of music will penetrate every part, and be thrown down upon the audience without being broken by echoes. Three thousand jets of gas light, surrounding lit by galleries and arches, a glance to be a long continuous vine, will make the whole scene resplendent with brilliancy. The exhibition will be opened on the 22d inst, and will continue for three weeks. A rare display of plants, trees and flowers will be made, and, with choice selections of music, will constitute a very attractive exhibition. It is not yet determined what will be done with the pavilion in the interim between the anand to arrange the hall tor balls and receptions. Similar exhibitions have long been very popular, under the name of Winter Gardens, in Berlin, Paris, London, been very popular, under the name of whiter Gardens, in Berlin, Paris, London, Hamburg, and other principal European cities, being frequented by all who appreciate the beauties of art and nature. The opening of San Francisco's Horticultural Hall cannot fail to be productive of great interest, as it will introduce a novel and delightful exhibition. Messrs. Reinner and Meyer, scientific landscape gardeners, made a visit to Europe some years ago, with the view of studying the peculiarities of the principal winter gardens and concert halls, and the results of their observations will be seen in the coming exhibition.

# Colonel Stevenson's Important Office.

On the 7th instant, Colonel J. D. Stevenson entered upon his important office as Shipping Commissioner, under an Act of Congress approved June 7th, 1872, which, among other things, provides that the several Circuit Courts of the United States shall appoint Shipping Commissioners for the various scaports within their jurisdiction, which shall in their judgment require the same, and shall have full and complete control over the same, subject to the provisions of the law. The various sections of the Act are designed to give full protection to sailors who have so long been at the mercy of land sharks and sailor boarding-bouse keepers. They are very complete and comprehensive, and have been adopted principally from the English custom and law on this subject. The Commissioners are constituted the recorders, transcribers, custodians and preservers of all the accounts of the merchant marine as they relate to the agreements, contracts and wages of sailors. The interest of masters of vessels, shippers and sailers will be alike scrupulously regarded. Section 63 of the Act provides that every person who unlawfully goes on board any ship before her actual arrival, and before she has been completely moored, without the permission of the Master, is liable to a penalty not exceeding two hundred dollars and imprisonment for a period not exceeding six months. The Master or person in charge of such ship is empowered to arrest and deliver up to the police authorities the violators of this provision. Section 63 provides that land sharks and sailor boarding-honse runners who entice sailors away, or take out of such ship any effects of any seamen, except under his personal direction, and the permission of the Master, the offender shall incur a penalty not exceeding three months. That such an Act will prove of incalculable benefit to our commercial and mercantile interests cannot be doubted. Colonel Stevenson will have the hearty sympathy of the public in his enforcement of the law and his efforts to abate the outrages committed upon

#### Book Notice.

SIX MONTHS IN CALIFORNIA, by J. G. Player-Frowd. London: Longmans, Green

There are two classes of travelers, the one who makes locomotion the object, and the other who ness it as a means to an end. The one finds a pleasure in awakening in a new place, the other has watched and noted the varied objects as they passed. Of this latter class is the author of this unpretending book. It does not assume to be a scientific treatise on geology or mining, or the administration of not assume to be a scientific treatise on geology or unning, or the administration of the laws of the Pacific Cosat, but is the narrative of a man who traveled with his eyes and ears wide open, and who profited by every occasion to acquire information. The consequence is, that his descriptions are peculiarly vivid, whilst at the same time they impart knowledge. For instance, we have graphic details of the scenery of the main attractions for tourists, such as the Geysers, Yosemite Valley, and Big Trees, added to which is a popular sketen of the geology and geographical divisions of California, an account of the various mining districts in that State as well as in Nevada. Agriculture, who growing, wool raising, and sericulture are each separately and concisely treated, and the whole book, of about a hundred and sixty pages, is an interesting sketch of travel, as well as a valuable guide to the tourist. As an example of the descriptive style of the author, we quote the follow-

ing:
"The Yosemite Valley proper is seven miles long. It can hardly be called a valley. It is in reality a rift in the earth's surface. Let the reader fancy such a chasm, of a width varying from one mile to ninety feet, with granite walls from one thousand to four thousand feet, that is to say, from one-fifth to three-quarters of a mile high. Let him imagine some of these masses of rock to be detached, and standing in all their solitude like giant obelisks. Let him picture others cieft from top to bottom as though by a thunder-bolt. Added to this let him imagine a river, top to bottom as trough by a unuber-bott. Added to this let him imagine a river, cold as ice and clear as crystal, following the windings of the valley, that same river having descended as from the clouds with the thunder of a great flood. Let him conceive the most luxuriant vegetation and the extreme of barrenness, the softest carpet of moss and grassy lawns and great ferns and wild roses, alternating with the huge scathed rocks, where not even the lichen will cling, and then he will have a prosaic idea of the Valley of the Yosemite.

"But it is impossible to describe the endless charms of light and shade and coior and form, or to picture the sunbeam as it strikes the summit of one of the grant senties, or to note it stealing down the sides of the cold waits and then filling the whole valley with a flood of glory, relieved here and there by the deepest shade, more gloomy still by contrast. Here are spots where the sun never shines, cold and damp and dripping forever, and others where the gorge opens its arms wide to receive the bridegroom and bask in his rays; somewhere the river hurries along anxious to be free from its stony prison, and others where its repandy into a still, deep lake, as if for rest and enjoyment of the lovely scene, for it takes it all in, and in its immest depths the whole valley is mirrored."

We can speak from our own knowledge of the accuracy of the statistical and mining information, and we are glad to welcome this work to California.

# Prorogation of Parliament-The Queen's Speech.

Parliament was prorogued on the afternoon of the 10th. The members of the House of Commons assembled at the bar of the House of Lords, when the speech of the Queen, who was not present, was read by Royal commission. With regard to America, the following language was used: 'I rejoice to inform you that the controversy which had arisen between my Government and that of the United States, in consequence of the presentation of the American claim for indirect damages, under the Treaty of washington, was ended by the apontaneous declaration of the Arbitrators—entirely consistent with the view I announced to you at the opening of the session. In concurrence with your action on the part of the United opening of the session. In concurrence with your action on the part of the United Kingdom, the Parliament of Canada has passed the Acts necessary to give effect to the Treaty within the Dominion. All the arrangements contemplated by that instrument are therefore now in progress, and I reflect with satisfaction that the subjects with which it has dealt no longer offer any impediment to a perfect concord between our kindred nations." The revenue is stated to be in a flourishing condition, trade and industry active, and the general measures adopted by Parliament are referred to with satisfaction. It is thought that Parliament may be reassembled in December.

## A Good Showing.

The public debt of the United States, when Grant came into office, was \$2,525,483,280. On the list of July last it had been reduced, in a period of three years and four months, to \$2,191,485,343. The amount paid off was \$33,343,393,395. During the same period the monthly interest payments had been reduced from \$10,532,482 to \$3,665,705. This makes an annual saving in interest charges of \$37,335,145. Parallel with this great reduction of the principal and interest of the debt, we have had successive reductions of taxes and customs amounting to over \$130,000,000.

# Leaves from a Lady's Diary.

Aug. 12 .- I don't often go up Sacramento street, above Kearny street, but some-Act of 12.—I don't older go up sacraments street, above realing street, one thing led me there this morning, and I saw a white man buying one of those flabby pieces of pork of a chinese butcher that he displays so temptingly to the gross appetites of his countrymen. The sight shocked me. It seemed even to astonish appeares of the countrymen. The sight shocked me. It seemed even to astonian the butcher. Margaret I—came to lunch, and, as usual, began to complain of the want of sympathy she found everywhere, that she had nobody whom she could really call her friend. What do you mean by friend? I asked. Of course she began the usual detail of one whom you could trust even with your life or give your life for, etc., etc., whereupon I took up a clever French book I was reading yesterday and showed her what the author classed as friends. "There is the despotic friend who makes us execute all her commissions and run all her crands; the with the trust who makes us execute all her commissions and run all her crands; the witty friend who makes jokes at our expense; the indiscrect friend who exposes our weak points to women and our personal defects to men; then there is the friend in embarrassed circumstances which is infinitely more embarrassing; the friend in emparassed circumstances which is numberly more emparasing; the parasite who feeds on us; in fact the thousand and one sorts of friends whom it would be too long to enumerate, from her who borrows one's books and never returns them to her who borrows one's husband to send him home sulky and discontented.

tented."

Aug. 13.—The anniversary of Aunt M.—'s death; went to the cemetery with some flowers, and wandered among the graves. What a satire on humanity! When grief is new, we trim the garden and deck the tomb, but time brings oblivion, and weeds obliterate the name of the departed. If the dead could get up and read the eulogies graven over them they would blush, or, like the prisoner whose counsel was expatiating on his virtues, blubber forth, "I didn't know I was so good." Riding back in the street cars, I noticed the different ways women enter them. Some come in 'n a state of nervous excitement, generally dragging a small child after them; others bounce down wherever they see the slightest opening; some enter as if they expected to be insulted, and sit down with an air of defiance, as much as to say, "come on, I'm ready for you."

AUGUST 15.—Crowds flock to see \*Humpty Dumpty\* and Weil and Schmidt play their fine music to a hall only two-thirds full, but one-third of whom enjoy or understand it. I took up to-day a little written sketch that Emily had made of herself

stand it. I took up to-day a little written sketch that Emily had made of herself stand it. I took up to-day a little written sketch that Emily had made of herself and was amused at the way in which she dwelt on her good points and glided over her failings. The character was truly drawn but self-softened. Many a woman has a kind of mental kaleidoscope, where the bits of broken glass are her own merits and successes, they fall into harmonious arrangements and delight her, sometimes harmfully and to her ultimate detriment, but they are a present pleasure. Young W—— came in the evening. I quite envied him his youth, both of mind and body. He had been deer-shooting up Tamalpais and gave us a glowing account of his life in the woods. His love of nature, both animated and scenery, amounts to a passion, and his description of a small, still, dark lake that he came to above the clouds brought to my mind those lines by Leighton:

The mountain tarn whereto the weary sun Hath clomb the hill to drink, and where the stars Come stealthily at night to bathe, like nymphs That shame to strip until the sun is gone.

Went to see the famous diamonds, rubies, sapphires and precious stones that have been brought here from savage Arizona. The table looked as if the Princess Preciosa had been talking to the broker in whose office they were. The effect on me was very strange, and I was literally demoralized for the rest of the day. I could think of nothing else but ant-hills teeming with brilliants. I am curious to see what it will be when the next batch comes. I expect that people will go crazy.

### The Samoan or Navigator Islands.

The action of the United States in the proposed annexation of the Navigator Islands, is attracting much attention in England, and has even been mentioned in the House of Commons, as the following extract from the Times will show:

"In answer to Admiral Erskine, Lord Enfeld stated that on the 8th April last numerous residents in the Samoan or Navigators' Islands signed a petition asking for annexation by the United States, and Sir Edward Thornton had been instructed by her Majesty's Government to make inquiries as to the decision the American Government had arrived at with regard to that petition."

We have received from the Secretary of State, at Washington, a printed pamphlet, containing official information as to the truly important action taken by the United States Government in reference to the Samoan Group. In March last, Commander Richard W. Meade, of the United States Navy, in charge of the Nurgagansett, visited Pago Pago, in the Island of Tutuila, and Apia, in the Island of Upolu, and, by treaty with the duly authorized chiefs, acquired as a naval and coaling station for the United States the magnificent harbor of Pago Pago; in return for which a guarantee of protection was extended. An important code of laws was adopted by the chiefs and recognized as the laws of Samoa by the United States anthorities. A petition for annexation was presented by the chiefs, but that being a subject beyond the power of Commander Meade to deal with, the petition

was forwarded to Washington and was in due course referred to the Senate, and remains yet to be acted upon. It is understood, however, that President Grant favors the establishment of a local Government, recognized and protected by the United States and founded upon the model of Hawsil. As this course satisfies all parties, it is understood that it will be adopted.

## ARTICLES OF CONFEDERATION.

The following are the articles of confederation which, pending the formation of a permanent Government, have been adopted by the Chief:

"Know all men by these presents, that we, Maunga, Chief of Le Pagaloa: Leiato, Chief of Le Alatana; Faumuina, Chief of Le Laloi; Loliai, Chief of Le Itaa, Samoa, having met in counce; this 9th day of March, A. D., 1872, do hereby agree to form a league and confederation for our mutual welfare and protection, and to unite our several districts under the flag raised at Pago Pago on the 2d day of March, A. D., 1872; and we hereby do solemnly bind curselves to carry out this covenant faithfully, and to maintain peace with each other and to carry out in our several districts the commercial regulations and laws of Pago Pago, promulgated and recognized by Commander Richard W. Meade, United States Navy, commanding United States steamer Narraganett.

United States steamer Narragansett.
"In witness whereof we have hereunto set our hands and scals this 9th day of March, 1873.

O. AU O. LEIATO,
O. AU O. MAUAGA,
O. AU O. MAUAGA,
O. AU O. MAUAGA MA ITUAU.
(Witnessee.] R. W. MEADE, Commander U. S. Navy; T. MEREDITH, U. S. Vice-Consular Agent.

THE PLAG OF SAMOA

A flag, of which we annex a drawing, was raised and saluted with fifteen guns by Commander Meade:

The nine stripes represent the nine islands of Samoa. Tutuila is the central island of the group, and Pago Pago is the key to Samoa. The four white stripes and white stars represent the four large islands of Savii, Upolu, Tutuils and Tan. The five blue stripes represent the small islands. The moon an ancient emblem in Samoa is shown in the first and last quarters representing the letter "S," or Samoa. The corner ground is red.

The Samoans are a line-made race, very light in color. The women are in many instances exceedingly beautiful. English missionaries having been residents among them for thirty years past, and they warmly approve the steps now being taken to given same a stable Government. The natives have long since recognized Christianety, and for the most part live according to its teachings. In no place have the missionaries been more successful. A United States commercial Agent, a Consul of Her Britanic Mijesty, and about one hundred British and Americans are residents in Samoa. The islands are tertile and beautiful in the extreme, so much so as to have extorted from all who have visited them language of admiration that almost sounds extrawagent.

ADDRESS TO THE CHIEFS BY COMMANDER MEADE.

After the harbor of Pago Pago had been duly ceded by treaty, Commander Meade delivered the following address;

"The Government of the United States of America is about to establish commercial relations with the Samoan Islands by means of the line of steamers now plying between California, Hawaii, New Zealand and Australia, and wishes in the own interest as well as that of its citizens, to secure a convenient port in the Samoan Islands, to use as a coaling station and resort for its ships of war which are to cruise in the South Sea, to guard commerce and to give you the protection we

have guaranteed.

"I came to Pago Pago as it is the finest harbor on the Islands and the key to Samoa, and have surveyed it for that purpose, and secured from the Chief of Pago such rights and privileges as will prevent other nations from acting in a way adverse to the interests of American citizens, or to your injury as a free people and

verse to the interests of American Chazala, of the Spanning of the soil.

"The United States Government does not seek your territory or the control of your affairs, but wishes simply to secure to its own people, who may come among you to buy land for themselves, the lawful enjoyment of their rights of property

under such wise laws as you yourselves shall make.
"The Government of the United States will from time to time send ships of war (and they have many) to your islands, and also, no doubt, wise persons, to assist you in framing good laws for yourselves and the foreigners who may settle among you, and will aid you by its influence and protection to establish a sound and stable form of Government under which the Samoan people can grow prosperous and

"The Government and people of the United States seek your friendship and welfare and will aid you to establish yourselves as a nation by peacefully exerting its influence to prevent your independence from being taken away from you by

any foreign power whatever."

#### LAWS OF SAMOA.

The following code of laws were adopted by the chiefs and recognized by Commander Meade on behalf of the United States:

ist. All foreign Consuls, duly appointed, shall be protected and respected, both

1st. All foreign Consuls, duly appointed, shall be protected and respected, Journ their persons and property, and all foreigners settling on the Islands and conforming to the laws shall receive the protection of the Government.

2d. The fullest protection shall be given to all foreign ships and vessels which may be wrecked, and any property saved shall be taken in charge by the Consul of the country to which the vessel belongs, who will allow salvage on the property so saved. No embezzlement will be permitted. The effects of all foreigners deceased will be given up to the Consul of the nation of the person so deceased.

2d Every was elements.

3d. Every vessel entering Pago Pago shall pay a port charge to the chief, to be regulated by agreement between the chief, the agent of the Californian and Australian Steamship Company and the foreign Consul. Pilots shall be appointed by the same persons. The agent of the Steamship Company to be Pilot Commissioner ex-officio, and the pilotage for men-of-war and merchant vessel to be \$1 per foot of draught and \$1 per day for detention on board. Where pilots are declined, half pilotage will be paid. Each pilot to be furnished with a copy of port regulations, and to show the same to the masters of each yeasel which he may bring into port.

4th. No work shall be done on shore nor shall any natives be emyloyed on board

4th. No work shall be done on shore nor shall any natives be emyloyed on board ressels on Sunday, under a penalty of \$10, except under circumstances of absolute necessity, such as aid in case of the wreck of a vessels or the coaling of the steamship obliged to proceed on time on her voyage north or south.

5th. All trading in distilled or spirituous liquors or any kind of intoxicating drink is absolutely prohibited. Any person so offending shall be fined \$100 on conviction before a mixed court. All such liquors found on shore and kept for sale or barter in any way, shall be seized and destroyed. If any native is found intoxicated, the individual who has supplied him with drink shall pay a fine of \$10. If any foreigner beformed drunk or victors is shall pay a fine of \$10.

Intoxicated, the individual who has supplied him with orbits soalt pay a fine of \$10.

If any foreigner be found drunk or riotous he shall pay a fine of \$10.

6th. Any person found guilty of offering inducement to a native female to prostitute herself to a foreigner, to pay a fine of \$10; and any native female found guilty of prostituting herself to a foreigner, to pay a fine of \$20.

7th. Deserters shall be apprehended by the chief on application to him through the Consul, to whom he must be delivered. The usual rewards required by regulation to be paid by men-of-war, and \$10 shall be paid by merchantmen—one-third to go to the chief.

8th. All fines to be paid in specie, or its equivalent, or be commuted at the rate

of one month's labor on roads for \$10.

9th. Should any master of any merchant vessel refuse compliance with the local regulations, the case to be referred to the Consul of the nation to which the vessel belongs, who is required to afford redress.

Clongs, who is required to afford redress. (Signed by the High Chiefs.)

Approved and sent to the United Governments for the information of all masters (reasels witting Pago. RICHARD W. MEADE, Commander U. S. N. of vessels visiting Pago Pago,

#### REPORT OF CAPTAIN WAKEMAN.

Forming a part of the pamphlet issued from the Secretary of State's Office is a

highly interesting report upon the Islands by Captain Wakeman. We regret that we have space only for brief extracts from this document. Captain Wakeman says: "I left Honolulu July 30th, on board S. S. Nevada, and proceeded to the Navigator group of islands. On the night of August 8th, at 230 r. m., I was dropped into a quarter-boar, with one man, off the harbor of Pago Pago, Jaland of Tutulia, without a deviation or detention of five minutes to the steamer. At 1:30, atthough quite dark, we had arrived at the head of the bay, in six fathoms of water and alongside the brig L. P. Foster, she having anchored there the day before. At daylight I found myself in the most perfectly land-locked harbor that exists in the Pacific Ocean. In approaching the harbor from the south, either by night or day, the mariner has unmistakable land-marks to conduct him into port. One on the port-hand, a high-peaked, conical mountain, 2,327 feet high; and on the starboard-hand, a flat-topped mountain, 1,470 feet in hight, which keep sentinel on either hand. These land-marks can never be mistaken by the mariner. The entrance to the harbor is three-quarters of a mile in width between Tower Rock on the port-side, and Breaker Point on the starboard-hand, with soundings of hirty-six lathoms. "• • • • "The productions of the Islands are on a soil of dark, and in spots a reddish colored leam. The cocoa nut of the species from which cobra is made grows here in abundance. Cobra is wouth \$100 per ton in Europe, breadfruit, hansnas, oranges, limes, sassafrus, nutmer, vinegar plant, curry, indigo, tarro, sweet-potato, yams, pine-apples, arrow-root, sugar-cane, coffee and a variety of tropical plants, including dye-woods, are found here. Indian corn grows also, two crops a year. The stalk is not so tall as in Illinois, but the coli is as long and the kernel as finely developed, and as good as the best. The cotton-tree is from ten to twelve feet in hight, and six inches in dameter. It has large, spreading branches, the boil being about the size of an apricot, and breaks into three parts. The cotton is snow-white and a fine staple. About eight niles from Pago Pago, over an easy grade, is Cecoa-nut Valley, which is about sent numbers long by give branches, the boil being about the soil is always damp. Here the largest trees are found —one that is used as a pine, another is like malogany, from which the pupits in their churches are made, the bottoms of their canoes, their paddles and steering cars."

"At Upolo, I called upon Mr. Webber, German Consul, and delivered my letters, I found him to belong to a Hamburg house of fifteen years' standing. He has two large ships now in port, of 800 tons each, one nearly loaded and others to follow in a few months. He has also four large schooners, two in port and two absent. He trades among the various islands near the equator and brings their cargoes here, trades among the various islands near the equator and brings their carroes here, where they are received by the large vessels and dispatched for liamburg. Two large ships are now due from his house, and they bring out articles of trade and take back cobra and other products. These ships carry home a freight of from \$80,000 to \$100,000. On this group of islands ten cocoanuts are purchased for one niggerhead of tobacco. This Island of Upolo is justly called the Garden of the Pacific. There is probably no place in the world of equal dimensions which is so well realered at all points, with so many rivers flowing from the interior to the sea on both sides; so many fine large aprings of pure coid water bubbling up from the earth and flowing in thousands of siles of little streams toward the sea. I have had to ford, in passing over three miles of land along the shore, no less than five rivers, many of which contain some of the finest water-power that could be desired. The soil is generally a dark loam, in some places a reddish loam. The cocoanut groves here excel any that I ever saw before, and extend far back from the sea into the mountains. Bread-fruit is also in the greatest abundance, and in the most perfect condition, there being about twelve varieties, some very large. Bananas are nowhere found in greater abundance, many varieties existing, all being very fine. The engar China banana is, without exception, the most delicrous fruit that can be found. Oranges are large in size, very juicy and fine flavored. Citrous are very large and fine. The yams are the largest known in the world, and of the best quality. Limes are about the size of a common lemmon. The largest mangrove in the world is found here, and has just the same flavor as the small ones elsewhere; also, the mamma-apple, arrow-root, sasafras, vinegar-plant, and the ti-plant, the leaves of which constitute the whole wardrobe of both sexes. The root of this plant is larger than the ordinary beet, containing about four times the amount of saccharine matter. There are a great variety of tropies plants which are very valuable as medicines. Trees used for dye-woods, etc. But the great staple article weathon, which is indigenous to the soil. Some of this cotton soil in Europe ast year at eighty-seven cents per pound. When we know that the very best quality of see island cotton in the world can be produced here with a profit at cest quantry of sea usiand cotton in the world can be produced here with a profit at one shifting per pound, and a yield of 500 pounds to the acre, it is fair to presume that this is destined to become a very important article of commerce. The tree is from ten to twelve feet in hight, and well filled with pools. Sugar-came is a weed, it grows wild, is about twelve feet in hight and filled with piece. Copie is, like all the above named articles, indigenous. The only coffee estate which has been started be done hitmet gricces, in angelinia. The biny concevesate which has been in on the island of Sawi; in three years the trees were seven feet high, and produced lifteen pounds of coffee each. This resembled mochs more than anything else, from its small round bean or kernel.

else, from its small round bean or kernel.

All vesetables are in abundance. Stringed beans, two yards in length, peas and everything in that line. Indian corn, two crops per year. Swest potatoes not so large as in California, but they cook meliow and have the same layor. Tarro, which is the main source of food in all the islands, is here abundant and in the most perfect condition, also water-melons, musk-melons, equashes, pumpkins and latinged garden vegetables, and as radishes, onions and lettine. Everything that is put in the ground here does well. Tobacco is indigenous, but has not being the constitution of the con

the world's commerce are arable, the future importance of this group may be readily seen. The harbor of Apia is the best on the island of Upolo, although there are many both on the north side and the south. There were some twelve vessels in port when I was there—a French, Russian and American man-of-war, and two large merchant ships; the rest were small craft."

#### CONCLUSION.

From the foregoing it will be apparent that the Samoan group, lying in the direct track of the Australian and San Francisco steamers, and in close contiguity to the Fijis, Society Group, the New Hebridies and the innumerable isles of the Pacific, are about to open up a field of enterprise of remarkable promise.

## John Bigler's Monument.

The last Legislature nobly appropriated \$1,000 to the erection of a monument to ex-Governor John Bigler. Aiken & Luce, of Sacramento, have completed the moment and placed it, over the remains of the deceased. It stands in a handsome lot, surrounded witch marble copings and with marble vases at the conters. The hight of the monument is about sixteen feet. It is made of marble from El Dorado county, and bears the following inscriptions in raised letters on panels: On the west side—"John Bigler; born in Cumberland county, Pennsylvania, January 8th, 1806; died in Sacramento, November 29th, 1871." On the east—"Erected by the State of California." On the south—"First Speaker of the Assembly of California; Governor from 1852 to 1856." The north panel reads—"United States Minister to Chile from 1877 to 1861." Another noble act should be recorded in this connected to Chile from 1875 to 1861." Another noble act should be recorded in this connected to. While Governor Bigler was Minister to Chile he there met the now famous Railroad King of South America, our old friend Harry Meiggs. A warm and lasting friendship sprang up between the gentlemen, and when some vears afterwards a mutual triend mentioned to Meiggs phat Governor Bigler was in financial distress, Meiggs promptly and unostentatiously forwarded hin a check of \$10,000.

— Did you ever read Sir Thomas Browne on suicide? A quaint old book—bold, too, considering the age in which it was written; for in those days the feto dees was buried at the junction of cross-roads, stake-impuled. We admire the author's courage in publishing his sentiments—to make a defence of those who "make an end of it"—to maintain that, as we were not consulted ante-natally, we should have the right to "shuffle off" without any conference. When, as the other day, a man ents his throat and gashes his wrists, it is a self-evident proposition that he desires to escape from the cares of life. This desire should be universally respected. We do not perceive the justice of trying to circumvent his object by sewing up his gashes. If he can be repaired, he is not likely to be of further usefulness; indeed, will be but so much sodden clay in the way of his fellows. We respect a man who, having ascertained that he is of no carthly use, proceeds to put himself out of the way; and we decline to extend any sympathy to the officiousness which insists on mending his bungling work and keeping him here. We see upon Montgomery street every day many eyesores which would be better if planted deep: and we cheerfully recommend to them the keen-edged razor and the cup of cold poison. Should they take the suggestion kindly, let no one interfere with their praise-worthy design.

Our regard for the living is tender and affecting. We do not trouble ourselves much about the dead, because when a man is dead he is dead and that's the end of him. Ditto with a woman. We cannot, therefore, permit our sympathies to go out to bereaved widows and widowers, who have met with 'ate and sudden favors conferred by Heaven in justly reducing them to a state of single blessedness. If this brief item is perused by the charming young widow who desired us to manufacture some oblituary poetry on the death of her "late lamented," she will perceive that our conscientious scruptes run counter to her heart's desire. If at the end of three months our fair but sorrowing correspondent is not thoroughly cured of lamenting her lord and master in the sweet sounds of poesy, we shall in grief complain that the climate of California doesn't agree with her as well as it does with the great majority of widows whom we have consoled.

We hear of a proposition to organize a Ladles' Society, auxiliary to the Society for the Prevention of Cruelty to Animals. This will be cheering intelligence to the small-brained young counter-jumpers, who, musk-scented and with hair split in the middle, have so long been objects of barbarous amusement and unkindest derision on the part of the fair.

#### Court Chat.

— On Monday, the 1st of July, Queen Victoria, accompanied by the Princesses Louisn and Bestrace and Prince Leopold, privately inspected the Memorial to her late husbane, the Prince Consort, which with shortly be thrown open to the mage of the general public. It is now completed, with the exception of the statue of the Prince. This, in consequence of the Shows of the sculptur. Mr. Foley, will not be ready for some time. The Memorial recructed upon the sub-of-the Great Endo. Triedy for some time. The Memorial twerested upon the site of the Great Exhibition of 1851, the original Crestal Palace Exhibition and has been ten years landing, sta cost of nearly £100 000. Of this sum £35,000 were raised by voluntars sub-scription: £12,000 were obtained by an organized appeal made through the Society of Arts to the humble; classes in the United Kingdom and the coionies, and \$50,000 more were voted by Parliament. From the various designs sent in for approval, that of Gelbert Scott, Roya' Academician, bore off the pain. An Executive Comthat of General Scott, rows, Academician, were on the point An executive Com-mittee was then formed, and almost their first act was the pleasant one of accepting a most noble offer from a "leviathan" contractor, John Keik, to "construct the Memorial entries at contractor, being open to the supervision of the Executive Committee." The Memorian is one of the grandest and most sampoints open-air monuments ever conceived in the brain or carried out by the hand of man. open-arr moneum-miss ever contensed in the brain of varieties as a second of architectural art's still area, that it is capable of banding something more than jointstock banks or radway stations, and that never has it been more trainiplicantly proved butks of radway stations, and that never has it been more trainiplantary proved than by calbert Scott in the present instance. I wish I could describe to you at length the marveous structure. It is more like assumithing we read of in the "Arabian Nighth: "damanthing celes. When you first see it you are dezeled, you hardly believe it is solid stone; you a most expect that, like Aladdun's palmos, it will disappear some the day through the air. To give you some notion of it, I will tell you, in Mr. of beet Scott's own words, that his design was that of "a consesal stati te of the Prince, plac d beneath a vast and magnificent shrine or tabernacle, and surrounded by works of sea plure, illustrating those arts and sciences which he fostered, and the great undertakings which he originated." And beautifully has the design been realized. Such lace-work in stone, such account works of supplace are four great corner groups, representing Europe, Asia, Mesa and America. I most attempt to describe the last, I cannot A colossal female figure, typifying the entire American continent, is seated upon a buffalo, dashing through the tall grass of the prairie. On her left arm she then a bullate, dashing through the later agrees of the prairie. On her left arm she bears a sheeld embryoned with the eage, the benever, the vocanoes, the Lone States, the ciph in and the Southern Cross, the respective embrans of the United States, Canada, Mexico, Chele, Peru and Brazil. In her right hand is a stone-pointed feathered baree. At the back are two male figures, South and Central America. They are scated, to denote that they do not keep pace with other parts of the continent. In front are two female figures standay, they are drawn up to their full hight, and represent Canada and the United States. The last, which is the principal figure of the four, holds in her hand a sceptre and directs the course pursued by the mounted figure. She wears in her had a star and an eage's plane, and over her shoulders a starred buildrek. The calm expression of conscious supremacy apparent in every feature of her majestic countermance, and the beauty of her pose; the irrepressible vigor of the buffalo, and the hope amounting to certainty which beams in the face of its rider, in a word, everything connected with both the conception and the execution of this most spirited group stamps the artest, Mr. Bell, as a man of undoubted gonlas. Before quetting the "nbject, I most mention that the Queen has bestowed the honor of kneckthood upon the architect of the me-morfal, who will beneforth be Sir Gibbert Scott. London Letter to N. Y. Bust.

— Here are the ipissima verba of a young lady who went to the Caledon'an Ball: "I'm so thred. No wonder. It was nearly five o'clock this morthing before I got home of course broad daylight. I enjoyed the ball-extremely; it was so different from London balls generally. "Not a common-looking person in the room. Such pretty women and such lovely cresses, and such magnifecent jewely and lace. I'm afraid I was constantly coviding my neighbor's goods. I'm bruised all over, black and bane, even my neck, and as for my poor dress, the flounce were hanging in shreds about me. Even the flounce on my petticoat was form "My fan was broken to smuthercens, but there were plenty of badies worse off than I was. You see all the men in cavatry uniforms wore spurs, so the ladges dresses suffered. "The people got so excited over the Scotch dances—siamped and shouted: it was great fan—quite like a fashlonable romp."

 The Post is informed that Sir Alexander Cockburn is about to be called to the Upper House as Earl Cockburn. It may be mentioned that Sir Alexander has more than once refused the ofter of aPeerage.

— The Consistion understands that Lord Napler, late Governor of Madrae, who recently neted as Vicerry of India on the death of Lord Mayo, and has seen much diplomatic service, is to be called to the Upper House by the little Baron Ettrick of the United Kangdom. Lord Napler's property is in the old Ettrick Forest, and the river of that name runs through the property. Lord Napler will continue to be called after his Scotch barony, which dates from 1627, and this title must not be confounded with Lord Napler of Magdala.

— The dress of her Royal Highness the Princess of Wales was the theme of admiration at a garden party at Chiawick. It was composed of a beautiful dark blue each costume, over a light blue cashmere, and the exquisite taste displayed in its form, and the happy blending of the colors, rendering the dress faultless.

- The imperial family of Austria is about to be involved in another disagreeable lawsuit, in which disclosures will have to be made about the disagnations that have prevailed for ever so long among the Hapsburgs. The Archduchess Sophie, has left her vast private fortune to her sister, the Queen of Saxony. Her children have contested her will, and it is said that their principal argument for invalidating it will be that their celebrated mother was partially deranged since 1867.
- The Prince of Wales, lounging recently in the Galleria Vittorio Emmanuele, in Milan, was accosted by a little flower-girl, in and crippled, who offered him a nosegay. His Royal Highness took it, and, moved with pity, sent for Dr. Sapolini, of the King's household, and begged him to take care of the poor girl, and try to cure her, adding that he would pay all expenses.
- The Duke of Cleveland has lately bought an estate in Yorkshire belonging to a Mr. Milbank, who is a member of the House of Commons. The money to be paid is as follows: One million dollars down, and one hundred thousand dollars a year. We wonder what the acreage of this estate is?
- President Thiers said, the other day, in the French Assembly, that, in his opinion, King William of Prussia was an abler man than Frederick the Great; that Bismarck was greater than Cardinal Richelieu; and Field-Marshal Moltke the most eminent strategist that ever lived.
- The King of Bavaria prosecuted an equerry whom he had sent to Berlin in order to purchase horses for him there, and who allowed himself to be involved in an intrigue for the purpose of bringing about a match between the king and a Prassian princess.
- Angel Iturbide, son of the ex-Emperor Iturbide of Mexico, died in the city of Mexico the same day that Juarez died.
- The Queen has bestowed Bagshot Park, Surrey, upon Prince Arthur, as a country seat.
- The Portland breakwater was formally opened by the Prince of Wales on Saturday last.
- A statue to the Emperor Paul I. of Russia has just been erected at Pavlosk on the Don.
  - The Queen has become the patroness of the Friendly Female Society.
  - The Queen went to Balmoral on Tuesday last.
- His Royal Highness the Duke of Edinburgh is to honor the Earl of Fife with a visit at New Mar Lodge.

# Special Breveties.

- It is stated on the authority of an Italian journal, that the Emperor of Russia contemplates uniting the Caspian with the Black or Enxine Sea by means of a canal, which will be about 400 miles long, and take six years to complete. This project is worthy of one of the greatest powers on our globe. More than one object is subserved by it. It secures entrance to the heart of Russia to the commerce of the world without necessarily a transhipment of goods, the Caspian and the Volgabeirg navigable altogether more than 2,000 miles. It will enable Russia to concentrate greater military strength upon the southern shores of the Caspian and within 550 miles of the Persian Guif. And another object is sald to be the replenishing of the waters of the inland sea, which is showing a subsidence year by year, threatening in the course of time the destruction of the fishing business, which now gives support and employment to hundreds of thousands of the Russian people. The Caspian is 38½ feet lower than the Black Sea by latest measurements. A scheme of this kind is in consonance with the spirit of an age that sees the completion of the Suez Canal, seeks to cleave the granite barriers in the tropic zone to unite the waters of the Atlantic and Pacific.
- Bethnal Green is in a dreadful state of mind. The poor people there did their very best to welcome the Prince of Wales on his visit to the Museum, hung out flags, removed their windows and filled them with flowers, and turned out in application and the prince of the paily News and Daily Telegraph as undersized people, very dirty, with their wives badly dressed, and so on, in a very depreciatory manner, and they cannot get over the shock of their feelings. They have held an indignation meeting, with their vicar in the chair; having protested that Bethnal Green is a "hive of honest industry," which is quite true, though pretentious; have resolved to buy no more "slandering papers," and have published caricatures of the reporters.
- A newspaper correspondent writes from Nynee Tal that the natives of that charming sanitarium, to celebrate the occasion of the late eclipse of the sun and distinguish it from other days, washed. They went down in troops, ladies and genthemen, to the edge of the lake, by "billions," near the Assemby Rooms, and, without making any fuss about their being no bathing machines, left their warmer clothing with sympathizing relatives on the shore, rushed into the water, and washed most heartily. The lake, when the correspondent was writing, some days afterwards, had not quite recovered its color again, but the number of fair-complexioned people to be seen walking about the bazaar was quite astonishing, and reminded the writer of home!

Among the more notable American arrivals in London of late, has been Colonel J. P. Sandford, a very famous traveler. During the last nineteen years he has done little else but travel, and having first made the conquest of the whole of North and South America, he has since devoted himself to Europe, Asia and Frica. He arrives now from the fast, having spent several months in Japan. China, Egypt and Palestine; and now, instead of going home, he is preparing for a longer journey, the second of the kind, through Russia, Siberia and Northern China. There is no American, it is believed, who has seen so much of the world as this restless gentleman, and he is said to look forward with dismay to the day when there will be no country left for him to explore. \*\*Court Journal\*\*

Carl Radel, a German professor, has recently published a work entitled "Fusang," in which he brings proofs, which he declares to be irrefragable, to the effect that the mysterious country called "Fusang" in the early Chinese chronicles, and which many scholars have believed to be the Pacific Coast of America, had no reference whatever to this continent. He asserts that it is simply absurd to believe that the Chinese discovered this continent prior to the Northmen and Christopher Columbus.

The hopes of a general cessation of the strike and lock-out in the building trades, founded on the compromise made by the masons with the masters, have proved delusive. All the other trades are combining to continue the strike, and have adopted resolutions committing the workmen to a continuance in strict union of the battle on behalf of the "nine honts"—the question of wages being left to the discretion of the individual trades, acting according to their special cases.

— Mr. Bright, in his residence at Rochdale, received recently the testimonial of the Staffordshire Potteries—presented, as the inscription bears witness, in recognition of the "foresignt, eloquence, and faithful character which have greatly contributed to his vountry's prosperity." The testimonial, which consisted symply of specimens of the fluest local Ceramic art, was acknowledged by Mr. Bright in a long speech, reviewing the triumphs of Liberal legislation for the last thirty or forty years.

years.

In the course of a lecture delivered in Marylebone, a few weeks since. Mr. Odger denounced the Liberal party as "humbugs." Earl Russell as "a mischierous old man, "Mr. Forster as "a political renegate." Mr. Ayton as an "insolent upstart," and Mr. Stansheld as "driveling, sniveling Jamie Stansheld, the worst of the lot." Mr. Glyn had claimed to be Mr. Odger's friend—his personal friend—but Mr. Odger would have nothing to do with him.

A report recently presented to Parliament gives the average daily pay of mechanics as follows: Austria, one dollar: Belgium, sixty cents: France, one dollar and ten cents: Denmark, sixty cents; liby, forty cents: Netherlands, seventy-five cents; Norway, sixty cents; Sicily, thirty cents; Portugal, forty cents: Prussia, seventy-five cents; Russia, seventy-five cents; Sweden, sixty cents; Switzerland, sixty cents.

— Since St. Peter, to whom tradition assigns twenty-five years, there have been but three popes (with the exception of the present), out of two hundred and iffyeight, who have lived to commence or to thish their twenty-third year of government. These were Adrian I., the pope of Charlemagne; Pius VI., the pope of the Directory; and Pius VIII., the pope of Napoleon I.

The German Palice Anxieger asserts that between seventy and eighty persons in New York are engaged in counterfeiting the treasury-notes of various Enropean governments, and that they are able to carry on their nefarious business with the utmost impudence, as their true character is but little known to the police authorities of New York.

An interesting ceremony has taken place at West Ham Cemetery, in the shape of erecting a tombstone to the memory of Numa Hartog, the young Jew who, besides being Fellow of the University of London, became Senior Wrangler at Cambridge, and died of small-pox last year. The tombstone bore an inscription suitable to the occasion.

It is said that among the ornaments which adorn the walls of a tavern in London where the Communist refugees most congregate is a clay pipe well colored which was formerly the property of M. Gambetta, and to which, by the orders of Félix Pyat, is attached the following inscription: "The pipe of a traitor."

The freehold site of the church of St. Mildred, Poultry, in the heart of the city of London, occupying an area of 2,293 square feet, has been sold, by tender, for £46,105, or at the rate of £20 2s. per square foot. The purchasers are the Gresbam Life insurance Company.

A correspondent of the Ceylon Observer calls attention to a famous rose tree growing on the Coragall estate. Hantanne district. He says it is "eighty feet in circumference, fifteen feet high, and is bearing at present at least two thousand roses."

at Yokohama, has proceeded to Yeddo, where it has been well received by the population and presented to the Mikado, who showed himself gracious and friendly

The point has been raised whether the nuisance of the "Shakers" of Little College Street, Chelsea, may not be put down on the ground that they have "no dancing license."

# My Rose.

'Twas only last spring that she plucked the rose, A common rose by the wayside growing;
I begged, and she gave it, as one who knows
The bounty of such bestowing.

"Twas only last summer my heart found words
To utter the thoughts she already knew. We kissed and were plighted. The very birds Seemed singing in raptures new.

But now 'tis autumn, my rose is dead,'
And she has changed, for her love has died;
The day is past when we should have wed,
And she is another's bride.

The feeling is sore, but I know it vain
To wail for a love that could change so soon; A little while, and the aching strain That binds my heart will be gone.

The spring will return, and fresh roses blow; There are other loves, though the first proved naught. If she could change, it is better so; - Cassell's Magazine. Such love is not worth a thought.

## The "Chronicle."

We cheerfully recognize and acknowledge enterprise and energy, wherever displayed. It gives us pleasure to reproduce the following statement by the proprietors of the Chronicle of their increasing business and enlarging facilities;

THE PROGRESS OF THE "CHRONICLE," THE GREAT PAPER OF THE PACIFIC. The circulation of the Chronicle having increased with unusual and extraordinary rapidity within the last six months, we find ourselves at last unable to get our whole edition printed early enough to serve all our subscribers in season. To remedy this, we have ordered a press built in New York city, for which there will be no match on the Pacific Coast. It will be what is known as a "Hoe retary, four-cylinder, double-quarto," and will print all four pages at once, with a capacity of striking off ten thousand complete copies per hour, which can, by stereotyping, be increased to twenty thousand copies per hour. It will weigh fifteen tons, and require two platform cars for its transportation. Four months them the date of codesive increased to twenty thousand copies per hour. It will weigh fifteen tons, and require two platform cars for its transportation. Four months from the date of ordering it is the time required to build it. Its dimensions will be: In length, 32 feet 8 inches; in width, 13 feet 6 inches; in hight, 16 feet. It will take six men to work it. A the latest improvements will be embraced in it. A new roller movement will make a cleaner impression than is possible with any other contrivance, and enting cylinders will divide the paper automatically. It will print forty per cent. faster than any press west of the Rocky Mountains. With the engine, boiler and appurtenances, it will cost, set up in San Francisco, \$30,000. We shall make, also, other improvements. With the increase of our advertising patronage we ind ourselves so provements. With the increase of our advertising patronage we find ourselves so cramped for space that the alternative is left us of omitting news or of going to the expense of enlarging the paper. Of course, we chose the latter, and with that change intend to have a new dress of improved type. The increase of business and the enlargement of the Chronicle will also necessitate our removal to more commodious quarters. We shall also adopt a new mailing system, by which the addresses on the wrappers will be printed daily, each bearing the date of the expiration of its subscription. All told, our improvements will cost us about \$40,000. More than three months, probably, will elapse before they are completed. The facilities of the Chronicle will then be unequaled by any newspaper on the Pacific Coast.

— We attended a lecture the other evening. It was for the benefit of the Internationals. The collection of human curiosities assembled was rare. It was worth nations. The collection of numan currestites assembled was fare. It was worth more than the price of admission to see the idiots of all shapes and nations who gathered in the hall. We always make a point of being present at International rodeos. We are studying Darwinism, and the average International is a great aid in the consideration of the theory. As to the lecture, we cordially embrace the occasion to say nothing about it. If we do not as cordially embrace the lecturer, it is only because of the infernally jealous temper of Mrs. Town Crier, who always storms when some nice, charming, sweet, luscious young creature shows any inclination to date on us. clination to dote on us.

Coast.

<sup>—</sup> We have received the California Horticulturist and Floral Magazine for August. It has interesting articles on Decorative Plants, Choice Varieties of Fuchsias, Hints About Wine-Making, Forest Trees, etc. It is an excellent publication, worthy of a generous support.

#### INDIRECT CLAIMS.

Who are the Arbitrators, Umpires, or Referees, at Geneva or elsewhere, compewho are the Arbitators, (impires, or Referees, at Geneva or elsewhere, concent to decide upon the justice, the equity, the propriety, the admissibility of such claims as the following: The indirect claims of a wife when she is walking with her husband, and stops before a large shop with a large plate-glass frontage, to admire and point out to her companion? That lovely suik, or "That most becoming costume," or "That elegant Polonise," with an appealing eye, and, it may be, a deprecatory glance at her own deteriorating attire. The claim is strengthened, if the husband is conscious that in the expiring season the balance of enjoyment has been in his favor. The indirect claim of the young entleman who is on the eve of returning to shool after the holidays, and would be glad if it occurred to you that he has expenses to meet in the ensuing half. The indirect claim of mamina, who offers baby for the inspection of friends and relatives. The indirect claim of who offers taily for the inspection of triends and relatives. The indirect cruin of the young lady who presents benself to the family circle bewitchingly arrayed for her first ball. The indirect claim of the juvenile author who writes to you with a presentation copy of his little volume of poems. The indirect claim of the promising painter, whose studio you visit to inspect the works he is sending to the gallery. The indirect claims of the various classes of persons who prey upon you at theaters, concerts and other places of public annoyance and extortion. The indirect claims of different sections of the community about the last week in December. The indi-

#### FIFARO'S DICTIONARY.

Marriage—A popular lottery. Gin—A slow poison, composed of turpentine and other matters. Naughty—A term of endearment used by methers. Academy (Royal)—The scatfold on which pictures are bung. Taxes A necessary evil. Latch-Key Another. Tripe A species of inferior spouge. Love—A disease. Young people are most hable to caich this disease, but in these cases it is seldom chronic. N. B. Other diseases are often mistaken for this distemper. 111 Luck-An excuse for idleness and want of perseverance. Cards Will o' the Wlaps, that lure people on to intamy and disgrace. Lies-Falsehoods that are found out. lure people on to mining and unstance.

Camarines. Unfortunates who spend their lives in prison to amuse their jailers.

Milimers. Female slaves, not yet emancipated.

Dress.—A capricious idol, much worshiped in society.

As the sittings of the Geneva Tribunal are, and are to be, entirely secret, it would be a capital stroke of economy by the managers of the daily newspapers to withdraw their special correspondents, and write the Geneva telegrams themselves. There is nothing very difficult about it. "The proceedings the steday are understood to have been of a satisfactory matter." "It is understood that the Tribunal made to have men or a savisactory manner. It is unterstisse into the travalles in the considerable progress, in to-day session, toward settling certain formalities in the observed in discussion." At the close of to-day sesting, it was evident that according to the rights of belignerints had been determined." "Though the proceedings of to-day have not, of course, been divelged, it is known that the Tribunal has come to a definite understanding touching certain salient points in dispute." "It is probable that the labors of to-day have materially forwarded matters with regard to the duties of neutrals in spec field contingencies." It cannot be indiscreet to hint that certain technicalities have to day received grave consideration, and others will occupy the time of the Tribunal to-morrow. All this ought to be written in London. Let us see if the suggestion is not acted upon.

It is very gratifying to observe that Lord Rosebery's attempt to exclude sectarian catechisms and formularies from the schools of Scotland was stubbornly opposed, and triumphantly frustrated. It now only remains to exclude all manuer of secular instruction, and the intellectual needs of Scotland will be properly provided for. Governor Eyre, who is held to be unjustly accused, and who certainly was very vigorously prosecuted, has had his expenses paid him back by the Government. This is very good, indeed. Now, here are two men, who have been for some time doing penal servitude for an alleged rape. The prosecuting witness, upon whose unsupported testimony they were convicted, is now in arrest for perinty in the case; and there is the strongest prospect that the men will be set at liberty. How delighted they will be to resume "the godlike attitude of freedom and a man!" With what cheerful alacrity will they engage countless wagons, drawn by number less horses, to convey away the tons of bright sovereigns and the thick bales of bank notes which the Government will bestow in reparation! The subject is not a fit one to dwell unon; it makes one wickful envising. a fit one to dwell upon; it makes one wickedly envious.

The police are not, perhaps, superhumanly acute in ferreting out an assassin, but upon the track of a chicken thief they are simply inspired. The other night one of them found, in a lone, sequestered spot, a sack containing a heu and her callow brood. It wasn't a nice night, but Robert squatted alongside those birds, and for four mortal hours watched and waited for the thief to return and claim his luggage, which at last he did and was nabbed. There have been instances of heroic fidelity which at has the did and was maded. There have obed instances of perior intensity more conspicuous than this, and more unselfish, and more foughing, and more romantic; but they are not related of the police. Now, observe the vanity of ambition, and mark the emptiness of fame: the number and letter of that vigilant officer have already quite perished in the public memory! Where's the use of being good ?

At the opening of the assizes at Kilkenny, the other day, there was not a single criminal for trial, and the same thing had occurred once before. thing I have ever heard about Kilkenny, it is very thoughtful of the people to go of into the country to commit their crimes. It is more satisfactory, too; and, after enacting two or three murders out amongst the trees, under the bite sky, one perceives how very much more comfortable it is. There are people who have not killed a man within city limits for several seasons; and they are perfectly right.

At a meeting of bakers' men, last week, one of them said the master bakers ought to get their profits out of the public, not out of their journeymen. The insignation is most unjust; the master bakers, like other tradesmen, take their profits impartially from both.

M. Gambetta claims that the French Republican is not an enemy to property He is not; he likes it well enough; but he is down upon the man who has more of it than he has.

—Somebody says a wife should be like a roast lamb—tender and nicely dressed. A bachelor adds, "but without any sauce."

Stings from the London Hornet.

Military Intelligence.—His Serene Highness The Hornet, Commander-in-Chief of the admiration of everybody, and Inspector-General of most things worth seeing, on Saturday reviewed, with all the pomp and circumstance of glorious war, four strong batteries of the Third Middlesex Artillery Volunteers. Those bold defour strong catteries of the Third and diesex Artifiery volunteers. Those bold defenders of our hearths and homes, accepting the invitation of Captain Davies, of the Shrublands, Leytonstone—a gentleman whose name we cannot recall without the tenderest recollections of prime champage and lobster said—proceeded by special train from Fenchurch street, and special rain from the clouds, to his salubrious grounds, where they were at once drawn up in martial array, by as martial a Ray—of course I allude to Major Ray—as Mars himself might wish to see. His Second Histones to the course to the street of the course of the Serene Highness arrived at the Leytonstone station at about three o'clock, and was received by the chief porter, who presented an address—it was the address of Captain Davies—but no matter, the illustrious Insect found his way. His Highness had a glorious reception from everything and everybody. The very elements said "All hail!" and the artillery of heaven gave a salute of twenty-one gans—it was thundering very hard at the time. The inhabitants of the primitive village turned out en masse to the number of two men and a dog, and for a consideration, which was withheld, out of respect for their feelings, would have cheered—but they didn't, His Highness was received on the field, at Shrublands, with every demonstration of lovalty. A general salute was tendered, but as it did not include the ladies-and there were some delicious creatures amongst the spectators-it was declined. rain at once consented to hold up, and the evolutions proceeded. It is needless to particularize them; suffice it to say, the review was a glorious sight. The cartridge practice was beyond all praise, and it did. His Serene Highness military some ridge practice was beyond all praise, and it did His Serene Highness' military soul good to see the heroic way in which the gallant commanding officer, facing his men, received the whole fire of his regiment. After the sham-fight came champague of course—under a large marquee; and it was really wonderfuil to mark, by the rapid consumption of cold fowls, how chicken-hearted the erst bold warriors became. Captain Davies presided—a modest bud in the center of a bouquet of fair roses—and his health was drunk, and The Hornet was drunk—His Highness' health I mean—and everything went as merrily as a marriage bell. His Serene Highness having promised to commend the regiment to the particular notice of his friend the Horse Guards, Mr. Vernon Harcourt, and other great military authorities, the feast gave way to field sports and dancing on the green. When H. S. H. The Hornet finally left the hospitable domain of Captain Davies he gently hummed "The Soldier Tired," and with special reference to his genial host nurmaned with perfect coherence—and he defice any one to prove the contrary—that thrilling strain, "For he's a jolly good fellow." Mr. Miall.—Mr. Miall, M. P. for Bradford, prime pet of the Liberation Society, and superlative Joy of a section of Nonconformista, is one of those apparently necessary bores, "a man with a mission." Possessing the requisite amount of that which one's friends call perseverance, and one's foce obstinacy, and implied by a puritancial horror of the loaves and fishes, he has conceived, in the inmost recesses of his latent modesty, a design to discatablish the English Church. Pursaing the same course of tactics by which Mr Whalley seeks to exterminate the Pope, and Sir Wilfrid Lawson to water the people's toddy, he anunally rides at till at the joilty old windmill, whose sales still go round, whether impelled by Evangelistic gusts or the mild and perfumed breezes of ultra-Ritualism: and, if he meets with no greater success than Don Quixote, when opposed to a similar enemy, it is not for a lack of courage or energy, but from a mistaken notion as to the proper way to upset a windmill. If Mr. Miall were not so deeply engrossed in the fortunes of Mr. Miall, he would possibly see, by his recent treatment in the House of Commons, that it is the especial privilege of Mr. Chladstone and Mr. Disraell to educate the people to an idea; and further, that the best way to upset an established Church is not to break its windows, but, commercially, knock it out of time by the sheer force of a more active nonconformity. It is possible a few more such defeats as that he has just suffered, may induce Mr. Miall to concentrate his peculiar faients on preaching up more chape's; at present, the unction he must layed, his soul is, the Hornel's sympathetic assurance, addressed equally to him and his boid minority, that—

There's a good time coming, boys, Only get a little stronger.

Hints for Agriculturists.—There is reason to believe The Hornet circulates extensively in the country. I shall, therefore, endeavor to give a truly rarid tone to a certain part of the Paper; and with that view. I have secured the services of a distant connection of a friend of Alderman Mechi's second consint twice removed. This is his first installment of copy. I have indeed found a treasure, as you will see. He writes thus, only his is a very illegible hand: You can't farm properly unless you have a farm. When you have one much depends on its soil. In America the industrious farmer, who devotedly digs up his estate, finds its of is often performent, but this remark only applies to my Yankee subsectiver. To discover the soil of your farm—and we are now addressing our United Kingdom constituencies—turn it over as much as possible. Don't, however, turn it over to another remainer or else he will discover it and not you. To turn it over panother treathing—it can't hear you. A plow is also useful. Join the 'Arable Land Improvement Company (Limited),' and they will allot you some plow shares a once. Then go to work, unless indeed the work will come to you, and save you the Journey. The properly stocked farm-yard contains many more than three feet. Perhaps the fowls keep you. That's the exception. In any case give the fowls a fair chance and plenty of barley, and await the course of events. If they do not produce eggs, any the fault statheir door; if they do, they will probably lay it the egg we mean at yours; though it would be better all round if they laid it in the nest. Have chickens, by all means, if you can Never be without your home brood. We will not give a decided opinion about the gosling. "De Goosetibus, etc.," you know.

Sheep.—These animals want looking after. As lambs they are very fond of their

SHEEP.—These animals want looking after. As lambs they are very fond of their dams; but they may be weamed from this bad habit in time. If they are very much cut up, mintsance, judiciously applied, is not at all amiss. We may say, en passant, the large-hearted farmer looks upon sheep as—

A little more than kin, and less than kine.

#### Which suggests -

Cows, Erc.—Cows give milk; milk gives whey; so do you when you are overpersuaded. In the present case, please don't give way. Don't give anything, in
fact, but take some advice. Never take your bull by the "Horns." Let the tramway people do it for you—they go by the very door. Keep an Irish bull amongst
your stock, it makes them laugh and grow fat, saving oileake and Thorley's food
for cattle thereby. Neat cattle are all very well in their way; but say you have
some littery cattle, and they turn to some fine day and use their pens. Why, you
have something to take round in a caravan at once,

Pros.—Some of your pigs will turn out to be boars, others to be sheer hogs. You must treat them accordingly. If they are too bad to be treated, cure them. Pigs like acorns. If you live near a forest, let them ran for the cake, by all means, unless they are too fat, and then you had better run for the accorns yourself.

— Sensationalism is the order of the day with our pulpiteers. "Dead Flies" and "Short Bedsteads" are advertised as subjects for sermons. If these vapid preachers—weak of intellect and strong of odor—cannot find any well-fitter matters to droll about, we pray their long-suffering congregations to strip them of their saccretotal robes and kick them out of the temples which they turn into things to be scoffed at, "Short bedsteads," indeed. Let this ridiculous preacher try his feet in a lively "essence," or sing for us a comic ditty. No doubt he would be a better nigger minstrel than expounder of the word of Jesus.

#### Diamond News -- Mr. Henry Janin's Preliminary Report. New York, June 26, 1872

S. L. M. Barlow, Esq., Present - Dear Sir: Having received from Messrs. Tiffany & Read an estimate of the value of diamonds and rubies collected by us on our recent trip to the new diamond fields. I am now prepared to make and herewith do make a preliminary report, which will embrace the conclusions to be reached in a more detailed report, and which should suffice to determine any proposed purchase of stock, to make or decline the investment.

#### THE AMOUNT OF GRAVEL WASHED.

While at the diamond fields, there was washed of rich gravel less than, but say three thousand pounds, or one and a half tons. This amount of work was done by Messrs. Stack and Arnold principally, the only experienced washers, assisted at times by myself and other members of the party. The total amount of work done was under, but say four days work of two men, or eight days work of one man. This amount of labor produced 25% carats of diamonds, first quality, worth \$16 per carat, or \$4,966; 568 carats diamonds, second quality, worth \$4,590. Further, of rubies, four pounds, or 7,200 carats, worth fifty cents per carat, but estimated at thirty cents—\$2,226. Total produce of one and a half tone of gravel \$2,926 or \$2,500...per \$0.00...per \$0.00

one and a half tons of gravel, \$8,026, or \$5,350-say \$5,000-per ton.

#### A MODERATE ESTIMATE.

The estimate was made on a conservative, commercial and selling basis, and ignored the fact that while none of the diamonds were worth less, many were large enough to be worth much more per carat than \$16. The estimate upon the rubies enough to be worth much more per carat than \$16. The estimate upon the rubies was made with due regard to the great quantity in which they can be produced

and to the effect of this quantity upon the market.

and to the effect of this quantity upon the market.

The washing was done by hand, in ordinary gold pans. With the assistance of even the simplest machinery (gold-rockers), the results of the same quantity of gravel would have been increased many fold by the same number of days work. One thousand tons of such gravel as this would produce \$50 per share, and would more than cover the purchase price and expenses of production. Gravel so poor as to produce only one per cent. of the ascertained value of the richest gravel would still be worth \$50 per ton, and would pay very large profits, if washed in quantities.

#### THE EXPENSE OF WASHING

Would never exceed \$10 per ton. An acre of ground covers 43,560 square feet, and with an average depth of soil of one foot would produce (at twenty cubic feet per ton) over, but say 2,000 tons. Therefore, if the ground prove as rich over only one-half acre of ground, as the stuff washed already, this small area will produce 1,000 tons, and would more than cover by its yield of diamonds and rubies the purchase

If ten acres only, which would furnish 20,000 tons, prove to be one-twentieth (five per cent.) as rich as the best ground, the product will amount to \$5,000,000, or \$50

per share

Now the Company own-

1-0ne	block	around	discovery	of	 	160 acres.
2—One	block	of			 	2,720 acres.
8—One	plock	of			 	100 acres.

The first block alone, with a depth of gravel of one foot, would produce 320,000 tons; last ten years washing, 100 tons per diem. It is evident, therefore, that for all practical purposes, it is sufficient to confine our attention to the first block of 100 acres, which, as far as known, contains the best ground.

Our stay at the diamond fields was so short (we were in camp at the fields only

seven days), and there was so much to be done in the way of locating, surveying and securing the property, water rights and timber lands, that it left me much less time than I desired in which to prospect and sample this tract of ground. To prospect the whole tract of nearly 3,000 acres would occupy months.

#### OF THE AMOUNT OF PROSPECTING DONE,

I had only time to gather samples from those portions of the 160-acre block of I had only time to gainer samples from those portions of the locality of the points numbered diamonds and rubles were found, as per inclosed samples. These points were over one-third of a mile distant from the original discovery, and show a very

were over one-third of a mile distant from the original discovery, and show a very large area to be diamond and ruby-bearing.

The samples were taken from the surface. It is probable that at a greater depth larger diamonds would be found. The amount of prospecting done was insignificant, and does not enable me to form a judgment as to the extent or imit either of the very rich or only moderately rich ground. I have already shown that

## ONLY ONE-HALF ACRE

Of the very rich ground to repay the purchase money, and also that if the whole 160-acre tract will produce gravel of an average value of one per cent. of the value of the one and a half tone washed (\$5,000 per ton), it would furnish an immense value in diamonds and rubies

I wish to call particular attention to the samples and points in the plat marked 9 and 10. No. 9 is from the point where the last gravel washed was taken from (a

large sample of which accompanies this), and where the broad gulch has received the drainage and products of decomposition (diamonds, rubies and gravel) of the sandstone and cement beds above. No. 10 is from the surface soil down this guide for a length of over 300 yards. I believe that this guide will be found to be ex-tremely rich in precious stones, and the few experiments made confirm this believe

tremely rich in precious stones, and the few experiments made confirm this hellef. I desire particularly to impress upon the mind of any proposed purchaser that I am not in a position to say, owing to the limited time allowed me for prospecting the ground, how extensive the area of rich gravel is, or how much of the tract will be found available and profitable for washing. My report must necessarily be unsatisfactory and incomplete on these points. Nevertheless, the investigations made were satisfactory as far as they went, and no evidence was gathered which could authorize me to do other than to recommend investment at the price submitted to me for consideration, of \$40 per shure. It requires that so small an area should recover sear rich to cover the unrelease area of the should prove very rich to cover the purchase-money, and the

GREAT RESULTS OBTAINED BY US

Were so easily obtained with so little labor that I feel perfectly safe in expressing the belief that the amount of the purchase-money will be speedily repaid in dividends, to be followed by large additional profits. The apprehension that diamonds may be found in such an abundance as to desertoy their value, is, to my mind, entirely without foundation. The question of water is satisfactorily answered by the statement that we secured five streams, being all we found on this side of the mountains. The Arnold creek alone (and two of the others are much larger) will suffice for all demands for power and washing for any amount of machinery and any number of tons of daily washings of gravel. We secured also 320 acres of pine timber land, ample for all time for fencing and for flumes and buildings - steampower will never be necessary. The streams of water are as situated that they can be carried to any part of the property at a moderate expense. A mining district was formed and mining laws passed to protect our interests. In conclusion, I would say that I consider this

A WONDERFULLY RICH DISCOVERY, we extremely profitable. That while I did not have time And one that will prove extremely profitable. That while I did not have time enough to make the investigations which would have answered very important questions. I do not doubt that further prospecting will result in finding diamonds over a greater area than is as yet proved to be diamond bearing; and finally, that I consider any investment at \$40 per share, or at the rate of \$4.000,000; or the whole property, a safe and attractive one. Very truly, your obedient servant.

HENRY JANIN, M. E.

### Condition of Mexico.

A valued friend, who has been passing some time in the turbulent republic over our borders, writes us his impressions of the country. He says that a chaotic state of things exists, and that the country is marching with claim strides to inevitable ruin. There is little or no security for person or property; the "extraordinary powers" with which Juarez was invested made the Government as despotic as powers" with which Juarez was invested made the Government as despotic as that of Turkey. For the easier control of the people most of the States have been divided, so that now there is nearly double the number there was formerly, each with its State Government and vensil Legislature, granting in most cases extraordinary powers to the Governor, so that between the oppression of the Federal and the State Governments, both of which exact forced loans and levy taxes ad libition, the whole substance of the people must soon be exforted from them. The taxation is enormous, and all frittered away, with the exception of a few improvements in the capital, by decimating the people by internecine war. Many rich mines are not worked, because the builton is in danger of heine stolen from them by the line is in danger of heine stolen from them by the line is in danger of heine stolen from them by the line is in danger of heine stolen from them by the line is a stolen from them by the line is the stolen from them by the stolen from them by the line is the stolen from t worked, because the bullion is in danger of being stolen from them by bandits calling themselves pronunciados. Rea, del Monte has a small army to protect the mine and its bullion on the way to its destination. Costly manufactories are stand-ing idle and offered for a third of their cost. The country produces little or nothing beyond what is absolutely necessary to feed the people; commerce is stagmant, and many cities and towns that were once prosperous are going to decay. The Rail-road Company is making efforts to finish the road from Vera Cruz to Mexico by the road company is making enores to finish the road from Vera Cruz to Mexico by the end of the year, to save a subsidity of \$500,000 for twenty years, which on failure would be forfeited, that is, ought to be, according to the contract, but I dare say the company would, in case of need, find means of whipping the devil around the post. The road is complete from Vera Cruz to Orizaba, with the exception of a bridge or two, but there is a considerable hiatus between Orizaba and Puebla, embracing the Cumbre, within a few miles of Orizaba, a mountain that presents one of the greatest, if not the greatest difficulty of the whole line. You are aware, no doubt, that some of the people especially the mulcteers and owners of freight wagons, are so opposed to the "innovation" that parts of the line have been deswagons, are so opposed to the "innovation" that parts of the line have been destroyed, as they consider it must entail ruln on the country. One merchant, of a certain city, gravely said that "formerly 150 donkies used to come in during a certain period, but that now only 50 come." If many thought as he did, the number of donkies in the place would be greater than that of those which came to it from without. There is only one remedy for this beautiful, but God-forsaken country intervention by a nation whose people possess the intelligence, enterprise and energy to develop its inexhaustible riches, and the sooner it take place, the better for the Mexicans themselves, for as it is impossible for them to be in a more wretched, hopeless condition, any change of necessity would be for the better, and there are many who ardently desire it. So mote it be.

## The Primeval Man's Pastoral.

My grandfather Jock was an ape, His grandfather Twist was a worm; Each age has developed in shape,

And ours has got rid of the squirm; If the law of selection will work in our case We'll develop in time to a wonderful race. For selection won't work in the world

My sweetheart has claws, and her face Is covered with bristles and hair; She's feline in nature and grace,

She's apt to get out on a tear, She's cursed with a passion to sing after But these she'll evolve and develop all

right. One race has evolved in the sea, And partly got rid of their scales; Though cousin by faces to me,

They're cousin to fishes by tails: But they'll ever remain simply mermen and women,

that they swim in.

'Tis said that Gorilla the Great, Who rules as the chief of our clan, Has found in the annals of Fate We're soon to evolve into man

Furthermore, that our children will doubt whence they came, Till a fellow named Darwin shall put them

to shame.

#### Public Schools.

EDITOR NEWS LETTER:—This element which is assuming such large proportions in our midst seems to excite little interest in the minds of the many. They do not reflect that in a short time the multitude of children now being educated in our publie schools will be turned loose upon the community with the seal of their Ama-hater upon them. That, in this rapidly growing country there men so early take their status in life, public schools are the fashioners of times that will be upon upon their status in life, public schools are the fushioners of times that will be upon us before we are aware. It behooves us to inquire into their much vaunted system of teaching. History and beltes lettres, which formed a very considerable part of an education in the olden time, are almost entirely abjured in the new, and education, in these institutions of learning, is conducted on the broad basis of the multiplication table. We, who at ten and twelve years of age, worshiped with reverential awe such ancient heroes as Julius Cæsar and Alexander the Great, as well as the great figures of modern history, are astonished to find, that to the children of today the history of mations is almost a scaled book. At fourteen or fifteen years of age they are given the History and Constitution of the United States to study, and George Washington and Andrew Jackson are almost the only heroes a public school boy knows, unless he be something of a book-worm, a creature rarely found among the youth of San Francisco. To be sure, some attention is given to this matter in the High School, but, as comparatively few enter that department, general history can scarcely be called a branch of study in the public schools. Polite literature, with its wealth of interest and refining effects, is also totally disregarded. An Australian lady, visiting the schools in this city a short time since, was delibed with the sweet singing, charmed with the precision of the caliathenics, and astonished at the precoclous answers of the children in what are called "object lessons." In one of the primary classes, a little fellow of perhaps eight years defined correctly an isosceles triangle, an octahedron, etc. Another discoursed intelligently of priat the precocious answers of the chindren in what are cause. Object ressons. In most of the primary classes, a little fellow of perhaps eight years defined correctly an isosceles triangle, an octahedron, etc. Another discoursed intelligently of primary, secondary and tertiary colors, while a third gave quite an interesting little lesson on animals. But when asked the location of Australia, a blank fell upon the entire class, until one little chap timidly suggested that "that was where the Sydney ducks lived." The same lady expressed her astonishment at the class of persons engaged in teaching. Many of these are no doubt worthy young women, and would make excellent mantua-makers or tidy housemaids; but in consideration of the fact that their verbs wage perpetual warfare with their substantives, and that adverbs properly used are superfluities in their vocabularies, they are certainly out of place in a school-room. This evil is traceable to—I had almost said the root of all evil—the Board of Directors. We are somewhat better acquainted with the movements of this august body than with the inner workings of the schools. We are ven familiar with their personal characteristics; with the jolly, irate, but somewhat foul-mouthed old gentlemen who takes a leading part in these proceedings; with the wheezy old person of whom we seldom hear; the clerical looking young porter who sports the mercet suspicion of a necktie; the tall party (long without visible means of support) whose chief characteristic is soiled linen, etc. Such is our Board of Education. If it were the Board of anything else, we wouldn't mind; but fancy presenting this band of men to the Faculty of a University as our Board of Education. In the Board, as in the schools, there are some who belong there, but but fancy presenting this band of men to the Faculty of a University as our Board of Education. In the Board, as in the schools, there are some who belong there, but most of them have used the position for political purposes. Teachers are engineered into the department through a most intricate system of wire-pulling, merit being no criterion whatever. A young lady, of small disciplinary power, was sent to take charge of a class, in which she proved to be utterly incompetent. Before half a day was gone she burst into tears before the class. The Principal complained to the Director. "She must be made to succeed," replied that gentleman, in a meaning tone; upon which the Principal understood that she was to do the greater west of the work in that class. Another lady afficient with an incident service. meaning tone; upon which the Principal understood that she was to do the greater part of the work in that class. Another lady, afflicted with an inefficient corps of teachers, was asked why she did not complain. "Because I dare not," was the answer; "they would soon have another Principal." If the right man were in the right place, such things would not be. We have not such Regents for our Universities; why should we have such members in our Board of Education? Give us gentlemen of intelligence and culture, that it may have dignity; gentlemen of good social position, that it may have tone; gentlemen of sufficient wealth, to render them impervious to pecuniary testimonials; fathers of families, who will look to the interests of the children; and above all, men who stand aloof from the pool of politics.

## Rhymes of the Rail-fence.

Ah, woful waste, More gray hairs! Scanty remnant of a top-knot! Why does each particular hair

From my caput hop and stop not? What will bring them back, or keep These few locks from getting fewer-What has le(a)d to best effect?

"Dr. Bilken's Hair Renewer!"

O! for twenty years ago, When, new Argonauts, we landed, Scaled the hills with hearts so light, Seeking new shores golden-sanded :

Life was all a joke to us,
Pork and beans the best of diet.
What will bring those bright days back? "Jones's Bloom of Youth-just try it!"

When night came we threw aside Pick and pan in shortest metre :

Supper, pipes, then off to sleep, Curled beneath a manzanita. That was sleep. On feathers now At each noise I start and stir up; What will bring such slumbers back? "Mrs. Winslow's Soothing Syrup!"

Well, Life's road looks gloomy now, Strew'd with broken hopes, tear-sodden;

Yet we hope for rest at last When our feet the goal have trodden; Rest, not joy nor pain. Till then, While we toil through Life's disasters,

What shall ease our aching feet !
"Care your corns with Thompson's
Plasters!"

Poor blind moles! Though Huxley dreams, Spencer doubts and Darwin pierces Far into the gloom. Yet what Life so strange or death so fierce is Who can tell! We cry for light; Blind, yet groping for the dawning, What shall aid our feeble eight! " Brown's Eve-opener, every morning!"

W. H. MATS.

Young Lady Cooks for the Country.

At the Agricultural Fair in Santa Clara, prizes are offered for the best cooks among the unmarried ladies. This is a move in the right direction, and we hall among the unmarried ladies. This is a move in the right direction, she we man the fact as an evidence that we are to return to the simplicity of early times, when our wives were help-meets instead of "help-cats;" when the young wife brought to the matrimonial copartnership a willingness to bear her share of the burden and labor of life; when one silk freek, one China tea set, half a dozen silver spoons, and counter-panes of her own patch-work, were evidences of the simplicity of her taste, the economy of her life, and promises of future industry. Now the young birds must begin where their mother leaves off. Her outfit is a trousseau, a gorgeous birds must begin where their mother leaves off. Her outfit is a trousseau, a gorgeous house, rich in upholstery, mirrors, carvings and ornamentation of paint, plaster, silk and velvet; she sneers at a cottage where love is, and prefers the cheap and showy boarding house to an own but humbler home. The sama Clara Fair gives not only a prize for the best young cook who can manage a cheap and economical dinner, but other prizes will be hanging round within seen to the savory viands to nose themselves out a wife-awkward, beardless, robust young farmers, ready to offer themselves, their virtuous lives, their industrious habits, their well-tilled farms, to a bride who will know how to preside over the multifarious duties of a home in the country. We advise our city grist to go in and win. Show the country maiden that you, too, know how to broil and bake and fry and stew; then, for the finish to your feast, cive an extra desert—something to tickle the farmers maiden. finish to your feast, give an extra desert—something to tickle the farmers palate, and ten to one you will steal away from the country girl the honors and the lovers and ten to one you will steal away from the country girl the honors and the lovers of the day. And when the farmer's boy a wooing comes, accept his hard hand and honest heart as a surer anchor and a firmer trust than the hult-gentleman, hall-hoodlum, who parts his hair in the middle and offers to share with you the chances in his lottery of life. It we had a thousand sweethearts, we would advise all save one to go to the country. If we had a thousand genteel, half-starved city friends, fighting the grinning fiend of genteel poverty, striving to keep up appearances, living beyond their means, in constant dread of what the world will say, slaves to society, we would say, go to the country; with half a hundred acres of God's boundtiful soil, you may live happy, healthful, independent, self-respected and contented.

# Drunk and Disorderly.

In a Times leader on the paternal Licensing Bill, the other day, occurred the remark, relative to the United Kingdom Alliance Abolitionists: "Sober persons are unwilling to seem identified with impracticable functies." Just so. The sober refuse to be associated with the drunken. Fanatics, who how fight with fists at public meetings in the frenzy of their craving to impose a Liquor Law on their neighbors, demonstrate the possibility of drankenness without drinking. It is well, indeed, that they should be debarred from "intoxicating liquors," ing. It is well, fudeed, that they should be debarred from "intoxicating indors," which would fearfully increase their habitual condition of excitement from intoxicating sentiments. For they go about drunk under the influence of lust of rule, bred of outrageous vanity and conceit, or, in phrenological language, an excessive development and an influence stee of the organs of self-esteem and love of approbation arousing combativeness and destructiveness into furious activity, accompanied by a general frame of mind resembling delirium tremens. - Punch.

## Horsewomanship.

Bayard Taylor, describing an ascent of Mount Pleasant in 1860, writes: "Here my lady friend, appalled by the road and the perils of the side-saddle, was about to give up the journey, but, having convinced her of the greater security of the masculine scat, we changed saddles, and all went well. I would advise all ladies who are at all nervous, to take a man's saddle and ride as Catharine of Russia did." That is as good a bit of practical advice as Bayard Taylor ever penned, and he does not seem to have had any objectionable Views-o-Food in consequence of it, either. Thomas Forrester, in his travels in Sicily, says: "The girls were in such glee, with Filippi pressing the mules to a gallop, that, though we enjoyed the fun, we really feared they would be thrown off. Our fears were groundless; riding astride, as is the fashion of the country, but with all propriety, they had a firm, sear, and laughed at our apprehensions." Another traveler thus writes of a Tartar cavaleade: "Mounted astride—the only way ladies ride in the East, or should ride anywhere—on a graceful Tartar iron-cray, with a pretty foot peeping from her drapery, she was a fair type of the Mingrelian." Incited by the foregoing, "five young ladies" (as they sign themselves) write a letter to the New York World, in which they say: "Three of us are in the habit of riding in Central Park twice or three times a week, and it is not altogether pleasant to sit for two hours at a time like half a tailor with one limb curled up and aching; and besides this, the girth of my saddle did burst once, and I came near being badly hurt, as I would have been had not my mare been very gentle. We have talked the matter over, and have agreed to brave public opinion by going astride our horses to Central Park next Saturday at three o'clock in the afternoon. We carnestly request any other ladies who wish to inaugurate the new movement to meet us there in bloomer costume, or some other equally appropriate. We shall be at the Fifth avenue entrance precisely at three o'clock."

## The American Parcel Post.

By the new postal law which came into operation on the 1st of July, packages of dry goods, hardware, drugs (except liquid drugs), and other merchandise not exceeding twelve ounces in weight can be mailed to any part of the United States at a charge of two cents for each two onnees or fraction of two onnees. The New York Herald says: "Much time and money will be saved by this arrangement. The express companies demand at least forty cents for the transportation of any package, however small, for any distance, The Post Office authorities, on the other hand, will forward a twelve-onnee package to San Francisco for twelve cents. For instance, a pair of boots, if neither boot weighs more than the specified twelve onnees, may be wrapped up in two separate parcels, and sent across the continent for twenly-four cents; whereas, under the old plan the transportation of goods of this description would cost almost more money than they were worth."

#### The Vendome Column.

Everything is now ready for the reconstruction of the Vendôme Column in the Place Vendôme, at Paris. The plans are all prepared, the expenses being calculated at 250,000 francs, and M. Normand, the architect, is only waiting for orders to commence operations.

[All the bronze fragments of this beautiful column have been collected, with the exception of one, containing the figure of an officer near the top. This portion, curiously enough, is now in California. Little doubt exists but that the national love for la belle France amongst her sons here will shortly restore to its proper place the remaining specimen of artistic genius by which only the completeness of this wonderful column may be made equal to its original perfectness.

We have been pained to observe that the Chronicle, in carrying out its mission as a "live paper," gives with zest a piece of Sacramento scandal, which is likely to add fuel to the already strong flame of unreasonable prejudice against the really excellent class of people called mothers-in-law. We look upon a good mother-in-law—and there are many such—as a blessing in any household; and we suggest to every dutiful son-in-law that it will add peace to his later years if he now procures a photograph of the maternal relative of the light of his eyes. The very best pictures that we know of are taken by Bradly & Rulofson.

— One Boren, County Judge of San Bernardino, has been "stumping" Utah in favor of Joe Smith, Jr., who claims the succession to Brigham Young as head of Mormondom. Thus we see that there are citizens of California who take more interest in the Mormon religion than in the Presidential election. The doctrines of the Mormons are probably as good as any others, and Boren has a right to preach them if he likes. Nevertheless, being illogical, we would like to scalp Boren and to flay him alive for his ridiculous opinions.

# Money-Market and City Poem.

Reviving Confidence.

Atter a lull, again once more Incessant double raps at door, And ever as the postman knocks, Prospectus left in letter-box. What do I know of banks or mines, Railways and mercantile designs, That Joint Stock schemers e'er should see A likely share-buyer in me ? My name on a Profession's roll They know about me is the whole. From that mere knowledge they surmise That I shall at their projects rise. How many fools, and what fools they, To make those stamps and paper pay, What numbers of amazing asses, Must count among the lettered classes ! Behold Pilgarlic's little hoard Into a speculation poured, Large dividends in hope to gain! The poor Pilgarlic is insane.

Did Bubble-mongers only know How I their circulars bestow In less waste paper me they'd stand. I tear up all that come to hand. It seems but just the other day The cry was all how money lay Idle, because of panic dread From Bubble speculations bred. And has the cycle come round, when The same is to occur again? If a fixed law these things thus rules, What constant quantities are fools! Ascending to a higher sphere, Whoever leaves me money here Will near look down from regions blest, In risky shares whilst I invest. Lured by high interest 1'd ne'er be To bite at bad security. O. I would make a cantions beir ! Try me, ascending Millionnaire.

#### Court Chat.

— An dissuccessful attempt to assassinate the King and Queen of Spain was made at Madrid on the night of Thursday, July 18. In the afternoon secret information was conveyed to Señor Mata, the Civil Governor, that the night would not pass over without an attempt on the life of His Majesty. The King was informed of it, but he either refused to give it credence or did not desire to alarm the mind of the Queen, for he not only rode out alone in the afternoon on horseback, but made no change in his intention to go to the night concert. The Civil Governor redoubled all the usual precautions. He caused the whole way from the Palace to the gardens to be covered, as it were, with armed police, many of them in plain clothes, and he had all the usually frequented haunts of the "conspirator class" of Madrid closely watched. What followed is thus described by an occasional correspondent of the Times: "According to their custom, their Majesties left the Palace a little before ten in an open carriage. They sat at the back, with General Burgos on the front seat, as military aide-de-camp. Three other aides-de-camp rode behind in a second open carriage, but there were no outriders or escort of any kind. Their Majesties left the gardens in the same order about a quarter past twelve (midnight). The streets were densely crowded, for all Madrid at present keeps indoors by day and is out at night. A little before twelve some fourteen or sixteen ill-looking fellows were seen to emerge from a tavern in the Plaza Mayor and proceed to the Calle Arenal, where they divided themselves into groups of three or four, and stationed themselves at various points on both sides of the streets. On passing the Cafe de Levante, close to the Calle de Hileros, shots were rapidly fired from both sides of the Street is the remaining deneral Burgos, who is a very tall and powerful man, rose and leaned over the King and the Queen, who sa very tall and powerful man, rose and leaned over the King and the Queen, who sa very tall and powerful man, rose and lean

— The Marquis de Montaigu has sent the following letter to a portion of the French press respecting a recent marriage in high life which took place in England: "Strange rumors have been spread with remarkable rapidity in English and French society concerning the marriage of Prince Leichtenstein with Miss Mary Fox—rumors which compel the Marquis de Montaigu, for family considerations, to intervene, and to give the most formal contradiction to the absurd and calumnious statements which have gone the round of the press. According to one version it is said that after the birth of Mdlle. Anne de Montaigu, which took place on the 21st of December, 1859, her father, in despair at the death of his wile, which occurred three days after, viz., on the 24th of December, vowed never again to see the child whose birth had cost the life of its mother; he consequently entrusted it to the charge of a doctor, who was at the same time forbidden ever to remind him that the infant was in existence. Lady Holland, who was acquainted with the physician, having expressed a desire to adopt a legitimate child of good family, received about this time Mdlle. Anne de Montaigu, brought her np, and finally married her to Prince de Leichtenstein. The truth is as follows: The Marquis de Montaigu had four children—(1) Pierre, Connt de Montaigu, married on the 30th of January, 1872, to Mdlle, de Wendell; (2) Paul, who died young; (3) Mavia Augustine, born on the 17th of June, 1847, unmarried; and (4) Anne Marie Elizabeth Augustine, born on the 18th of December, 1853, christened the same day at St. Thomas d'Aquin, baptized in the same church on the 16th of March, 1854, and married to Baron Lamotte, on August 18, 1870. The last named, like her elder sister, was brought up at home from the day of her birth, and only left it on the day of her marriage. These facts are well known to all the friends of the family. The Marquis de Montaigu has to add that he holds in his hands a certificate from the register at the church of St. Augustin, declaring that

A correspondent of a contemporary writes as follows regarding the Prince and Princess of Wales: Rvery-one likes the Prince immensely, and without doubt be seems greatly improved—toned down, as it were, by his illness. He leads to comparatively quiet life, and does not even seem to care for the innocent but uscless outdoor sports which he once patronized so frequently. There is, moreover, a grave and hearty conviction about him in any ceremony he goes through, especially for a benevolent object—such as the opening of Waterloo buildings, the New Stationers' Hospital at Highgate—which used not to be one of his conspicuous features a year or two age, and which naturally gives much satisfaction to those who understand the best interests of the Crown. The Princess, too, is never spoken of without a sort of personal affection. She is looking remarkably well and happy just now, as also do her children.

- The journals announce the death in her 102d year of the Marquise de Cornimont de Bellefontuine, at her chateau in the Vosces. The deceased was allow of honor to Queen Marie Antoinette, and owed her preservation, at the fine of the invasion of the Tuileries, to the devotedness of a Swiss, who rolled her up in a packet of linen, and afterwards concealed her in his honse for several days. She left France at that period and did not return until the reign of Charles X. Her husband was for a long time the King's slid-de-camp.
- The news from Peking is that the young Emperor is very childish, setting his affections chiefly on dress and theatricals, of the latter of which he is inordinately fond. It is also said that the Empress encourages him in these effeminate tastes, with the view of keeping him in leading strings even after he has nominally ascended the throne. He may sit in front of the screen in the Audience Chamber, but this able and arabitious woman is determined still, as heretofore, to sit behind it and pull the strings by which the puppet will be moved.
- Lord Hatherley, who becomes a retired Lord Chancellor on a life pension of £5.000 a year, was better known as Sir William Page Wood, equally distinguished at the bar and on the bench, and was, in December, 1888, elevated to the Woolsack by Mr. Gladstone, after Sir Roundell Palmer had declined the position owing to his conscientions scrupies in regard to the diseastablishment of the Irish Charlet, It is probable that the vacant seat will be again offered to Sir Roundell Palmer, who is now at Geneva.
- The Duke of Edinburgh is making a very promising beginning in his new carser of a composer. He acknowledges the composership of the very pretty valse, the "Galatea," played at the Prince and Princess of Wales' hall, and has elsewhere been heard with much approval on the part of those who would not say it was good because H.R.H. were the letters of recommendation, perhaps the contrary.
- Comte Moltke has presented a copy of his Franco-German war to M. Thiers.

  Mine etemy has written a book. It is the resembry for remembrance, perhaps the pansies for thoughts.
- The Crown Princess Victoria of Prussia, a daughter of Queen Victoria, bas offered a prize of \$3,000 on the best essay on advancing the material prosperity of working-women.
- The Sultan has sent the ex-Empress Eugenie a magnificent sapphire, surrounded by large brilliants. The value of this splendid jewel is over 3,000 guiness.
  - Minister Schenck's daughter will marry an English millionaire.
  - Prince Augustus, of Saxe-Coburg, has arrived at New York,

## Special Breveties.

- In Japan, the Jingisho, or department for the Shinto gods, has been abolished, and a new department of religious Instruction established instead. The worship of the Mikado's ancestors with in future be carried on inside of his palace for his own behoof only. The abbots of the Buddinst temples have been made nobles. The Government has decided to destroy the tempors of Shiha, some of the most beautiful architectural remains in the conntry. The foreign journals are protesting. The results of the recent census 33,000,000 are questioned, from 18,000,000 to 22,000,000 is said to be the true figure. The Mikado has inspected the College of Nanko. Exercises in English, French, and German were substantify gone through by the popils. A correspondent at Yeddo sends as the following interesting particulars in regard to the great educational movement in that city: "By an official report recently published, it is shown that the actual number of pupils in the private, city, and government schools of Yeddo is 33,481. This, in a population of not quite 800,000, shows that nearly every Japanese youth is being taught to read and write. The pupils in the large government schools are as follows: In the Yeddo Chiversity, 500; in the two medical hospitals, 300; in the limited). The remainder are scattered throughout the city, taught by toreign has a special school of its own, to educate young men to be translators, assistants, etc. All these help to swell the grand total. Of the one hundred and thruty or more foreigners now resident in Yeddo, it is estimated that more than one bundred are that city, and the seat of foreign fashion and life—the New York of Japane Yeddo is the great school of the country, and the ample the keep for the display and development of that civilization at which, and justly, too. "all the world wonders."
- In one of his recent speeches, the Pope, alluding to a parable of the Testament, spoke of a hen and its chickens, his ideas were probably inspired by the following circumstance; Pio IX, possesses a brooding hen, which he visits almost every day, even when it rains. This hen shares with Bismarck and Spain the honor of interesting the inmates of the Vatican. The courtners of his Hollings never fail to inquire after the health of the hen and chickens. In reply to those inquiries, Pio IX, related the other day to a circle of Cardinals that out of thirty eggs hatched by his favorite hen, twenty only had produced chickens; ten were addled.—Secies Times.

A Wolverhampton correspondent of the Glasgow Herald writes as follows: "At present a large portion of the extra 10s, or 20s, a week the Staffordshire iron-worker is now getting is being spent in more expensive, but not a really higher class of beverages. His first impulse now appears to be to drink the same liquor as his master, and to eat the same food. He wants sulmon and turkey pullets, duck and green peas. He walks into a little pot-house in the back country with the air which a Staffordshire man cun assume when iron is up, and asks for a bottle of red port: and so that it is dark-colored, we do him the justice to say that he is not fastidious. He wants it strong to look at, and he takes all the rest for granted, Happily, however, alike for the ironworker himself and for those who should be benefited by his higher wages, this will not always be so. These spuries of prosperity are very difficult to bear, as well by masters as by men; but a time comes when, if the income is steady, the men know how to use it. A year's experience of high wages will give rise to a demand for more wholesome houses, better hedding, changes of clothing, more comfortable furniture, and a hundred minor luxines, the enjoyment of which invariably grows out of the means of obtaining them."

— Droz, a mechanic of Geneva, produced a clock which excelled all others in ingenuity. On it was sented a negro, a shepberd, and a dog. When the clock struck, the shepherd played six tunes on his flute, and the dog approached and fawned upon him. This wonderful machine was exhibited to the King of Spain, who was greatly delighted with it. "The gentleness of my dog," said Droz, "is his least merit. If your majesty fouch one of the apples which you see in the shepherd's basket, you will admire the animals fidelity." The King took an apple, and the dog flew at his hand, barking so loudly that the King's dog, which was in the room, began to bark also. At this the courtiers, not doubting that it was an after from the control of the machine of the machine of the merge what o'clock it was, the Minister did so, but obtained no coply. Droz then observed that the negro had not yet learned Spanish, upon which the question was repeated in French, when the negro immediately answered him. At this prodigy the firnness of the Minister also foresook him, and he retreated precipitately, declaring that it must be the work of a supernatural being.

with servants' vulgar assumption of gentility, and of manners beyond their station, we have no patience. Ordinary stupidity we can generally overlook, even when inconvenienced by it. One instance of the latter is too good to pass unchronicled. Certain young Indian gentlemen, who were pursuing the study of the law were invited by the Master of the Temple to spend an evening at his house, and he had provided such delicacies as were deemed suited to their peculiar tastes. The time fixed for the arrival of the interesting party arrived, but nobody came. When nearly an hour had passed in fruitless waiting, the dector's lady rang for the maid, who had not become quite accustomed to the ways of the house. She entered in a state of considerable excitement. "Have none of the gentleman arrived?" asked her mistress. "No," unswered the domestic, "but a lot of impudent ( hristy Minstrels has been a ringing at the bell, and ( have been a driving 'em away, mun")—From "Service," in Tinsley's Magazine.

— The Madras police recently apprehended a notorious bank-note forger, for whose capture £1,000 reward had been offered, with a supposed accomplice. The forged notes have been scattered broadcast over India. The forger said that if he was taken with his comrade to a certain Holy Hill he would show where his letters and forged notes were hidden, but the European officers were not to go near the hill. The authorities fell into the trap. The prisoners were handcuffed together, and were sent under a native escort, who reported on returning that the lorgers had leaped into the Holy Tank and were drowned. We have thus lost evidence which has been long sought for. As the bodies were for several hours undiscovered, the probability of escape was believed; but since then the bodies are reported to have been found.

A most extraordinary scene occurred in the Police Court of Mornant, Rhone. The proceedings were about to commence when a man named Bittand, a locksemith, suddenly presented a revolver at the head of M. Metayer Descombes, mayor of the town, and fired. The intended victim had seen the movement, turned the weapon aside, and escaped with a slight wound on the little finger. The assailant was immediately scized, and upon him was found a second revolver, a pistol loaded to the muzzle, and a large knife, recently sharpened. When taken to the station he coolly declared that he entertained a deep hatred of all administrators of justice in general, and particularly of the mayor.

— A gentleman amateur floriculturist, well known in Wimbledon, has succeeded in raising a purely new species of geranium; and though it may not, perhaps, be thought as valuable as the celebrated black tully of tullipomania days, yet such is its rarity that he estimates its worth at £1,000, and hopes to make at least that sum out of it. The precious plant is of pure white—stem, leaves, and flowers. It looks almost like wax, and is of a bright transparency. Never was anything of the kind heard of before among floriculturists; and no doubt, if the owner is fortunate enough to propagate the species, there will be a great demand for it.

— Court Journal.

— Mr. Murray has in press "The Expressions of the Emotions in Man and the Lower Animals," by Charles Darwin, and "The Geographical Evidences of the Antiquity of Man," by Sir Charles Lyell.

# "Why Should the Poor be Flattered?"-Hamlet, Act 5th.

"Why should the Poor be flattered?" Our sculptors can't make figures, Art foolish, Humlet, trow All else are torn and tattered, None else are flattered now.

Your Clourn, our race accusing. Declared our wits astray: We beat him at abusing

Ourselves. Behold our way! Our Queen mis-spends her income.

The Lords are feeble Ninkum-Poops, and the Commons, knaves.

Our soldiers are no fighters, Our sailors cannot sail, Our bishops shame their mitres, Our merchants cheat and fail.

Our doctors live by quacking, Our lawyers lie for fees. Our authors' brains are lacking, Our priests teach what they please.

Our matrons hear "two-meaning." Are not averse to schnapps, Our maidens boast a leaning To Popes-or pigeon-traps.

To no ears but their own. Only the so-called Worker. Her Court's all fashion's slaves,

The Stalwart Son of Toil, Never from that a shirker, Never in brawl or broil.

Our architects are Vandals.

Our music-writers Handels

Unfit to rear a stone :

Our painters vamp and scamp, Our minstrels might please niggers,

Our players lounge or stamp.

That sober, saving Being, The nation's "heart and core." Him we are all agreeing
To flatter—and much more.

For him we muzzle quoters Of Smith or Malthus lawe, For him we muzzle voters, Would muzzle thirsty jaws. For him we spurn the maxim

"Only the taught should rule." One who would teach or tax him Would now be called a fool.

"Why should the poor be flattered?" You pause for a reply— But, if our brains are battered, Dear Hamlet, don't ask why.

- - Punch.

# Arnold's Report of the Diamond Mines.

LARAMIE (Wyoming), August 19th .- The following appeared in the Sentinel to-

We have the honor of first placing before the country the only authoritative history and circumstances connected with the great diamond discovery, which we gather from the original discoverer, L. Edward Arnold. The main facts were in our possession some days ago, but at the request of the persons most interested it was not published at the time. Our readers will remember that, on the 14th mass, there appeared in the Sentinel an item on this subject. Next morning we were

waited upon by Mr. Arnold, when the following conversation ensued

Mr. A.—It's no use for me to misrepresent matters to you regarding your article in last evening's issue, for you have got us down to a hole. I came here for the purpose of fitting out an expedition, as you state, supposing it could be done without our intentions or destination being discovered. The San Francisco papers have been working in the dark, publishing all sorts of nonsense regarding this discovery, but you are the only one who has yet hit us hard. We will compromise, if agreeable to you, as we are not ready to have the facts made public at present. If you will let up on us for a few days we will give the facts in full, and you can publish the first authentic account of the affair. [We satisfied him that we would keep quiet until such time as he was ready to have the matter made public, and he proceeded I am the original discoverer of the diamond district. My first visit to the fields was on July 18, 1899, prospecting in the Pimo Indian country for gold. One day an Indian came to me, bringing some bright, peculiar-shaped stones. He assured me they were diamonds, and that the locality where they were to be found had been known to his tribe for many years. After making him presents, and with a heap of coaxing, he consented to accompany me to the grounds. It was a three days' journey, and we started at once.

I found the fields located on the slope of a mountain of sandstone formation; and I commute neural sociated on the stope of a mountain of sandstone formation; and so plenty were the gens to be found that I picked up a quart or more in a few minutes. I started next day, with fear and nope, for San Francisco. On my arrival there I carried the stones to J. W. Tucker, lewder, Montgomery street, who pronounced them worthless. I was not esti-sited. I heard of a French appdary in the city who had worked at Amsterdam, the great diamond-cutting mart of the world, and to him I applied for his opinion. He pronounced them

My friends, in some manner, got hold of the matter, and it was creating some excitement when I referred to Tucker. This satisfied them and threw them off the track. To make assurance doubly sure I sent one of the stones to Fossa, Morris & Co., Boston, and had it cut. This releved my mind of all doubts. I went back that season and brought out with me about \$200,000 worth. I made two trips in 1870, two in 1871 and one this year, in company with Dodge, Rewberry and Henry Janin, who were sent to verify my statements to the company I was then about forming in Washington. In a ton and a halt of dirt we found about \$89,000 with of brilliants. The publishing of this report of Janin's was the greatest mistake

we have made, for it set all the old miners upon us. These diamonds were discovered before the two pretenders were ever in the country. [Here he showed us a beautiful brilliant of about seven carats.] This is one I brought out with me on a beautiful brilliant of about seven carats.] This is one I brought out with me on my last trip. Dodge, who accompanied us on that occasion, is a very poor miner. He is too well fixed to mine. After being on the grounds a few hours he refused to pick up the diamonds when they were under his very nose. Janin's report was more than satislactory. The company was formed with a capital of \$10,000,000. It was still thought necessary to keep the locality a secret. I started South and procured twenty negroes, thinking I could move them out to the location and get about six months' work out of them, when I would be willing the world should know the location. I got them here and had them equipped, and was ready to start when I lost confidence in the colored troops and concluded to send them home. They had been here only about three weeks, and I gave them \$150 cach, and they were well satisfied. General McClellan has come and matters are satisfactorily arranged. I go to Cañon City, Colorado, from which place I shall start with one hundred picked men and experienced miners. Our claim is all right. We are protected by the United States Government, and have concluded to go ahead in the matter boldly. the matter boldly.

#### MINER AND FOX,

Of California, claim to have discovered the secret where our gems are found, but Of California, claim to have discovered the secret where our gems are found, but they do not speak of seeing men which we have on the ground, working and holding possession. From Cañon City our route is southwest through St. Louis valley, 300 miles, and south of the Moquis village. Near Flax River about \$2,800,000 worth of brilliants have been gathered up to this date, figured at a low estimate. Itook out one weighing 405 carats. On my first visit I could pick them up on the slope of the mountain without trouble. The rains had washed the surface dirt off, and had exposed them to view. I have denied upon all occasions any knowledge of the location of the diamond district except to my company. I have been obliged to do so to protect the interests of my friends and myself. You are the first obliged to do so to protect the interests of my friends and myself. outsider who has obtained any accurate account of this affair.

Humboldt speaks of this country as a region where diamonds should be found, and Lieutenant Ives, who was through that section in 1857 with a surveying party, describes the rubies and emeralds found there, and speaks of finding stones re-sembling diamonds, none of which were tested by competent judges, we believe, at The gravel in which the gems are found occupies an area of some 3,000 that time. The gravel in which the gems are found occupies an area of some 3,000 acres. The tract is on Government land, and the Government has issued the patter for the entire area. The present owners therefor have the power of the United States to protect them in the possession and enjoyment of their property. The company of which Mr. Arnold is the founder, is incorporated as the California and New York Mining and Commercial Company, with the following Trustees: Hon. Milton S. Latham, President London and San Francisco Bank; Albert Gansl, of B. Davidson & Co., Rothschilds agents; the Hon. Thomas H. Selby, Wm. M. Lent, Wm. F. Babcock, Louis Sloss and Maurice Dore, of San Francisco, and Gem. George B. McClellan and S. L. M. Barlow of New York. The capital stock is \$10,000,000. Mr. Janin, engineer and mineralegist of the company, estimates the cash value of the jewels aiready secured at millions, and says there can be no estimate of the wealth embodied in the company's tract.

## THE DISCOVERER.

L. Edward Arnold is a Kentuckian by birth, and 40 years of age. He came into the Western country at the age of eighteen, and has therefore had an experience of 22 years in mining. He was at one time a partner of old Bill Bridger, and is said to know the Western country better than any man living. He has acquired a fortune through his diamond discoveries, and after getting the company in working order preposes to retire, and no longer to lead the life of the hardy miner.

#### Diamondana.

The Catlin Diamond and Mineral Exploring Company filed its certificate of incorporation on the 17th instant. Object: to search for, locate and work deposits of precious stones, mineral veins and deposits, and other properties, in Arizona, New Mexico, and other States and Territories. Capital stock, \$1,000,000, divided into 50,000 sharces of \$20 cach. The Trustees are: A. S. Hallidic, George W. Bowie and J. S. Silver. The agreement entered into by the members of the New Golconda Diamond Mining Company provides that stock shall be sold to provide duads to equip a prospecting party. Each member of this party is to receive \$75 per month, and at the end of six months' time of service, shall receive an agreed number of shares of the stock. It is stated that a party of three men named Farrand, McNutt and Buckley recently set out from this city for New Mexico, via Denver, Colorado, in search of diamonds. The party saw Mr. Janin (of the San Francisco and New York Mining and Commercial Company) at Cheyenne, and themselves proceeded on to Santa Fe. A Mr. McCallum is reported to have sent on to New York from Santa Fe a parcel of diamonds valued at \$10,000, which he had procured in New Mexico. The Todd and Glass party, whose arrival was recently reported in Los Angeless, originally set out from Denver, Colorado, and passed through New Mexico and Arizona for geological exploration. In the "ant-bill" country the party collected a number of mineral specimens, among them several rules. The Catlin Diamond and Mineral Exploring Company filed its certificate of inrubies.

## First, Yet Youngest.

Love, on a bank Elysian, Smiled as he lay at rest, Thigh-deep in crushed red roses, A dove moaned at his breast,

Love's smile awoke the planets, Taught by that shining heat Henceforth to burn forever, Chained to Love's twinkling feet.

Love fed the worlds with beauty, Pressing his bosom's joy Warm on the sphereless ages, The bright immortal boy.

Love smiled, Thor dropped his hammer; Love smiled Jove's bolt away; Hell saw Love and was Heaven, Night saw Love and was Day. Form, Fragrance, Color, Music, Wit, Folly, Passion, Calm -All daring to adore him-Prayed lovely Love for balm.

The new-fiedged lark piped "cage me!"
The rainbow "melt me" sang,
The heartscase and the myrtle—
All Nature "love me" rang.

Ambition, Courage, Patience, Toil blossomed at his nod; The knave became a martyr, The broken reed a god.

Ere rain of kisses brought one Cheek to a rose full-blown, Ere yet one young-cycl cherub Had felt his wings had flown.

Of all sweets first, yet youngest, Before wild Time began Love smiled on bashful darkness, Till now Love smiles on man.

- Robert Batson.

## In Memoriam.

Died, in Canandaigna, New York, August 8th, 1872, in the 89th year of her age, Mrs. Abigail Beals, widow of Thomas Beals and mother of Henry Channing Beals and the first years of her lite there, and went to Canandaigna in 1896, with her brother, the first years of her lite there, and went to Canandaigna in 1896, with her brother, the Rev. Timothy Field, first pastor of the Congregational Church there. She was married March 9th, 1805. In December, 1807, 8th, e, with her husband, united with the church, and has ever been marked by her quick, embently consistent, and pure exercise of those Christian graces which commend the beauty and happiness of the religion of Jesus. For many years she has led a peculiarly retired life, but it was that of one hidden in the pavilion of redeeming love; and every one admitted to the sacredness of that withdrawment felt, while receiving the genial courtesy and bland welcome that ever characterized her, that her tent was folded, and that she only awaited the summons in the morning to pass from a wilderness world.

"Why weep ye, then, for her, who having run
The bound of man's appointed years, at last,
Life's blessings all enjoyed, life's labors done,
Seconely to her final rest has passed;
While the soft memory of her virtues, yet
Tinging like twilight hues, when the bright sun has set."

## How to do it.

We extract a notice, headed "Marriage in High Life," from a recent number of the San Francisco News Letter;

"The Rev. Dr. Benton, editor-in-chief of the Pacific, united in the holy bonds of matrimony, June 12th, in Oakland, Timothy L. Barker, Esq., of the mercentile firm of Wellman, Peck & Co., of this city, to Miss Mary R. Simpson, of Oakland, a recent graduate of Mills' Institute. His Excellency Newton Booth, Governor of the State, acted as groomsman on the happy occasion. No cards, cakes or callers expected."

It will be observed that over there editors move in high life and perform the marriage service without being "assisted" by several bishops; while state officials act as groomsmen. We expect shortly to announce that "the editor of Fun has united in the bands of matrimony Jeremiah Reddimony, Esq., of the firm of Reddimony, Goldschild & Rothschmidt to Miss Selina Barblew, who recently took high honors in the Cambridge Local Examination. The Right Hon. he First Lord of the Treasury acted as groomsman. No billets, bridecakes, or bores."—Fun.

The following is an alarming evidence of the progress of the photographic art at Bradley & Rulofson's: A lady, last week, had her likeness taken by a photographist; and he executed it so well that her husband prefers it to the original. Bradley & Rulofson's is the headquarters of the photographic art on this coast. All styles of pictures are made there in a style unequaled elsewhere.

## The Commercial Firm of George W. Chesley & Co.

Among the solid and substantial merchants of this State none stand higher than the firm of George W. Chesley & Co., of Sacramento, wholesale grocers and importers and wholesale dealers in fine wines and liquors. The gentlemen comprising the members of this firm are residents of California since 1849, and during that time have earned for themselves a reputation for integrity and energy of which they may well be proud. The business of the house has vastly increased, and, desirous of still extending it, a Branch Wholesale Importing House has been established by them in this city, located at No. 414 Front street. The new building occupied by the firm is very capacious and admirably arranged. The opening, which occurred a short time ago, was attended by over five hundred of our leading merchants and business men. A sumptious lunch was set out, and the wine of wines—old Piper Heidsick—was drank to the success and continued prosperity of the firm. The object that Messys. Chesley & Co. have in view in this opening up a new and extensive branch of their wholesale business is to advance their comercial interests in Southern California. To the north it will be extended to the British Possessions, including Vancouver Island and British Columbia. Our increasing shipping facilities with the Sandwich Islands, China and Japan will also afford this enterprising firm vast fields for the prosecution of their business. The ample means of Chesley & Co. can afford to give first-class customers all the accommodations required. As generous dealing merchants they never make it hard for their patrons who from one unforescen cause or another meet with reverses in business. Speaking of the trade to be carried on in this city, the firm will make a specialty of putting up choice wines, brandies and liquors for apothecaries throughout the Pacific Coast can rely upon the purity of all such articles. We had the pleasure of visiting their new wholesale house on Front street, passing through the first, second and infinite order of the interpret

## A Story of Fashionable Wickedness.

A gossiping correspondent says: Princess Metternich has declared against the modern fashion of ladies' dress. Tunies and polonaises her soul abbors, and the modern bonnet she will have none of. She has had her dresses made recently in the manner known to ladies as "Gabrielle," long, straight, and untrimmed; and over her head, in licu of the designed bonnet, she pins a Spanish lace veil. Worth says little: a leader he must have, and if the princess only treated his opinions with a little more deference he might get along with her, and await better times for Paris and the Tuilleries. Now his best patronesses are in England, and he knows perfectly well how much he can extract from an English miladi. A plain morning dress he asks £20 for, and a morning silk dress, merely a dress to go shopping in, costs £70; as to ball dresses or a trousseau, it would read like a story from the "Arabian Nights," or an extract from "Baron Munchausen," only to hint at the prices. There is a good story in circulation in West End circles apropos of this subject, with which it may amuse readers to close the gossis for this week. Mme. B., a nouvelle richesse, being anxious to obtain a footing in the best circles, put dozen quarterings at least on her shield, and blood the bluest of the blue, was poor in the "open sesame" which a city firm had given Madam B. As time went on, and the protege began to acquire some confidence in her new position, poor Lady E. had to submit to a vast amount of patronage which vexed her soul more than she dared to express. It was hard when she had a guilty consciousness of wearing a dress a second season to be obliged to admire eight or ten new ones per week from the first modistes in the metropolis. One day a crisis came. Lady E. was making a morning call on her friend. "Don't leave for a moment, dear Lady E., said madam, "I wish to show you and have your opinion of a near costume which Worth has just sent me (a plain morning dress) nothing in particular, only a thing at £70." "My dear creature," wait the out

#### Iris

#### BY BAYARD TAYLOR.

I am born from the womb of the cloud, For some have stolen the grace And the strength of the ardent sun,

And the rivers of rain to run. Then light on my sevenfold arch I swing in the silence of air,

While the vapors beneath me march, And leave the sweet earth bare.

For a moment I hover and gleam On the skirts of the sinking storm, And I die in the bliss of the beam

That gave me being and form.

I fade, as in human hearts The rapture that mocks the will: I pass as a dream departs
That cannot itself fulfill!

When the winds have ceased to be loud, And some have copied the face Or echoed the voice of Life; And some have woven of sound A chain of the sweetest control. And some have fabled or found The key to the human soul;

That is hidden in rost or strife,

But I, from the blank of the air And the white of the barren beam, Have wrought the colors that flare In the forms of a painter's dream.

I gather the souls of the flowers,
And the sparks of the gems, to me;

Till pale are the biossoming bowers, And dim the chameleon sea!

# Waking Thoughts.

Once more I have to get up and dress. When will some ingenious patentee invent an envelope for the human frame, which will release me from the burden of assuming and adjusting twelve distinct articles of attire every morning of my brief! Blessings on this heard and mustache! I am delivered from one impediment to happiness and comfort. For me the razor is now only a curiosity, an emblem of a barbardous practice, which no caprice of custom, or tyranny of fashor, shall ever force me to resume. I will wear those new bouts this morning. I have shall ever force me to resume. I will wear those new boots this morning. I nave put off patting them on from day to day, but the painful step must be taken at last. In less than ten minutes I shall hear the cheerful cry, "Glass put in," which will be followed by "Strawberries," which will be succeeded, by "Tims to mend," which will be contemporary with "Orangea, sweet orangea," which will give place to the newest melcelles on the fluest organe, and exquisite harmonics by musiclans of foreign extraction and brazen impudence. This is the fifth, We have to due of foreign extraction and brazen impudence. This is the fifth. We have to drie with the Proudinans, in Lone Square. Semi-grand people, with pretensions, and rectations, and not the finest collar of wines. Terrible encounter, this hot weather! Shall I pass through this day without any mortification from my domestic retainers! Will cook give warning because she will not be interfered with in the kitchen, or Caroline have warning given to her because she was impertinent! I hope my first wife's rawrien brother will not turn up to-day. He invariably collects a loan, and has a knack of making his appearance when we have some rather choice people here, and I know the Groby Smiths are expected to luncheon. I wonder whether the Esmeraida Mariquita Silver Mine Shares will be quoted in this morning's papers at a still further depreciation in value? What was it Har-riet said to me before I went to sleep? I remember it now too well—she wanted me to make some calls with her this afternoon. What a relief! This is not the me to make some cans with ner this aiternoon. What a rener: This is not the day when my wife's cluest unmarried sinter wrote to say she should come up from Uttoxeter to see us, and would probably stay all night. It really is too hot to find answers to her arguments for women being made Magistrates, Coroners, County Judges, etc. One thing I will not do when she comes. I will not go and hear her address a crowded meeting on the Rights, Wrongs and Megrims of Women. How many circulars shall I receive this day?

Idolators, so called, do not perhaps worship graven images, after all. It is quite possible that these things but represent the immortal and all-powerful divinities whom they believe to govern creation. So, also, we gaze on the benign contenance of the Saviour, as handed down by the Masters, with feelings skin to advartion. We preserve the pictures of our kindred and dear friends, and in looking upon them recall the best-loved scenes and incidents of our existence. Nothing is to be more highly prized than such photographs; and no photographs surpass in exactness and finish those taken at the gallery of Bradley & Rulofson, 420 Montecement stress. gomery street.

The production of pig iron for 1871 is given at 13,315,000 tons, of which Great Britain produced 50 per cent. The quantity manufactured in the United States was 1,912,000 tons. The production of rails in this country last year was 775,830 tons, including 60,000 tons of steel rails. It is estimated that 140,000 persons are employed in the United States in the direct production of iron, and 800,000 persons in the manufacture of articles of iron. The wages paid these persons aggregate \$564,000,000,000, and their products are valued at \$900,000,000.

The Growth of Luxury.

The Daily News says upon one point connected with the season whose days are numbered everybody is agreed. Never, one hears on all hands, was so much money spent before. A few years ago we used to hear constant and bitter complaints from the West End tradesmen that the absence of the Court from town had a material and most detrimental effect on their calculations:

"Now, were Royalty to withdraw itself altogether from London, it would scarcely be missed in the spending world of fashion. There has been money, it is observed, for everything: and big houses, big dinners, big balls, big garden purities, have been unprecedented in number and quality. Horses, dresses, equipages cost money, yet are more rapidly paid for than was ever before known in the annals of the Court newsman. Splendor and ostentation are amazingly on the increase. Coal mines, iron mines, banks, shipping yards, all the various sources of personal wealth, have been yielding unparalleled profits, and the result has been seen in London during the last four months. A perfect fury of festivity has been raging, and what is called hospitality has never been offered on so sumptaous a scale. Nor should it be forgotten that this has been going on at the same time that it is beyond doubt that all the objects of luxurious expenditure have enormously advanced in cost. Without resorting to strikes, domestic servants have contrived to add fifty per cent. or sixty per cent, to their wages in a very short time. Seventy pounds is now a common sum to give to a cook; and tall footmen, those unfailing indicators of barbaric expenditure, can get 'anything they choose to ask.' No one now needs come to London for the season and think to cut any figure in it who is obliged to count the cost."

Commenting on the same topic, the Standard remarks that an income of £1,000 a year in 1872 represents no higher social position, no greater comparative command of the comforts of life, no greater case of living in the same rank and style and in the same circles, than was represented in 1862 by £800, or in 1850 by £600 a year:

"The situation of men with fixed incomes of moderate amount is becoming daily harder and more uncomfortable; they find themselves poorer in effect than they were, and the struggle to maintain a decent equality with their compers more severe. Women, who are very often in this position, find the capital which was ample sufficient for their support when it was assigned them becoming wholly inadequaty to their present needs. The clergy, whose incomes are for the most part of this kind, find their means every year more restricted, the difficulty of maintaining the station and habits of a gentleman on the income of a first-class artisan, to which they have been so long accustomed, constantly approaching nearer to uter impossibility, the calls of hospitality and charity becoming constantly harder to meet."

# Extraordinary Story.

In a village not far from Berlin, an old couple lived very quietly upon their little property. Both had carefully purchased their coffins some years ago, as is often the case among country folks. The coffins were placed in a stable, and were used as a receptacle for different things, especially for storing up baked fruit, and other articles to be kept for winteruse. Not long ago the old man died suddenly. The son, who was a soldier quartered at Berlin, hastened at the summons to pay the last respects to his father's remains. In the meantime, the mother had, with the help of another son who lived with her, put all the articles together in one of the coffins, and in the other had duly placed the mortal remains of him, who for so many years was the partner of her life-long journey. The coffin was carried to the grave by the hands of stout country youths, and followed by the sorrowing relatives and sympathizing neighbors, while the bells tolled out their melancholy direg. The following day the son had to return to the garrison. The anxious mother wished to give him some of the fruit, etc., that was packed away, to take with him on his journey, and on going to the remaining coffin for that purpose, what was her horror to find the body of her husband. In the confusion of the moment the wrong coffin had been borne to the grave, and now there remained nothing else to be done than to dig the first coffin up again, and bury the dead body, while a second funcal oration had to be pronounced by the village pastor.

— The small-pox still claims its victims in the larger towns of Chile. Its continuance excites the superstition of the people; and the Archbishop of Santiago urges his people to rely more upon divine aid than upon human skili and science.

New Music.—We have received from White, Smith & Perry, music publishers, Boston, a pretty song, "Kitty May," words by George Cooper, music by C. A. White.

— The Tunstall estate, near Sittingbourne, containing near one thousand acres of arable and wood lands, was sold by auction, in twenty-two lots, for £72,250.

### Our Trade with Australia.

We clip the following from the Sydney (N. S. W.) Morning Herald: "It is clear that the relations between our wool-producers and the American consumers are desthat the remains deween our woot-producers and the American consumers are des-tined to grow much closer. The annual report of commercial relations is part gives the foreign wool imported into the United States as 32,300 bales, of which 17,500 came from the Cape of Good Hope, and 15,000 from Australia. The Amerfican consumption of foreign wool is on the increase, and for 1872 is estimated at 45,500 bales. The American buyers who have visited Australia prefer our wool to that of the Cape, and would prefer it still more if they could rely on quick and direct shipments. From August, 1871, to February, 1872, there were direct shipments of 18,811 bales from this colony and Victoria, the value of which from the ments of 18,811 bates from this colony and victoria, the value of Shakh roll have port of shipment was not less than £418,680. The quantity shipped would have been greater had tonnage been easily procurable, and had freight been less than a penny a pound. It had been calculated that large steamships running direct from Sydney or Melbourne to San Francisco could carry wool at a halfpenny per pound. and make a fine profit, and it can hardly be doubted that a monthly line of such steamers would carry a large quantity of wool, even if they did not always cofilled. The American manufacturer, by buying in Australia, saves both in time and in money, and can afford, therefore, to give a higher price than in London. Purchases made here have been mostly on the faith of letters of credit issued in the States, The draft's against shipments drawn on London go home by the Sucre, which therefore, by going direct, may be in the possession of the manufacturer, and even be worked up, before the drafts mature. Though wool is the principal commodity which the opening of direct communication with America has found as an improved which the opening of direct communication with America has found us an improved market for, it is not the only one. During the last nine months about 1,700 casks of tallow were shipped to San Francisco, and we are informed that that market might absorb 3,000 casks per annum. Our Illawarra dairymen have made some spirited attempts to ship their surplus butter to London, though without very great encouragement, but there is a market nearer to them which is worth cultivating; for 14 tons have already been shipped to Honolnia and San Francisco. From 2,000 103,000 cases of fruit have also been shipped to Cultiornia, for, though as fine a fruit-growing country as our own, it is winter with them when it is summer with us. For preserved meats, too, there have been considerable orders, though the trade has been interrupted since the withdrawal of the direct line."

### A Bowlder Swallower.

We have no desire to emulate Claudio Dones, the stone-swallower. This gentleman came near being stoned to death lately in a manner unknown to the early Christian martyrs. While performing some tricks for the editication of a select lew in a tan markers where he trouble golden the store of the trouble of a select few in a Kearny street saloon, he swallowed two stores, one an inch long and the other was inches. Both weighed over three ourses. He attempted to expunge them his capacious bowels, but unlike domain in the whale's bely, they would not come pacions howels, but unlike Johan in the wholes your, see, and the One of the stones remained in his bread-basket thirty-seven days, and the forth. One of the stones remained in his bread-basket thirty-seven days, and the other forty days to a minute. On Saturday the last one was extracted. The stone-swallower was under the medical treatment of Dr. Rottanzi, an eminent Italian physician of this city. Now that the fellow is on his pins again, we propose to put him to some use, and by permission of the proper authorities, we shall set him at work to gnaw down Telegraph Hill. When he gets through with that he must swallow his way through a portion of the Sierra Nevadas. Here he will have ample opportunities to practice upon bowlders, and if successful in this—of which there can scarcely be a doubt—he will be a fit subject to grapple with mountains in the moon. moon.

### Is it Medicine?

A friend of ours, who halls from one of the upper districts of South Carolina, called at the Pick office, and among other novelifes, he mentioned "Wolfe's Aromatic Schiedam Schnapps," and stated as a fact that in his section of the country nearly all the physicians, in certain cases, when they deemed ardent spirit necessary to prolong or save life, invariably used these Schnapps, justly regarding it as the only spirits that could be procured pure and unadulterated. He also stated that this medicine or Schnapps was becoming the only beverage sold on the great stage or railroad routes. He says those physicians who have used and analyzed it state that for diseases such as gravel, gout, rheumatism, etc., it is incomparable.—New Orleans Picayune.

PLATT & NEWTON, Sole Agents for the Pacific Coast.

We learn from the Pacific that "the Congregational Club meets every Monday at the Bible House. Visitors to the State from the East or elsewhere are specially invited to find the place, and thus make the acquaintance of their brethren here." No doubt the Club is an excellent one; but it is would attract visitors from the East or elsewhere, it should neet at Eberhardt & Lachman's wine rooms, corner of First and Market streets, where the choicest champagnes and other wines are kept for the delectation of the visitor.

People are always inventing new words or devising new tropes, each with a grain of the salt of truth or poetry in it. Of course they are not in the dictionary. Even Webster's Unabridged, grand and "best," as it is, is only a dictionary of quotations from common talk, and never will be complete till it is issued daily in morning, noon and evening editions. So rapid and startling is the evolution of new words and new significations, that such a daily will become one of the necessities of modern life. No word has yet been coined sufficiently expressive to give a full and complete idea of the cloquence of the "Laurel Palace," corner of Kearny and Bush streets. Nothing like this beautiful saloon has been heretofore seen, and visitors to the city daily flock to view it. The "Laurel" is supplied, also, with the rarest brands of wines and flquors, and is in every way the leading saloon of the city.

To talk about Nature's beverage is very well when we can get water from a spring that is not contaminated, or from a stream which is certain not to be a sewer; but even the Dew off Hen Nevis is occasionally all the better for a little qualification, and if we are not to drink the juice of the grape without being doused in the verjuice of the abstainer, the jooce is in it. The tendency of modern drinking is in the direction of wines so pure and light that they exhibate without intoxicating. In truth, good wine may be regarded as the pleasantest of all medicine, a real diet drink, so that we have reason to be glad of any addition to the best varieties as a fresh discovery in hygsene. The famous Gerke Wine ranks as the choicest beverage now sold.

No sooner does any prominent person arrive here than Bradley & Rulofson go for him with their camera. Their gallery of life-like photographs of well-known people is the largest and finest in the city, and attracts many visitors every day. Photography in their hands is an art indeed; their pictures are perfect. Retoning is made a specialty by them, and has reached a degree of excellence at their gallery that is unknown elsewhere. Go to Bradley & Rulofson's, ascend in the elevator, and get of yourself a picture that you will be proud of.

Carpets and Upholstery of the finest duality, from the leading home and foreign looms, are only to be obtained at the establishment of Messrs. Plum, Bell & Co., 24 Post street. Their stock of furniture is unrivaled, and offers a varied assortment to the purchaser, at low prices. No one thinks of fitting up his house without visiting this establishment and examining its varied stock of everything needed. The best goods at the cheapest price is the rule there.

To all who desire a fine photographic likeness, we take pleasure in mentioning the Art Gallery of Mr. I. W. Taber, 12 Montgomery street, where the best pictures are made. Mr. Taber has had many years' experience in this city, and never fails to secure a perfect likeness. His gallery is filled with choicest specimens of photography, which are daily visited by crowds of people who take delight in art. Retouching is carried to perfection at Taber's gallery.

#### Journalism.

Journalism may be popularly divided into three kinds; party, personal and free. All the minor divisions and subdivisions fall under one or the other of these heads; a ad all are more or leas bound to serve their employers. The party paper takes a decided stand on questions that agitate the country in which it may be published for it must be understood as a broad axiom that all representative assemblies of all countries may be divided into the ins and the outs, the one being the government for the time being, the other hoping to be the government of the future. It necessarily follows, therefore, that the journals of either side must support their particular party through thick and thin, in good report and evil report, and as a matter of most stern necessity, even in error. Consequently they are bound hand and foot to the service. The second, or personal division of journalism, is more limited in its range and less important in its vocation. It embraces the organs of a project or joint stock company, or scheme of colonization, or any idiosyncrasy which has eapital enough to place its peculiar local interest before the public. Such a sheet is entirely the slave of its proprietors. The third, and by far the largest and most important branch of journalism, is that which we have designated "free." By free, he it perfectly understood that we do not mean independent. We mean freedom of action, untrammeled by party, unimpeded by personal feelings, with a staff of active, intelligent brains ever ready with their pens to answer the call of those who require their services, unbiassed in thought, yet pliable to public opinion, nay, perforce of its very yielding, leading that public opinion it appears to submit to. Such is the London Times. Such is the San Francisco News Letter: A newspaper, as we have shown in our three divisions of its kind, is a slave to its owners, and in the two first with a limited range of action, whereas the third division has a field as wide as that of a lawyer who accepts a brief one day for the pl

# The Overland Monthly for September

And measured for gold as if measuring tape In the shelter of wall, in the shadow of grape, In a temperate place, till he fattens and dies."

It is discouraging to learn that Mr. Carmany, the enterprising proprietor of the \*Overland\*, paid the \*'song man," Joaquin Miller, \$2,000 for the composition from which the above lines are an extract. It is discouraging because the fact is encouraging to Mr. Bausman. Miss Pittsinger, and other Californian song people to go on and compose very much better songs which will still be an affliction that this community, with all its wickedness, has done nothing to deserve. The key to Mr. Miller's production is contained in the lines above quoted. It is "measured for gold as if measuring tape." The writer's candor yielded to the exigency of the measure when he used the words "shadow of grape" for "inspiration of grape," and "temperate place" for "intemperate place" the candor returns, however, together with a spirit of prophecy which we may prayerfully hope to see realized within a reasonable period, when he writes that "he fattens and dies." We have not space to make the quotations from Mr. Miller's rhymes, entitled the "Isles of the Amazons," which should show that it is no poem, that it is repeatedly rough in structure, and occasionally meaningless. We may dismiss it by remarking in a practical way that Mr. Carmany is badly swindled. Two papers sufficiently redeem the value of the magazine. The writer of "Government Surveys" shows the costliness and inaccuracy of these as now made. He appears to prove that systems of approved experience in other countries could be applied with economy in this. In illustration of the inaccuracy of the present work, we may mention that in some surveys recently made in the Tulare Valley, not a single government stake was found where it ought to have been, nor were they generally in the neighborhood. "The Owen's Valley Earthquake," No. 2, by Prol. Whitney of the State Geological Survey, embracing the general conclusions of the study of that phenomenon, is of the first interest both from a popular and a scientific view point. "Snap Shots" ought, we suggest, to be credited to the popular

### A Charming Melody.

"Open the door, love, open to me;

A zephyr of perfume comes in from the sea:
[Perfume from the sea-sea-weed and dead polyps.]

I've kisses and vows for thee plenty in store ; Open the door to me, open the door.

Open the door to me; fondly I wait,

Like a bird that laments to return to its mate, [Why doesn't he return ?]

The sorrow of parting shall pain me no more: Open the door, love, open the door.

Open the door, love, dim in the west,
'Mid a cluster of stars, is the moon's fading crest.
[If the moon is dim, what must the stars be!]
No longer in anger the waves heat the shore,

Open the door, love, open the door,"

### Telegraphy in the Schools.

An enterprising individual has requested that he be allowed to affix a telegraph apparatus to the different schools in the city, and that he and his daughter the keeps it all in the family) shall impart to the 'wenty thousand children in attendarece the art of telegraphy. What injury has San Francisco done this gentleman that he proposes in cold blood to inundate us with a gentration of ciectric journal of the san francisco done this gentleman that he proposes in cold blood to inundate us with a gentration of ciectric journal of the sand of the dangerous thing. 'A smattering of German, French, music and drawing, is daily unstring the "bone and sinew," that is to be, of the land. Every washerwoman's daughter desires to become a school teacher, every mechanic's son a dry goods clerk, or something of that ilk. There are not chough easy positions to accommodate all, and in consequence, hoodlumism is rampant. Connect a blacksmith shop, a carpenter shop, a saddlery, a foundry, a farm with the public schools, instead of a battery. Teach the children that to be a blacksmith, saddler, carpenter, or farmer, a battery. Teach the children that to be a blacksmith, saddler, carpenter, or farmer, with a good English education, is to be a noble thing; but that it is gnoble for a strong man to grow up in lily-fingered idleness and endeavor to shirk the primeval enres behind a ribbon counter, or aim the intreaction of a telegraph apparatus. It is not long since that a youthful vagabond was a rarity in our streets; now the newspapers are teeming with the outraces of hoodiums. Boys of tender years rob, plander, may, murder, and we have become so used to it that we are not shocked. Children go around, and in the outskirts of our city, men and women are alraid to venture out after dark, for fear of the depredations of a parcel of boys. Newspapers may chronicle, divines may preach, the people complain—there is but one painacea for hoodumism: work. Dispense with the accomplishments in the public schools; give the children a good, thorough English education; and instead of engaging the services of a gentleman at \$100 per month to teach them music, engage some one at a greater compensation, if necessary, to teach them the dignity of labor, to obtain recruits among them for the ranks of labor, to secure for the graduates of the grammar schools apprenticeships, that they may become what we much need, a race of intelligent and educated workmen; for we have few mechanics among ourseives, and depend almost entirely upon foreign immigration for mechanical skill. A poor boy in our city has but one good chance of becoming a useful citizen, and that is, to do something wicked enough to send him to the Industrial School, where, while receiving an education he also learns a trade, thereby securing a maintenance in the future, while receiving himself from the horrors of hoodlumism in the present. We do not intend to recommend the Industrial School in all cases; but with a certain prominent orator we agree, that the present system of education leads children to despise manual labor, and we protest against this winding of our own twenty thousand in the coils of a magnetic wire.

Cast us into a den with hungry, howling hyenas, closet us with ravenous. ferocions lions, clinch us to the embraces of blood-thirsty tigers, coil us around ferocous lions, clinch us to the embraces of blood-thirsty tigers, coil us around with death-dealing rattlesnaks, concentrate us in the jaw of an ameound, cardie our blood with the ever-enduring odors of the skunk, cut gorges in our fair skin with the virus of small-pox, cling to our lips the positience of ages, but, O ye gods, let us never again behold such a sad, sorrowful, sickening sight. We have seen despicable, distorted, degrading sights in one day, but this was the acme. The heavens and the earth shall pass away; the seas become molten fires; the worms transform themselves into mighty giants, but never again will Pacific Hall, on a hoty Sabbath evening, be veandalized, outraged and deflict as it was on last Sabbath evening. The sight was shocking to our Christian heart. After this pleasant rises of acoust it is exceedingly acreeable for us to state that the correction learner. bath evening. The sight was snocking to our emission many. After one promopiece of agony, it is exceedingly agreeable for us to state that the gorgeous Inco-brent betured there on that occasion, that the crushing gushing and rushing Emily presented him with a bouquet, and that the sympathetic, Juscious Rose Emily presented him with a bouquet, and that the crushing gushing and rushing placed him with a satin-bound copy of her sinful "Psyche." "When shall we three meet again?"

### The New Shipping Act.

Owners of vessels and shipping agents in New York and other cities look with great repugnance upon the new shipping law, passed in the interest of "poor Jack." A number of them have engaged the services of Captain Osborn, editor of the New York Nautical Gazette, to take steps to obtain a repeal or modification of the law at the next meeting of Congress. They claim that it is unnecessary, unjust and pernicious in its working. The agents say that by this enactment hundreds of respectable shipping masters, who have homestly and faithfully fulfilled their duties as middlemen between owners of vessels and sailors, now find their occupation gone. Owners consider it unnecessary and burdensome that they should be forced to take their men to the shipping office in order to settle with them. They object to the dictary scale for seamen, asserting that sailors are nowhere better fed than on American ships, and that the men will not be satisfied with the new weighed-out "sait horse" diet. The new act contains provisions which are spoken of as unjust and ridiculous. Section 17 provides that a sailor's wages during his absence at sea can only be paid to his wife or mother; while he may have neither, and may want to assign his wages to his sister or father. The bond to be given by the Commissioner is but \$5,000, while the fees he will receive in New York, for instance, will amount to \$15,000, bettin 3 provides that the Commissioner may engage a clerk or clerks to assist hum, "at his own proper cost." Section 4, that he may procure suitable premises, etc., "at his own proper cost." Thus the Commissioner is endowed with the largest discretionary powers. Section 66 provides that in no case shall the salary, fees and emoluments of any officer appointed under the act be more than \$5,000 a year, and any additional fees shall be paid into the national treasury. If the act is construed to mean that the Commissioner shall renational treasury. If the act is construed to mean that the Commissioner at New York has already engaged some twe

— Quainty and quietly is it recorded in ancient history that the fifty daughters of Danaus, with a single exception, slew their husbands on their wedding night. The Pagan Bunderbuss of July 4th, A. C., 11,871,—"a family journal having the largest circulation and consequently the best advertising medium,"—in doing up the slaughter simply says, in its local columns, that "fifty husbands were matrimonially dosed to death by their affectionate wives a few evenings ago. Fortunately the event occurred on their wedding night, thus saving the happy victims from prolonged torture." No "editorial notes" on the subject. Our other exchanges of that date are silent on the calamity. Evidently the Pagan editors, governed by a high sense of morality, did not wish to poison the family circle with horrible deals of the slaughter. In this age of Christian enlightenment, were forty-nine benedicks dispatched to heaven, hell or purgatory in a single night, the "family journals having the largest circulation (on the Pacific Coast) and consequently the best advertising mediums" would gloat over the atrocity and give their readers columns of bloody matter, with cheerful sensation headings in this style. Monstrous Matrimonial Slaughter—Forty-Nine Husbands Batchered on their Wedding Night —The Fiendish Wives Perpetrators of the Fiendish Decd—Shocking Details of the Human Carrage, etcetera and so on. Truly the family papers of the 19th century are models of Christian purity compared to the unbelieving Pagan Blunderbuss and its contemporaries.

<sup>— &</sup>quot;Bella Barton," who says she is a teacher, writes us in defense of the Directors and the teachers, and invites us to call upon her in order that she may have an opportunity to convince us that our impressions of the public schools are wrong. We decline to call, Bella. In the language of Holy Writ, thy speech lewargeth thee. All the young and pretty schoolmarms are not only alliterative in the matter of signatures, but they have invariably soft-vowelly given names anding in "ie." There isn't a Jane, Sarah, Kate or Nell in the department, they are all Jennies, Sallies, Katies and Nellies. If you were one of those tender pullets of the schoolmarm flock, you would have signed yourself similarly. There is at this moment a vivid picture of you photographed upon the retina of our mind's eye. It reveals a bulbous, bony brow, a nose belonging to the same architectural type as that of the late Horace Hawes, an eye that would reflect credit upon a rock-cod in a fish-monger's stall; the shoulder blades are like unto the blades of Damascus, and the contour is that of a starved chicken. Verily, we can't come, Bella; but we have transferred your invitation to a young friend in the surgical line, who is emporarily equal to our fondness for the flesh.

### Dr. Livingstone.

The following letter from Zanzibar, which appears in the Bombay Gazette, gives particulars of the meeting between Mr. Stanley and Dr. Livingstone, and the return of the Livingstone Search Expedition, and also touches on some other points.

Zanziban, May 30.

Sin: - Dr. Livingstone was met with and relieved at Ujiji, by Mr. Stanley: consequently the Living-tone Search and Relief Expedition is proken up, and the members are en roule for England.

Mr. Stanley found Livingstone ill and almost destitute : but the Doctor soon recovered health and strength, and the two crossed the Tanganyika Lake, and jour-

neved round its northern end.

Mr. Stanley left Livingstone at Unyanyembe in excellent hea'th and spirits. He and Schney lett Evenssione at Chyangelines in excellent near than Sprits. The was waiting there for supplies and men, which he had commissioned Mr. Stanley to send him from Zanzibar, and which were dispatched a few days since to join him. Living-stone intends, on receipt of he supplies and men, to prosecute his researches for two years more, and then return home.

It is said be has addressed an official dispatch to Dr. Kirk, acting British Consul and political agent here, containing very grave charges against the latter, principully for an exed remissuess in inting to forward supplies, and for having enjoined men who, after long delay, conveyed some supplies to the Doctor, not to take service under him, nor to remain with him. He also accuses the principal nation

firm here of peculation and slave-dealing.

With regard to Dr. Livingstone's complaint that Dr. Kirk has been remiss in forwarding him necessary supplies, there can be no doubt that it is too well founded. Dr. Kirk certainly obtained from England and eisewhere an amount of credit for his exertions to forward supplies to Livingstone which he never merited, it being matter of fact that his protessons, as recorded in his dispatches and his acts, with reterence to the transmission of suppose to Livingstone, were entirely contradictory. The mere fact that the American Consal found no difficulty whatever in cetting letters, papers, and supplies conveyed to Mr. Statecy at Ujiji, proves that it should have been an infinitely easier task for the British political agent, who naturally possessed more influence, to have sent to Livingstone the aid he was so much in need of.

Statements have been made and credited that the disturbed state of the interior, Statements have been make and created that he distincte state of the interior, and the dishonesty of the natives entrusted with the conveyance of supplies prevented their reaching Ujin. As, however, the same argument would apply to the transmission of dispatches and supplies to Mr. Starley, which nevertheless never failed to reach him safely, it is clear that such excuses are unworthy of notice.

Dr. Kirk has long since given out that Livingstone had written officially that he

absolutely retused in tuture to furnish any information as to his discoveries until such time as he returned to England, and should be die in the interim, all his

papers should perish with him

Mr. Stanley asserts that Lavingstone never expressed himself to any such effect, but that being natura by independ at liberties having been taken with his manuscript unauthorized by him, and a heavy sum charged him for the construction of a map he reputatives, he declined in fatter to supply materials to those who had made so unwarrantable use of documents previously sent to be used to his detri-

ment as an explorer and geographer.

As for the galant and successful exploit of the \*Herald'\*\* commissioner, it will, no doubt, bring to Mr. Stan'es the due reward he so well merits. He left Zanzibar a hale robust man, 178 pounds weight; he returned in so poor and emaciated a condition that no one knew him, weighing 130 pounds. He left a route for England, via Soychelles, a few days since, in the steamer Africa, with the members of the Livangstone expedition, excepting Lieut, Dawson, who preferred to go round the Cape in an American vessel, and reach England via New York.

R is not ont of piece to mention here that whoever are responsible for the organization and dispatch of the "Livingstone Search and Rehref Expedition," they displayed an amount of ignorance and incapacity most discreditable to those con-

The expedition was dispatched from England so as to arrive here at the commencement of the heavy annual rains, which traveling is simply impracticable. It is true, Mr. Stanley, after some weeks detention at Ugogo, managed to force his way through the flooded pains to Zanzibar about a month since, but he was in light marching order, and without any heavy imposliments. Moreover, he was ac-climatized. He lost his two European and one hall-caste fellow travelers on his journey to Ujiji; and had the expedition led by Mr. Dawson attempted to push into the interior before the settin; in of dry weather, few here doubt that the result would probably have been disastrous to all the European members.

H. A. FRASER.

<sup>-</sup> Brother Horatio Stebbins has asserted that the oscillation of human bodies in the act of waltzing is a sinful exercise of the muscles. Brother S, tersely says that if a man in the public streets were to encircue a strange woman to whom he had just been introduced after the stell and manner of doesn it in the best reoms, the Christian world would be shocked. We cannot agree with our Reverend friend. Nothing shocks the Christian world after it is once made popular and fashionable.

### The Lesson of the Hour.

The stern moralist, who pounces upon calamity to extract the inevitable lesson, who administers consolation in the form of the nauseous bolus of caution against a repetition of the error, must find his hour and his power now. Woe to the unfortunate vanquished who cross his path with their tale of sorrow and loss? He has no word of sympathy for the grief that gnaws, but only a keen relish of the salutary lesson that it teaches. He fails to see that the toad is ugly and venomous, but detects the mythical jewel that he wears. But worse than his aphorisms is his natural air of superiority, that gives an additional burden to the one already clinging about your heart. You are made to feel, with a twinge of pain stabbing your sensitive breast, that not only nothing is so successful as success, but nothing is so disastrous as failure. Your successful man has, besides the substantial satisfaction of his success, the reward of his iriends' approval, and the triumph of his own elevation. But your unfortunate man has nothing—empty hands, an aching heart, a throbbing brain, a dull, painful self-consciousness, and bitter reproaches or averted looks from his friends. I desire to tender him my sympathy. It is unsubstantial, evanescent, of small account, perhaps, but it is something. It may serve for the moment; and it can certainly do no harm. I am prepared to believe in him still. I not only do not rejoice that he has learned a lesson, but I am truly sorry that the school has been so hard a one for him. Are our sympathies so quickly blunted that one error may turn them way? Shall we not feel the vericat morsel of regret for poor Tantalus, because, forsooth, his punishment is commensurate with his crime? I agree with Charles Lamb, who said he always had a feeling, almost amounting to a lendre, for those foolish virgins. His sympathies were quick and kindly, and I venture to say that we should find them enhated on our side to-day, in California street, if he were here. He would not own of our word misguided wills? Am I to be "d

sore and sensitive, and will do harm as well as good.

I repeat, therefore, the ofter of my sympathy for the sufferers in the late panie. If the cup that was held to their lips has been dashed aside, I feel the pan of it with them and for them. I will not perk myself on the elevation of my own dunghill to crow over or taunt them. I I did, would it do any good? Because I am writuons, shall there be no more cakes and ale? The unfortunate "under dog in written fight" needs an occasional enlogist. Things are not pleasant for him at the issue of the combat, and it does not evince a humane spirit to hurl the moral lesson at him besides. You may be clearly in the right of it, O moralist, but you are moral out of season. He sees as well as you that he ought not to attack so large a dog, but his spirit overcame his caution, and the issue proves the one if it shows a lack of the other. He acted according to his lights, but tested his strength and bore his wounds to no purpose if judged by the sympathy that is meted out to him. I wish I could comfort him, that poor vanquished animal. When at one time it seemed that thou west gaining the battle, no moral maxims were harled at thee! It was in thy defeat that these missiles were cast. But hie thee home! Lick thy wounds, and come forth again into the arena! One helping and friendly hand may do thee good, and one word of counsel in season may preserve thee from much

abuse out of season.

La Rochefoucault says (and he was keen of discrimination) that we "bear the misfortunes of our friends with praiseworthy equanimity." But let us remember that our turn may come, too, and that we, too, will then fail of the sympathy we refused another. Have we no word of good cheer for our friend who ventured out, although he keen whis craft was frail and the waters troubled! Let us rather out, being the companion of the control of the co

Here in an idea for the teetotaller: "The number of deaths of horses in New York is equal at the present moment to the number of deaths of the male population. As the horses do not drink whisky, it is not whisky that kills the male population, which goes in heartily for it." The philosopher who penned this reflection was a New York citizen—a great thinker. It is a sure thing that good whisky is a good beverage; and the best of all whiskies is Cutter Whisky, which nobody can deny.

As soon as the eyes begin to grow weak, failing sight should be aided by Muler's Brazilian Pebble Spectacles, which are the best.

### Gathering Roses.

Out in the shaded perch she stood, "My rose," said I, " is the largest there, Twining the sweet assessine and I, "There is one bright rose I see

And it that one you refuse.
The sweetest, brightest, best of all-Said 1. That I also would keep as mine." None other will I choose." after "I koss von your choice, "she gally said," Come afther your ross yourself." said The rose waves duttering o'er her head. Turning her blushing face from me.

Gradly I did her bidding then, And casping her hand in mine, Gathered my rose at close to me This is the one I want" cried I: Only a kiss for her reply.

### Sound Railroad Views

The event of the week in reclical developments was the occasion of the public The event of the week in realized developments was the occasion of the public addresses delivered last evening by Col. Thomas A south of Economicality and Production of the Peers Pacific Rail road, and his associates. Col. Scott explained the obtained of the Teens Pacific Rail road, and his associates. Col. Scott explained the obtained of the obtained of the show beilt, with the Pacific occasion, traversing the State of F. via and the territories of New Movey and Arasama tegether with the nelies which if it in the State of California, beaching the coast of Stan Diogo. Five hundred unless of the road are advertised to be left under contract on the left of October meet, which will be completed within organization months from the slage, that it is of January, 1874. In addition to large grants of lands and beints by the State and countles of Teens, the Linux State, Linux removes here exceed the section of contract of the coast of t Texas, the United States Government has a vanted the road Parky one of acres fluances are in the bands of a samileate having its housing actions in London, through whom the construction bonds are negotiated and funds presented as required. The entire line well be completed within the very 1811. Building will proceed at several points in Texas, at the Colorado river and from San Dogsa. "I have always bepoints in Texas, at the Colorado river and from San Bogo. "I have suvers has lived pead col Scottic, and state I have come here I am quite sure, that the people of San Francisco and of the State of Charlenna we'l be carned and we'l be orger to seeme a connection between this great city and our road," He trusta, he says, that the people of San Francisco and the whose people of the afterna, we'l see it to their interest to make such a transcements as we'l insure permanent, thorough and complete connections with this road. Co. Scott expressed the tops that when the city of San Francisco sha' take heid of the enterprise of building a road to the city of San Francesco shall take first of the emergence of uniting a root to one Senthern perfect of the State, she well do to un abases that will open it up to the Thirty-second, Thirty-fifth, or any other thirtieth-parasial resultinat may reach the borders of the State—that it will be an eyes this tway by which any of the States cost of colleges, and all parties concerned in reach connection with them, may come in an equal terms. At that Cell Scott asks is the entriest conjugation of Caliform use in an enterprise that we find to promote their interests as we has his own, with "receptions from one end to the other." In an interview with directors of the Ca forms Atlantic and Pacific Rayread, the effect of the proposed amalga-mation of that enterprise with the Missouri Atlantic and Pacific Company came up for discussion. The question was whether after such amalgamation the Carfornia line con d be extended south to the Colorade river to connect with the Phirty-second parade road without discrimination against the latter. Col. Scott, discriming any antagonism with the Misson'd enterprise, expressed his benefithat if all lines now projects I were bor'll with in the next five years, there wend be business enough for all within a very limited period after their completion. But he pointed out that if the cal forms the were single-mosted with a through line, the natural feeting of the perfess controling the through line would be to five it to your line beyond the point of junction. They would eend any business over it that they could many way contro, and thus practically detest tair competition, and in fact the very object which San Prancisco was endeavoring to accomplish by the efforts now making to build a road to the southern boundary of the State. He cited, in il instrution of this, cases where legislative enactment had reserved to connecting lines the same rights and privileges for cornection and bus ness that they granted to the original reads; and yet differences had arisen which seriously embarrassed these connecting roads, and prevented their for enjoyment of the rights thus attempted to be secured. Upon this head Col Scott in the have multipased instances a most indefinitely, of which the Bergenfunnel in New Jersey, the new frame now by our cause the city of Beltimers in order to establish a competising which has been denoted for years, and the Louisian e-bridge troubles, are consperious missiones. Logislative ensurement has informly field in 2a efforts to prevent a company operating a public. lie work from enforcing a discrimination against a competing enterprise in the en-joyment of their works. Col. Scott vivid y "knows how it is house to in Pennaylvan a, where he has circumvented rivals attempting to encroach upon his own profitable privileges

Co. Scott statist that in his indement the only feasible plan was to have this end of the line, proposed to be omit by and from the city, controlled by an independent company, who would so operate it as to give equal facilities to the Thirty-orth, the Thirty-second and to all other connecting reads, and in this way the site world be able to grant her own interests. These are practiced years and continued themselves to the sober judgment. A few of our citizens, actuated it may be by the

purest intentions, early in the present agitation committed themselves to the project of helping the Thirty-fifth Parallel Railroad Company to construct their road. They committed an error of judgment. Had they been less precipitate in action and consulted, as it is obvious they ought to have done, with the Thirty-second Parallel Company, they would not have made the mistake. Since then, personal feeling—in which the public has no part—has become enlisted, and it is unpleasantly apparent that these gentlemen have ceased to be governed by considerations of public policy. At this juncture, the arrival of Colonel Thomas A, Scott and party is opportune. They were on their way to Sun Diego to put the California end of their road under construction. They were asked to make a statement to the citizens of San Francisco of the needs of the railroad situation as examined from their view-point. They ask for and solicit a California line of rail from San Francisco to the Colorado River. It may connect with the Thirty-fifth and Thirty-second parallel roads, and all others that may come to it. Their lucid statements of the case have shown that it is to the interest of California her people should unite all their efforts to push that road through with all possible speed. The statements and explanations submitted by Colonel Secti, Colonel Williamson, Governor Throckmorton, Colonel Forney, Senator Sherman and Judge W. D. Kelley, render it plain that the California road ought to be absolutely independent and operated solely in the interest of California. It should be free to make liberal terms with all railroads that may come to it. This proposition appeared equally clear to the projectors of the San Francisco and Colorado River Railroad, who saw the mistake that had been made in the "entangling alliance" contracted with the Missouri plaintont. But it is a fortunate coincidence that just at the right time the officers of one of the San Francisco—were villided and their motives impeached. Although this abuse emanated from individ

# Extract from a Letter from Mr. Samuel Lawrence, the Founder of Lawrence, Mass.

HIGHLY COMPLIMENTARY TO CALIFORNIA AND CALIFORNIANS.

We have been permitted by our friend, "James Pipes of Pipesville," to give to the public an extract from a very kind and complimentary letter, received by him recently from Mr. Samuel Lawrence of Boston, and coming from so distinguished a gentleman, it is particularly interesting to the dwellers of the Pacific Coast and the residents of San Francisco.

MY DEAR. MR. MASSETT:—All went well with us to this place; we were most kindly received by friends in Chicago, Cleveland, and Pittsburgh; in the latter we staid a week with our Yosemite travelers, who belong to the salt of the earth.

It seems like a continuous dream, a romance, the past three months; no one can appreciate our seeings, etc., better than yourself. I am greatly impressed with the character of the leading men of California. Elsewhere, when men become suddenly rich, they are shoddyish and vulgar; not so on the Pacific Slope—all the men we saw were modest, with excellent manners, worthy the best courts of Europe. Before many years a great university will be there, and the future of that State will be grand.

I was glad to hear you had been to Mr. Ralston's. California would be, indeed, lonesome without that house and its admirable immates. Mrs. L. joins me in warmest regards to you. From your friend,

SAMUEL LAWRENCE.

To Stephen Massett, Esq.

Professor Agassiz has created some surprise by the statement that the primitive oyster was a foot long. We have in our office a petrified oyster quite a foot long, from San Luis Obispo. But the finest specimens of oysters we have seen anywhere are at Emerson Corville's "Saddle Rock" Saloon, 410 Pine street, and are served up in the most delicious styles to all comers. The "Saddle Rock" is the headquarters of all who delight in oysters.

Pleasure-hunters and health-seekers would do well to drive over the San Bruno Road and stop at Harry Blanken's Six-mile House for a drink or a cigar.

### Sonnet.

BY PAUL H. HAYNE.

I close mine eyes in this drear inland place,
This wood, far inland, thronged with shivering trees—
Our southland pines—in whose dark brows the breeze
Moans like a spirit shorn of joy and grace;
The same wild genius whose half-veiled face
Dawns on the briny brink of wave-washed leas,
Fraught with the weird old mystery of the seas,
Whose hoary brow bears many a storm-bolt's trace;
I close mine eyes; but lo! a spiritual light
Steals round me: I behold through foam and mist
A death-pale reach of somber, wavering sand,

A death-pale reach of somber, wavering sand, By transient glints of waning star-beams kiesed, And hear upborne athwart the desolate strand Voices of ghostly billows of the Night.

### Capital and Labor.

During every political campaign we must expect to be flooded by the stump-speakers and journalistic "organs" with tirades of abuse of capitalists, and deplorable descriptions of the position and prospects of laboring men. It seems to be thought that such appeals gain votes, and therefore both parties indulge in them. Every scheme advocated by men who set themselves up as the representatives of the laboring masses is adopted for the nonce in patforms and on the hustings no matter how impracticable it may be. The elight-hour movement is an instance, Men who know it to be absurd advocate it simply because they believe it to be popular with a very large class of voters. We are inclined to think that the strength of the eight-hour crowd is much exaggerated. We do not believe these adultators are nearly as numerous as the great noise they set up might seem to imply. Besides being few in numbers, they are wortally lacking in intelligence. They are not at all a fair representation of the average knowledge of the community. A gaince at the "Labor Unions" of this city demonstrates this. Any one who knows the members of these Unions is aware that nine out of ten of them are very genorant persons, with "not an idea above an oyster." Among the leaders even, it would be difficult to find three men who could spell six consecutive words properly. They will not compare in "book-larrint" with one of our ten-vear-old school boys. Nor arc they men of natura "horse sense." They know little or nothing upon any conceivable subject. The whole object of their lives seems to be to prate generality about the relates and wrongs of laboring men, and by much fuse create among the politicians an impression that they have an inflience, so that they may receive as a sop some little place, which they are incompetent to fill, with the chance of getting an occasional "piece" to "work at them; you can see them any day, hanging about the corners or rushing along the streets as if bent on a mission that will such the country. What good, if any, they

No good citizen fails to appreciate the proper demands of laborers. No one would wish to see them doing other than well. All want them to receive a far day's wages for a fair day's work. They do receive this already in aimost every instance. In what other country under the sun do men pretend that ten hours out of twenty-four are too much for toil? In what other country are those hours of labor so liberally rewarded? Where else have working-men anything like the same opportunity to provide well for themselves and families, to educate their children, to secure homes and valuable interests, and to become in time independent of labor? "In time "—there is the trouble. Those dissatisfied people know very well that industry and economy will, in the course of years, lift them above the necessity of manual labor, it they desire. There is not a poor man in this land, having health and strength, who may not become "well off" in this world's goods, if he desires. He need not be a miser to de this; it is only necessary that he should follow the career he is fitted for, and which is open to him, faithfully, intelligently and economically. Ten hours a day of labor will not hurt him; most men in business for themselves have to work and worry harder and longer than the hired laborer. But the frouble with these agritators is, they do not want to zerok; they keep up a perpetual quarrel with the Miniphy because they were not born with sliver spoons in their months; they look around at those already opalent because of their own or their fathers' labor and tact and economy, and grass their lot is different. If they work at all they spend their earnings lavishly in folly. They do not economize and accumulate, and they find themselves always in the same improvident and putful condition. They are their own worst enemies, but they cry out against "capitalists" as the authors of all their wors.

employers. They are, in a word, unreasonable beings, blindly opposing the laws of commerce and the decrees of nature. They will not learn that there is no short cut to case and comfort for the masses of humanity, but that to patient and persevering industry and far-seeing providence are given success. They are not willing to earn their bread by the sweat of their brows, but cry aloud for an impossible Utopia where there shall be no caste in law or in fact, and where all will have to do the same labor and gain the same profit. The idea that possesses them was carried further by Robin Hood of old, and animates to the fullest extent the thieves whom we send to San Quentin today.

whom we send to San Quentin to-day.

We have read during the week of a New York boy who, we think, will never be found in company with these foolish, impracticable, unworthy people. Out of twenty-six boys gathered to undergo competitive examination for a vacant cadetship in the Annapois Naval Academy, the prize was won by a lad described as "shambling, with collarless shirt, sieve-like shoes, coarse clothes," who "spoke to nobody and nobody spoke to him." He was wretchedly poor, and has been assisting to support his mother and three sisters by selling papers and running errands. But he had the stuff in him that men are made of, and he determined to errands. But he had the stull in him that men are made of, and he determined to win his way in the world. He has studied hard, and stored his mind with knowledge. He will succeed in life, while most of his old companions will live and die grumblers, eight-hour men, non-producers to any appreciable extent, and mere drags upon the community. Let these complaining people go to work, do the best they can, and they will find that in time they will do very well. In this country there is room enough for all, and to spare; and he is pitifully devoid of ambittion, energy and tact who does not in time place himself in an independent position.

### An Earthly Heaven for Invalids.

Through the courtesy of a gentleman who has just returned from Southern California, we are informed that invalids from all points in the United States, and even from Europe, are to be met with at the various famous health-restoring localities in the southern counties. Especially are those places suitable for consumptives. There being neither extreme heat nor extreme cold, and the open air ranging from fifty-five to seventy-five degrees, or clircly free from fogs and unhealthy winds, the seekers after a genial, bally clime, find it there surpassing even the clime along the Italian and Mediterranean coast. The climate of San Diego is preferable in every respect for invalids to the climate of Mentone, celebrated throughout Europe. Invalids who have visited the most important health resorts in the old world de-clare that a residence at Santa Barbara has done them more benefit than all their sojournings at foreign points. The entire coast of Southern California has less rain, warmer winters and cooler summers, than the northern shore of the Mediter-ranean. When the befefits, advantages and blessings of the delightful clime of our southern land are more widely known, we look for a hegira of invalids from the States east of the Rocky Mountains and Europe to such localities as Santa the States east of the Rocky Monntains and Europe to such localities as Santa Barbara, Los Angeles, and San Diego. As a people, we Americans are the most overworked in brain and body of any people in the world. We are not so much confirmed invalids as people who merely want a change of climate and a rest to restore our over-tasked energies, mental and physical. As to our own beautiful State of California, we know no other country in the universe where persons in search of health or pleasure can find these in greater abundance. Every year thousands visit this coast, spend large sums of money, and depart bringing with them pleasant memories of our clime and our population.

— The meek and lowly followers of the Lamb in the village of Colusa are employing a number of young girls as beggars for the "missionary fund," in other words, to bore men into giving money for the maintenance of a lot of ecclesiastics. bummers among the heathen. It is sad to see children so early trained in the brassy ways of church beggars. How can we expect them to preserve their blushing purity, when sent about on such an errand. This "missionary cause" is worse than useless; it produces no results, so far as we have been able to discover, that may be fairly considered good. Let the missionaries go to work. We pray that the children may be withdrawn from their unpleasant and debasing occupation of begging alms for the lazy fellows.

We invite our readers to visit and examine the very extensive stock of costly and plain furniture of all materials and varieties, with matrasses, bedding, etc., to be found at the establishment of N. P. Cole & Co., Bush street. This stock is most complete, embracing everything kept in similar establishments, and is the finest assortment in the city. Articles may be bought at low prices. By all means go and see for yourselves.

Among pleasant drives that to San Bruno ranks first. The great attraction is Thorpe's Hotel and Gardens, where lovers of nature may enjoy themselves amid beautiful arbors, varied shrubbery and abundant flowers. Those who go once are sure to repeat the visit.

### Words to a Wife.

I bespeak me that I am. They in price, year after year, are Rising, thon must needs allow; Butchers' meat grows ever dearer, So, and yet not so, dost thou.

Love, thou'rt like yet unlike mutton,
Likewise beef, and veal and lamb,
Do not answer that the glutton

To my butcher waxeth still,
Less and less each time for raimen Less and less each time for raiment, Wanes thy linendraper's bill. Thus by thrift expense thou meetest, Whence thy wisdom doth appear; Also, that I find thee, sweetest Cheaper still and still more dear.

### Leaves from a Lady's Diary.

Avorsy 19.—W—sent me from Paria, Alexander Dumas fils new book. In it the author revenges himself for the accident of his birth, his color and the neglect of the world during his youth. He has written many works that are immoral, many that are licentious, but I never yet read one that was so outrageously insulting to all decency than this. The book is called *E. Homme-France*, and the very title is a sneer. All the secret sins of the married life of women are exposed and the details of the crime of one are held up as the type of wommankind. I was ashaned of myself after I had finished the work, and would not go out all day. I felt as if I wanted a moral bath, a kind of Jewish system of purification by isolalation from the world. This author would make of woman a cold machine to rule a man without one thought of love, friendship or maternity, indeed shunning this latter. How different is our American Lowell, when he says AUGUST 19 .- W-- sent me from Paris, Alexander Dumas fils new book. In it

Full many a sweet forewarning hath the mind, Full many a whispering of vague desire, Ere comes the nature destined to unbind Its virgin zone, and all its deeps in-pire-Low stirrings in the leaves, before the wind Wakes all the green strings of the forest lyre. Faint heatings in the calyx, ere the rose Its warm voluptuous breast doth all unclose.

Avg. 20. - Walking along Kearny street to-day, I saw a crowd round the window of a picture shop. I went also and found that they were all staring at a crude, gaudy, hadly executed colored lithograph of "going to the races," the latter representing various drunken accidents. There were some nice landscapes and good engravings by their side, but no one noticed them. some thre landscapes and good engravings by their side, but no one noticed them. Coming back met C—, who, as usual, was brimful of his last book and longing to impart. His reading is like the fat on soup, and must be skimmed off in order to prevent indigestion; or rather I would liken him to a working bee who as never happy until it has unloaded itself of its treasure of honey, when it sets forth on the wing to fresh flowers. Joaquin Miller's new poem in the Orecland reminds me of a child of nature and long introduced into acceptance of the Orecland reminds me of a child of nature suddenly introduced into society. One admires a handsome young peasant or farmer in his country dress, and with his bright, clear eye, and sunburnt cheeks, but put that man into a drawing-room with a black coat and white cavat, and he would be ill at ease and sheepish. So it is with Mider; he is introduced into the world of letters, where education enhances refinement, and he would tain be like those he consorts with: consequently his poetry has a fase gloze and has lost its rugged power. It is just the difference between fruit and pastry, and, indeed, I have always remarked that when a girl loves fruit, and will go munching away at apples and pears and grapes indiscriminately, she is sure to be fond of the country; but when she sighs for cakes and pastry and confectionary, it is ten to one but she prefers the town. So it is with the poet of nature. Let him once leave the scenes of his inspiration and he becomes a mere machine to grind verses for the publishers. Lucy B—has been reading Mmc. Bovary, and denounces it in unmeasured terms. I took it up and found that it described her character exactly. Thus it is that a book pleases us when it exposes our friend, but displeases in proportion as it is a mirror of our inmost thoughts, words, or actions.

What We Know About Tunneling.

When A. W. Von Schmidt proposed to tunnel the Sierra Nevada mountains in order to bring the waters of Luke Tahoe to Carifornia, he probably proposed a foolish thing. It would not pay. Now mark m: The state of California maintains a force of cight hundred hands all the year round at Sun Quentin. They are not a force of eight hundred hands all the year round at San Quentin. They are not improved by their sojourn there; if anything, they are rather made worse. No moral advantage is gained by keeping them there; something is in fact lost; and on the score of expense, which we venture to think the controlling consideration, a good deal is lost. Why should not this grand working force be made to bore another Mont Cenis tunnel! Why not! They can. By their work our transit of the Sierra can be deprived of one half its present enormous expense. The moral effect on the men would be good. This is a good idea. Nothing prevents its being adopted at the first moment by the Legislature but the inherent indurated stupidity of men which it makes it necessary to weary the sense with iteration before the comprehend anything. The labor of eight hundred men for seven years would amount to 1,680,000 days labor, value say \$1,200,000. The saving in transportation which this labor would effect would be nearly \$1,000,000 per annum. Now this is which this labor would effect would be nearly \$1,000,000 per annum. Now this is practical.

### Local Dottings.

The charge against Moore, ex-Postmaster at Ogden, of robbing the mail of \$10,000; was dismissed, the preliminary examination showing no criminating evidence whatever. - J. L. Stone has come here from the United States Commissioners of whatever.—I. L. Stone has come here from the United States Commissioners of Fisheries for the purpose of obtaining salmon roe for the rivers of the Atlantic coast. He will make a scientific classification of the fish of this coast.—The steamer Hassler will leave San Diego for San Francisco to-day, with the Agassiz scientific party on board.—A Coast Railroad meeting was held at Spanishtown, Half Moon Bay, on the 19th inst. A committee was appointed to open books of subscription to the proposed road.—Beginning with September 17th, the Pacific Mail steamer, salling hence for Panama will call at San Pedro and San Diego.—Sallors won't cruise, hence ships detained for the same. That is, crews. Pretty pnn.—Charles Sumner, black as the ace of spades, accuses wicked Wim. Green, white, of miscognating the cards in a monte deal.—Clarker McGlaster, white, of miscegenating the cards in a monte deal.—Clarkson, McCloskey, O'Keefc, Walsh, Popper and Hand propose to "receive" General McClellan in San Francisco. The attention of the crueity-to-animals officer is called to the case.—In collusion with the medical faculty-to-ammass of the collusion with the medical faculty, the Market Street Railroad Company have resolved to provide additional facilities for going to Lone Mountain.—The Police Commissioners have directed the force to wear soft hats—"to suit (the Bulletian Street Stree etin says) particular heads."—A dog worrying a tough marrow-bone which he cannot crack, is vividly suggested by John Sime's creditors, who learn there is cannot crack, is vividly suggested by John Sime's creditors, who learn there is \$265,000 cash in bank and cannot get a cent.—The usual case of domestic infelicty on trial in Court affords choice reading in the family papers.—Paul Keen slew Joseph MacBiroy in Los Angeles—cause, politics. Anything to beat Grant.—Society of Pioneers are going to visit San Luis Obispo. San Luis may rejoice: She hath her afflictions in this world.—Morning Call has "a fight between a mink and a rat." We have heard of this Chronicic-Call fight before.—Trial of the domestic infelicity case is ended and the family papers are desolate.—The Liberal Republicans indorse Piper for Congress. Piper has deserved this.—The receipts of strawberries for the season were 1,000 tons. These are exclusive of the favorite California variety—the strawberry in September.—Catherine McDonald, female servant, carved Mrs. McGonigle, her daughter and two sons-in-law. The McGonigles will now engage Chinese cheap labor.—The usual accident has happened to the Webb Australian steamship Newada.—Bianchi says he will give Italian opera next month.—The Health Officer says there were only seven copper-colored deaths last week. Chief Crowley is effectively suppressing the Hoodlum.—Two papers, "both daily," are disgusted with railroad building, disgusted with political conventions, disgusted with mining stocks, disgusted with Greeley, disgusted with the. gusted with Greeley, disgusted with the One Hundred, disgusted with life. At the Bay District Fair they are to have a tournament. Cheap circus.—Analgamated carpenters have organized a branch in San Francisco. Retorted blackgamated carpenters have organized a branch in San Francisco. Retorted blacksmiths may be expected next.—S. A. Sharp, attorrey, was thrown from a buggy and stunned. They took him to a drug shop and opened the asafetida. He thought he was in a San Francisco Court room and promptly "made a motion."—Seven small boy burglars arrested. Very small boy burglars should beware of the San Francisco police.—Street work, which had been delayed about four months under the new law, is to be resumed. The property owner will prepare for the regular swindles.—"California is peculiarly favorable to the raising of sheep.—Erraing Paper. And where the sheep are, thither the shearer cometh with his Atlantic and Pacific "sheers." Perchance he shall go back shorn.—Ah Foo was drugged and robbed by an almond-eyed houri. Policeman prevailed on her to give up the plunder. Thus is the trade of the pore working woman forever ruined by Chinese cheap labor.—Young woman married on the 17th inst., and died on the 19th. No inquest. Disease of the heart, they call it.—Rural correspondent rebukes daily paper for "bulling freights," This guileless child of nature conceives his paper to put up the freight on wheat, even as the athletic beetle madly tosseth paving stones into the air.

— St. Patrick's Day, the Twelfth of July, and the other holidays observed by people who can't forget that they are foreigners, are to have a rival in the Second of September, on which day the Germans talk of celebrating the victory of Sedan. As one who has the misfortune to have been born in this country, we venture to protest against the introduction of many more of these foreign holidays, on which the seeds of discord are industriously sown. A little more Fourth of July and Twenty-second of February—a little more Americanism, and a great deal less of foreign nonsense, would sait us better.

<sup>&</sup>quot;Camille" is on the rampage again. She sobs, tears her hair, and hustles "poor Harry" out of his grave for the edification of the Police Court. "Camille" seems to be a little mixed in regard to her martimonial escapades: stremuously denies that her marriage with Harry was dissolved, violently asserts that her religion would not allow her to be divorced from the orchestra man, and raves of the honor of her child. Had Harry Byrne died penniless, would not the orchestra marriage have been valid?

### Clips from the "London Figaro."

A man who was charged with having pounded his wife with a fire-poker until she was of a beautiful steely blue, was placed upon the witness stand last week, when he admitted that he had had an argument with the good woman, but claimed that she had received her cuts and contusions "by falling about." Did it ever occur to any member of Parliament to test the advantages of this kind of logic? It would be interesting to observe the Marquis of Salisbury trying to convict the Government of error by flooping about the House, and bumping his head against the empty benches; or Lord Lennox giving his views upon Scotch education by pitching himself prome along the floor, and cutting open his eyebrow.

— Thomas Flynn, who was up before Alderman Carter charged with garotting a gentleman and maniling a policeman, said he knew nothing about it; he had a weak head, and whenever he took a drink of liquor it made him mad. For the benfit of this class of persons, any laws compelling people to take a drink of liquor ought to be repealed. There are hundreds of taproons in London at which one cannot take in spirits without getting mad. The writer, albeit a man of ridiculously even temper, is sometimes betrayed by inferior tipple into so exatted an indignation that, for the time being, he loses his sense of indebtedness to the vendor.

— The Government have determined to prosecute the Roman Catholic priests who assisted at the Galway election; and the Attorney-General for Ireland speaks of his duty in the matter as "a most painful one," such as he hopes never again to be called upon to perform." Nothing could more pointedly exhibit the foily of not having the Town Crier as Attorney-General for Ireland. If that legal luminary were entrusted with this business, you would see him set about it with an art like that of a hen entering upon the pursuit of the flecting grasshopper, or stabbing at the edible worm. The duty would be "painful" only to the defendants.

— The standard hight of the police is to be reduced one inch. It is to be hoped that all economy-mad politicians will be satisfied with this concession; they have always advocated cutting down the police force, and the Procurstean operation has been undertaken solely to still their clamor. The superfluous inch should be taken from the top—our police make no use of their heads; but they could not get on without their feet—at least, not fast enough when there is a row to be run away from.

In scanning the papers the other day, we were arrested by this statement:
"Mrs. Edwardes: Ought we to visit her! Miss Rhoda Broughton: Red as a Rose; is she." The first appeared to be an impertinent question: the next an equally impertinent remark. But on looking further, we perceived that these soutements formed a portion of the advertisement of one of our well-known publishers.

— At the Tipperary Assizes, a lawsuit between a nice young man and a model young woman was settled by the marriage of the plaintiff with the defendant; and this is held up as an example worthy of imitation. Not any, it isn't. A fellow doesn't wish all the elderly maidens in the United Kingdom bringing action against him. It is bad enough to have them naming their cats in his honor.

— The reporter of a contemporary thus gusbingly describes the storm at Wimbledon: "Then came down the thunder-drops, and smote the encampment right heavily; and the growling and flashing of the heavens produced a picture-sque effect, which lacked hardly any element of grandeur." Beg his pardon; it lacked, at that time, his magnificent description.

Ellen Rook, aged fifty, and still agitated by a recent tempest of delirium tremers, was, the other day, committed to juil for three weeks, for thieving a twopenny bottle of lemonade. There can be no doubt of the moral stability of a country in which disease is so rigorously repressed by the strong arm of idiocy.

— Mr. Soley advertises for "a young man to keep a fancy jewelry stock." Had he brought his advertisement to this office instead of taking it to a daily contemporary, he would have got a reply to it before he had turned his back. There is a young man here who is ready to keep anything in the jewelry line.

The daily press is very fond of publishing what it calls the "Latest Turf Movements." Having never had the leisure to examine this department of "the great moral engine," I should be pleased to know if it refers to the operations of the gravedigzer, or to those of his pensioner, the mole.

A skipper was arrested the other day for firing a revolver in the street. He exploded two charges, and quietly remarked, "Let anybody come near me now!" This comprehensive invitation would have had an appearance of more sincere hospitality if he had cleared all his chambers before extending it.

"The young women employed in milliners' rooms and in the drapers' shops," says a contemporary, "every now and then send forth a cry for shorter hours, but very little seems to come of it." A good deal comes of it; they are invariably dismissed when detected.

— Sir James Kay Shuttleworth and a party of friends have been visiting Billingsgate Market, disguised as costermongers. If they were in search of choice colloquialisms, they took a deal of unnecessary trouble; the Imperial Parliament would have served their purpose.

A supporter of General Grant for the Presidency of the United States has offered a reward of five hundred dollars for a "campaign song." The partisans of Mr. Greeley will, probably, offer a supplementary reward of equal amount for the author of it.

— A metrical translation of Goldsmith's "Deserted Village" into Armenian has been published at Venice. We wonder what dear old Goldle would say to this! He would doubtless be as well pleased as was Nick Bottom at his own "translation."

— If the undertakers' men mean to knock off working on Sunday, it is going to make things very awkward for people who wish to die on Thursday or Friday.

### Facilities Needed for Ship-Building.

"Some of the finest iron vessels loading here are launched from the ship yards of Hamburg and Bremen."—Bulletin, Aug. 1st. The fact is, not a single iron vessel that we are aware of built in Germany has ever entered this port. The iron bark Anna, flying the German flag, was built on the Clyde, in Scotland. The same paper stated, a short time since, that the Pacific Mail Company's steamers had driven off other steam lines from Japan waters. This is really nonsense. Other steamers have contracts for earrying the mails from their Governments to those seas. If our contemporary was read only by the ignorant, veracity would be of little moment, but we presume it is read by intelligent people.

### An Interesting Experiment.

The Matin publishes an account of the experiments made by a doctor of Montpelier, to ascertain the effects of wine, brandy, and absinthe on lowls. Those birds took very readily to the régime, and ended by absorbing daily six cubic centimetres of alcohol, or from twelve to fifteen of wine. The result was that they lost fiesh rapidly, especially those which drank absinthe. Two months of that hignor was sufficient to kill them; those treated with brandy resisted for four months and a haif, and with wine ten months. An extraordinary effect of this alcoholism was the immense development of cocks' crests, which increased to four times their natural size, and assumed a brighter hue.

— It is currently reported that our good Bishop, Alemany, manager of the Exiled Capuchin troupe, having met with such signal success in his pienic venture, will soon import a fresh batch of exiles whose treasonable plottings and abject wrethednes will so far discount that of the original seventy-five that the soft-hearted dupes of our city will be induced to contribute \$15,000 more for the support of imported vagabonds.

### Carp.

Some time ago we published an article on fish culture in California, which was extensively copied in the English and European Press. We have now to add that extensively copied in the English and European Press. We have now to sdd that an important species of fish is to be acclimated to our waters, namely, the carp. A large number of this fish was lately brought here by J. A. Poppe, Esq., of Sonoma, who has just returned from a trip to Germany. The carp, to some paintes, is one of the most delicious articles of food, and is more highly prized in Europe than any other fish. It is alike a delicacy on the table of the subject and the Emperor. The most relishable specimens weigh from six to ten pounds, but some have been found which weigh as high as twenty pounds. They are rearred in artificial pounds, which have small streams of fresh water running through them. The carp does not thrive well where the waters are too deep and the current powerful. In taste the flavor is even more delicate than that of the finest brook trout. The number the haver is even more decided than that of the must brook tront. The number brought here by Mr. Poppe are in a healthy condition. From the time they were taken out of their native element in Germany up to reaching here they had to receive a constant supply of pure fresh water, and as far as possible plenty of fresh air. Special arrangements were made with the steamboat and railroad companies air. Special arrangements were made with the steamhoat and railroad companies to this effect. The enterprising gentleman who has brought them, traveled extensively throughout Europe, and conversed with the leading fish culturists, all of whom were as pieased, as they were astonished, to know that in "the wilds of California" the culture of fish had attained great perfection. It is said that this is the first time that specimens of this fish were brought in a live state from Europe to the United States. the United States. We shall be eager to learn of the success of Mr. Poppe in acclimatizing them.

## How Stanley was Sent after Livingstone.

A correspondent of the London Telegraph has interviewed Stanley, and says: "It was an idea of young Mr. Bennett, at that time staying in Paris. He telegraphed for Mr. Stanley, then resident in Madrid, and he, not knowing what business was in hand, left instantly, arrived at the Grand Hotel, Paris, at closen of the night, and went at once to Mr. Bennett's room. That gentleman was in bed. "Come in, sir, who are you?" "My name is Stanley, answered the young correspondent. "Ah, yes, replied the New York journalist; "sit down—glad to see you, have you any idea where Livingstone is?" "No?" "Well, I think he is living, and is to be found. Will you try to find him? "Yes!" (Good; you can have an unlimited credit. Tes your own means, carry out your own plans. Good night? Thus the Heralit's expedition in search of Livingstone was set on foot."

— There is a panic among the Benedicts. Psyche has invaded their homes. Not the ethereal creature whom the ancients endowed with butterfly wings, but a modern Psyche, of the earth, earthy of one hundred and cighty pounds avorable. modern Psyche, of the earth, earthy of one hundred and eighty pounds avoirdness. A Psyche of powder, paint and patches, in whose cheek the hot blood of Africa mantice brownly, in whose eyes glummer the fires of her unholy doctrines. Psyche is the author of a most extraordinary rhapsody, which she is distributing among our womankind, endeavoring to disseminate the seeds of her hideous moral leprosy. The Benedicts can stand this sort of thing among themselves, but when she stands upon the threshold of their homes they cry, "Out upon the woman! she is unclean!"

An old maid, being asked why she had never married, replied that she had years. Had she known the bliss of drinking Squarza's Punches, she would have felt such labor to be a light one. These Funches make all labor easy and life delightful. A. Boma, successor to Squarza. Branch establishment, 317 Kearny etreet, near Bush.

The excellent host of the Racine House, 1923 Kearny street, has succeeded in making it one of the most comfortable and clegant hotels in the city. Pleasant sunny rooms and desirable accommodations are provided for all guests, whose every need is looked after with diligence. The Racine is unsurpassed as a homelike and first-class hotel.

The Oakland children have invented a new game. A little boy fills a bottle with powder and shot and touches it off with a match. It makes his face look like a pepper-box. It is a cheerful game for children whose mothers haven't time to look after them. It keeps them out of mischief.

- Mansfield, who tried to murder a young lady some weeks ago, has just been trying to commit suicide, and the papers therefore call him insane. It seems to us the most sensible thing we have heard of him. Why shouldn't he be allowed to carry out his desire? Catch us trying to stop him!

### In Memoriam.

Prentice, of the Louisville Journal, thus spoke of the following beautiful lines: "One might almost wish to die, if he knew that so beautiful a tribute as this would be written to his memory."

On the bosom of a river, Where the sun unloosed his quiver, And the starlight streamed forever, Sailed a vessel light and free.

Morning dewdrops hung like manna On the bright folds of her banner While the zephyrs rose to fan her Softly to the radiant sea.

At her prow a pilot beaming In the flush of youth stood dreaming, And he was in glorious seeming,

Like an angel from above. Through his hair the breezes sported, And as on the wave he floated, Oft that pilot, angel-throated, Warbled lays of hope and love.

Buds of laurel bloom were blooming, And his hands anon were throwing

Music from a lyre of gold Swiftly down the stream he glided, Soft the purple wave divided, And a rainbow arch abided

On his canvas' snowy fold.

Anxious hearts with fond devotion, Watched him sailing to the ocean, Prayed that never wild commotion

'Mid the elements might rise. And he seemed some young Apollo, Charming summer winds to follow,

While the water flags' corolla Trembled to his music sighs.

But those purple waves enchanted Rolled beside a city haunted By an awful spell that daunted Every comer to her shore. Night shades rank the air encumbered, And pale marble statues numbered Where the lotus-eaters slumbered, And awake to light no more.

Through those locks so blithely flowing, Then there rushed with lighting quickness O'er his face a mortal sickness, And the dews in fearful thickness
Gathered o'er his temples fair.
And there swept a dying murmur Through the lively Southern summer As the beauteous pilot comer Perished by that city there.

Still rolls on that radiant river. And the sun unbinds his quiver And the starlight streams forever On its bosom as before. But that vessel's rainbow banner Greets no more the gay Savanna, And that pilot's lute drops manna On the purple waves no more.

— The Money writer in Friday's Alta California has the following:—"A supposed animosity between Messrs. Jones and Sharon has been freely invoked as supposed animostly between agessis, ones and stanton has obeen freely invoiced as the cause of present and inture demoralization of Washoe stocks. The public as has been abused with rumors that "Sharon will knock this stock," that "Jones and Hayward will mash that," that "the Nevada elections will turn on the rise and fall of stocks" and numberless other follies. We have omitted to notice these stories hitherto, thinking them too absurd to be seriously entertained; but, having examined into the matter, we are authorized by the highest authority to pronounce the whole a tissue of worthless fabrications. The only basis for the was the supposed rivalry between those gentlemen for the Senatorship of Nevada. But the highly honorable course pursued by Mr. Sharou, when, under the stremous advice of his physician, he was forced to forego the high honor to which he justly aspired, in simply retiring from the field now occupied by Mr. Jones, resulted in the most cordial feeling between all parties, who now recognize their mutual in terests as bound solely up in the welfare of the Comstock ledge, and we speak advisedly when we assert that the best interests of all the mines are recognized by advisedly when we assert that the best interests of all the mines are recognized by all those gentlemen as the sole object of each, and the most cordial co-operation for their promotion exists. The facts are, that no parties co-operate with more mutual generosity and honorable feeling than the much abused gentlemen whose names we have cited." The writer adds: "Any 'bear' party, or ill-informed persons, who propose to operate on the basis of supposed rivalry will meet the appropriate punishment"—whatever that may mean.

— We always did admire persistent attempts at doing good, and are glad to notice that the budding wantons at the "Magdalen Asylum" have induced the Grand Jury to recommend their transfer to the Industrial School. It was too limited a field to be shut up with the Sisters, and they pine for their native pursuits. A medal should be struck for the Grand Jury for thus removing these hapless but vigorous Cyprians from temptation, and we hear the honorary members of the "Industrial School" have one in preparation.

The Call is now issued every day. The Post has enlarged. The Chronicle will also issue every day. Sam Williams has got back to the Bulletin, which needed him. The Alla renews its youth, and evidently doesn't intend to decay with other old landmarks. The Republican grows epigrammatical, The Examiner—but there's nothing new about the Examiner.

### Pope Pickering.

The mysterious is always a source of power. Ancient religious controlled the world because of the mystery in which they were enshrouded the Eleusinian mysteries, the mysteries of the Druids, the mysteries of the alchemists, the southsayers, the diviners by stars or cards, the mysteries of the ancient miraces. The Roman faith was maintained by the mysterious practices of its priests. The Christian religion has its mysteries of faith and vicarious atonement. The Mormons have the mysteries of the bronze tablets. The Incas of Pern were surrounded by mystery; the Grand Limm of Persea, and the Tenno of Japan also. But most wonderful of all the mysteries of modern times is the mysterious power of the Womermier and the investment of indicate the second process power of the for Brother Pickering of the Gail. The Call is a small cloud, not much bagger than a man's hand; but it was large enough to lidde Deacon Pickering From the public gaze, and to keep him enveloped in a deep log of imperconstity. The Rev. Mr. Pickering was daily seen upon our strets, clean of person, nucely agged and nicely dressed. It wasked through the strets with silent tread, his head was bowed in protound meditation, his step was soft as a cat in the creamerie - He looked wise; all around him, enveloping him like the cloud that Macrax threwaround for favorite warrarrat the stage of Troy, like Eness as the escaped from the watcherles of Dido, was the imperetrable impersonably of the Press. Bishop Prekering was a unsubstantial as a dream. We gooked upon him as great and good and when a sort of newspaper denti-god. We feared his powers, we deprecated his wrath, we placated his vengennee, we smiled when we met him. When we ran for effice we sent our friend to interview the Bulletin and Call. We promised and pledged oursent our friend to interview the littletin and the we promised and plagged ourselves. In the presence of this overshadowing, mysterious, intains be and wonderful cardinal Pickering, we stood and gazed upon him in awe, as the traveler looks upon the Sphynx. If Pickering took small, we all succeed. If he did but nod, we trembied. He stretched his lugge legs across our State, and we pigniles walked beneath them. Pickering became Pope. He was the vicegement of the God of Power. He was the Colossus of Rhodes. When he opened his month, we hearkened. When he smiled, we looked happy. When he frowned, we thurst our latter that the colossus when the colossus the lower and can have fine to an extensive when he haved little tails between our little legs and ran howling to our kennels. When he brayed, we tremided at the Hon's roar. We had gotten accustomed to conflagrations, war, famine and earthquakes; but Pickering was the one inexplicable mystery of which we stood in awe. Pope Pickering was undoubtedly of unmaculate conception, gotten of no ordinary mortal, for who ever heard of any other Pickering. He was infal'ble, and who could doubt him? This was Pickering, the editor. But whoop! hurrah! we have found him out through the Committee of One Hundred. He is a stuffed club, sheet-from thunder; an ass in the don's skin; a cut in the meal-tub. His wings are wax; his legs are saw-dust; his roar is gentle as a suck ug dove; he is fustion, prancila; he is sound and fury, signifying nothing; bruinagim, ne is fustian, pranciai, ile is sonine and dry signification conditions a signification of the properties of the sonio signification of the sonio signification of the sonio significant s tain he becomes a mole-hill; and now there are none so poor as to do him reverence. He is a dethroned monarch. His is the fate of being found out. Now everybody will kick him. He is going down hill everybody will give him a show kery.
This Jack the Giant-Killer is no longer a mystery. Alas, poor Pickering:
"Brother," "Deacon," "Reverent," "Bissiop," "Cardinal, "Pops!" "Pops!" your high elevation you are brought down to the level of us poor mortals, and we find you a little old, well-preserved gentleman, who does not know more than we do; a little lead type, a few kegs of masty ink, a machine to print papers on, and a few boxs to distribute them to us for a shibiling a week. Our advice is for Old Pickering to go into his hole and draw his hole in after him. If he doesn't we will stop the paper. Moral: It is not a wise thing for an editor of induferent honesty and weak brains to come out into the arens of public debate, where he is com-pelled to measure his intellect with other men's, and to have his motives weighed in the same balances that determine the homesty of his neighbors.

#### Annex Them.

Our last advices from Northwestern Mexico are not of a hopeful character. The State of similor is again in revolution. Juissee is a smouldering fire and the State Government is so weak that it cannot enforce the laws. Lossda, the Judou ruler, is master of the situation in the Canton of Teple. In the State of Sonora the Apaches keep the northern borders in constant turnoil, while the southern borders are infested with Simdon revolutionists. The Territory of Lower California remins undeveloped. The vast area of country mentioned is not surpassed by any portion of the earth in its mineral wealth and agricultural resources. For more than fifty years in common with other portions of Mexico, the Northwestern States have been in adnost constant revolution. The principal products have been nurders, assussingtons and but herics. Why should not these States beauted to the giant Republic of the North? Why should not these States be annealed develop their vast resources? Why should not English and American capital develop their vast resources? Why should not English and American capital develop their vast resources? Why should not English and American expected the emasculated theories of the Indimized dons? Their annexation would alike benefit Mexico, the United States and Europe. They ought to be annexed.

### Murray's Guide to Foreign Parts of the English Language.

OF RELATIVE PRONOUNS .- A relative pronoun is, my thick-headed little darof RELECTIVE PROPOSES.—A reactive pronoun left in the called the anticedent, as-lings, a word that relates to a noun or pronoun before it, called the anticedent, as-The pupil vaho neglected to bring his school money. Who is the relative pronoun— we will not ask who is the neglectful pupil. We trust that he has learned to be

ashamed of himself, and, although we quote him as an example, we desire to remind other little boys of our cademy that he is an example not to be followed.

We now come to a consideration of simple relatives. The author of this grammar knows but few—he may say too few—but these he has never ceased to love; he may, however, remark with reference to certain financial matters which have transpired, that these relatives have long ceased to respond. He has one relative— an uncle—who still lends a kindly ear at a statutory rate of interest on portable securities, but he is decidedly not a simple relative. Depend upon it, boys, your only simple relative is your mother. What says the bard ?-

Who was it slapped me when I fell, And kicked the place to make it swell; And whopped, and swore, and cursed me well? My father !

Who was it wiped my tearful eye, And backed me up in every lie, And tipped me well upon the sly?

My mother!

Stick to your mothers, boys-but where were we? Oh, discussing simple relatives! Well, the simple relatives in grammar are who, which and find. Murray says they are alike in both numbers; so you will please to remember which is which, and not witch. Here a conundrum suggests itself: When is the best time to use and not witch. and not witch. Here a connucrum suggests user: when is the best time to use the simple relative which? Answer The whiching hour.—Shakspeare. N. R.—This conundrum should be judiciously used by schoolmasters on examination days, when pupils' friends are present. If the answer is made to appear impromptu, it will much increase the reputation of the school.

Who is applied to persons—as "Who the deuce are you?" Be cautious, how-

ever, to apply it to undersized persons, lest the answer should be practical.

Which is applied to inferior animals and things without life; but, as interior animals and things without life are not likely to understand you, to apply anything to them is a work of supererogation.

That is used instead of who or which, as—The boy that squints. Nothing is

more horrible than a boy that squints.

We may be asked—What is a compound relative! We reply at once that it is, This may see as indefinite; but we decline to give any further explanation; what is undoubtedly a compound relative which includes both the relative and the antecedent. Take for instance: Watt, the engineer; he was Watt: so was his antecedent; that is to say, his father was Watt. Will anybody attempt to deny this? I pause for a reply.—Hornet.

The teachers and pupils of the high school are forbidden by the Directors of the Board of Education to visit the exhibition of paintings of the Art Association. This is just as it should be. A child who is stifling in a garretall the working-day week should not be allowed to breathe the fresh air of the country on Sunday, nor should the intellect of a young mind, which has been cramped and confined by the narrow formulas of class books, and the routine of education be allowed to expand in the contemplation of the works of great masters, who, in a manner, condense nature on the canvass and bring life and light and animation by manner, condense nature on the canvass and bring life and light and animation by the depiction of classical, historical or biblical scenes. Such would make them think outside of school and be perversive of dicipline. "The character of the paintings is not such as to warrant the children to view them." Quite right, oh most immaculate Board. Henceforward, the most rigid rules of propriety are to be observed. The Crucifixion is to be painted before the soldiers have parted chairts garmant sympathem Crucifes are to be done any in disperse and Dougsel. be observed. The Crucifixion is to be painted before the soldiers have parted Christ's garment among them, Cupids are to be done up in diapers, and Powers' Greek Slave is to have a clean injult-gown once a week. Snow & Roos' gallery is to bear an inscription over its doors "for gentlemen only;" the various picture shops in Kearney and Washington streets are to be closed from two to four, the hour at which the young ladies are permitted to promenade. Venus rising from the sea is only to be allowed to show her head above water, and the statues in Woodward's Gardens are to be plastered over with fig leaves. In such way only can the virgin minds of the high class remain uppolluted—in such way can the Board of Education suif the air of virtuous satisfaction— Education sniff the air of virtuous satisfaction.

<sup>—</sup> May it please the honorable Court, the majesty of the law is a fearful thing. The "leaders of the bar" wrangle over subpæned carcasses like petted maggots on a fidsh. And the poor delinquent, like the ass between two bundles of straw, knows not which is his redeemer. Instead of a short-hand, we need a long-armed reporter, with a pitch-soaked besom, to drive these legal vermin from the portals of the Police Court. Asafetida would not disperse them, as they bask in the smiles of "Moon-faced Moil" at her receptions. "Members of the Bar!" Rather the chewers of the stumpe that lawyers throw away—with faces that are press-copies of King Alcohol's telegrams. Faugh!

### "Where Did You Come From, Baby Dear?"

Where did you come from, baby dear ! Out of the everywhere into here Where did you get your eyes so blue? Out of the sky as I came through. What makes the light in them sparkle and spin? Some of the starry spikes left in. Where did you get that little tear? I found it waiting when I got here. What makes your forehead so smooth and high? A soft hand stroked it as I went by. What makes your cheeks like a warm white rose? I saw something better than any one knows. Whence that three-cornered smile of bliss? Three angels gave me at once a kiss. Where did you get this pearly ear? God spoke, and it came out to hear. Where did you get those arms and hands? Love made itself into hook and bands. Feet, whence did you come, you darling things? From the same box as the cherubs' wings. How did they all come just to be you ? God thought of me, and so I grew. But how did you come to us, you dear? God thought about you, and so I am here ?- George McDonald.

### Press Personality.

An American traveler who wrote a book on California a few years ago, noted as a trait of her people, and a blemish on many generous qualities, a spirit of detrac-tion. He said (in substance) that whenever he ventured a remark commending the enterprise or energy or hospitality or any other praiseworthy quality of one whom he had met, his interlocutor might assent, but always with some qualities, and in support of this would relate some circumstance to the discredit of the individual in question. Of course, this spirit is not universal among Californians. Perhaps it is not even general. But it is certain that there is a great deal of it, or it would not have arrested our visitor's attention. And aside from this testimony of a stranger we may venture to affirm that any candid Californian will admit that of a stranger we may venture to aftern that any caudid Californian will admit that there is too much of it. Of late this spirit of detraction has become conspicuous in the journalism of San Francisco. Citizens of the best and purest character have been recklessly accused of dishonorable, not to say dishonest conduct, and these charges have been thung, not by journalis of the lower order, but by the most respectable that we have. Men whose career for twenty years among us has been one of probity, industry and enterprise, have been exhibited to the public as conspiring not only to betray the public interest, but to cheat the community. When the significant and important facts connected with the diamond discovery were made public, one paper—The Evening Bulletin—under the guise of warning its readers against a speculative venture, intunated that the incorporators of the diamond company had "put up" an artful and fraudulent scheme by which the public was to be cheated. Another paper—The Morning Call—intimated that the incorporators had allowed their names to be put forward as stool-pigeous to lure the was to be cheated. Another paper—The Morning Call—Intimated that the incorporators had allowed their names to be put forward as stool-pigeons to lure the public into the swindle. Yet among the names thus aspersed we may remark those of Thos. H. Seiby, Wm. F. Babcock and Albert Gaus. When the San Francisco and Colorado River Railroad Company was organized, the incorporators were—and have ever since been—villified as a dishonest "ring," conspirators against the public interest, leagued to prevent the construction of an overland line, "mairroad jumping jacks," (whatever that may be thought to mean, etc. Yet among these Judises who are plotting to betray San Francisco are Mitton S. Latham, John Parrott and Geo. H. Howard. Again, a bountiful barvest yields to California such a surplus of wheat for export that all available transportation will not suffice to move, if in twelve months: a leading dealer, foresceing the extremely, had secured. move it in twelve months; a leading dealer, foreseeing the extgency, had secured ships by advance charters at lower freights than must otherwise have been paid; higher prices have been actually received by farmers in consequence of this prevision; and yet The Evening Bulletin uses the name of Issae Friedlander as a text for some bad language, and with carnous perversion informs country readers that he is fleecing them through his low charters. Finally, from causes long foreseen, he is fleecing them through his low charters. Finally, from causes long forescen, there comes a general decline in mining stocks; this fact, inevitable in view of the developments in the mines, is affirmed to be a "bear mevement," operated by the Bank of California (gracefully alluded to as a "banking ring") for the purpose of financially injuring Mr. J. P. Jones, candidate for United States Senator in the adjoining State of Nevada. In this connection we may remark as follows: The oldest daily newspaper in the United States is the Philadelphia North American, edited by Hon. Morton McMichael, and occupying the position in Philadelphia corresponding with that of the Journal of Commerce in New York; in a recent article on American banking, the North American took occasion to remark that there were but two banks in America which fulfilled in the broader sense the duties of such institutions: those were the Bank of Montreal and the Bank of California. The Philadelphia paper points to our California bank as an institution in which some local pride might be felt. The San Francisco paper speaks of it as a den of thiceves. These instances must suffice to illustrate the spirit of personal detraction in San Francisco journalism of which we spoke. The spirit is a bad one. Aside from its essential meanness, it is demoralizing to the community. The younger members especially will learn from it to look upon the careers of men which have been outwardly honorable as those of covert roguery. It tends to beget public distrust of those whom the public has the best right to trust, and whom it is for the public interest should be trusted. It encourages a spirit of suspicion which is inimical to union of action and public enterprise. Nor does the fact that the individuals who launch this indiscriminating ander against our best citizens through their sheets, are themselves without character or honorable reputation of any kind, diminish the public injury which is wrought by journalism of this reckless and debauched character.

The Evening Bulletin of Thursday gave an illustration of the decency of San

The Evening Bulletin of Thursday gave an illustration of the decency of Saa Francisco journalism by an article, copied into the Morning Call Friday, in which each of the 38 members of the late Committee of One Hundred who voted in favor of the railroad compromise is attacked in his private character. As far as the proepects of consummating the compromise by a popular vote are concerned, this line of contest will not be injurious. But when a writer on the press avails of the opportunity afforded by his trade to assail the private characters of some of the best clitzens in the community, it is time for indignation and protest. For where is this thing to stop? When Wm, F. Babcock is held up to the public as a member of a corrupt "ring," when Louis A. Garnet, James Otis, John H. Redinzton and R. A. Swain are denounced as truckling to "Ralston" and "Stanford" (as the animal, in his graceful familiarity, puts it), when George H. Howard, Josiah Belden, W. W. Montague and John T. Doyle are accused of betraying a public trust in the interest of private speculation, it is time to ask whose character is safe from the slanders of this rufflan? For a less offence, some years ago, the community of San Francisco rose as one man and set its heel on Mr. Nugent's Herald. Times have changed, and there is no longer an opportunity for combined and energetic action. When a cur snaps and snarls at our heels, we kick it into the gutter. A cur is snapping and snarling at the heels of the best clitzens of Son Francisco. Is there no cyprian's bully who will be willing to do a public service without quitting his

— Vive la Uvorkide! Another of these delightful wife-murders. This is becoming a savory salad for our breakfast-table, as we read from the live papers the full details to our wife and our (hypothetical) children. We hall the era of Bemedictine vengeance! Bare your blades, gallant husbands. Carve your monograms, your mystic brands, upon the cuticle of these un-silent partners, lest, in the roteo of society, they be found in your neighbors' cerral! A man's wife must be a help 'm work as well as a help 'm eat. No more shall these beldames do up their hair on a whisk-broom, and, with the Sunday tablecloth bunched on behind, pace along the Avenue de Kearny to meet the leers of the loafers who gaze upon them with dog's-eared eyes. Our ribs will now be lined with laughing fatness; we are content.

"If that's a tournament, it isn't the turn I meant," remarked a fish-eyed debauchee, leaning over the fence at the Agricultural Park. We agree with the f. e. d.; the best movement would be to turn 'em out. We always had a dim, misty respect for the days of chivalry, for King Arthur and the Holy Grail; but if it was their privilege to angle along on spavined horses, with the laudable ambition of thrusting a discolored toothpick through a dangling ring, we copper the days of Kingbibood henceforth. With a former fixed idea that to belong to a military company was the last gasp of faultiv, we yet will yield the palm to these "Independent Knights of Yolo" and their cognate idiots.

— "Poor Harry!" Beat against the coffined confines of thy narrow abode, struggle to tear thyself from the cold embrace of the grave, for the vultares are gathering in quarrelsome haste to seize upon what thou hast left behind thee. Better that thou hadet died a pauper than leave a feast for these ravenous and unclean birds of prey. Better that thou hadst perished from the memory of man than that the sad story of thy youthful folly should be thrust before our eyes. Rest thee peacefully, good, jovial, lamented Harry, if thou mayest; we will remember thee as we knew thee, not as they now tell us that thou wert.

<sup>—</sup> The "patent outsides" plan is being introduced among our country papers. The first and fourth pages are printed in this city, and sent to the interior, where the inside pages are filled with the local news and advertisements.

### Love's Betraval.

SHE never told her love : They might have deemed it bold In such a tender dove-Just forty-three years old.

That love she strove to hide, But fate was harsh indeed For, though the damsel tried, She did not quite succeed.

What did that love betray? Her glances you'll suppose. Eyes tell of love, they say; But this time 'twas her nose.

And that was such a hue, To every one 'twas clear ('Twas 'tw'xt a red and blue) She madly loved -her beer.

### Who They Are .-- "The Chain Unlinked."

The Bulletin has in a bungling way dissected and commented upon each of the thirty-eight gentlemen who voted for the compromise report in the Committee of One Hundred. Below is a true and correct analysis of the minority of thirty-four who voted against it. It shows that nearly every one of them had a motive in so voting, and that they in no way represent public sentiment, or that they are reasonably incompetent to judge of a great railroad proposition

George F. Bragg - His name becomes him. Has no real estate, according to the last assessment roll. Is an officer of the Benicia Cement Company (bilk), an exper-

rans assessment tool. Is an onicer of the Benica Cement Company (bilk), an expermental concern that pays no money. Sthographers—A wast amount of bonds, preferred stock, common and uncommon shares, will be necessary to plaster over our too-confiding tax-payers if they vote a \$10,000,000 subsidy to the Atlantic and Pacific Railroad. Plenty of business this will make for Britton & Rey, Lithographers. John Bayton—Has \$6,850 of real estate, and is President of the Union Pacific Salt Company. If anybody ever heard of that company before, he must have heard of Pacific Ref. stock stocked and the Company before, he must have heard of

Company. If anybody ever heard of that company before, he must have heard of Barton; if not, probably not.

W. A. Aldrick—Member of the last Legislature, and generally voted for every bill Stanford & Co. wanted passed. He is a resident of Oakland, and pays taxes in this city on just \$225 worth of real estate.

Alex. G. Abell Has not been engaged in any business for himself for many years. Has drawn his support for a long time from the Masonic Fraternity.

John Bensly—A celebrated builder of railroads on paper. His last great enterprise was in the Oroville and Virginia city Railroad via Beckworth Pass—a road that was squelched out of existence by the Supreme Court for attempting to get a subsidy of several hundred thousand dollars from Pluma-county without even substitute the same to a vote of the people; after which bold attempt the Legislature. mitting the same to a vote of the people; after which bold attempt the Legislature repealed the Act authorizing Bensly's railroad company to do this thing.

Weskington Bertlett—Ex-office-holder, still an audice-seeker. A gentleman of leisure, but acts occasionally in 180 capacity of clerk to the Chumber of Commerce—an office of honor, but we funcy not one of profit. Controlled by Picker-

ing & Co.

ing & Co.

Earl Burtlett -Paid taxes last year on \$540 of real estate. Lives on the Point Lobos road, on the line of the proposed Atlantic and Pacific Railroad. Is largely interested in land along the line. Controlled by Tobin.

Lewis Canadapham, of Maryswille- Who never will forgive Stanford & Co. for breaking up the monopoly formerly known as the California Steam Navigation Company, of which he was a large stockholder till the railroad competition to Sacramento and Marysville cut down the enormous profits of that corporation. erally opposed to everything and everybody.

Albert Dibble - Had no real estate on the assessment rolls last year. Sells goods on commission. Lives in Maria consty.

Regional O, Devo-Name not found in the San Francisco Directory; resides no-

where that we know of.

where that we know of.

Henry L. Durks - President of the Trust Company, where the Trustees of the stock to be issued by the Atlantic and Pacific in some roundabout way for the benfit of the city, expect to keep their securibles or the proceeds of them. Mr. Davis has the trusteeship of \$10,000,000 railroad stock in his eye. Of course he is opposed to the compromise, which, if voted, would deprive him and his friends of this great trust

John Jose Of the celebrated firm of John Doe and Richard Roe-Hotel boarder;

no residence

Calch T. Fay Fy, Foe, Fay, Fum He smelleth the battle atar off-even in Washington and rusheth to the rescue of this city, with the people's money which sent him to the National Capital in one hand and a commission from the A. and P. in the other. (He is the chief of the A. & P. subscription agents and runners.)
He pretends to be a disinterested friend of the city; was the Bulletin's candidate
for Governor and ran against Haight and Corham in 1867, receiving in the whole
State 3.000 votes out of 109,000, which illustrates the immense influence of the Bulletin.

A. Halladie—Wire-puller. No real estate.

John S. Hager—Attorney for L. L. Robinson and believed to be one of the paid attorneys of the Atlantic and Pacific. His late report on that miraculous corporation which he thoroughly investigated in the space of forty-right hours while on a trip through St. Lonis, has invoked the laughter and witty criticisms of all the railroad men in the country. Hager, as State Senator, was the author of the bill

giving 600 acres of land, just north of Goat Island, to a railroad company that would have built there a rival city had not Hager & Pickering sold it out to the

would have built infer a five lay had not Hage: a fixed highest for the Committee of A. D. Hatch—Dealer in railroad ties—and recently boasted in the Committee of One Hundred that he expected to furnish all the ties for the Atlantic and Pacific

when they got their \$1,000,000 subsidy from San Francisco.

Robert C. Johnson—Son of his father and hails from Sweden.

James Linforth—An Englishmen, of Linforth, Kellogg & Co.—hardware house.

Expects to furnish metals and from for all the work done in this State by the Atlantic and Pacific

John C. Merritt-Sells things on commission.

E. F. Northam-"Who lards the lean earth as he walks along." Sneath's righthand man in the Committee of One Hundred. Made much money in early days by nature man in the Committee of the Futured. Have made much moley in early agents starting runs on the bank of which he was a director, and then employing agents to buy up poor men's bank books at a heavy shave. When the causeless panic subsided, of course he collected these liabilities of the bank in full. An unbeliever in the sentiment that "honesty is the best policy."

in the sentiment that "honesty is the best policy."

Loven Pickering.—The man who runs the Call in the interests of the Greeleyites and the Catholics, the Bulletin in the interests of the Grantites and the Protestants, and both against the best interests of San Francisco. Loren was once a lion, but now none so poor as to do him reverence. Everyhody knows Old Pick.

David Meeker.—Pitts-Steven's last target; has \$4,200 of property to be assessed; voted while in the last Legislature to pass Stanford's railrond bills over Governor Booth's vetoes. But he is old and fickle, and as likely to be for the compromise to-morrow as he was against it yesterday. Consults his scrap-book on all occasions. Was one of the backers of the "Escaped Nun" on her recent appearance in this city. Is a firm Protestant this year, but may be a fierce Catholic next.

D. C. McRuer—Is out of business and has been for some time. Wants a place and has been promised one with good salary and nothing to do, in the California Atlantic and Pacific if the \$10,000,000 to that concern is voted. Was sorely disappointed in not getting another accidental nomination to Congress, believes Stan-

pointed in not getting another accidental nomination to Congress, believes Stanford was the man who pulled his leg out of the halls of Congress and logically opposes the citys best interests to get even. He is a self-made man; God Almighty is not in any way responsible for McRuer. He worships his self-creator.

G. J. McKinnan—Name not in the Directory.

Is not in any way responsible for McKner. He worships his sell-creator.

G. J. McKinnan—Name not in the Directory.

Albert Miller—There are two Albert Millers in the Directory: one a laborer the other a watchman who dwells in the Government House. Which of the two this Albert Miller really is, we have been unable to find out.

R. G. Sneath—Lives in San Mateo. Owning but \$50 of property in this city. His forte is not finance but Oratory. "Let me clasp that Cherished Hand," is one of his celebrated periods. He is an original in his way, and is capable of inventing a whole report as he did for example in partnership with Judge Hager in that wonderful document concerning the Atlantic and Pacific, in which they proved to the satisfaction probably of themselves but to no body else that the St. Louis 35th—"Parallel Company?" was a solvent and thriving corporation. Charitable people perhaps would concede that Sneath really supposed he was telling the truth when he helped to frame this report. To say the least he was a stranger in St. Louis and they took him in. But Commissioner Sneath is now no more. The Committee of One Hundred, which was the power that created him, is itself destroyed. It passed away with a great noise, and in much agony—but it is gone and with it its creature and most serviceable tool, R. G. Sneath.

R. G. Sherwood—Jeweler. Time was made for such fellows as Sherwood. He lives, moves and has his being principally from the sale of time-pieces. Had mankind taken no note of time, there would have been no Sherwoods. Were he wise, he would stick to his hair-springs, feather-wheels, dials and plated wares. A man

he would stick to his hair-springs, feather-wheels, dials and plated wares. A man whose mind is about as large as "the ring upon my lady's finger," could not be expected to comprehend the vast benefits to San Francisco a railroad bridge at Ravenswood would produce, and, therefore, very naturally he voted against the

compromise.

Levi Stevens—The Great Unknown.

Richard Tobin—Made rich by large attorney's fees, levied on poor mens' property for searching titles on behalf of the Hibernian Bank; owns a ranch at Pigeon Point, which the Atlantic and Pacific is expected to run through; is very willing, age! anxious to vote a tax of \$10,000,000 on San Francisco to improve his ranch at Pigeon Point. Had this ranch been located near Ravenswood he would have voted for the compromise.

J. C. Wilmerding-Whisky-Owns real estate valued by the Assessor at just

\$1,600.

P. L. Weaver-The last on the list of the immaculate thirty-four, is agent of a P. L. Weaver—The last on the list of the immaculate thirty-four, is agent of a Powder Company. The Atlantic and Pacific route lies across so many hills and mountains, a vast amount of blasting will be necessary in building it. Should the \$10,000,000 subsidy be voted, Mr. Weaver expects \$1,000,000 of it will be spent in buying his powder. Milton said of powder, that it was an invention of the devil. If this be true, Mr. Weaver must be one of the d—1's agents.

The aggregate property of the above thirty-four "Representative Men" amounts to less than \$400,000, according to the assessment books of last year. While the amount of property represented by the thirty-eight who voted for the \$2,500,000 compromise exceeds \$1,800,000, or more than four times the sum total owned by the minority of thirty-four. Indee Hastington.

the minority of thirty-four. Indeed, two men of the thirty-eight-Judge Hastings

and Josiah Belden—own more taxable property in this city than the whole thirty-four. And when we come to add to the thirty-eight such names as Peter Donahue, Adam Grant, Nicholas Luning. Tyler Curlis, James Lick and a score more like them—every one of whom would have voted for the compromise had they been present, we find that these men together represent TEN TIMES the property that the thirty-four possess altogether. There were two parties in the Committee of One Hundred. One representing about \$5,000,000 in real estate, the other about \$400,000 in real estate. The Bulletin, as the advocate of the \$400,000, is highly incensed that the gentlemen composing the \$5,000,000 party should dure be independent and have minds of their own, and therefore its efforts to "unlink the chain" that binds these large property holders in a common fellowship, and a united action to save San Frandisco from this \$10,000,000 steal, and at the arabiunited action to save san Francisco from this \$10,000,000 steal, and at the ametime bridge over the chasm that divides this city from the great interior by a railroad bridge at Ravenswood. No candid voter or tax-payer can long be at a loss to know which of these two parties it is his duty to follow. The party of thirty-eight are among the most solid, far-seeing business men of San Francisco. The party of thirty-four is made up of schemers, speculators, men out of employment, and impractical fellows generally. So much for the two factions into which the Committee of One Hundred has been broken.

### Leaves from a Lady's Diary.

AUGUST 24 .- There was no matinée at any of the theaters to-day, and when I went to the Mercantile Library to get a book, I found the room full of men and women, some of the latter flirting shamefully and not behaving properly at all. women, some of the latter firting snamefully and not behaving properly at an even as a strange mixture, and I fancied that some ladies who move in good society bad come on purpose to satisfy their enriosity. The men looked sheepish and awkward. They dare not offend their fast lady friends by shirking them, and yet knew that they were being watched by the stately damea at whose houses they visit. The matinée is the safest piace for a rendezvous. Henry R was there, and though it is notorious that he as the favorite of Mrs. D., who was divorced last year, yet he was making strong love to Mrs. M., who isn't half as pretty, and hesides, has a husband who is very fond of her. All men are alike, they don't care for impropriety that is safe, but prefer a dash of danger and a greater degree of wrong in their criminal acts. The old story. The more forbidden the fruit, the greater the desire to plack it.

Avg. 25.—Called on Annie B. on my way home from church. Her house was a Avg. 29.—Called on Annie B. on my, way home from church. Her house was a picture of neatness, notwithstanding her large young family. As I opened the door I heard her reciting poetry most energetically, and saw her three youngest sitting on stools with wonder stricken expressions of contenance. I could not help laughing out loud. She explained by saying, "You know I have not the slightest ear for music, so, as I can't keep the children quiet with nursery songs, I apont Shakapeare to them. They don't understand it, but it answers the purpose."

Aug. 26.—Dined at the W——s, and noticed the difference of two characters. There was that spiteful Mrs. V. who said andibly to her husband, as she entered the drawing room, "What a horrid smeil of dinner comes up from the kitchen. It positively makes me sick," whilst good-natured, curly-headed little Mr. M. came beaming in, snifting up the annistakable odor with infinite gust, declaring that it was a promise of good things. An Englishman was there, who thought it would please us if he decried his own country. He little thought how I despised him for it, and the saying of a wise man came into my mind: "Be assured when men do not love their hearths nor reverence their threshholds, it is a sign that they have dishonored both."

### The English Harvest.

Says the London Overland Mail of the 10th instant: "There has been no other Says the London Overland Mail of the 10th instant: "There has been no other instance in twenty years of so large a fall of rain in the first seven months of the year as in the present year. According to the common belief, it is beginning to look serious for the crops. Harvesting has pretty generally commenced, but day after day work is impeded by floods of rain. The corn market has already began to discount the damage, and a few more days will decide whether or not the wheat yield must be counted among the failures of the time. About the seriousness of the prospect there cannot be two opinions." Yesterday the price of California wheat in Liverpool advanced from 12s, to 12s, 4d. Perhaps this indicates continued rainy weather, a few days more of which would be apt to advance the quotation to 18s., upon which freight rates hence to Great Eristin would hardly fall to respond. In fact, we rather expect to see 25 paid.

The events of the present year make San Francisco the great point of attraction

respond. In fact, we rather expect to see 25 paid.

The events of the precent year make San Francisco the great point of attraction for all the shipping of the world, and California has raised the price of reight for all commodities over the face of the world. The Cotton of the Southern States and India, the Teas of China and Japan, the Sugars of Manila and Cuba, the Coffee of Brazil, the Wool of Australia, and every important product which must find its way to England and Europe and freights advanced because California bide high for Wheat ships. Cotton, Coffee, Sugar, Tea, Wool, and the whole list of productions, reached their destination charged with higher transportation cost, because California shakes her valide crows in the face of commerce.

California shakes her prolific crops in the face of commerce.

### Such Conduct as Those.

The conduct of Messrs. Pickering and Fitch in their attitude towards the Central The conduct of Messre. Pickering and Fitch in their attitude towards the Central Railroad Company is explicable upon no ordinary hypothesis. The ordinary motives that seem to govern business men in their relations with each other do not control the Bulletin and Call newspapers, nor their proprietors, in considering the railroad question. Mr. Pickering, being an unusually modest and retiring gentleman, and seldom if ever taking any active personal participation in matters of general public interest—always keeping his journal, the Call, prudently poised on both sides of every important question, holding the balances so evenly that no mortal can tell which side he favors—now for the first time bursts out into public notice, becomes a member of the Committee of One Hundred, takes an earnest interest in all the proceedings becomes one of the Executive Committee, turns orator terest in all the proceedings, becomes one of the Executive Committee, turns orator and makes speeches, is on his legs for frequent, earnest and even angry participation in debate, and casts reflections upon all who differ with him. The Bulletin takes up the cudgel, and, in unison with the Call, undertakes to fight the battles of the Atlantic and Pacific Railroad with all the zeal of paid advocates. The Evening Republican charges Pickering with having a monctary interest in the road, and names the amount paid for the advocacy at \$100,000 in bonds. We do not credit the charge, although Mr. Pickering was formerly a resident of St. Louis. Still we cannot appreciate or understand the zeal and enthusiasm with which those two cannot appreciate or understand the zeal and enthasiasm with which those two journals advocate bleeding our people to pay money to a foreign corporation. Pickering and Fitch know that the Atlantic and Pacific Railroad corporation is bankrupt, that its lands are forfeit, its charter forfeitable, its right of way in this State questioned, its debt overwhelming; that its capital stock is \$100,000,000 to the confederates with Fremont; that it cannot be built from San Francisco to Colorado. Not only have they thus lent themselves to a foreign corporation, but they have done everything that human ingenuity could do to injure the existing roads in this State and impede their construction. The Evening Bulletin and Call have contained articles attacking the credit of our own railroad corporations, have misrepresented facts and given false figures, for the avowed purpose of injuring their credit in foreign money markets. Mr. Pickering made a speech in the Committee of One Hundred, claiming the broad doctrine that it was right to fight the Devil with fire; that anything was honor-Pickering made a speech in the Committee of One Hundred, canning the broad doctrine that it was right to fight the Devil with fire; that anything was honorable in war, and that all was fair in destroying or crippling an enemy; moved the appointment of a committee to search country records, and spy into Stanford & Co.'s affairs, for the avowed purpose of destroying their credit in foreign money markets; and now, in every issue of their daily journals, is advocated the proposition of co-operation with the Atlantic and Pacific Road. Mr. Pickering is member of another sub-committee to canvase the town for subscriptions, and we are informed that twenty canvassers are out asking of poor men and women, working men and mechanics, to take stock in this rotten and defunct railroad corporation—anything to best Stanford, from \$5 upwards; and this in order to get strength before the people to ask a municipal subscription of \$10,000,000. In the meantime certain of our wealthy men organize to construct an independent competing road to the Colorado, and the tall and Bulletin denounce it as dishonest, as a trick of Stanford & Co., question the motives of the movers and brand them as tools, plot-ters and conspirators in the interest of the Central and Southern Pacific Railroad corporations. We ask ourselves what does this all mean! What is the motive? corporations. We ask ourselves what does this all mean? What is the motive? It is certainly not an honest desire to serve the people, because this railroad is a palpable fraud. There is something under all this that we do not comprehend—there is some ulterior reason—\$100,000 in bonds, worth sixty-eight cents on the dollar? There was a time when even this amount would not have tempted the Bulletin to advocate even a questionable enterprise. Is it really true that the Call is a bad speculation—that its boasted circulation of \$26,000 is a sham, or at least is a bad speculation—that its boasted circulation of 26,000 is a sham, or at least only a temporary issue of wrapping paper to furnish the basis for affidavit making? Is it true, as the *Chronicle* has charged, that the *Bulletin's* circulation has declined half and does not now exceed 7,000 daily, and that its business has proportionally declined, and that it contemplates reducing its price from 37% cents per week to 15 cents, in order to head off a new newspaper enterprise that is about starting in rivalry with the *Bulletin* and with ample capital? We hear all these suggestions, but they hardly account for the vindictive policy pursued by Pickering and the *Call*, Fitch and the *Bulletin*, against everybody and everything that does not favor stealing \$10,000,000 out of our municipal treasury to bein Billings Parsons and Bob. Call, Fitch and the Bulletin, against everybody and everything 'that does not favor stealing \$1,000,000 out of our municipal treasury to help Billings, Parsons and Robinson out of a bad scrape. The subscribers to this co-operative road do not intend to pay the money unless the city subscribes. No one is asked to advance the ordinary percentage of their subscriptions. Pickering has avowed his intention not to pay his subscription of \$10,000. Fitch has taken nothing. The Bulletin and Call have fairly staked their existence upon carrying this proposition before the people. It is to be the last final test of their strength. If they succeed, they will boast their triumph as illustrating the influence of their journals; if they fail, the Call will subside and the Bulletin reduce its price and become a second class evening paper.

<sup>—</sup> Since July 1st, ten vessels have been loaded at Vallejo direct for England, the same taking on at that point 257,000 centals, against eleven vesels with 250,000 centals for the same time in 1871. The number loaded at Oakland wharf during the same interval is eighteen, with 444,000 centals, against two for the same time last year, with 47,000 centals.

### Court Chat.

sequell to engine Manager and a form of the particle of the Hopper Marie Comment of the Section 1988 Secti Property of the control of the contr The second secon A STATE OF THE STA Control of the second of the s the many the second of the second of the second The first of the second of the A service of the serv Windows and the state of the same of the s Service of the servic State of the state CATE ALL REST TO A REST OF THE REST OF THE REST OF THE PARTY FOR service to a term the form of the service and the service of the service to the service and th Submir .

The state of the s

- The Emperor Francis Joseph will arrive at Pesth on the 1st of September to open the session of the Hungarlan Diet in person. Prime Minister Andrassy and the heads of Departments will meet the Emperor on the 3d and accompany him on his visit to Saxony. From Dresden the Emperor will proceed to Berlin on the 6th to meet the Emperor of Germany. At Berlin great preparations are being made for the festivities attending the meeting of the Emperors of Germany, Austria and Russia. The great day will be the 7th of September, when the Emperors of Russia and Austria will be received in the forenoon by a grand military parade; in the afternoon there will be a State banquet, and in the evening a gala performance. This will be succeeded by a torchlight procession. The entire city is to be illuminated.
- A writer in the Paris Figaro has received a pamphlet from the Emperor Napoleon, on the fly-leaf of which was the following in the Emperor's own handwriting: "Monsieur St. Geneet, in a remarkable article which has appeared in the Figaro, pretends that the crime of the Emperor consisted in declaring war when he must have known that France was not ready to support him. It would be more just to say that his error was to have counted on the correctness of returns made to him, and on the possibility of uniting ha few days the different elements of which armies are composed.—NAPOLEON."
- A significant change in the titles of the head of the Royal Family of Austro-Hungary is announced as likely to be made. At a recent Council of Ministers it was decided, subject to the approval of the Emperor, that in tuture the chief of the Austro-Hungarian monarchy and his successors shall continue the title of Imperial and Royal Majesty, but that they will dispense with that of Apostolic Majesty. This is a sign of the times for the Vatican.
- The King of Siam, who recently visited the Viceroy of India, is a very small, placid-looking man who dresses in European fashion, with knee-breeches and stockings, and lives like a European in all respects. He has a lot of wives.
- The Viceroy of Egypt, who has just terminated his visit to Constantinople, has testified his gratitude for the Sultan's hospitality by presenting him with 50,000 Henry-Martin frifes.
- Ex-Empress Carlotta is reported to be dying. All hope of her recovery has been relinquished, and the last sacraments administered.
  - Baron Lederer, Austrian Minister to Washington, is on his way to his post.
  - The Queen of the Belgians has given birth to a daughter.

### Special Breveties.

- A correspondent sends to the London Telegraph an account of a tragedy which has occurred in Switzerland. A young Polish student formed the acquaint ance of an American lady named Huez, who, with four daughters, was staying at Gersau. After a time he asked the hand of one of the young ladies in marriage, but was refused, and the family shortly afterward left for Geneva. The young lady was out for a walk in the woods with one of her sisters and an English gentleman, when suddenly the Pole appeared and presenting a revolver first shot Miss Hues and then attempted to blow out his own brains. Both he and his victim are not expected to live. Miss Hues was shot in the head, and the bullet passing through her temple and striking her tongue, stopped the power of speech. Intense excitement was caused at Geneva by the news of the tragedy.
- Strange conduct this in church. At a recent Sunday morning service a well-dressed young lady was observed in the body of the Chapel Royal, Savoy, freely using an open glass, staring unflinchingly at various people in different parts of the church. This annoyance was endured until the preacher, the Rev. H. White, ascended the pulpit to deliver his sermon. The reverend gentleman speedily noticed the obnoxious open glass fully directed towards him, and the officence being repeated several times he abruptly stopped his discourse, and requested the offender either to desist or leave the church. The young lady, somewhat abashed, at once quitted the building, much to the relief of the preacher and his hearers.
- The Italie, Turin, says the following scene occurred a few days ago at a railway station: "On a hitter cold day a millionaire applied at the ticket office for a third class ticket. 'What!' exclaimed the officia', who knew him, 'you, sir, take a third class on such a day as this?' 'Why, I must,' was the cool reply, 'since there is no fourth class.' 'I beg your pardon,' answered the official, handing him a ticket, 'but there is—here is one.' The man of wealth hastily paid for it, and rushed forward to take his place. On the doorkeeper asking to see his ticket, the traveler produced it, but was rather taken aback on being told that the ticket would not do for him. 'And why not?' he exclaimed. 'Why, sir, because it is a dog ticket!'"
- A very novel present was lately made to a popular actress at the Havana. It was on the occasion of the lady's benefit, and le senorita had been called before the curtain to receive the vociferous plaudits of the house, which rose en masse as she appeared. In the midst of her triumph there emerged from the stage-box a handsome negro boy, dressed in a gorgeous livery of blue and silver, and bearing in one hand an exquisite bouquet, and in the other a card, on which was written: "Madame, deign to accept the bouquet and the holder!"

- Driven from Germany, the Jesuits seem to have fallen on their legs in Holland and Belgium. The Count of Hoensbrock has given to them his estate of Blyenbeck and Hoensbrock, in the province of Limbourg. The Duke of Arenberg is negotiating for a large estate in the neighborhood of Ghent for the same purpose. There seems no peace for the Jesuits in any part of the world at present, and a general rush at them is made with a cry of "Turn them out". The Guatemala Government has decreed to extinguish the company of Jesuits in that country, and to confiscate their properties for the public benefit, and has also agreed with San Salvador to expel the Jesuits from Nicaraguan territory.
- The question of the cost of living is at present agitating the minds not only of political economists, but also, to a very remarkable degree, of prudent women. The increase in prices of certain articles of food in England has of late caused some alarm, and in a few instances strikes against the butchers have been organized in the northern counties of England. In Scotland, although there has been a rise in the price of articles of food, it does not affect the Scotch people so much as their Southern neighbors. In New York, also, the high price of food is beginning to affect the poorer classes.
- A telegraph clerk in London who was engaged on a wire to Berlin formed an acquaintance with and an attachment for a female clerk who worked on the same wire in Berlin, that he made a proposal to her, and that she accepted him without having seen him. They were married, and the marriage resulting from their electric affinities is supposed to have turned out as well as those in which the senses are more apparently concerned.
- Henry Mason, of North street, Peckham, whose birthday we have more than once recorded in the South London Press, died on Monday in his 106th year, and was buried at Nunhead Cemetery on Saturday. Deceased retained all his faculties to the last, and left smokers take courage—smoked his pipe until within a few days of his death.—South London Press.
- Miss Louisa Atkins, holding the degree of M. D., after five years' study at Zurich, has been appointed resident medical officer and secretary to the Birmingham and Midland Hospital for Women. This is the first instance on record of a female medical practitioner being made an officer of a public hospital. This appointment cannot fail to give great eatisfaction to the advocates of Women's Rights.
- A dispatch from the Litchard Observatory, at Clinton, New York, says that another new planet was discovered on the night of the 23d in-t., making 12d of the group of Asteroids. It is a very bright star of the texth magnitude, and its position an hour after midnight was in 22 hours, 21 minutes, 22 seconds of the right ascension, and in 70 degrees, 18 minutes, 30 seconds of the South Declination.
- The Berlin Spener Gazette, the favorite organ of the Emperor William, asserts that the cardinals of the Vatican have already elected Cardinal Patrizzi as successor of the present Pope, and that he will be proclaimed Pope as soon as Pius IX. has breathed his last. The cardinals are said to have adopted this unusual course in accordance with a secret bull issued by Pius IX. in 1870.
- The Prior of Beltas, in Portugal, recently called the Emperor of Germany, in a sermon, "A monster in human shape, and the greatest thief of modern times," Thereupon Prince Bismarck sent word to the Portuguese Government that the abusive priest must be deposed and imprisoned, which was done accordingly.
- The German Government has informed the ladies of Alsace and Lorraine that the brothers and lovers of such of them as are most violent in their demonstrations of hostility to Germany will be selected to serve in the German army after October 1st.
- St. Jerome in his retreat at Bethlehem endeavored to cure his mind of its hankering after classical literature by submitting his body to repeated flagellations, the very method which in our schools is applied, quite as ineffectually, for the opposite purpose.
- In Paris, the fashion of ladies wearing high-heeled boots and shoes is passing away. As the writer very sensibly states, this fashion had nothing to recommend and everything to condemn it. Elegance was not preserved nor beauty ensured.
- Women work at bricklaying in Austria, and we are told that it is common to see them carrying hods of bricks and mortar up long ladders. And this is what it will end in here, if women persist in their demand for women's rights.
- Some Jesuits visited Prince Bismarck recently at Varzin. They wanted to know on what conditions they would be allowed to remain in Germany. The chancellor's laconic reply was, "On none."
- Mazzini, after all, died a rich man. His property has been appraised at nearly four hundred thousand lire. It is believed that he spent during his lifetime nearly the same amount for revolutionary purposes.
- Her Majesty's ship Daphne will shortly proceed to the Malay Archipelago on an expedition against the pirates, who are again getting troublesome in that direction.
- A sign in Mission street, San Francisco, is inscribed: "Dr. ——. Teeth extracted, 50 cents. Children, 25 cents."

### The Faithful Steersman.

Many a noble deed of valor Forever lives in story: But none, I ween, with purer ray
Than the brave steersman's glory.

A gallant bark on Erie's waters At noon is gaily sailing, Half a thousand laughing idlers The keen, free air inhaling.

And ever and anon the captain Cries—"Steersman, can you tarry?"
And tainter and yet fainter shouts The brave man's answer carry.

On, on, they speed—the beach is nearing By fire and smoke surrounded, He holds his post-his eye is fixed. And now the prow has grounded.

But whence that cry so strangely piercing, Madly they leap ashore—the hundred Amaze and fear combining? [vapor, Who from the flames are flying, Whence those clouds of dense, dark The flames that madly play around Those ruddy flames upshining?

The helm where he is dving:

Calm at the helm his station.

Oaths, prayers resound, and wild entreaty, He who endured the stifling torture, Tears, wails, and execration— Who neither droop'd nor tired; The while one man alone is keeping Who saved others, not himself, Who saved others, not himself, And, saving them, expired!

-Lady Georgiana Fullerton.

### Diamonds.

An associated press dispatch from London Aug. 30th gave the substance of a "card" addressed to The Times by a respectable firm of dismond brokers, mentioning that an American had bought from them some time ago a parcel of rough diamonds without regarding their quality. The Times is represented as connecting this purchase with the American diamond discoveries, and as expressing surprise that Meesrs. "Latham, Barlow and McClellan" should have become connected with the enterprise. We will venture to doubt that The Times used the names of those gentlemen or of any gentlemen in this connection. It is not an unsafe prophecy to say that when the issue in question shall be received, it will appear that these names had been interpolated in the dispatch in the United States. But to-day the "city article" of The Times will make mention of the fact that parties interested in the American diamond discovery have been communicated with by cable, and whatever significance may be attached to the diamond purchase in that city, it cannot throw doubt upon the reality of the American discovery. The circumstances attending the gathering of these stones rendered a "salting" of the ground impossible; and besides, at least one diamond in the collection could not have been sold by the London brokers without special mention; and upon inquiry they will certify to having had no such stone in their possession. All of which will not appear in the dispatches of the California Associated Press.

It would be inferred from some of the comment which one hears, that the public had acquired some rights in the time that believe to the dispatch of the cannot be a constituted by the condon discoveries of which they are defeated by

had acquired some rights in the diamond discoveries of which they are defrauded by had acquired some rights in the diamond discoveries of which they are defrauded by the parties who decline to give their locality. It may prevent some confusion of thought if the public will recall the fact that it has not adventured a dollar in the real diamond discovery, and has not been invited to. The persons who have adventured dollars are satisfied with their business. When the public shall also become interested, then the reports of "finds," etc., will become really some of its business—which at present they really are not. The public takes a natural interest in a discovery which promises to be of national importance, and of grand personal advantage. But, for a season, it is to be borne in mind, that the interest is that of an "outsider," who is in no way wronged should the whole business prove delaying.

delusive.

### Recall Them.

The people of this city have been accused of helding queer and rather liberal views on the question of morality. Our Eastern friends have expectorated quite freely on our loose morals, and hold up their hands in holy horror at the free and easy style of doing things in this Paris of the Pacific. Let us admit that we are no longer tortured with the iron-clad morality of the Puritans, that men and women have not their reputations picked to pieces by the vile tongue of scandal, and that the doctrine is, "Mind your own business and i'll mind mine." Yet with all this generosity the people of San Francisco are unable to relish the importations of Eastern morality, who come here with their viliainous free-love doctrines. The he and she reptiles who flourish at the East, by pandering to the high-toned descendants of the Puritans, are not at all appreciated by us. Their open and avowed doctrines of shame do not find a response in the hearts of this community, notwithstanding all the slanders it has had to endure under this head. The East should call back its free-love apostles, for this community is already nauseated with them. with them.

—It is stated that the evidence at Marshal Bazaine's trial, now progressing in Paraine, shows that traitorous correspondence existed between Bazaine and the Germans prior to the surrender of Motz.

### Excunt.

The Committee of One Hundred Wednesday accomplished, so far as its in their power the object of their organization—the "defeat" of the cost Island grant for rail-road purposes. The "rail-road compones of stranged between the committee and its collects of the rail-road company involves, as its carried power, but the committee and its collects of the rail-road company involves, as its carried power, but the company seals of the said for terminal purposes. It to character the backets the law by a beside at Ravenswood and stable in the formacies at the said for terminal purposes. It is commented to the said on the collection of the fall ment of the object down to be present in previously. The company also absorbers its claim of the certificity for \$1.50 minus. In the case of the collection, the result of which is deputed and as consideration for the formaling, the case to very far \$1.50 minus. These sure the coding features of the contract to gets take with the cells of the contract to gets at the coding features of the coding

The Committee of One Hundred has hardly received fair treatment at the hands of the public press. We imagine that the body of their fe lower to us have a juster appreciation of their labors. The committee was arganized at a moment of high appearant on of their moors. The committee was organized at a meadment of high perpetur or retenuent, when it was feel that some energent measures for the presection, of pub is a ferrests were on led for. The individual's comparing to commended the central confidence of the pub is. They entered with zero spent a work which has consumed four months of persevering labor. About one-half of those who at first compassed the committee afterwards fell was a leaving the part of the remainder. These, in turn, resigned it to an Experience Committee, which was furnished in the confidence of the members were men of viscourty and of the members were men of viscourty. part informate in the composition. Some of the members were men of vis contry views; nearly all backed personal experience in the matters line were called on to deal with more than one were then whose attractions and account realized them for intercourse with gentlemen, and some, perbass, has their measured them for intercourse with gentlemen, and some, perbass, has their measured the exception of the source of personal interest. But the crowning masforters of the Executive Committee was that it embraced men who had become committee to an indictionable of the exception of the experience of the executive Committee and who had become committee forward felt bound to struggle tor the success of that measure, which even they are not personally all the proposed to abandon. Most of the trouble which the Committee has lad, leading the measurements of words and the measurements of exercise and the proposed of the committee of the commit prepared to amount of the community of the manuscript of the mass can't passage of words and the practice of paramentary trackers was checommand, have tended to weaken the influence of the body with the community, has arisen from the membership or the "Missouri party. But, not will standing a Clis, the Executive Committee of the One Hundred and give to the public an exhanst ve expose from of existing runnord problems. They can make from the discussion freedoms or impracticable suggestions like that for a bridge across the has at Alameda Point. And a stundy and ta tuful in normy, enduring the billingsgate of at east one backguard and folling the ingenuity of par amentary pettifor 12, and this a negot at a contract to accompash the object of the committee 8 existence—the defeat of the Goat Is and grant. If this object he worth accomplishing unless the who era road agolation has been a mistike—unless the rockless personality which has been characteristic of our daily press for months past is grate one as well as dis\_racefai then the members of the Executive committee place done a good work and deserve the public grait for have done in the laborate dearnests and honests for the public weal, and wilcout for or reward. In this few have set an example of public weal, and wilcout for or reward. In this few have set an example of public specific production of the first specific dearness and undependence which will be of permanent married cleed and value. to the community. Notwithstanding, therefore, the efforts that have been and will continue to be made, to be attle the work of the Con natter by those who are chagritted at its result, the fact remains that that work and its result, the tax-result of comprehense are a saccess. It we may be permitted an expressive consquarkism—"That's what's the matter."

Oyes.' Oyes.' Oyes.' Sea'ed proposals are hereby invited, at the office of the Town Curv. for the densery of the bodies dead professed or the Fab Commission is of the State. For that they are barmanes, uncludy see in its 10 temper of course on policy, and answory in our sight. Long has been our sufficience, and our pastine its as a web-ased garder, and our net made in which up to the externs of our, was Witness the who call is aughter of our innocent; so men, their obtay begard the discks of the river storages. Yea, and at the spanning season, also an pasting resources. Let thus trumwards of size, this transformance of effect momentally, thus three-leaded hybria of salary absorption, be booked, by the weed stanced gives, have did into the market-place, and left to die to every from an some fisherman is block. Yea, and before their spanning time, lest the earth be overrun with the fant brood of presonancem eaches. We grown and trivial under this affliction. Show we onger suffer that span direct the hards of the six monanties six Sect. So the Town Creek place are from a possine, production of the light of worthwest, and it would be manifed our measures of the free for commissioners.

### Our Reputation Abroad.

The London Mining World, in its issue of the 10th, gives prominence to an article in which the following sentences occur: "There are, unhappily, several combinations of unprincipled men in the States, who occupy themselves in the larentive business of concecting mining schemes for foreign markets, especially for the English market, and they have hitherto reaped a tolerable harvest. It hight be thought that even the most obtuse reader of some of these highly-colored or wholly false representations, must at once see into their real character, to avoid the trap laif for them. But it is not so. Millions of money have been drawn from the pockets of the people of this country, upon promises to employ it in the working of mines, the riches of which were absolutely incalculable for their extent; but the money has been swallowed up by men of the like kidney with Fisk and Gould, while the mines, whose character they portrayed in such attractive colors, have been as barren and unproductive as was the Eric Railrond. The mining schemes referred to can come only from California, Nevada, Utah, Idaho and Colorado; in fact, the schemes which a reader of The Mining World will understand, are from California, Nevada and Utah. The unprincipled individuals who are represented as making prevy of unsuspecting Englishmen are among ourselves or immediate the English market, and they have hitherto reaped a tolerable harvest. California, Nevada and Ctan. The unprincipled individuals who are represented as making prey of unsuspecting Englishmen are among ourselves or immediate neighbors, and, therefore, within range of the personal acquaintance of readers of The Financial Postscript. In point of factthe Pacific coast mines which have been sold on the English market have all been brought forward by one party or another out of about a score of individuals, all told. These individuals are well known in San Francisco, and will be identified by the reader. Bearing them in mind, he will know that the assertions in The Mining World that they have drawn "millions of money —meaning millions of pounds sterling, and therefore ten millions of dollars at the least—from the British pocket, are untrue. But more than this, the terms on which these Pacific mining properties have been sold in Loudon, are notorious; the terms of each bargain have been canvassed on California street; and a brief statement of the whole business is that more than one-half of the total sums paid statement of the whole business is that more than one-half of the coust sums paut by the British public has gone into the pockets of the British middle-men—the well known London Mining Syndicate. One instance may be mentioned in which a sound but small property was offered to the syndicate at a moderate price, when they clapped on £60,000 as their own fee for putting the business to the public, and actually received more in this commission than the selling price of the mine. The they clapped on £60,000 as their own fee for putting the business to the public, and actually received more in this commission than the selling price of the mine. The Pacific coast will hereafter suffer for these peculiarly British operations. Flaming prospectuses, got up by the London promoters of the schemes, promising impossible results, will be ranked as Yunkee falsehoods. We have sins enough of our own to answer for without this cousinly burden. Now these dedusive prospectuses are leginning to be exposed, and The Mining World falls to calling "stop thief!" after men who are far enough away from it, but has never a word to say about the individuals nearer home who got the stockholders' money, and who, in fact, not only "put up the jobs," but themselves "put them through." Is it unreasonable to suspect that this indignant clamor against "American vendors "whos sold the mines, may be designed to turn away attention from some British vendors." sonance to suspect that this indiginant channer agains. "American vendors" who sold the mines, may be designed to turn away attention from some British vendors who sold the stock and its holders? The same article in The Mining World has some remarks in another place, inculcating a truth which cannot be too ofven urged, and which we here quote: "There are people here (it says) whose looved gambling is so strong that they prefer a heavy risk, with a promise of 1,000 per cent., "This is not be somewhat." to a more moderate undertaking. This is not so reprehensible in the case of a man who can venture a sum of money, and lose it without inconvenience to himself or his family. But it is highly criminal in one who stakes what is his living, or, at least, what will be a serious loss to his family."

<sup>—</sup> Now comes an idiotic newspaper man and wants us to make Miss Salle Smart a School Director. He claims that she has developed the proper qualifications for the position: she has lobbied in the Legislature, she has scribbled for his paper, she has delivered a woman-suffrage tirade. For all and several of these infquities we would, if Sallie were our daughter, bend her over the paternal knee and administer to her a sound spanking; she isn't our daughter, however—more's the pity, for her own sake—and we refrain from visiting upon her the merited punishment. But we give her this fatherly advice: Sa'lie, you ridiculous, misguided young schoolmarm, quit your nonsense, attend to the A, B, C's of the brats committed to your care, keep your nose clean, and keep your name out of the papers. Then some one of the editors of the Post may smile upon you and take you to his bosom, and you will obtain a precarious livelihood by preparing his crackers and cheese, potatoes and onions thenceforth.

<sup>—</sup> Some sensation has been created in Inyo county by the "jumping" of the Eclipse mining claim, belonging to an English Company, on which some thousands of pounds have been spent. The jumpers take the ground that the Eclipse Company, being composed of aliens, cannot hold their claim under the laws of the United States. But the title to the property was acquired by the company through I. Friedlander of San Francisco, a citizen of the United States, the price paid therefor being stated at \$250,000. The jumpers will have their labor for their pains.

### Rossini and Bull-ini!

California is a queer place! Our social, like our geological strata, is mixed, and puzzles the student whose researches have been pursued in the time-honored grooves of old countries. At the Bay District Agricultural Haces and Cattle Show, all classes sat good-naturedly in close proximity. The representatives of all phases of society behaved themselves equally well. The demi-nande were plentiful, and no one seemed to think it catching. All seemed proud of the motherly marte hand giddy coles; the proud, high-stepping sites, "whose necks are clothed with them clean little" haddencys, "with their deer-like heads, black noses and great, lovely eyes; the Siberian-over-coated sheep; the fat, grunting little porkers, and—What! Listen a moment.' Amid the shouts of the "pool" anchoneer, the gay laughter and shrill circ of "Peanuts," came grateful and strange as a fragrant breath, wathing pastoral sweets far into the city's crowd and din—Cujus Animam. From the Presidio's superb band. Stabat Mater on the race-course! California, all over!

### More Precious Stones.

The "Original Diamond Discovery" Company has received a consignment of precious stones from the expedition recently fitted out by them to proceed in quest of diamonds. The parcel embraces near twenty pounds weight of stones, which are classed as rubies, garnets, sapphires, emeraids, opals and—diamonds. The emeraids and opals are probably a mistake. But about the genuineuess of some of the other stones there is no doubt. The crystals, believed to be diamonds, are probably such. By the time we go to press their identity will be determined. If genuine, their value will be considerable. The value of the other stones will also be approximately arrived at before to-morrow. The prospecting expedition located 640 acres of land, and reinforcements will be promptly sent forward if the stones turn out all right. The proprietors in the Original Discovery Company are more than satisfied with the first fruits of their enterprise. The stones are at the office of B. F. Sherwood & Co., Stock Brokers, California street.

#### Plunket et al.

For invincible stupidity, reckless disregard of common sense, pitiable perversity, and utter idiocy, commend us to the Board of Education. The function, and insensate and ridiculous public has made Directors of our Schools refuse to indexe an invitation to the pupils of the Girls' High School to visit the Art Gallery, for fear their morals may be perverted! O, affectation of unfelt delicacy! O, boundless and fathomicss chuckle-headedness! We will go among the Joss-houses and bring out the carved images, we will go along the streets and gather the wooden Iadians, we will visit the churches and assemble the preachers, we will enter the toy-shops and buy up the jumping-jacks; and we will declare these the Board of Education: for even among these will be found more capacity and wisdom than is possessed by the present remarkable Board. Our School Directors objecting to the Art Gallery! O, arrogance of assimine assumption, essence of amazing chique! Omith beat Martine; O my eye and Betty Martin!

There's a "bue and cry" from the diamond fields, The miners arrive from each quarter, In every stone which the gravel yields, The bue forms the the color, the cry makes the water.

Men of genius see the beauties of nature with light and warmth, and paint them forciby without effort, as the morning sun does the scene he rises upon; and sometimes communicate to objects a freshness and lustre that is not seen in the creations of nature. Great painters have produced images that left nature far behind. Great photographic artists give us striking and delicately to ached pictures that challenge our admiration. This is illustrated every day at the gallery of Bradley & Rulotson. The splendid portraits of beautiful women and noble-looking men there exhibited attract crowds of gazers. Bradley & Rulofson have an elevator, and they have elevated their art to the highest point of perfection.

### California Advertiser.

Devoted to the Leading Interests of California and the Pacific Coast

The News Letter is the most reliable organ representing the moneyed and substantial interests of the City of San Francisco and State of California; its Banking, Real Estate, Commerce, Insurance, Mining and other Stocks. It reflects the times as they pass: men, manners, literature, theatricals and follies. It is piquant and pungent by turns—

WISE, WITTY, GRAVE, GAY, LIVELY AND SEVERE.

THE

### Mentor, Whip and Mirror of the Town

The Marked Superiority of the Articles

Appearing in the News Letter to those which have the run of Newspaper and Magazine Literature, justify their appearance in a more permanent and referable form—in the California Mail Bag. The selections throughout are judiciously made: all the articles are clear and vigorous, and their substance is such as to imply in every instance much reading and vigorous thought. The utility of the acts of the men of progress are herein made clear, and the indomitable tendencies of the people inhabiting the Pacific Coast made most plain.

SOLD BY ALL BOOKSELLERS AND AGENTS

LOUIS AGASSIZ.

### AGASSIZ.

AGASSIZ, LOUIS JOHN RUDOLPH, was born May 28, 1807. He is of French descent, his family having been among the Huguenots who were driven from France by the revocation of the edict of Nantes. They took refuge in the Pays de Vaud. For six generations the lineal ancestors of Agassiz have been clergymen. His father was pastor of St. Imier, a Protestant parish in the ancient bishopric of Basel. His mother, who still lives in a vigorous and honored age, was Mademoiselle Rose Mayor, the daughter of a physician in the Canton de Vaud. The father, having left St. Imier on account of the severity of the climate, and taken charge of the parish of Mottier in the valley between the lake of Neuchatel and the lake of Morat, Louis was born here. His early education was conducted under the eye of his mother, a woman of uncommon intelligence and talent. At the age of eleven, he was sent with a younger brother to the gymnasium of Bienne, where several years were passed in the study of ancient and modern languages, diversified by the amusements of fishing and collecting insects. In the meantime his father had removed from Mottier to the little town of Orbe, at the foot of the Jura; here, during the vacations, the student's attention was first drawn to the natural sciences, under the influence of a young clergyman named Fivaz, who is now himself in the United States. His studies were first directed to plants. Having studied four years at Bienne, Louis entered the college (L'Academie) of Lausanne, where he passed two years. Having chosen the profession of medicine, he went to Zurich in 1824, where he remained two years in the medical school. From this school he removed to the university of Heidelberg, where he continued his medical studies, devothimself chiefly to anatomy and physiology under Tiedemann, zoology under Leuckart, and botany under Bischoff. He remained here until the Autumn of 1827. At this time he entered the university of Munich. which had recently been reorganized. Among the eminent men assembled there, were Oken, the zoologist; Martius, the botanist; Schelling. the philosopher; Dollinger, the founder of modern physiology, not to mention the great teachers in other departments. With all these distinguished men, Agassiz formed intimate friendships. He studied the organization of plants and their geographical distribution, with Martius; he lived in the house of Dollinger, with whom he studied the embryonic development of animals; he was intimate with Wagler; with Oken he discussed the principles of classification; with Fuchs he studied mineralogy; and for four successive years he attended all the lectures of Schelling on philosophy. While at the university of Munich, Agassiz was the leading spirit in a select circle of young men who met to discuss scientific subjects. This society was called the little academy, and so interesting were the lectures and discussions which were held there, that the professors were glad to take part in them. When Don Pedro of Brazil married an Austrian princess, the Austrian and Bravarian Governments seized the opportunity of sending to that country a scientific exploring expedition. The naturalists of the expedition were Martius, Spix, Natterer and Pohl. Agassiz, still a student, had already published a few special papers. On

the return of the scientific corps, Martius occupied himself with the publication of his great work on Brazil. The zoological portion of the work was intrusted to Spix; but he had not completed the work at the time of his death. Martius immediately selected young Agassiz to elaborate the ichthyological part of the work, upon which very little had been, done. It was published in Latin, in a folio volume; and the manner in which Agassiz accomplished the task, placed him at once in the foremost rank of naturalists. These studies and labors diverted Agassiz from the profession of medicine, to which he had been destined by his parents. The allowance he had hitherto received from his father, on which, moderate as it was, he had not only subsisted, but had employed a distinguished young artist, Dinkel, was now withdrawn. Agassiz then applied to Cotta, whose reputation as a publisher and a man of the most enlarged views, is world-wide. This distinguished man, struck by the value of the materials Agassiz had collected for a "Natural History of the Freshwater Fishes of Europe," and no doubt impressed with the genius of the young naturalist, enabled him by a timely supply of funds to go on and complete the work. This was his second great undertaking. Meantime he presented himself as a candidate for the degree of doctor of philosophy, which he took at Erlangen, after passing a very severe examination with distinction. In the same year he took at Munich the degree of doctor in medicine, on which occasion he maintained the superiority of woman, in a Latin dissertation upon the thesis, femina humana superior mari. The great work on the fresh-water fishes was advancing. After the double examination for degrees, Agassiz visited Vienna, where he prosecuted his studies in the museum and devoted himself especially to the study of the fishes of the Danube. While in that city he became acquainted with the leading naturalists, and particularly Fitzinger. While studying living fishes, his attention was drawn to the fossil species, found in the fresh-water deposits of Oeningen and of Glaris in Switzerland, and of Solenhofen in Bavaria. Immediately after the completion of the work on the fishes of Brazil, he commenced his researches upon the fossil fishes, and devoted seven years to the study before commencing the publication. This was continued through ten years, and was brought to a close in 1844. In the course of his preparation for this work, Agassiz visited the principal museums of Europe, accompanied by a skillful artist; and so great was the interest felt universally in these researches, and the confidence which the author inspired, that he was allowed to take with him and keep for examination and comparison the most valuable specimens of more than eighty public and private museums, some of which he was permitted to retain from five to ten years, in order the better to compare and describe them. Agassiz was enabled to visit Paris and to prosecute his researches in the collections of that capital, by the most distinguished act on the part of a clergyman and friend of his father, Mr. Christinat, who at a later period visited Agassiz in America and passed some years at his house. This gentleman, at the time alluded to, had just come into possession of a small sum of money, which he voluntarily offered in aid of his young friend's pursuits. Agassiz at once became acquainted with Humboldt, who was then residing in Paris, and with Cuvier, the eminent naturalist, who had just commenced his work on fishes. The drawings exhibited to him by Agassiz so delighted the illustrious philosopher that he offered to relinquish to him all the materials he had himself collected; and from that time to his death he cherished a warm friendship for the young Swiss naturalist, and received him in his

family on the most intimate terms. In his investigations of the freshwater fishes, the rivers and lakes of Europe were thoroughly explored, in order to compare those of the different water basins, especially the Rhine, the Rhone, and the Danube, with their tributaries. These investigations had mostly been made while Agassiz was still a student in Heidelberg and Munich, during the vacations, when he traveled on foot over the whole of southern Germany and Switzerland. Some time after the death of Cuvier, 1832, Agassiz returned to Switzerland, on the invitation of citizens of Neuchatel, where preparations were making to reorganize the college. He received the appointment of Professor of Natural History in that establishment the same year, and immediately began to make preparations for the publication of the work on which he had been occupied so long. He also extended his researches to other departments of zoology. In 1833 he was enabled, by the liberality of Humboldt, who had been his devoted friend since the commencement of their acquaintance in Paris, to begin the publication of the great work on the fossil fishes. This is in five volumes, with a folio atlas, containing about 400 plates. About 1.000 species are described and figured in the natural size. with the colors of their beds, and there are short indications of about 700 more. The discovery and description of so many new species led to the recognition of new types, and an entirely new classification, based chiefly on the characters of importance in the fossils. We have not space to give the details of the new classification. But we may remark that the great generalizations to which these researches led have stood the test of time, and have been strengthened and extended by the researches of a quarter of a century. The geological results of these investigations were remarkable. The relative ages of the formations in which the fossil fishes were found, were more clearly established by comparisons of their structures. Moreover, the fossil species differ from those now living, and differ in different stages of the same formation, as well as in different formations, leading to the conclusion that our globe has been peopled by a series of creative acts; and, as peculiar species occur in certain regions and not elsewhere, that these creations were not only successive but local, each having assigned to it a natural limit, man alone, and the animals associated with him, forming the exceptions to this last general law, From this general survey Agassez drew several very important conclusions respecting the relation of the creator to the universe. The existence of a superior intelligence, whose power alone could establish and sustain such an order of things, he considers to have been established by rigid demonstration, and on a truly scientific foundation. He shows that species do not insensibly pass into each other, but each has its appointed period, and is not connected, except in the order of time, with its predecessor. "An invisible thread, in all ages, runs through this immense diversity, exhibiting as a general result the fact that there is a continual progress in development ending in man, the four classes of vertebrates presenting the intermediate steps, and the invertebrates the constant accessory accompaniment. Have we not here the manifestation of a mind as powerful as prolific? the acts of an intelligence as sublime as provident? the marks of goodness as infinite as wise? the most palpable demonstration of the existence of a personal God, author of all things, ruler of the universe, and dispenser of all good? This, at least, is what I read in the works of creation." Such is the appropriate tone of the closing part of the chapter on classification. Professor Agassiz visited England several times, and was everywhere received with respect and en-

thusiasm. The universities of Edinburgh and Dublin conferred on him the degree of LL.D., and the corporations enrolled him among their citizens. The most eminent persons gladly welcomed him. He was the guest of the late Sir Robert Peel and Lord Egerton, afterwards Lord Ellesmere, and Sir Philip Egerton honored him with a friendship which continues to the present day. Of the eminent naturalists, Buckland, Owen and Sir Roderic Murchison should be enumerated among his friends. In 1834 his "Prodomus of the Echinoderms" appeared, which was soon followed by his monographs on that class of animals, in the preparation of which he was aided by Professor Valentin and Mr. Desor. To facilitate the study of the echini, Professor Agassiz caused plastercasts of his collection to be made, numbering over 500 species. Monographs on living and fossil shells and upon the tertiary shells considered as identical with the living species, were also published by him about the same time. During this period he continued to collect materials for his "History of the Fresh-water Fishes." He formed a lithographic establishment at Neuchatel, where the plates for the atlas of this work were executed, and the prints struck off under his own eye. The great expense of the work, however, exhausted his pecuniary resources, and he not only found it impossible to continue it on the original plan, but it entailed upon him a heavy debt, which cost him the labors of many subsequent years to pay off. In the elaboration of some portions of the subject he was assisted by Mr. Vogt, then distinguished for his zeal and attainments in zoology, since less favorably known as a political agitator, and finally as a thorough going atheist. The publication of the "Fresh-water Fishes," in 1839-'40, was followed by the Nomenclator Zoologicus, containing an enumeration of all the genera in the animal kingdom, with the etymology of their names—the names of those who first proposed them. the date of their publications, etc. This work was founded upon registers, in which Agassiz entered the names of the animals as they occurred in his studies. They were then methodically arranged, the nomenclature of each class being submitted to the revision of naturalists distinguished for their investigations in each special branch. This was accompanied by another extensive and important work, the Bibliothera Zoologie et Geologie. containing a list of the authors mentioned in the former, with notices of their works. This work, published at the expense of the Ray Society in England, has appeared since the author's residence in the United States, with emendations and additions by H. Strickland and Sir W. Jardine, in four large octavo volumes. From the year 1836 to 1845, Agassiz spent his Summer vacations among the Alps, chiefly engaged in the study of the glaciers and the geological phenomena they produce. The indications of their greater extension in a former period, and the traces they have left upon the surface of the earth, were carefully followed through the countries adjoining Switzerland, as well as England, Scotland Ireland. Before him, Saussure, Venetz, Charpentier and others had written upon the glaciers and the distribution of bowlders over the valley of Switzerland. Saussure's theory of their distribution referred it to the action of water. The idea of glacial agency in transporting bowlders appears to have originated among the chamois hunters, who had noticed the fact that every year huge masses of rock were moved by them from their original position. The idea adopted by Venetz, and extended by Charpentier, who explained the distribution of the bowlders throughout the valley of Switzerland, and on the slopes of the Jura, by the extension of glaciers beyond their present limits in a former period. In 1836, Agassiz visited Charpentier, and accompanied him to the glacier of the Diablerets, where he saw the actual transportation of the bowlders by the glacier, and the rounding and polishing of the rocks at its sides. These observations removed his former doubts. It was obvious to him at a glance that such an accumulation of ice as would extend the glaciers from the Alps to the Jura, covering the valley of Switzerland to the depth of more than 2,500 feet, would require a depression of temperature which must have been widely felt, producing similar phenomena over other portions of the earth's surface; that the north of Europe must have been at the same time covered with a similar sheet of ice. Agassiz first announced his glacial theory in a discourse delivered before the Helvetic Society in 1837; but in order to investigate the facts more thoroughly, he first visited most of the Alpine glaciers, and then established his headquarters on the glacier of the Aar, where for eight consecutive Summers he continued the researches which formed so large a part of his scientific labors in Europe. These researches are embodied in two works. The first, entitled Etudes sur les Glaciers, published in 1840, with plates, contains a description of the glacial phenomena and a statement of the author's views of their former extent. The second, published at Paris in 1847, under the title of Systeme Glaciaire, contains an account of the investigations made during his last five visits, 1841-'45, upon the mode of progress of the glaciers, and is accompanied with plates and topographical charts on a scale of 1-10000. An excellent and graphic account of these visits and researches among the glaciers, is given in a little work by his companion, Mr. Edward Desor, Excursions et sciours de M. Agassiz et de ses compagnons de voyage dans les glaciers et les hautes regions des Alpes. It has been also translated into German. His description of the ascent of the Jungfrau in 1841 is the most curious and interesting. Since his residence in the United States, Professor Agassiz has occupied himself with investigations of the distribution of the bowlders and the smooth surface of beds of rock over the North American continent, which he also attributes to the action of glaciers, extending from the north. The results of these investigations are chiefly recorded in the volume containing an account of an excursion to Lake Superior. Special and technical as most of these works appear, an attentive student will perceive that each was undertaken with reference to some general question, and made a test of the value and soundness of some general principle. The papers and works upon echinoderms aimed at a revision of the classification of these animals, and a better appreciation of their structural differences from the other types. The monographs upon shells, living and fossil, were prepared with the view of testing the range of distribution of species in past ages, and the limits of their specific characters. The researches on fossil fishes, thus far the greatest and most important work of the author, are intended to show the relations of living and fossil species, and their embryonic development in one of the most extensive classes of the animal kingdom, the existence of which upon earth may be traced back to the earliest periods in which animal life was called into being. The investigations upon the glaciers were called forth by a desire to connect the history of the physical changes our globe has undergone with the phenomena exhibited by the development of the organic kingdom. Everywhere we discover in his works a tendency to the most extensive generalizations, while in every instance the knowledge of the facts, a careful study of the most minute relations of his subjects, has been his constant aim in all his investigations. Mr. Agassiz found time, amidst his numerous labors, to superin-

tend a German translation of "Buckland's Geology," and to revise the French and German translations of "Sowerby's Mineral Conchology," made by Mr. Desor. From 1846, the biography of Mr. Agassiz belongs to the scientific history of the United States. In the Autumn of that year he arrived in Boston, from Paris. The object of his visit to the United States was, in the first place, to make himself familiar with the natural history and geology of this country, in fulfillment of a mission suggested to the King of Prussia by the Baron Alexander von Humboldt, and in the second place to meet an invitation from Mr. John A. Lowell to deliver a course of lectures in Boston. Eighteen months or two years had been allotted to the first task, and ample means were provided by the Prussian Government for that purpose. Soon after his arrival in Boston, Professor Agassiz delivered his first course of Lowell lectures, consisting of a general review of the animal kingdom. These lectures were listened to with interest unabated to the end by audiences of 1,500 to 2,000 hearers, embracing all that was most cultivated in science and letters in the society of Bo-ton and the vicinity. Immediately afterward, by special request, he delivered another course upon the glaciers and the phenomena connected with their former greater extension. Having completed these labors, he visited New York, Philadelphia and Charleston, with the view of comparing the animals of the northern shores with those of the more southern latitudes of the continent. On his return to the North, early in the Summer of 1847, he met with Professor Alexander Dallas Bache, the Superintendent of the United States Coast Survey. This event had an important influence upon the subsequent career of Professor Agassiz; for Mr. Bache invited him to avail himself of the facilities presented by the operations of the coast survey for the further prosecution of his researches. The offer was so liberal and of such vast importance, in a scientific point of view, that Agassiz could hardly credit his good fortune; and upon being assured that he might, without difficulty, visit at will every point of the coast in the well-equipped survey vessels, from Maine to Texas, and along the whole western coast, he exclaimed that this would decide him to remain to the end of his days in the United States. He immediately seized the opportunity of spending part of the Summer of 1847 on board the Bibb, commanded by Captain C. H. Davis, on the coast of Nantucket and Martha's Vineyard. The immediate result of this, and a second cruise along the same coast, was several papers upon the medusæ of Massachusetts, and upon a coral found near Holmes' Hole. In the same Summer he visited, in company with Mr. John A. Lowell, Niagara Falls and the White Mountains. During the next three Winters he delivered courses of lectures before the Lowell Institute upon comparative embryology and upon the successive developments of the animal kingdom, some of which he repeated in New York, Philadelphia, and Charleston, South Carolina. At the close of the year 1847, Mr. Abbot Lawrence founded the scientific school in Cambridge, and a professorship of zoology and geology was offered Mr. Agassiz, which he accepted, after having obtained from his Government an honorable discharge of his obligations to to them. The Minister of Foreign Affairs, in granting his request, employed these words: "We well know that wherever you take up your abode, your time will be employed for the best advantage of science." In the Spring of 1848 Agassiz entered upon his duties in Cambridge, and at the close of the academic year he started with twelve of his pupils upon a scientific exploration of the shores of Lake Superior, where they passed the Summer months. The results of this journey are

contained in the volume entitled "Lake Superior," the narrative part of which was written by Mr. Elliot Cabot, together with the reports of the lectures the professor delivered at the close of each day. Dr. J. Le Conte contributed the account of the coleoptera. In 1848, in conjunction with Dr. A. A. Gould, he published "Principles of Zoology," for the use of schools and colleges. From that period Professor Agassiz has devoted his time alternately to teaching and making original investigations. Besides his university lectures he has delivered, in the Winters, courses of lectures in different parts of the country, while exploring its natural history. In these excursions he has been constantly accompanied by assistants, so that the collections he has made are the most complete extant, and embrace the whole range of the animal kingdom. In this manner he has traversed the whole extent of the country from Lake Superior to the Gulf of Mexico, and from the Atlantic coast to the valley of the Mississippi, delivering courses of lectures in Savannah, Mobile, New Orleans, St. Louis, Cincinnati and many other places besides those already mentioned. In 1850 he spent the Winter upon the reef of Florida, in the service of the Coast Survey, with the view of ascertaining the mode of growth and the direction of the increase of the reef. A preliminary report of this survey is contained in the Coast Survey reports. In the following Summer he explored the State of New York with Professor James Hall, chiefly with the view of making himself thoroughly acquainted with the important geological results of the survey of that State, and afterward visited again the most important localities with his pupils. The Helderbergs and Niagara Falls and that interesting vicinity were always most attractive points of study. In 1852, Professor Agassiz accepted a professorship of comparative anatomy in the medical college of Charleston, S. C., which he retained for two successive Winters, during which he made a thorough study of the marine animals of that coast, extending his excursion to Georgia and North Carolina; but finding the climate injurious to his constitution, he resigned the situation and returned to reside permanently at the North. Since the year of 1855 the attention of Professor Agassiz has been chiefly devoted to the arrangement of the immense amount of materials collected in these explorations. To form an adequate idea of the extent of the collections he has brought together, it ought to be known that besides his own efforts, and the assistance he has derived from the young men accompanying him everywhere, he has been largely assisted by the friends he has made in every State during his excursions. These contributions were continued long after he left the different stations where he temporarily established himself. These collections embrace also the western coast; he has received large contributions from California through the kindness of his brother-in-law, Mr. Thomas G. Cary, Jr., who for six years collected for him extensively there. The results of all these explorations and investigations are now to be published in the work entitled "Contributions to the Natural History of the United States." Two volumes out of ten of this extensive work have already passed through the press. The subscription list extends to the unexampled number of 2,500 names, in all parts of the United States; a magnificent support of a purely scientific undertaking, executed on a grand and expensive scale; a tribute to the worth of science, and an appreciation of the labors of a great original investigator. such as has never before been exhibited to the world. Professor Agassiz's eminence as a scientific man was early recognized in Europe. In 1836 he was elected into the Academy of Sciences in Paris and the Royal Society

of London, and soon after received similar honors from all the other great learned societies in Europe and America. From the Academy of Sciences in Paris he has received the Monthyon prize for experimental physiology, and the Cuvier prize; the Wollaston medal from the Geological Society of London, and the medal of merit from the King of Prussia. The labors of Agassiz have by no means been limited to the works enumerated in the present notice. He has been a frequent and conjous contributor to the leading scientific journals of Europe and America. He has made numerous communications to the learned societies of which he is an active member. In the United States his activity has been most beneficial in the American Scientific Association, the American Academy of Arts and Sciences, the Boston Natural History Society, the proceedings and transactions of all of which have been constantly enriched from his boundless resources. Agassiz has recently completed his sixty-fifth year. He is a man of great physical vigor, and his constitution has passed unharmed through his gigantic labors. Many years more of fruitful activity may reasonably be expected. His influence upon the scientific development of the United States has been profound and far-reaching. He has called into energetic action the minds of a large body of young men of science, who are laboring in every field of investigation with the enthusiasm he has inspired in the methods he has taught, and with the noble spirit which has always animated the master. Towards the end of September, 1872, Professor Agassiz arrived in San Francisco in the United States steamer Hassler, in which he, accompanied by a party of naturalists, had made a circuit of the coasts of South America. Of this expedition, in a public address delivered on September 24th, he said:

He had been asked to give some account of the voyage of the Hassler, which had terminated its course in the harbor of San Francisco. He was afraid that the incidents of a scientific expedition were too monotonous to be very entertaining, and willing as he was to accede to that request, he thought he might in preference submit some remarks upon the present aims of science. Let him only say that this excursion of the Hassler, as he might call it, was entirely incidental to the necessities of the Coast Survey. The good ship which brought himself and the rest of the party there, was intended to continue the work of the Coast Survey along this coast. Instead of allowing her to make the voyage empty, some scientific men were invited by the Superintendent of the Coast Survey to take passage in her and make the most of it. Liberal citizens of Massachusetts added means to the good will of the Superintendent, that whatever collections should be obtained and investigations made during the voyage, might not be an additional expense to the great national undertaking of the Government. He thought it desirable that these facts should be known, in order that great expectations should not be entertained concerning the scientific results of the Hassler's voyage, for all that could be done was done through means supplied by private individuals, and not by the large resources of a Government. Unfortunately it was almost everywhere still so, that science had to take the humblest position in the world, and that the supplies which flowed to her help were frequently granted with a reluctant hand.

A few days afterwards Professor Agassiz returned to Boston by the overland route.

# CALIFORNIA MAIL BAG.

### Railroad Investments.

[From the Nation.]

Railroad securities now constitute probably the most popular form of investment of a personal nature open to the people of the United States. A sort of mania as regards them may be said to exist. This is very clearly shown in the rapid development of our railroad system, which is now progressing with an almost incredible rapidity. As recently as the last Presidential election in 1868, the greatest amount of railroad construction in any one year had been in 1856, the year preceding the memorable panic. It then amounted to 3,643 miles, costing probably \$140,000,000. It would at this time be interesting to inquire how far so great a \$140,000,000. It would at this time be interesting to inquire how far so great a withdrawal of the active wealth of the country from immediate circulation, and its permanent investment in a form temporarily both unprofitable and inaccessible, contributed to the crisis of 1857. In a greater or less degree, however, it was unguestionably one of the immediate causes of that catastrophe, which was at once followed by a rapid falling off in railroad construction, until in 1861 it had almost censed, being reduced for that year to 621 miles. From that period it gradually but slowly began to survive, until in 1869 it had almost reached 5,000 miles, and 7,453 in 1871. The permanent investment of the last year in railroad development, and the consequent withdrawal of wealth from active circulation, can hardly be estimated at less than \$275,000,000, though it must be admitted that a considerable portion of this is foreign capital.

tion of this is foreign capital.

mated at less than \$275,000,000, though it must be admitted that a considerable portion of this is foreign capital.

With the columns of the newspapers crowded with advertisements of bonds ressed upon the market at rates of interest varying between 7 and 12 per cent, most people, even those tolerably well informed, would be somewhat surprised at being told that railroad securities in America are not more profitable on the whole, while decidedly less secure, than the bonds of the United States. Yet such is indisputably the fact. United States 6 per cents, (gold) are now selling in the neighborhood of par (gold). The cost of the railroad system of the country has been at least three thousand millions of money, actually expended in construction. The gross annual earnings of this system are about \$455,000,000, of which not more than 33 per cent. can be set down to net profit, or a total of \$150,000,000.—being exactly 5 per cent. on the cost. The system is, in fact, a thorough lottery, and hence probably one great cause of its attractiveness to investors. What with dividends in money and dividends in scrip and rapid fluctuations in value; what with the noise made over a few great successes and the silence preserved as regards numerous failures, the general public is thoroughly dazed and bejuggled. Yet the figures, few and poor as they are, are inexorable. In his recent "Manual," Mr. H. V. Poor has given a table, very incomplete and far from correct, but yet sufficient for present purposes, of 384 railroads. Of these 104 only, or less than one out of three, pay any dividends on stock at all; of the 104 dividend paying enterprises, 4 pay dividends of over 10 per cent.; 30 pay 10 per cent.; 39 pay between 7 and 10; and 30 pay loss than? T. The remaining 360 pay no dividends at all. Dividends on capital stock represent, however, but a small portion of the net earnings of the system, the great bulk of which is necessarily devoted to the payment of interest and to development. As regards the proportion which their reporte

capital stock represent, however, but a small portion of the net carnings of the system, the great bulk of which is necessarily devoted to the payment of interest and to development. As regards the proportion which their reported net earnings, whether devoted to dividends or however applied, bear to the entire cost of their construction, the roads of Massachusetts appear to be the most prosperous in the country, their percentage rising as high as 3.41; Pennsylvania comes next with 8.3; Connecticut reports 7.16; New York, 7.5; while Ohio, the only other State which furnishes reliable returns, falls as low as 4.9 per cent.

It is in the extreme West, however, that the railroad development is more rapid, and that the greatest inducements are held out to investors. How far the railroad mania has there gone, and what a surprising lottery it has become, is, in the almost total absence of reliable statistics, not easily estimated. We are, however, not wholly in the dark on the subject. Take the State of Kansas, for instance. In 1864, Kansas possessed 40 miles of railroad, all newly constructed; in 1871, she boasted of 1,760 miles, having built 260 miles in that year and 570 in the previous one. She now possesses, therefore, 154 more miles of completed road than Massachusetts, and a little more than half as many as Ohio. These railroads were mainly constructed out of the proceeds of the saie of bonds, many of them, it is true, secured on valuable land grants, but all of them bearing a high rate of interest, ranging, indeed, on their cost price as originally issued at from 9 to 20 per cent. How is this interest to be earned? What burden, in other words, does a reasonable remuneration for the cost of this mushroom railroad system impose upon the people of the State? Upon this point we have the means of arriving at some conconclusions—not very exact, perhaps, but withal exceedingly suggestive.

Railroade, as a matter of course, have to draw their income from the community they serve. The population of the United States, for instance, is in round nity they serve. The population of the United States, for instance, is in round numbers 38,000,000, and its railroads earn a gross annual income of \$455,000,000. Upon an average, therefore, each inhabitant of the United States pays within a few cents of \$12 per annual to the support of the railroad system. Few States have carried the science of railroad statistics to a sufficient degree of excellence to enable us, so far as their inhabitants are concerned, to verify this average with sufenable us, so far as their inhabitants are concerned, to verify this average with sufficient accuracy. In Massachusetts—a wealthy manufacturing community, with a large suburban trade—the average payment of each inhabitant is \$13.90; in Connecticut it is \$12.60; in Pennsylvania, where the returns are less exact and an enormous coal traffic is carried on, it is reported at about \$18; in Ohio it falls below the average to \$11.40. These are all old and wealthy communities, and two of them at least, Pennsylvania and Ohio, are States through which passes the bulk of the through or transit business of the country. With this annual per cupita contribution these States, as we have seen, succeed in paying on the capital invested in their raincal systems a moderate annual remuneration, varying thetween 4.5 and their railroad systems a moderate annual remuneration, varying between 4.5 and 8.4 per cent. Yet Massachusetts has to-day some 10 per cent, fewer miles of railroad than Kansas, with, as nearly as may be, four times the population and seventeen times the wealth. To render the railroad system of Kansas equally remuneroad than Kansas, with, as nearly as may be, four times the population and seventeen times the wealth. To render the railroad system of Kansas equally remanerative with that of Massachusetts, each of its Inhabitants ought to pay to its support \$61 annually; to render it equally remunerative with that of Ohio, each should pay \$41. Each does contribute, as nearly as can be ascertained, about \$17.60, or an annual sagregate in round numbers of \$6,400,000. This is the gross return, and evidently, in view of the wealth, products and business of the State, all that its inhabitants can now pay. Meanwhile the Kansas roads report a capital in stock and Indebtedness of \$95,000,000, or only a trifle less per mile than those of Massachusetts, of which amount no less than \$58,000,000 is in the shape of interest-bearing securities, as against less than \$18,000,000 in the older State. At present, therefore, the railroad system of Kansas would seem to be carming in gross a little less than \$9 per cent. per annum on its capital stock and indebtedness, instead of 29 per cent. as in Massachusetts, or 17 per cent, as in Ohio, and its earnings on its debt alone, without allowing anything for the cost of operating, are but 11 per cent, or hardly, if indeed at all, sufficient to meet its annual coupons. Yet he would be a very sanguine man, and know but little of Kansas roads, who would as a permaneral elements alone as the total net carnings. In other words, as regards Kansas, the future has been frightfully discounted. Instead of carning the interests of liberally provised, the roads of that State are yet realizing but a low renuneration on their actual cash cost. The process of railroad construction is, however, still going on as actively as ever in that State. actively as ever in that State.

The same course of reasoning might be extended to other Western States as well The same course of reasoning might be extended to other Western States as well as Kansas, though nowhere else, probably, has the process of railroad construction been so thoroughly overdone. The rule here applied is one of well nigh universal application. No railroad system can be considered well established which calls upon those whom it serves for a larger per capita contribution than, at the most \$20 per annum. More than this no people can pay, and, under ordinary circumstances, no people should be called upon to pay so much. Where, however, the amount necessary to a reasonable remuneration greatly exceeds this sum, it is not unsafe to conclude that a long period of extreme depression and embarrassment is impending over the system involved; unless, as in 1857, a financial crisis, by sweeping away the rotten superstructure, puts railroads and community in a position to start afresh.

tion to start afresh

in to start afresh.

In these times, when it seems only necessary to buy a railroad bond to secure an annuity, it is well to remind a credulous public of there stern realities. We by no means seek to imply that much money has not been made, and will not hereafter be made, and that, too, in the immediate luture, in railroad enterprises. In the face of existing facts, such a proposition would in no way be tenable. What we do mean to say is, that a form of investment always hazardous, and returning at best many more blanks than prizes, is at this time more hazardous than usual, and its risks are dally increasing. We see no reason to suppose that any general panic or fluancial crisis is now immediately impending over the country at large. On the contrary, a financial condition which stood firm under the shock of the Chicago fire cannot be otherwise than sound. But unless we are greatly deceived, within the next few years a great many very handsomely engraved railroad bonds will go to protest, and certificates of stock by the million will find their way into the hands of the trunk-makers. It is very improbable that the United States can construct for any length of time 7,000 miles of milway a year without getting more than the people now on the soil can conveniently support. They apparently more them they are called on for \$30, \$40, or \$80, it will assuredly be found that they are getting altogether too much of a good taing. be found that they are getting altogether too much of a good thing.

<sup>-</sup> We raise our voice in protest against the further exhibition of Cox. years the feeble performances of Cox in the pulpit we have treated with quiet diadain; but now that the politicians have hired Cox to parade on the stand at partiasan meetings, we think it is time to speak out. If this goes on, we shall have apply the caustic of our pen to Cox right vigorously.

## James Jones, the Journeyman Joiner.

FUN'S TEMPERANCE TRACT.

There was not a nicer boy than little Jim in the parish. He was strong, smart, and healthy; and could be seen any Sunday toddling home with his father's pint and pipe, occasionally taking a pull at the former. He grew up to be an intelligent and rapid workman. There wasn't a neater hand as a joiner in the upholstery trade. It was a treat to see him fitting up a chess-table or any such delicate job, he was so nimble at it. Of course he earned very good wages, and could always have his pot of beer, aye, and stand a glass or two to a less fortunate fellow workman. He married Jenny, the niece of Mr. Tebbits of "the Hope and Anchor," and they took a comfortable little cottage and brought up their family respectably. Mrs. J. could have her porter when the doctor recommended it, and as for Jim every Sunday evening he took his gin-and-water and pipe like a duke. Unfortunately this was too bright to last. One day Jim fell into conversation with a smug-faced man in a shiny hat, who had a roll of paper under his arm. This fiend in human shape told him a number of amusing fictions, and so worked on his mind by promising him a pewter medal in six months time, that the unlucky young man signed the pledge. From that moment his downward course began. James Jones became a confirmed tea-drinker. His indulgence in that narectic poison rulned his digestion, disordered the action of his heart, and completely shattered his nerves. Nor was this the only evil this tipping did him. The gallons of hot water he swallowed injured the coate of his stomach, and were strongly There was not a nicer boy than little Jim in the parish. He was strong, smart,

blattered his herees. For was his to only evil his atomach, and were strongly prejudicial to the nutrition of his body. His wife fell a victim to the same pernicious indulgence, and not only drank it to excess, but also gave it to the children, who grew weak and sickly in consequence.

Before long the miserable Jones found his shaken nerves telling upon his ability to do the delicate work for which he had once earned such a repute. His master's customers complained of the inferior quality of the goods, and his master found it was necessary to discharge him. He could not obtain employment as a joiner any

longer, and was driven to French polishing to earn his bread.

At last came the ultimate dromedary which fractured the straw's vertebræ! At last came the ultimate dromedary which fractured the straw's vertebre! Jimmy had not had a cup of tea for several days, when he happened to be passing the door of the grocer, with whom he had spent so much of his wages, and saw him standing at his door to watch the delivery of a cart-load of best sand, for improving the quality of brown sugar. "Sir," said James, "Many's the pound you've had of me one time and another. Give us a couple of onnees of the three and-fourpenny souchong." "Get out," said the grocer, "I shouldn't think of asking you for a carved sideboard or a dining table!" James was disgusted at his selfishness. He went home and thought the matter over seriously, and determined to reform. He smashed the teapot, melted the pewter medal, and sent out for a wint of helf and half. pint of half and half.

After a time his struggles to return to respectability were successful. in the employ of the Sheriff, and lives in elegant mansions of which he is put temporarily in possession. He always takes gin-and-water, cold, and smokes Returnes. If this veracious narrative opens the eyes of one single reader to the evils of indulgence in tea-drunkenness, the object of the writer will be accomplished.

## The County Jail.

There are at present two hundred and three prisoners in the County Jail. There are at present two numered and three prisohers in the county dat. They are hiddled together like so many animals going to the slaughter. Every cell has from five to seven victims, and the air issuing therefrom has so deadly a stench as to be almost unbearable. The "tanks," which are never used except when there is an excess of prisoners, are also crowded with white and Chiuese prisoners. These tanks are stygian dark and loathsome in the extreme. The women are crowded together like the men, one cell containing seven females and two babes. This condition of things is disgraceful to San Francisco, an insult to the State and an entrace are named to the state and This condition of things is disgraceful to San Francisco, an insult to the State and an outrage upon humanity. Good-hearted women are calling upon the preachers to rsise their voices in behalf of the unfortunate victims at the County Jail. We have no faith in the voice of these pusillanimous preachers. They are busy in howling their theological damfoolery. At St. Mary's Cathedral one of them grows eloquent over miracles; at Calvary Church Dr. Hemphill waxes merrily about "Dead Flies" and "Short-bed-posts;" Brother Stone is getting up love feasts for the edification of the sisters of his flock; Brother Cox is ranting politics; Brother Stobbins is gorging his herds in the Geary-street tabernacle with his pious raving; Dr. Scott is doing up the holy eunnehs of the Bible, and the less illustrious theological Hoodlums are of no account to themselves or anybody else. So much for the preachers and the County Jail. We have some faith, though, in the practical common sense and carnest sympathy of Sheriff Adams, coupled with the attention of the Board of Supervisors. If the Supervisors will listen to the plan which Sheriff Adams has matured and by which a vast change for the better would be inaugurated, and act upon it, the community will have reason to thank them, the victims in the jail will be utilized and humanized, and the disgrace upon our good name rated, and act upon it, the community will have reason to thank them, the victims in the jail will be utilized and humanized, and the disgrace upon our good name blotted out. In a word, Sheriff Adams proposes to create work for the idle prisoners. His plan is practical, and it remains with the Board of Supervisors to act upon it. In the meantime the prisoners, male and female, are treated with the greatest humanity, as far as it is possible for the officers to do so. Their food has been much improved, and on this score, as well as regards their personal treatment, there is a constitution of the statement of the there is no complaint.

# The Diamond Fields of New Mexico.

The following extract of a private latter written by C. O. Brown of Tueson A. T.) dated the 19th 19th inst., is furnished for publication. "Your favor of August 5th came to hand this merind, with stops encased about clamends, etc. This is all cild to me. I have known of the existence of diamonds, in Now Mexico for years. A solidier in the U.S. Arms found one near old Foot Defiance, in 18th which was solid for seven thousand chalars. Fort Defiance is standed in the northwestern part of New Mexico for the thousand chalars. Fort Defiance is standed in the northwestern part of New Mexico feature part of New Mexico feature part of New Mexico of Fastern Antzona or New Mexico, let them 20 to the above named places. I sent two men out there one year ago. I mean to Fort Wingste and they returned in a short time with fourtheen pounds of the sexal set return to the solid set of the sexal set freshes. I sent for the posts for a strong they are pronoutioned.

These set for the Mexico has over four hundred pounds of the sexales on hand, which he has benefit from the Navajo linds as for a strift. These garnets and coher stances are pecked up by Indians on any best, the ants benefit from the surface. Thousands of small garnets, and sometimes a few argue office, and could be a single as the best. When the soliders from Forts Wingste we had constituted the surface.

"I am credibly informed that emeralds and topezes are also found by the Navajo Indians. The Navajors prace a high estimation on the emeralds, and we not part with them. The Navajors say the emeralds are found in the San Francisco mountains. Those mountains are situated from 75 to 100 mines due next of Peacott, Arizona. In these particular of New Mexico and Arizona on 3 are these deamonds, rules and extracts to be found a scope of country extra due, and in the second of the

tains. These mountains are situated from 75 to 100 mins due north of Peracoli, Arizona. In these portrons of New Mexic oans Ar zona on a are the schamonds, rules and gernets to be found a scope of country extending about 100 mins. "Jose Farren, "nearty of Austin, NewMexic, and the form Fort Deminical, New Mexico, to the Roese River Revenue as follows." Of the existence of precions stones beredere is no doubt. As you are doubtless awara, I am in diamond sharp, and therefore cannot speak confidently in regard to their value. Size I arrived I have not exist severa, pounds of garnets, rubios, sapplaires and so-ca of distances to detail, Northeastern Arizonaana Niethwestern New Mexico, and above the west from the city of Santa Fe. Your humbles erreant has more that they forestoned on the humble of santa fe. Your humbles erreant has more that presented in Northeastern Arizonaana Niethwestern New Mexico, and above the west from name 20 or ses will not more that a glat traines for company or assertia on. There is no doubt of there being a great mish to this country, even if the diamonds should on the luttle Colonado. I have move from severa, powers of course good with the Navagous Indians, which they say were found often, and a person who was formerly in the englisy of the Government at Definite chairms in that he has found "course" of good of the Government at Definite chairms in that he has found "course" of good of the Government at Definite chairms in that he has found "course" of good of the Government at Definite chairms in that he has found to have been found in abundance, but of course they possess no value at pressor.

There are some twenty persons now in our juil for the crime of murder. If the prison doors and atting one of these red-handed persons out to ske as any lade or escape from our milet, the outraged saw wound seek out the accessor, and punish him as very v, and we wound a hinders the presenting as goes and was. But there are twenty gent emen, of learning and in genu, it, who are isolarst cases, manifest to escape the release of the crimenals. They will, browbeat witnesses, attempt to contact them, throw discredit on their institution, d'stort the facts of the case, seek to miss ead jurymen, being the judices, mind, tax their brains to devise means and expedients to find a leop-hee through which, their clients may escape; the quastion of the great or innocence of the accused will be to them an unimportant case, the main point being the carriang of theor wages and the growth of their repeatation as aringing haveness. If one of these gentlemen succession in precuring the research as of the client, we will not complian of the method he has emproyed but will all exact him as a sawyer of marveceus about and a most excellent citizen. The Tower Crier may be asked why he objects to this. He does not. He merely states the case.

— We are acquainted with an elderly gentleman, meek and saintly in appearance, mild in speech, decorons in dress, unfait in in devotion on the Sabbath, carnest in eabortation, powerful in prayer, fearered in all its ways, gentle in his manners, or chiefened in his views, liberar in the expression of charitable sentiments, an uplaceder of Sabbath Schools for the timese in our milds, carnest in the superior of massions to the heathen—of whom the papers will remark, when he dies, that he was an affectionate businessed and father and an exemplary citizen, besides being a worthy member of had another and an exemplary citizen besides being a worthy member of had another businessed and a prometry of California. You will say at once that he is a sunerior christian. By no means. He is in business, and wir rob you whenever he has an opportunity. His name is legion.

Treasure shipments overland by express for week ending September 4th, were \$1,934 04 in Gold Bars, and \$40,057 43 in Silver Bars; total, \$42,001 47.

### The Raven.

Mr. Poe possessed a raven,
Calling him—for rhyme's sake—shaven;
Also, calling him a "craven"—
That's a word that rankles.
On a bust it used to sit,
And declined to move or fit;
While my raven does—to wit
Comes and nips my ankles,

Now that bird of Mr. Poe Seemed one word alone to know, Which became uncommon slow After several verses. "Nevermore," was all, you see, It remarked to Mr. P.: While my raven oft says "d," Joined with various curses.

But his raven could not claim Any sort of Christian name, Like another known to fame— You'll in Dickens find it. So I've christened my sad rip With a name of fellowship— Call him Edgar Allan Grip— But he doesn't mind it.

### Debts of the States.

The following information concerning the bonded indebtedness of thirty-two States is from the New York Financier. The total debts of the States, arranged in the order of their magnitude, are as follows:

the order of their magnitude, are as tonows.			
1.	New York	\$37,879,350 17.	Texas\$3,701,294
2.	Louisiana	. 30,244,752 18.	California 8,362,500
3.	North Carolina	. 29,899,645 19.	New Jersey 2,796,200
4.	Massachusetts		Rhode Island 2,770,000
5.	Pennsylvania	. 28,656,876 21.	Minnesota 2,625,000
6.	Alabama		Kentucky 2,592,317
	Missouri		Michigan 2,298,000
8.	Georgia	18,267,500 24,	Wisconsin 2,252,000
9.	South Carolina		Illinois 2,133,000
10.	Maryland	. 12,436,716 26.	New Hampshire 1,968,000
11.	Arkansas	. 11,200,000 27.	Delaware 1,462,000
	Ohio	. 8,838,000 28.	Kansas 1,328,675
18.	Maine		Nevada 760,000
14.	Connecticut	5,769,300 30.	Vermont 412,000
15,	Florida	5,307,865 31.	Oregon 300,177
16.	Indiana	3,937,821 32.	Iowa 300,000

The first point in this summary which will attract the reader's attention is the fact that the names of the Southern States all appear very near the head of the list. Texas is the seventeenth on the list, and Florida the fifteenth; Arkansas stands the eleventh, and all the others precede it. New York, with a population, according to the last census returns, of 4,382,759, has a dobt of less than \$80,00,00 and set of the County of the last census returns, of 4,382,759, has a dobt of less than \$80,00,00 and set of the Union as regards the number of inhabitants, has a debt of over \$30,000,009, or \$41 per capita, and stands second on the list. The same thing is true of other Southern States when compared with their northern sisters. North Carolina, third on the list, has a population of 1,071,361, and a debt of \$29,899,645, being \$28 per capita; in Massachusetts, the fourth State, the some figures are, respectively, 1,457,331, \$29,560,664, and \$22. Between Pennsylvania and Alabama the discrepancy is far more marked. The former State has, population, 3,521,951; debt, \$28,856,876; per capita, \$8; the latter, 996,92, \$25,181,967, and \$25. in Missouri and Georgia, the per capita amounts are \$12 and \$15; in South Carolina and Maryland, \$22 and \$16; in Arkansas and Ohio, \$23 and \$3; and finally, in Connecticut and Florida, \$19 and \$28. Proceeding in the same manner, but coupling those States which are nearest allke in population, we obtain the following results. In Louisiana and Maryland the per capita amounts are, as given above, \$41 and \$15. or, in comparison with Maine, \$41 and \$11. Comparing North Carolina and Wisconsin, we have \$28 and \$2 respectively; Alabama and Usiconsin again \$25 and \$2; Gorgia and Michigan, where the variation is only 50 inhabitants, \$15 and \$2; South Carolina and Maine, \$22 and \$11; Arkansas and Connecticut, \$23 and \$10; Florida and Rhode Island, \$28 and \$12.

The impression that our Mister Pickering was the only being who bore that sweet name has been rudely dispelled. Another of the lik has come to the surface. He lives in Missouri; and he represented the Pickering family in the Louisville Convention. The haze of mystery that has enveloped Mister Pickering is being swept away, and it is becoming apparent that he is in reality nothing more than a mere man. In the Committee of One Hundred Loring received many a flooring; and soon every muff will feel at liberty to laugh at the ceaseless bickering of poor old Pickering.

The Pacific Borax Company have levied an assessment of 20 cents per share, delinquent October 7th.

### Court Chat.

The London Telegraph of August 20th, has this: "Being now permitted to write on the approaching interview between the three Emperors, the Russian press generally draw hopeful and peaceful auguries from the event. The Golos, however, hints that the Slavonian and Eastern questions will be brought on the tapic, and that Russia, though not greedy of conquest, must see her Christian subjects of the Porte protected from persecution and oppression, and that an open declaration to this effect may be made. Papal encroachment in Germany, and in the interior, will afford points for discussion and consideration." The same paper says that the Emperor Napoleon has frankly indicated his views in regard to the forth-coming interview of the three Emperors at Berlin, and on the present condition and prospects of France and other topics of the day. Referring to the Imperial assemblage, his Majesty did not consider that it involved any immediate threat or danger to the peace of Europe, but did not conceal his belief that when each Power had served its own immediate purpose by the help of its neighbors' partnership, it would be dissolved. Napoleon dwelt somewhat severely on the protectionist views of Thiers, and on his lavish expenditure on the army, which he contrasted keenly with his parsimonious views while in the Opposition under the Empire, and pretty plainly hinted that, despite the President's words, his mind was bent on war.

As we have our revolutionary personages, of whom the "last survivor" is continually announced as having just died, so the French have the relies of their revolution of 1789, and the demise of one or another of them from time to time serves to point a moral. A late French paper notes that Madame Ulrich de Beauge and de Melgueil, Jormerly lady in waiting to Queen Marie Antoinette, died on the 1st of August, in the one hundred and second year of her age. At the time of the invasion of the Tuilleries, on the 10th of August, 1792, Madame de Beague was arrested, and taken to the commune of Paris to be judged. Acquitted, she returned to the prison of the Temple, to be near her sovereign, whom she accompanied to the foot of the scaffold.

— Prince Bismarck has just celebrated at Varzin his "silver wedding." Only a small number of near relations and old friends were present on the occasion, but every minute brought some testimony of the interest with which the day was regarded even beyond the bounds of Germany. One hundred and ninety-two telegrams, and a still greater number of written congratulations, were received. Amongst them were messages from the Emperor, the Empress, the Grown Prince and Princess, and other members of the imperial family, from the King of Bavaria, from statesmen and generals, scholars and artists, corporations and societies, from high and low, old and young, known and unknown. Many gifts and poems were also received.

The programme for Sunday and the following days, when the Emperors will meet at Berlin, has been arranged. On Sunday the three Emperors will attend divine service in the morning at their respective houses of worship and afterward lunch together at Babelsherg. The day will close with a soirce at the palace of the Crown Prince at Potsdam. Monday, military maneuvres on a grand scale and a dumer at the Imperial Palace with soirce in the evening at the palace of Prince Charles. Tuesday, military display in the morning. The sovereigns will dine together in public under canvass and attend a court concert in the evening.

— So convinced, says a writer from Vienna, are the people here of the inexhaustible wealth of Americans, that Austrian noblemen see in American girls helr-sesses from whom to obtain the means of repairing fortunes shattered by dissiplation or gradual decay. They offer Austrian titles for gold, believing that no Republican woman can resist a coronet. It would be tunny, were it not disgusting, to note how, in a garrison city like Vienna, aristocratic officers in search of large incomes flock about Americans as bees buzz about flowers from which they hope to extract honey. Money is what the Austrian B's want to extract.

— We understand that it is the intention of Her Majesty to pay a visit to the Duke and Duchess of Sutherland, at Dunrobin Castle, early next month—probably on the 4th, remaining there for several days. This will be the first occasion on which Her Majesty has extended her tour into the Northern Highands, and the news of the intended visit has given much satisfaction to the people of the Highland capital, who have long looked forward to a passing visit from the Queen; while the good folks of Golspie, albeit accustomed to distinguished visitors, are all agong with excitement.

— The Boston Globe says: "A party of European tourists from Vienna, composed of persons of rank, among others the Count Festitis, a cousin of Prince Metternich. Count Geroe and Lord Blumen, after visiting the principal American institutions in the Eastern States, intend to proceed we-tward, explore Colorado, Nexada, Oregon, and lastly California, particularly the Yosemite Valley and the matemoth trees. This party is but the vanguard of a great army of tourists which is about to leave Europe for this country on a similar errand."

Lord Byron's vices and virtues have been a prolific theme for writers, both male and female. Lady Blessington was the first lady to bandle the subject; and Mrs. Beecher Stowe's literary escapade will not have been forzotten. Madame la Comtesse d Haussonville has now taken up the subject, and introduced to her French readers her own impressions (which, on the whole, are favorable) of "La Jennesse de Lord Byron."

- asked his name, he said he was the Duke of Syria. His tribe had set off for Spain, leaving him behind at Blicetre. He spoke a scarcely intelligible jarcon of French, Spanish, and Arabic. His Grace was locked up at the police station for stealing four chickens. He was clad in a garment of many colors, and wore a high hat.
- A French arocat has just published a Life of Charlotte Corday, from which we learn that Marat, at his marriage, dispensed with both priest and lawyer. He knelt on one knee, took the bride's hand in his, called the universe to witness that he loved Simonne Evrard before all women, and regained his feet a Benedict. This beats the late Gretna-Green.
- The King of Burmah has taken the death of his Queen very much to heart. She was his first love, and he married her when he was only a prince. He sees no one at present, and is said to gaze upon skulls, whilst pondering on the vanities of life. The late Queen's food is placed for her daily, and she is not spoken of as dead, but sleeping.
- Grave fears are expressed as to the condition of Sir Alexander Duff Gordon, Bart., one of the Commissioners of Inland Revenue. The hon. baronet visited the United States last year hoping to gain a fresh stock of health from the voyage. He, however, was benefited but little, and he now lies in a very damegrous state indeed.
- The Countess Edia, morganatic wife of the King of Portugal, is described as attending a court dinner smothered in rouge and pearl powder, weighted with rubies and diamonds, laden with gold fringe, and dragging a train of crimson velvet six yards in length from the drawing-room to the dining-room and back again.
- The Emperor of Russia had a narrow escape during his last voyage to Livadia. A large stone had been placed upon the rails near the station of Mordarowka on the Balta-Odessa line. Happily the conductor of the Imperial train saw the stone, and drew up in time to prevent an accident.
- The Prince of Wales has accepted the presidency of the Royal commission for the Vienna exhibition, a fact which has been highly appreciated by the Austrian Government and commission. The commissions of other Governments have been in operation since the commencement of this year.
- Sir Travers Twiss, D. C. L., has in progress the second volume of the "Monumenta Juridica: the Black Book of the Admiralty."
- The Queen has presented Mr. Stanley with a gold sauff-box, and a letter thanking him for his discovery of Dr. Livingstone.

# Special Breveties.

- —I remember well the amusement created amongst the bar of Ireland after a few numbers of "Charles O'Malley" had appeared. Amongst its members was one who came from the Far West, whose name was Charles O'Malley, and stranger still, he had been first in a cavalry regiment ere he subscribed to the sentiment "Cedant armae togac," and, doffing shake and sabretash, took to the wig and gown. He was a fine, dashing, pleasant fellow, good-natured yet iraseible, and retained to the last much of his military air, brandishing his brief much as he would have done his sabre. It was a standing joke to tell O'Malley that Lever had taken him for his model, and as each number came out with some new escapade of the hero-some quartel over his cups, or some misadventure in his gallantries—there was some good-natured friend ever ready to bring it under the notice of the lawyer, and expatiate upon the injury such travesties must cause to his professional prospects. This was sure to fire his Celtic blood and send it up into a face naturally one of the reddest, and so he was kept in a state of monthly exacerbation. It was indeed as the heavily of the control of the co
- An Austrian secondrel has assumed the character of St. Peter with rare success, and the fact suggests that superstition still flourishes to a lamentable extent. "A peasant woman of a small town," we are told by the Jewish Times, "lately lost her husband to whom she was fondly attached. Her grief was heart-rending, and she refused to be quieted until one night she heard somebody knock at her window, and, on investigation, a figure valled in white presented himself, who pretended to be no less a personage than the heavenly doorkeeper, St. Peter. He told the widow that he came at the request of her husband who was in search of a dwelling place in heaven, but could not find one, not having 200 florins, the sum required in payment of it. The woman hesitated to hand him the required money. A few evenings thereafter his holiness again made his appearance, and informed the woman that for the price of 600 florins a house in heaven would be secured for her in advance. She not having the money told the ghost to come again the next night, and in the morning she went to the bank to get the money. The bank officers suspected some trick, and, questioning the woman, were informed of the fact. They gave her the money, but at the same time gave notice to the police authorities, who caught the ghost and assigned him to a house not as airy not comfortable as his heavenly abode."

— The most likely successor to the present Pope is, says the Gazetta d'Italia, of Florence, Cardinal Antonio Maria Paneblanco, of the order of St. Francis. He was born at Terranouva, in Sicily, on the 14th of August, 180%, and was made cardinal by Pius IX. in the consistory of the 27th of September, 1861. He has always professed great admiration for Pope Sixtus V., whose life was his favorite study, and in whose cell he lived. One day, while in a reverie, he suddenly heard a knock at his door, and a voice told him that he would be a cardinal. This announcement did not surprise him; he merely replied, "Lo sapevo," and he will, says the Gazetta, doubtlees say the same when he learns that he has been elected Pope. Cardinal Paneblanco once swore before Canova's monument to Clement XIV. that he would restore the order of the Jesuits to its former greatness; and this is said to be the great object of his life. He is the intimate friend of Father Beckx, the general of the order, but, like his model Sixtus V., he is excessively reserved, carefully concealing from every one his intentions for the future. He praises the syllabus, and defends the principle of intallibility with extraordinary skill and theological knowledge.

— There is an ape in the London Zoological Gardens who has suddenly come forward as an advocate of the Darwinian theory. He has doubtless heard this theory discussed by visitors to the Gardens, and has felt that the honor of his race required him to uphold it. Now the ape cannot learn to talk in a day, and therefore this peculiar ape has adopted the easier plan of singing. Gitted by nature with a fine tenor voice, he has suddenly began to use it, to the astonishment of the public in general, and the delight of the Darwinians in particular. So far he has not executed any distinct melody, but has confined himself to a series of musical howls. However, an ape who can reach within one note of Wachtel's famous chest C, whose falsetto is admirable, and who has so far risen above the average ape as to substitute melodious howls for the hoarse barking of his barbarous days, has made so great an advance that he may soon be expected to sing intelligible musical phrases.

— Liszees.

— Liszees.

— Lisze the celebrated pianist, fell in love with a jeweler's daughter. A Prague journal thus describes the courtship: "One morning the jeweler, coming to the point with German frankness, said to Liszt, 'How do you like my daughter?' She is an angel.' What do you think of marriage? 'I think so well of it that I have the greatest possible inclination to it.' 'What would you say to a fortune of three million france?' 'I would willingly accept it.' 'Welt, we understand each other. My daughter pleases you; you please my daughter; her fortune is ready—be my son-in-law?' 'With all my heart.' The marriage was celebrated the following week."

The newspapers of Sweden are discussing the alarming decrease of population in that country, which they attribute directly to emigration, especially to emigration to this country. In 1868 the number of emigrants had reached 30,000, more than one-half of whom were able-bodied workmen and mechanics. In 1868 the exodus was still greater, 37,500 having left the country. At the date of the 20th of August there had left the town of Goethborg alone 20,463 people for America, and they left regularly after that at the rate of 100 and 200 per week. This drain has been since perpetually continued.

— The first Japan tea of any consequence received in this country was in 1859 and 1859, when we imported 365,390 pounds. From that small beginning our imports have gone on increasing, each succeeding year, till in 1870-11, the shipment from Japan reached 13,449,157 pounds, or about 27 per cent. of all the tea we imported in that year. The quantity imported in 1871 and 1872 has already reached 11,482,173 pounds.

— Miss Edith Challis, an actress known both in London and New York, while traveling some months since was very attentive to an old lady who tell ill on the journey, and subsequently died. Miss Challis has since learned that the old lady has left her £2,000 a year for life. In consequence of this she retires from the stage. Moral: Be kind to rich old ladies.

Mesers. Rothschild, the bankers at Paris and Frankfort, have received, in recognition of their services rendered to the Russian Government, the insignia of the St. Anne and Stanislaus Orders of the first class. The head of the London house, Baron Lionel Rothschild, has likewise received a present of a costly maischite vase, value 5,000 roubles.

The national debt of England amounts to \$3,884,305,335, the annual interest on which, at 3 per cent, would be \$116,528,160. The highest point this debt ever reached was at the conclusion of the wars growing out of the French revolution and the fall of Napoleon. At that time it reached \$4,000,000,000.

— Comments have been made on the heavy fines indicted on the four Italians for standing and talking on the public streets, and the case of the curbstone brokers is cited as a contrast. Such remarks are absurd, and betray an utter ignorance of the art of municipal government. If the street brokers were fined, they could not pay the fines, the county jail would be crowded, and the city put to an expense. The Italians Acre the money to pay into the city treasury, and it is right to make these swarthy foreigners contribute to it, whenever it can be managed.

## Beggars in Velvet Gowns.

Hark! Hark! The dogs do bark-The beggars have come to town, Some in rage, and some in tage, And some in velvet gowns.

Scribner's Magazine for September has an elaboration of the foregoing nursery rhyme, in which the "beggars in velvet gowns" are treated as follows:

Those are the fellows who beg the first, And beg the hardest and beg the worst:— Brokers who beg your cash for a "margin," With profit at naught and a very huge charge in Mining fellows with melting-pots; Speculators in water-lots; Smooth-faced gentleman, high in station, Ready to point to an "operation;" Seedy writers who have an infernal Project of starting a daily journal;
Politicians who beg you to run
For place in a race that can't be won; Lawyers ready your weal to show In a case that speedily proves your woe; And a host of such in the begging line Arrayed in velvet and linen fine, Worse than the locusts that came to harrow The souls of the serfs of the mighty Pharaoh; And so persistent in striking your purse.
And begging the cost of their plans to disburse,
That you wish, losing feeling and temper and ruth,
That the fate of Aktaion to-day was a truth,
And the dogs that barked when they came to town, Would tear them to pieces and gobble them down.

## Udolpho Wolfe's Schiedam Schnapps.

When the pure medicinal restorative, now so widely known as Udolpho Wolfe's When the pure medicinal restorative, now so widely known as Udolpho Wolle's Schiedam Schnapps, was introduced into the world under the indorsement of four thousand leading members of the medical profession, some twenty years ago, its proprietor was well aware that it could not wholly escape the penalty attached to all new and useful preparations. He therefore endeavored to invest it with the strongest possible safeguard against counterfeiters and imitators, to render all attem its to pirate it difficult and dangerous. It was submitted to distinguished chemists for analysis, and pronounced by them the purest spirits ever manufactured. Its purity and properties having been thus ascertained, samples of the article were forwarded to ten thousand physicians, including all the leading practitioners in the United States, for the purpose of experiment. A circular, requesting a trial of the preparation and report of the result, accompanied each specimen. Four thousand of the most eminent medical men in the Union promptly responded. Their opinions of the article were unanimously favorable. Such a preparation, they said, had long been wanted by the profession, as no reliance could be placed on the ordinary liquors of commerce, all of which were more or less adulterated, and therefore unfit for medical purposes. The peculiar excellence and strength of the oil of juniper, which formed one of the principal ingredients of the Schnapps, together with an unalloyed character of the alcoholic element, give it, in the estimation of the faculty, a marked superiority over every other diffusive stimulant as a diuretic, tonic and restorative.

PLATT & NEWTON, Sole Agents for the Pacific Coast. Schiedam Schnapps, was introduced into the world under the indorsement of four

- We may search the heaven above us, the hell beneath us, the earth on which We may search the neaven above us, the neil beneath us, the earth on which we stand, and the worlds without number upon which mortal eyes have never gazed, and so foul a viper cannot be found. We may dissect the heart of a particide or a pirate, and it will entain germs of nobility, while the heart of this huma viper will be found destitute of the first element of manhood. We may analyze the blood of a scorpion, and it will be found in purity as the dews of heaven compared to the blood of this wretch. We may take apart the hair of a gorilla, and its conto the blood of this wretch. We may take apart the nair of a gorina, and its contents will indicate moral consciousness and some sense of shame, while the brain of this human reptile will lack evidence of both. What an atrocious atom of flesh and blood he is, what a sickening specimen of decaying animal matter, what a gross lump of dirt! We refer to that vile viper in the shape of a man whose meat and drink is the reward of prostituted manhood, who sells himself and his name to a notorious hussy, who exists on the dollars and dimes raked in from the harvest of her shame. Get thee hence, thou masculine bawd, thou partner of her iniquity, thou sharer of her unboly lusts.

### Real Estate.

The sales of real estate in San Francisco recorded during the month of August, published daily in The Financial Postscript, numbered 313, the aggregate consideration being \$393, 772. The following were the most not/ceable sales: Forty feet on east side of Sansome, between Bush and Sutter; depth 89 and 9, with frame buildings, \$39,000; \$400 per front foot. Sale on California and Leidesdorff streets, to London and San Francisco Bank, \$39,000. Lot east side Fourth, 125 north of Harrison, 25890 in size, \$289 per foot. Lot northwest corner of Gongh and California, 275 on California and Sacramento by 2655, on Gough: exchanged for other property; consideration in deed, \$40,000. Special mention was made in these columns at the time of its occurrence of the sale to Milton S. Latham, Manager of the London and San Francisco Bank, of the property on the north-side of California street, 30 teel 5 inches west of Leidesdorff. The lot has a frontage of 24 feet 10 inches; half of it has a depth of 57 k feet, the other half a depth of but 40 feet 10 inches. There is a plain three-story brick building on the lot. The property in the rear on Leidesdorff, 40 feet front by 55% deep; paying \$29,000, or \$700 per front foot. The improvements on this lot consist of worthless oid frame buildings. John Parrout transferred the northwest corner of California and Leidesdorff \$200,800 for The last two purchases gave the buyer a frontage of 55 feet on California by a depth of 37 k feet on Leidesdorff, for which, ostens-bly, \$150,000 in all were paid. The buildings on the land are of no use to the buyer; they are to be torn down next year, when a very fine building for the London and San Francisco Bank will be creeted on the lot. The price paid per front foot \$3,450 is among the highest free the feet before This purchase by the London and San Francisco Bank disposes of the rumor that it was about to move to Market street. The property on the northwest corner of Edis and Steckton streets—5 feet on Stockton by 70 on Ellis, distant from Market str

been sold for \$45,000.

The late reduction of the rate of interest to 9 per cent, by the Hibernia Bank came at a good time. The number of mortgages given to private individuals was larger last month than in July, the excess amounting to \$8-5,222. The private releases of August exceed those of July in the sum of \$90,087. The Hibernia Bank last month released \$133,775 less than in July. Money is plenty with it, the country demand is light. The amount leaned on city property by the Franch Bank last month was small. The supply of money at the Savings Union is not large; ten per cent, is the rate on city, and it to 12 per cent, the rates on country loans. The German bank did not loan so much last month on city property as in July, the most of its available funds being already in profitable use; rates, 10 per cent, on city, and 11 to 12 per cent, on country loans. The supply of money at the Old Fellows' Bank is small; the city demand was moderate, while that from the country was brisk. Most of the money loaned by this bank in the country is used for the improvement of vineyards. Money is scarce at the Clay-street Bank. The Masonic Bank has pienty of money on hand; the city and country demand were both brisk last month; no change in rates. Money is scarce at the Security Bank; there was a fair city demand last month; no change in rates.

a fair city demand last month; no change in rates. The French Savings Bank has \$250,000 loaned on country property and \$180,000 in Alameda county. The Clay-street Bank holds mortgages on property outside of this city and county of the total value of \$1,442,248. The Odd Fellows' Bank has \$750,000 loaned in the country. The Missonic Bank has \$250,000 lat there. The German Bank has \$156,200 loaned in Alameda county, and \$376,500 in other interior counties. The Savings Union has \$1,881,089 loaned on Oakland property and \$1,343,946 on farms or in the towns of the interior. This makes a total of nearly six and a half millions of dellars let by the above banks on ranch and town property outside of this county, irrespective of the sums bound in the interior by our largest Savings Bank (the Hibernia, from which we have no statement. If we add to this sum the amount of deposits held by interior savings banks (seven and a half millions), we have a total of fourteen millions loaned outside of the city and county. These figures prove that the interior is quite as much interested as this city in the abolishment of the double and treble taxation which results from a mortgage tax.

abolishment of the double and freble taxation which results from a mortgage tax. The following leases of general interest were recorded during the past month: Store, 148,x2216 in size, northeast corner of Clay and Montgomery, in building now being creeted, for three years from November lat, at \$200 per month. Store in said building, north side Clay, 39 feet east of Montgomery, for three years from October 1st, at \$500 per month, with privilege of three years more on terms to be settled by arbitration. Frame building and lot, west corner of Fourth and Townsend (adjoining railroad freight depot., 70 feet front on Fourth by 68% on Townsend, for three years from June 1st, last, at \$225 per month, with privilege of one year more at \$250 per month.

<sup>—</sup> The Town Crier does not desire to take an active part in politics. He has observed, however, a brace of singular oversights in the conduct of the campaign to which he calls the attention of the orators of the two parties. Mr. Felton neglected to state that Greeky once stole the coppers off a dead ninger; eye sun Key York; and Dr. Shorb forgot that Grant was on one occasion detected in going through the pockets of a drunken Digger up at Knight's Ferry. These things should be kept before the people. Let the Alta and the Examiner see to it.

### Laughorisms.

[From the London Comic Journals.]

A GRAVE PARLIAMENTARY QUESTION.—Political student (to sporting M. P.)—"I suppose the present Ministry must have lost influence considerably this season, but they won't be turned out now?" Sporting M. P.—"Probably not, except on one question." P. S.—"Indeed! What question?" S. M. P.—"The grouse question; if they try to prolong the session beyond the twelfth."

GETTING A PULL.—It has been stated by some profit—N. B. not the Cumming man—that Lake Erie is drying up. Pooh! it is only a passing drain on its resources in consequence of the attempted liquidation of the great Erie Raiway Company. After the way in which the Fisk party "milked" the speculation, we don't wonder at the lake's being short of Simpson.

"Shut the Door in the Doctor's Nose."—The Northern Ensign records the death of a veteran, aged one bundred and five years. It adds: "The old man retained his faculties to the last." We doubt the statement with regard to one Faculty. Had he retained a member of that, he would have been physicked into another world long ago.

MALAPROPIANA.—Mrs. Maloprop is making a collection of butterfiles, which she hopes may help her to understand the theory of caterpillary attraction. With a view to gain some foreign information on the subject, she has been reading Mr. Wallace's delightful book of travel in what she calls the Himmalayan Archipelago.

A LITHOGRAPHIC EPIGRAM.
A sermon in stones we have recently had,
Of which an epitome giving,
You may say premier Stone was uncommonly Glad,
To learn Yother Stone was still Living.

PUTTING A NEW LIGHT ON IT—(A fact).—Susan—"Oh, Mim, please, my kitchin, Mim, it do so swarm with Bendles." Mistress—"Bendles, Susan; don't you know that word is spelt with a T? Susan—"Is't, Mim; well, it's the first time I've ever heard 'em called Tendles!"

LATEST FROM THE PLAYGROUND.—First Schoolboy: You're the new boy, ain't you! Look here, do you collect stamps? Second ditto (reassured): Ye.—s. First Schoolboy: Then there's one for you. [Comes down heavily on his toes, and cuts off.]

AN ALTERNATIVE.—Owner of Canine Individual—"Not a good house-dog because he didn't bark when you came? He generally barks at beggars, but he's always mute when he's after rats and that sort of vermin."

"WHEN TAKEN TO BE WELL SHAKEN."—A gentleman from California, at present on a visit to England, assures us that carthquakes are so common at San Francisco the even the ragged urchins in the streets have shock heads!

A HAPPY THOUGHT.—The American Elevated Railway is worked by means of what is known to engineers as an "endless rope." Might it not be well to work the murderers and robbers of London on the same principle?

GENUINE AMERICAN CLAIM.—There is certainly one claim of immense amount which may be advanced by the United States, and is incontestible; the claim of Mr. Stanley to have discovered Dr. Livingstone.

A NOBLE IDEA.—By our own small Coalman—Why are Coals the most contradictory articles known to commerce? Because, when purchased, instead of going to the buyer they go to the cellar.

VERDANT.—A lad at Greenock killed himself with an extra dose of very strong whisky at Greenock fair. This sort of whisky drinking is a very Green-ockupation for a lad!

READY-MADE EPITAPHS.—On a departed clown -"Though lost to sight, to mummer dear." On a Faithful Book-keeper—"Posted up." On one Drowned—"He left a large circle, etc."

Poor Child! Well He Might.—Fond Darling (to his dear Mamma)—"I know what it is, Ma, dear, that makes me so tiresome—its because I want a Squirt!"

A SETTLER FOR A SQUATTER.—Young Hodge—"Thur bean't no road he-ur!" Tresspasser—"Ah, so I see; but I wasn't looking for one!"

SPORTING AND METEOROLOGICAL QUESTION.—Sir, how am I to know when it's a dead heat? Why, when it's quite cold.

INSURED INNOCENCE.—Bulbous Uhlan (referring to French loan)—Von tausend et x ondred million bounds! Mein Gott, mein Gott! and dey say ve plondered dem! Qutte Right.—A correspondent, who owns a valuable horse, objects to turning him into a paddock for fear he should graze his knees.

FISH HAVE NOT FREE—This is strange, as we have only to go to the fishmonger to behold the sole, the (h)eel and the skate.

— Mr. Paschal Coggins has been nominated as a candidate for Congress by a convention of men of average intelligence. This reads like a lie, but it isn't. Truth is otten stranger than fiction. If you wish for a lie, we will give you a good one: Mr. Coggins is eminently fitted for the position to which he aspires.

## Youth and Age.

O day so gray, you could not chill me, In that sweet time, far off and fair, Though loud winds shrieked and echoed shrilly, And wild rain washed the woodlands bare! Though sodden fields stretched cold, unvaried, And birds flew south on weary wing; For in my happy heart I carried
The hope and promise of the Spring.

O day so gay, you cannot thrill me! Your light and perfume, shower and song, Your bloom and brightness, only fill me With old-time memories, sweet and strong. I would not bid your swift hours tarry, I do not hasten at your call;

For in my thankful heart I carry The joy and fruitage of the fall. -Atlantic Monthly.

- On the 16th of August The Financial Postscript, in an attempt to state the merits of the railroad situation, used the following language: "The object of these two incorporations (the Cahfornia Atlantic and Pacific and the San Francisco and Colorado River Railroad Companies) is one and the same the construc-tion of a railroad from San Francisco to the Colorado river. The city of San Frantion of a railroad from San Francisco to the Colorado river. The city of San Francisco is to be called upon to aid the work. Neither party can accomplish anything without the public aid. The true position for the city to take, with an eye to its own interest, is to require these personal quarrels to be compromised and settled before her own means be given at all." These positions were again urged in the issue of August 23d, with the further suggestion: "The public is not a party to the personal controversy which has begun to be wearisome. The public can bring a weight of opinion to bear on the contestants that can compel a compromise or compel those who shall refuse all compromise to go to the wall. The present is San Francisco's opportunity, and the question with which the city is controlted is, whether 'private feeling shall continue to be allowed to dominate public spirit; and the opportunity be lost through individual obstinacy and distracted counsels." The News Letter took the same ground. John T. Dovle, Esq., now writes as The News Letter took the same ground. John T. Doyle, Esq., now writes as follows:

"The Diretors of the California A. & P. R. R. Co. and of the San Francisco and Colorado Company are said to be in conference on the subject of uniting the two organizations. This is the most promising move for a competitive road yet made. Let the best elements of those two concerns be united, nators say five from each Boar' of Directors and adding three new names not identified with either party. Make this a new organization, combining the financial strength of the one with the popular support of the other. Abandon the impracticable and probably illegal) scheme of fifty trustees to control a majority of the stock and always elect the Directors, and substitute for it a privilege for every tax-payer to subscribe for the Directors, and substitute for it a privilege for every tax-payer to subscribe for and take stock in proportion to his taxes. Cut loose trom all entanging allinaries and strike for an independent road owned in the city and managed in its interest. To such an organization a subsidy of ten thousond dollars a mile would be cheers sully voted by the city, with one of the basins for terminal grounds, conditioned the road having no other terminals in tide water save on this peniusula. The privilege for tax-payers to subscribe for stock would relieve the subsidy of all dijectionable features, for the same persons who would give it as tax-payers could receive the hencit of it as stockholders, if they wished; their subscriptions, if made, would streament, while of the designed the option have would be a would be a would be a world. would strengthen the Company, while if they declined the option they would have no just cause of complaint. Three or four persons only would object to this settlement, and they would be powerless, for their opposition would be obviously factious."

- When real estate sales are being closed, at the time taxes are due, it is often a matter of dispute between the buyer and seller as to who should pay them. The a matter of dispute between the buyer and seller as to who should pay them. The following quotation from the law relating to taxes seems to make it the duty of the seller to do so, since, until he pays the tax, his title to the property is encumbered by a lien: "Every tax has the same force and effect as an execution duly levied against all property of the person who is liable for the payment of such tax." City real estate dealers endeavor to establish the rule that the seller shall pay taxes which are discovered. which are due.

<sup>-</sup> There is one thing for which we should ever hold the Louisville Convention Incre is one thing for which we should ever hold the Louisville Convention in grateful remembrance. The telegraph tersely tells as that Train was "bustled out of the door." The "man of destiny," the political comet, the most gigantic of humbugs and shameless of frauds, the incomprehensible bubbler, the misleader of the blind, the prince of liars, bustled out of the door-kicked like a manug of into the street. Verily, this good deed alone shall ever endear to us the name of Louisville.

### Letter from Mexico.

MEXICO, July 31, 1872.

MY DEAR NEWS LETTER: -Since my last communication a great event has taken place in this Republic, namely the death of President Juarez.

The cause is well known, tho' some people hint His food or his drink had something put in 't.

It is not surprising that so sudden and unexpected an occurrence should have created certain suspicions, when we bear in mind that the Cabinet had been recently changed, and that several summary executions and numerous arrests had lately taken place. But it has been decided by the faculty to the satisfaction of every reasonable person that Juarez died of disease of the heart. A Hungarian doctor gravely assured me that, at a banquet where eighty toasts were given, Juarez tossed off as many bumpers and died of congestion of the brain! This may do to tell to the amphibions portion of H. M.'s service, but those "whose bed's the occan, a wave their pillow," would hardly believe in such a rum death of a President. President.

The great question now is, what effect will the death of the President, the alleged cause of the revolution, produce on the state of the country? The sanguine believe that as the cause has ceased to exist, the effect nust cease; but they forget that there were three Richmonds in the field, two of whom survive, and although one of these has been nowhere, at least not to be found, during the course of the one of these has been nowhere, at least not to be found, during the course of the revolution, he may now, that an opportunity offers, wish to place himself somewhere, or his friends (!) may attempt to do it for him, which might, and probably would, lead to a combination of the revolutionists (so called). In proof of this view of the matter, cries have already been heard in Zacatecas of "Long live Porfirio Diaz and the Constitution," which is rather suggestive. You, who are presumed to know everything, are, of course, aware that in this Republic, when the President dies the President of the Supreme Court becomes de officio President of President dies the President of the Supreme Court becomes ae opicio President of the nation; not for the unexpired part of the the term of the defunct, but until a convocation is called and a new President is elected. The convocation is called for the 13th of October, when a primary election will take place, and the election for President on the 27th of the same month. Thus far it is not officially announced who the candidates will be, though it is understood that Lerdo de Tejada will be one, Porficio Diaz, in all likelihood, another, and they say Mejia means to offer himself as a candidate for the Presidential chair. There can be no doubt that Lerdo de Tejada is by far the most cligible, being a man of high social standing, as well as an able jurisconsult and statesman of great experience; in short he was the right hand man of Juarez,

A general amnesty has been promulgated, and a change of ministers and other A general annesty has been promulgated, and a change of ministers and other things have been talked of, but nothing further is done yet. News travels so slowly in this country, or there is such a suppression of its publicity, that nothing thus far is known of the effect produced by Juarez' death on the revolutionist at the seat of war. My humble opinion is that a large number of these "gentlemen" have been so long accustomed to profit by the disordered state of the country, and instead of working, to find the means of indulging in their numerous vices by plander, that it would be very difficult to make them engage in the dull routine of gaining an honest livelihood; indeed, many, if they possessed the inclination, have become quite unfitted for the task, while others could never be induced to en-

gage in it.

We will suppose that the provisional President or President elect should set

We will suppose that the provisional President or President elect should set We will suppose that the provisional President or President elect should set about reform in earnest, what hope would there be of success while almost every State has a petty tyrant for a Governor, either backed by a venal Legislature or already declared omnipotent by it to extort from the people of his State any amount of taxes he may think proper, with a horde of civil and military State ruffians to enforce his mandates. If these fellows resisted, which, of course, they would do, all the Federal forces would not suffice to subdue them. So the pros-

ruffians to enforce his mandates. If these fellows resisted, which, of course, they would do, all the Federal forces would not suffee to subducthem. So the prospects of reform do not appear to me to be very bright. An attempt at a pronunciamiento against Lerdo has been made in the City of Mexico.

It is quite refreshing to see the tribute paid to the memory of the late President, who up to the time of his death was regarded by the large majority of Mexicans as a tyrant and despot unsurpassed by any Sultan, and daily denounced as such by the press; but all his faults appear to have died with him, and he is now declared by all parties, including that portion of the press most bitterly opposed to him, to have been the savior of his country, the founder of the Constitution, destroyer of privileged classes, and the most constitutional, liberal, enlightened and progressive President that ever ruled the destinies of this country. As the fates seem to have determined he should die while President, it is a great pity they had not anticipated the event a year or so, then, indeed, he would have been entitled to the homage paid to his memory, but he last year of his rule will be found by the impartial biographer to form a black page of his history.

In the meantime the programme of new taxes is being strictly carried out, while the contributions are already so heavy and oppressive that little or no margin is left for any branch of industry or business. Thus capital and capitalists are daily eleaving the country, and while the demands on it are constantly increasing, its resources are visibly diminishing. This state of things caunot be borne much longer, there is, however, a remedy which I have already indicated, and as there is only that one, they must come to it sooner or later, the sooner the better for all concerned, and it is therefore prayed for by the intelligence of the country. So mote it be.

mote it be.

## Wayside Gushings.

[BY MRS. HARRIS.]

DEAR News LETTER: You thought, perhaps, I wouldn't write no more, And that I meant to bid you what the French call, au revoir; But the doctors they did bid me to stop gushing for a time, 'Cos they said my constitution would not stand sich constant rhyme. Likeways Roosian baths they hordered, vich did cause me to perspire Like a hancient gladiator, or perliceman at a fire. And vun day, vile they was coaping of my skin from top to toe, I did slide off from the marble, and 'ed foremost I did go On to a poor, sickly criter, who was on the slab beneath, And my weight did fall that 'eavy it did take away 'er breath, ''Orrid monster,'' lond she 'eller'd, ''I'l 'ave law on you for thie,'' And 'twas all in wain explaining that my balance I did miss 'Cos the marble were so ellippery, and too narrow for my size, And I couldn't see 'er, neither,' 'cos the soap was in my eyes. She did make me pay 'er doctor, and sit up with 'er' o nights. That was 'Arris's last Roosian bath, for though vun can't be drowned, 'Vun might get a compound fracture tumbling on the slippery ground; Or '!f falling on another Roosian female's fragile chest, 'Vun might be 'ad up for murder, so I like the Ocean best.

Recding t'other day my text book, I did open at the verse—
"In the latter days sedneers shall be waxing worseand worse."
And, thinks I, no doubt the present is the even!n' of the world,
When old Satan's on the rampage and 'is banner is unfuriled.
Some do call it the Millennium, sarin' 'its the latter days,
For the carrying on is awful and I never see sich ways.
There's McKinley—"fat and forty"—fave, I'm sure, if she's a day,
Me and Sayrah went to 'ear' er, just to learn vot she vould say;
And sich doctrines as she teaches 'its a shame for girls to 'ear,
Outraging all decent feelings and the memories we hold dear
Of a childhood reared in virtue by a faithful mother's hand,
And the precepts of religion taught us in a Christian land.
Worse than dogs and cats and cattle she would make us if she cond,
Following each beastly impulse, reckless of the pure and good.
Sayrah she is young and gushing, and young gals is easy wrought
Into highstrikes and excitement 'earin vot they didn't ought.
That night of McKinley's lecture she did 'are an' orrid dream,
And did vake me from my slumber by a loud permiscuous scream.
Sayra I, "Sayrah, vot's the matter! 'ave you tumbled out of bed?"
'Yos you dreamin'!" "Yes, I vos, Mim, I did dream that through the door
Came a gent more gay and 'andsome than I ever see'd before:
Says he, 'Sayrah, I be'eld you at the Love Lectur to-night
And I loved you from that hinstant, vich is free love at fust sight.
I am Smithers, your affin'ty, Tummus is my Christian name,
At this late 'our of the hevenin' vile the clocks is strikin' two—
Come to my harms, woluptious Sayrah, and don't vake your missus votever
I did duck that gal vith vater vich did hinstant cool 'er off, [you do!'"
And she's got rid of her free love but has now an 'acking cough,
Vich I'd rather see 'er dyin' of consumption day by day
Than live 'ealthy in the brazen, sensual, free love voman's vay.
He who calls us, "sons and daughters" 'did not mean us to be swine,
But these vomen scorn all sanctions, social, sacred and divine.
Love whe

The diamonds and other precious stones belonging to the San Francisco and New York Mining and Commercial Company popularly known as "the Bank of Californis stones.") have been forwarded to London. It will be remembered that the firm of Pittar, Leverson & Co., diamond dealers, recently wrote to the London Times that an American bad purchased from them a lot of rough Cape diamonds, and that paper is represented as intimating a suspicion that the American diamonds might be identical with this lot. Messrs. Pittar & Leverson when soon have an opportunity of inspecting the American stones, which go to London for cutting and a market, and will be requested to attempt to identify any of them as the stones which they sold.

### New Books.

Who Would Have Thought It? A Novel. Published by J. B. Lippincott & Co., Philadelphia. A. L. Bancrott & Co., San Francisco.

Philadelphia. A. L. Bancrott & Co., San Francisco.

Nothing could be more opportune than the appearance of this book just at the present moment, when the public mind is filled with excitement at the fabbilous tales of diamonds and emeraids and rubies and all precious stones gathered by the bushel in the new valley of "Sinbad the Sailor"—realizing in this matter of fact and prosaic age the wildest and most extravagant dreams of our childhood. Was the flight of the "Rocs" into the Valley of Diamonds any more remarkable than the tales daily told in our streets and listened to with credence by our "most potent, grave, and reverend signious," of the disinterment of diamonds, rubies and emeralds by those industrious little folk, the ants of New Mexico! Might it not have been of these very ants that Solomon spoke in a spirit of prophecy, "Go to the ant, thou sluggard; consider her ways and be wise."

The discovery of these precious stones is the hinge upon which the present story turns, and although very romantic, it is not beyond the range of probabilities. We will not spoil its interest with the lovers of fiction by giving a synopsis of the plot, we will not spoil its interest with the lovers of fiction by giving a synopsis of the plot, which we will give them an inkling of what is to come, by quoting Dr. Norval's story. The Doctor was an eccentric but learned scientist, who, while accompanying an exploring party met with the following adventures:

exploring party met with the following adventures

We were on our way down the Colorado River intending to follow its course to its junction with the (fila, or perhaps to the Gulf of California, and we had en-camped to take a two days' rest, when we were surrounded by a large party of Indians. The chief and two of his sons were badly wounded, and perhaps would have died if my medicine chest and surgical instruments hadn't been so good. The nave died if my indicatic cheek and singular instantiers from the ramp, and the chief told me he wished to send for his wife and daughters, and remain in camp with his two sons, that I might attend to their wounds. That same evening, after I had dressed the wounds of the chief and his two sons, Lola and her mother after I had dressed the wounds of the chief and his two sons, Lola and her mother came, accompanied by an Indian woman. The chief told me in broken Spanish, which he and I snoke about alike, that Eutelhap—pointing to Lola's mother—was his wife and had come to take care of him. A day or two after, feeling better acquainted, she asked me if she could trust me with a secret, and begged me to do her a favor for the love of God and for humanity's sake. I answered her I would do what I could. Then she told me her name was Donna Theresa Medina, that she had been carried away from Sonora, in Mexico, ten years ago, and she had never had an opportunity to escape until now; that she had made an oath to the chief not to try to escape, because in that way he would relax his vigilance, and she life enabled to send her little girl away. She said also that she would naw me well it chief not to try to escape, because in that way he would relax his vigilance, and she be enabled to send her little girl away. She said, also, that she would pay me well if I would take her child away and care for her. This of course I promised her. Then she told me that she had 'enough gold to fill up those boxes (pointing to our mess and provision chests) which she would put under my care for Loia, and for me to pay myself for my trouble; that she had gold in a little ravine not far from the spot where our camp was pitched. At first I could hardly believe what she said; but she did not let me doubt long. That same night she brought me a buckskin bug, which she could hardly carry, full of gold nuggets, and gave them to me, saying she would give me as many more as I wanted if I only would take her child away from among savages, and bring her up as a Christian and educate her myself in case I should not be able to find her father.

"Accidentally, while bathing in a small stream which is tributary to the Coloredo."

"Accidentally, while bathing in a small stream which is tributary to the Colorado River, she saw a very bright shining pebble. She picked it up, and as she had some knowledge of precious stones, she saw it was a large diamond, though only partly divested of its rough coating. She had some diamond rings on her fingers partly divested of its rough coating. She had some diamond rings on her fingers when she was captured, and with those rings, she told me, she managed to scratch the surface of these rough pebbles and ascertain that they were diamonds. Then she looked about for similar pebbles and found many more. Afterwards she followed the little rivulet from which they seemed to come down, and following it, was led up to the side of a bill and down a ravine, where, as if they had been washed thither by the rains, she found opals and larger diamonds. Afterward the Indians brought her emeralds and rubies, seeing she liked pretty pebbles. Thus she made a fine collection, for she took only the largest, and those which seemed to have the most norfect."

to her the most perfect."

to her the most perfect."

A Compendious Grammar of the Greek Language. By Alpheus Crosby. Woolworth, Ainsworth & Co., New York; A. Roman & Co., San Francisco. Nothing shows more fully the futility of the tin-speared attacks of pretended scholars upon classical education than the care and expense devoted to Greek and Latin text-books. And it is gratifying to those who believe in a solid education, to the exclusion of a superficial brilliancy, to see a book like the one before us. Prof. Crosby has devoted an energetic life to the methodizing and tabulating of the principles and forms of the Greek language, with a success that thousands of graduates from all leading colleges acknowledge with gratitude. And no small meed of praise is due to his publishers for their evident pains to make a fitting dress to the work. It occurs to us, however, and the author in his preface deprecates this criticism, that this particular volume was hardly needed. There seems to be no link wanting between the "First Lessons" and the standard "Greek Grammar," and in this middle book we are referred bodily, at the outset, to the larger Grammar, when any amplification is wished. Knowing well the completeness of the larger work, we question the judiciousness of adding needlessly to the number of handbooks on a language so synthetic as the Greek.

## Star Showers--August 9, 1872.

"Open the casement to-night, love, Gaze in the heavens afar, Only don't fix your regards on One bright particular star.

One bright particular star.

No, for to-night, they have told us, Stars will be shooting in showers, Heaven the idea is pretty

Strewn with those glittering flowers.

"Types of our blended existence, Emblems of love, dear, are they, Glimpses of brightness thick studding O'er my else desolate way.

"Let us take heart, then—take courage; Life for us yet shall be bright, Lit up by love like a star shower, Henceforth for us is no night.

"Henceforth!" Oh, brother star-gazing, Each caught a terrible cough, And the star-shower was a swindle, Hung fire, and never went off.

-Hornet.

## "Loud" Dressing.

Man is an imitative animal so is a woman. This propensity is of course the most strongly developed in the ruling passion—dress. As dresses the mistress, as dresses and the first past of the property of passion of purest water, rubies, emeralds, garnets and corals are all imitated beyond the power of any save experts to detect. The costliest fabrics—cashmeres, sitis and velvets—are so nearly copied that none but females and dry goods clerks can tell the difference. Furshave so far defied imitation, showing the superiority of nature to art. The sable, the emine, and the seal produce fabrics beyond the power of the foom to rival. We rejoice that we have no peasant class. It is a source of pride that we have no sumptuary laws, and no such social distinctions as preclude any class of our citizens to dress as they piease. But we confess that when we as serving girl with her hat and paumes and flowers—her long trail of inexpensive imitation dragging in the dirt—her cheap and glittering jewelry hashing from bust and car and finger, we wish she had sense enough to see how absurd she looks in patterning after sees showy woman of the town. This cheap display is becoming so common and abourd that the true woman is known by the simplicity of her attire.

### New Zealand Items.

A pearl-fishing company is about to be oreanized at Auckland, for the purpose of pearl fishing along the northwest of Australia, and the southern coast of New Guinea. The enterprise promises to be a successful one. At a meeting held for this purpose, it was announced that Captain Cadell had made \$7000 during the first year of his fishing. The pearl shell is valued at \$700 per ton in Sydney. The Annual Exhibition for the Industrial advancement of the Province and of the Colony was to have opened on the 1st instant. Through the courtesy of trans-Pacific mail boars, and the several inter-Colonial steamers, articles for the Exhibition were to be transmitted free from Australia and the United States. The subject of the cultivation of New Zealand flax is attracting great-attention. The quality of the article heretofore exported was inferior, but it is believed that flax grown in that colony will yet rival in value the article soid in the American and European markets.

## The Cotton Crop.

According to the reports from Merced and Kern Counties, the cotton crop promises excellent results. The present is the second year in experimenting upon the production of cetton in this State, and the experiments so far have more than realized the best expectations of the enterprising planters. It is estimated that more than one thousand bases will be procured this year. Specimens of Cailfornia cotton have been analyzed by experts, who pronounce it in fineness of texture and whiteness equal to the best article grown in the Southern States. It is said that an acre of cotton will not from \$200 to \$400. As yet this branch of agriculture is no more than in its infancy. Within a few years, however, California will take high rank as a cotton producing State. There is an immense field open to its cultivation, extending from the Sacramento Valley to the Kern River country.

The "Resources of California" is out again, and is a good number. Many items of interest are to be found in its pages. We notice, however, a singular omission: the editor has forgetten to mention the undentable fact that the very best photographs are obtainable only in this city. There can be no question about this; any one who shall get into Bradley & Rulofson's elevator and ascend to the regions of art must acknowledge its truth. We trust that Brother Wentworth will supply this omission in his next issue. It is hardly excusable for a publication designed to call attention to the advantages of California to fail to mention the really superior photographs of Bradley & Rulofson.

# Why My Special, "The Hornet's" Correspondent, Did

Not Discover Livingstone.

A Confession.—I remember, as well as if it were yesterday, sir, the night when you warmly wenug my hand, and, with a look I shall never forget, told me to start immediately in search of Livingstone. Ah, sir, if I had only gone, what a proud position would mine be now. I should have anticipated Stanley by exactly a week, and should be, at this present moment, putting my legs under a succession of feative "mahoganies" at Brighton, and looking forward with prospective joy to a page memoir of myself in the next new edition of Koutledge's "Men of the Time." But it was not to be, and it isn't. And the time has come when you should know why. Listen, then

But it was not to be, and it isn't. And the time has come when you should know why. Listen, then.

When you let me on that ever-memorable night, my first impulse was to climb on a chair, pull down Vol. I. of my "Encyclopedia Britannica," and look out Africa. Not that I was altogether ignorant of that foreign land. I had long been acquainted—who more so!—with its sherries, and knew more than a little of its acquainted—who more so!—with its sherries, and knew more than a little of its ports, having an esteemed cousin at one of them—Port Natal. In my youth I had often subscribed my pence, under parental compulsion, towards the Senegal Mission; and I had once known a very fat returned missionary from Sierra Leone, who at one critical juncture of his evangelizing career, had been marked for the royal larder at Abomey, and only escaped because there was no coop big enough to fatten him in. Which puts me in mind of the very corpulent private they made a corporal of, because he was too big to get inside of the regulation sentry boxes. This, though, is discursive. I climbed, as I told you—it was after dinner-as you may remember—to get down Vol. I. of the "E.B.," and I remember no more till I recovered consciousness the next morning, and found my laundress busily engaged in removing from contact with my prostrate form the thirty old thick volumes of Messrs. Blackie's exhaustive work which were littered about it. In my haste I had pulled the shelf and its contents down upon me; and Vol. J-L had infelted an ugly wound with its corner on my brow; while many of the others had flicted an ugly wound with its corner on my brow; while many of the others had made their marks about my person, with all the decision of ignorant plowmen who cannot write.

It was whilst smarting from my Encyclopædic wounds I sat down and dispatched

It was whilst smarting from my Encyclopædic wounds I sat down and dispatched to you a post-card, asking for funds to prosecute my search; which, in your fervor, you had forgotten on the previous evening. What you sent back to me, you know, and I need not mention the sum. It was some, certainly; but not much. But let bygones be bygones; as, indeed, they needs must be; for how can they be anything else? But I do not hesitate to say this. I started immediately on reading your letter accompanying the remittance. Do not misunderstand me. I started—not so much for Africa as with indignation. My first impulse was to return the check; my second—and how true it is that second thoughts are better—was to the the they have been the present of the second thoughts are better—was to change it. I did so; and that being done, I began to form my plans of action.

Livingstone was lost, you had told me, and I was to find him. The question at once arose, who lost him? Did he lose himself? If so, was he not better able to discover himself than any one clee was. Those who hide can find, the saying tells us. Thus I reasoned with myself. Suppose, in looking for Livingstone, I lost myself, would any one come to search me out? One man would have an interest in my discovery—he was my tailor—but I doubted if even he would it out a search expedition for the sake of finding £49 128. 10d., or rather the man who owed it to mim. So, by the time I had eaten my dinner, I came to the conclusion—or better, the conclusion came to me, for I was too lazy to move—that I might as well let Livingstone find himself. So, having sent you a telegram reporting my departure in a P. & O. boat for the Pyramids, I had my beard and whiskers shaved off, took two rooms at the Charing-cross hotel, and strolled downto the Arches for a quiet game of pool. game of pool,

The rarity of christian charity finds exemplification in the last issue of the Pacific, which is what they call a "religious" paper. One Hodge—a D. D.—has ventured to give to his fellow christians of the Roman Catholic branch this cold comfort: "When the choice is between that"—the Roman Catholic religion—"and none, it is wise and right to encourage the establishment of churches under the control of the Roman Catholic priests." This is not remarkably consoling. The Catholics are not likely to rush to embrace Hodge for the concession. Yet the The Catholics are not likely to rush to embrace Hodge for the concession. Yet the Pacific is amazed, indignant, horrified. It scorns the idea that the Catholic religion is better than none at all; and denounces Hodge for his remarkably illiberal admission, considering it altogether too liberal. We have studied this Christian question, and have found that all the branches—Congregationalists, Catholics and all the rest—are humbugs of the first water. Furthermore, the editor of the Pacific is a hypocrite or a fool. Probably, a mixture of both.

<sup>—</sup> The gentlemen concerned in the Fair case are reminded that they migh have saved themselves much time and labor by the selection of ready-made jurors. There is in the Stockton Asylum a class marked "not dangerous." As these people pay little attention to newspapers, and have no very fixed opinions on the subject of capital punishment or anything else, they might be made very satisfactory occupants of a jury box.

## The Australian Steamship Line.

Mr. Wm. H. Webb, proprietor of the line of steamers between San Francisco and the Australian Colonies, is now in this city. His business is to look after the interests of the line and inaugurate such measures as may tend to promote its prosperity. The policy pursued hitherto has been rather tentative than an example of what will be adopted in the future. It is satisfactory to know that the example of what will be adopted in the future. It is satisfactory to know that the example of the steep of the sufficiently encouraging to warrant hum in embarking a much larger amount of capital, to the end of placing the enterprise on a permanent foundation. As a preliminary measure, he has constructed two new steamships for the service, which it is no misuse of language to term "splendid." There appears every reason to believe that Congress, at its next session, will grant to the Webb Australian line a sufficient subsidy to guarantee its continuance. The to the Webb Australian line a sufficient subsidy to guarantee its continuance. The subsidy measure failed at the last session through a combination of circumstances subsidy measure failed at the last session through a combination of circumstances not likely to recur. One potent consideration with the mere politicians of that body was the Presidential election; each party and each individual member was anxious to go before the country as an "economist." The present President and his Cabinet favored the subsidy policy, and he will no doubt continue to do so if reflected. Mr. Greeley, in his New York Tribune, has been a strenuous advocate of the policy. Both men have a personal knowledge of the needs of our Pacific Coast, and either may be expected to lend such aid of his official influence as may be proper, to establish an American steam marine on the Pacific Ocean.

The best means of giving an adequate idea of the service which Mr. Webb proposes to establish between California and the Colonies, is to reproduce a description of one of the magnificent new steamships which is to be faild on. The construction of these vessels is the best warrant of Mr. Webb's faith in the enterprise, and of the spirit with which he will push it forward. From the New York Herald of August 11th we reproduce a test of August 11th we reproduce the following account of

### THE TRIAL TRIP OF THE " DAKOTA."

A splendid new steamer, the Dakota, built by W. H. Webb, made her first trip down the bay yesterday with a party of invited guests on board. The trip was in every respect a success, and the new ship was greatly praised. After landing the guests, the Dakota proceeded on a second and longer trip, which was equally satisfactory. The vessel is intended for the California and Australian trade.

The following is a description of the steamer: She has a condensing beam engine, cylinder SI inches diameter, and stroke of piston 12 feet, fitted with Sickles' cut-oif. The steam and exhaust valves are what is known as double-pocket or balance, instead of the single or Dickenson valves, which were removed at great expense because not working satisfactorily. The air pumps are 48 inches in diameter and 5 feet stroke. There is an ordinary jet condenser, and also a surface condenser; Lighthall's patent, with independent circulating pump, etc. The water-wheels are 32 feet diameter over buckets. There are four plain cylindrical boilers, wheels are 32 feet diameter over buckets. There are four plain cylindrical boilers, 18 feet 4 inches diameter, 12 feet 3 inches long for the after boilers and 10 feet for the forward boilers. There are three furnaces, 3 feet 6 inches diameter on each boiler, making 12 furnaces in the four boilers. There are 250 tubes in each boiler. Each boiler has a steam chimney 7 feet diameter, 9 feet 6 inches high, delivering the smoke into a tiplake common to all; the smoke pipe is 8 feet diameter and 36 feet high above the steam chimneys. The total grate surface is 300 square feet; the total heating surface is 7,280 square feet, without the steam chimney; proportion of fire to grate surface, 24 to 1. The ship is furnished with a donkey boiler and two main donkey pumps, one Woodward, one Sewell's pattern; also a heavy hoisting engine for coaling and hoisting cargo. The engine made thirteen revolutions per eignne for coaining and noiseining cargo. The eignne indee timeen revolutions per minute, with twenty-two pounds of steam, twenty-eight inches vacuum, cutting of at one-third of stroke, draft 18½ feet. The engine made eight revolutions with twenty-eight pounds steam, 28 inches vacuum cutting off at one-tenth of stroke, The alterations and additions to the machinery department of the Dakota consist The alterations and additions to the machinery department of the Dakota consist chiefly of entire new boilers, those of the Dickerson plan, the same as put on board the United States steamer the iamous Algonquin, though only used on voyage, having been found, upon practice, entirely unit, were removed and disposed of fool diron. The valve gar has also been entirely changed. Those of Dickerson, who originally planned the machinery of the Dakota before she came into the possession of Mr. Webb, having been found not to work well, have been discarded also. Other changes, but of less importance, have been made to make the machinery of the Dakota to conform fully in all particulars with well known practice, having in jump the archaded asyrice this steamer is intended to perform. Modern having in view the extended service this steamer is intended to perform. Modern improvement of detail, well tried and understood, have also been introduced. The boilers of the Dakota are cylindrical, made of extra thickness of the very best of Pennsylvania boiler iron—the heaviest ever before adopted in this country—and are intended to carry high steam with short cut-oft, and thus economize coal, which is a very important item in the Pacific service, where coal is always costly. The boilers have been tested officially, at a hydrostatic pressure of sixty pounds, which is much higher than usual. The machinery of the Dakota is intended to be operis much higher than usual. The machinery of the Dakota is intended to be operated upon the compound principle, as far as can be with a single cylinder, and full hopes are entertained that great speed will be obtained on a small consumption of fuel. The hull has been much improved for Pacific Ocean service in warm latitudes, by the addition of narrow guards abatt the wheel and the extension of the light decks over the side windows, thus enabling passengers to sleep in all weathers with the windows and doors of their rooms open. Additional bath-rooms have been added, barber's room, and increased ventilation in all parts of the ship.

## Shaksperian Quotations.

A. AND P. R. R. -" Too thin." HOPKINS. - " Write me down Ass." HAYWARD. - " Most strange." HAYWARD.—" Most strange.

Fitcet.—" Blood, Isgo, blood."

COFFIN.—" Art there, old mole?"

PIXLEY.—" To drive us from our stools." OLD Pick.—"Thy bones are marrow-less, thy blood is cold." S. F. AND COL. RIVER R. R. - "A good-ly company,"

PRINGLE. - "Alas, poor Yorick." HAGER. - "A mind discused." STEINHART. - "I know a bank." FAY. - "He was ambitious." SNEATH. - " Rude am I in speech." DOVLE.—"A Daniel come to judgment." SUPERVISOR FORBES.—"Be not afeard, my masters."
Tobin — "Uttered a lot of stinking breath."

## Is It a Miracle?

For some time past we have not indulged in the pastime of ecclesiastical scalping. We could not afford to waste our ammunition on the petite author of such religious deagened as "Dead Flies," "Short Bedsteads," 'God's Railroad, 'etc. Certam afflictions and bereavements have fallen upon our beloved brother of the Geary street Tabernacie, so we extend mercy to him, and as to the facetious and venerable aposite who presides over the new Temple on Post street, we never think of easting a Stone that way. Indeed, we have of late suffered much agony think of easing a some that way. There is, we have of any supersurance along of soil, because we could find no game worthy of our masterly ability. We despise putting out those small lights who preach for anything less than \$5,000 a year. Hence, Rev. Dr. Cox, the political harlequin and religious munumy, has escaped the putting out those small lights who present for anything uses than Salors a North-Hence, Rev. Dr. Cox, the political harlequin and neligious minime, has escaped her range of our intellectual ritle, as has Edder Bussett, the serutch-for-a-living Second Adventist, who how is the coming of Christ in a crowd of 2boy semewhere in the regions of the new Mint building. We have prayed for some illustrions victim, upon whom we could pour hot shot and shell; and to and beheld tis ever thus with the faithful—our prayers were heard, for the Rev. W. A. Spectacles, an eminent Cathole divine, preached at St. Mary's Cathodral on the subject of Miracles. Since the ancient days in which St. Philip Neri circle Pope Gement the Eighth of gout by the laying on of hands an art claimed to be a miracle by the faithful—there have been legions of Catholic ecclesiasies to feed their docks with unctions sermons on miracles. The Rev. Father, who followed the rexample on Sunday last—by way of digression—railed against 'the Paganism of Modern Society, and mourns over the fact that "an evil and adulterous generation demands a sign." But according to the Rev. Father, "the adulterous generation demands a sign." But fact it has always perplexed us to know where the priests, preachers and parsons get their authority. If supreme holiness, sublime intellectual power and a tender loving regard for a well filled wallet would constitute a source from which they could derive Divine power, we flatter our selves that we would be the possessors could derive Divine power, we flatter ourselves that we would be the possessors of it. But let us dea! with what the Rev. Father considers the greatest of all miracles it. But let us dear with what the Rey. Father considers the greatest of all indiacies—the existence of the Roman Catholic Church, which he says has stood the persecutions of storms for more than 1,800 years. Nonsense. If the Catholic Church is a miracle because it has lasted 1,800 years, what must be the Buildhist Church, which was hoary with as lasted 1,800 years, what must be the Buildhist Church, which was hoary with as bested to Christianity had birth, and which today is the retuge of more than a third of the population of the globe! What of the Taulist Church, in Ching which, should the propositions of storms for honderd, and reliage of more than a toltroof the population of the globe. What of the Taulst Church in China, which stood the persecutions of storms for hundreds and hun-dreds of years before the Pope's shipper was kissed? What of the Mohammedan Church, nearly as old as the Christian, which has driven the Catholic power from the sacred city of Jerusalem, the city that may be said to have given birth to Christianity! In the sense of age and of power, both these churches are greater miracles than the Roman Catholic Church, the prelates of which tickle the ignorant miracles than the Roman catholic entreit, the presences of which tickle the ignorant ear with the glory of its age and its process. As to miracles in themselves, the Rev. Father believes in them with a fanatic devotion. Renan, in his introductory to "The Apostics," says that "all the pretended miracles near enough to be examined, are referable to illusion or imposture." We think so. As to the tendency of modern society towards Paganism, thank the Gods for it. It proves that the power of the ecclesiastical slave masters is waning for want of dupes.

<sup>—</sup> The haunts of the progressionists are filled with woe; there is wailing in the temples of the shrickers. The fair Pitts tears her hair, and Loomis is as one distraught. For Couzins has departed, and her piace is vacant, and cannot be filled. No more shall her sparkling eyes carry confusion into the ranks of the enemy, and the ripping music of her voice is stilled. She hath gone, and none now remain but the ancient and dilapidated crones upon whom we have so often showered the sweet comfort of cheering words. Our soul lacks contentment, and we cry out even for the Rev. Annie Green. Would that we might have fresh fields and pastures new, wherein to disport ourselves. We tire of wringing the necks of the old hens that are left. Import fresh and tender virgins, O ye suffrage shrickers, that we may mangle them with a relish.

### A Wax-Work Romance.

We wos hexibitin' at Weston-super-Mare at the time, and doin' uncommon well. An' never 'ad Manders' Ryle Collexshun o' Wax Wurks deserved to do better: for never 'ad the figures been more numerus or rechurchy. Six wans in all: all on em full; to say nothink of the tatooed man as we carried about with us in the livin' waggin, an' threw in with a war-dance at the evenin' performances. We wos drawin' immense. Our cards, hinformin' the public o' the heddicational nature of the collexshun, 'ad fetched the ladies' schools, which wos legion; so much so, that we found it with our while to alter one wan-ful of "horrors" into kings and queens, to please the scholastic hellyment of our patruns.

We wos pitched up one hend o' the town handy to the Market Place. Never 'ad Dan'l in his den, which won one of the movin' tablow, werked better; an' the lions answered to the clock-work as if it 'ad jest been put into their hinsides. The Claimant -what all ot 'wax that figger habsorbed to be sure—was the object. The place. But the fashun an' hintelleck of the place took more to the Profit, an' likewise to the young Greek Female who suckled 'er aged Pa to slow music through the keyshole; while the domestic survants wos all for the bed-room sence, where Mrs. Squibbs, of Bethnalecren, an' 'er hinfant fam'ly of six, lay welt'rin' in their gore, which wos a terrible subjeck, an' not one as you'd liket dust after dark without company.

without company.

without company.

But all this is noither here nor there. We'd been at Weston a week, when one night we wos sittin' down to supper, after the close of the hexibition for the day. When I say we I mean me, Henery Manders, the sole proprietor, Mrs. M., as 'ad done the female 'Erenles in hearlier life, but had run too fat of late; Miss Mary Jane M., our honly child, an' a treasure, as was quite a "Little Nell" in 'er way; an' the tatoned man afore-menshuned, whose happetite was not haffected by his sing'ler markin', an' who used to sleep on a turn-up bedsted in Dan'l's den. Well, there we wos a-sittin', out in front of the waggins—for it was summer time—enoyin' of as nice a bit of tripe and hunions as you'd see in a day's march, when all at once I notussed a form approachin' in the dim light, as turned out presently to be that of a young man.

all at once I notused a form approachin' in the dim light, as turned out presently to be that of a young man.

When he stepped out into the flare o' the naptha-lamp, an' stood hesitatin' as to whether he should come on, I could see 'im quite plain—an' he weren't the most 'andsome nor hintelleckshal young man you could fancy. His forehead came bulgin' out under his 'at, an' his eyes wos large and watery, while there wos a wacant look on his face, as you might see lookin' out of the fust-floor front winders at 'Anwell, if you wos on the watch when you passed it in the train. Still he seemed 'armlesse, so I beckins to 'im, and says, "Good evenin', sir; what might you please to want?"

Afore he could answer, my Mary Jane chimed in. "Why, father, that's the young man as has been in every time the wax-wurks was hopen to-day, an' wanted to know if he could have a seasin ticket?"

But by that time he'd come up closer, an', sniffn' the supper, he says, "There, I'm disturbin' you, I know; but, if you please, will the wax-wurks be open any more to-night?"

more to-night?

The latooed man, as had been hencored a good deal towards the end of the evenint, looked savage at the very thought; but I winked at 'in to say nothin', and replied as follows: "Well, sir, I may say as Manders's is closed for the night. Dan'l, and the rest of 'hem wants their sleep like we do, an' I'm sure you wouldn't be the one as to deny it to 'em.'"

"Me!" he says, quite energetic; "decidedly not. But tell me, Mr. Manders, does she sleep!" and he come up quite close, and whispered in my hear.

"Meanin' who, sir ?" says I.

"Can you ask?" he replies, in a meliancholy tone. "Why, Christine, of course, my angel, my love!" an' he leaned over to the tatooed man an' exclaimed hoarsely. "An' yon, Mr. Wild Indian, do you love!"

He's atouchy sort, that tatooed one, an' there might have been trouble, only I signed to Mrs. M. to help 'im to more tripe and hunions. Then I looked at the young man. Its eyes wos rollin' wildly, an' is forehead seemed to bulge more than ever. He was evidently a loonatic. I felt I must dissemble.

"Christine does sleep," I murmured sadly, an' then I asked Mary Jane in a hundertone what he meant.

dertone what he meant.

"Oh, it's that figger of the Princess Louise what we've dreased up and labelled for the Brighton poisoner," she replied. "I found 'im kissin' it this alternoon." The young man was standin' gazin' at the carrywans, an' whisilin' plaintive'y. "Could I see her?" he said presently, "before I seek my couch? I will not wake 'er, I will but kiss the bed clothes and retire."

'er, I will but kiss the bed clothes and retire.''
It was awkward to leave my supper like this, but there wos determidashun in 'is watery eye, an' half-a-crown in his fingers. "Foller me," I says, and I leads on to the hexibition with the keys and a naptha lamp. He was a bit timid follerin' me down the steps into the straw, as smelt strong o' stale sawdışt an' orange peel. An' no wonder, for the figgers all wropped up in white sheets looked awful. The Brighton poisoner was in the far off corner between the Claimant an' the Markis of Bute. She was all covered up like the rest; but I removed the sheet at his request. "Withdraw a while, Manders!" he said, "I would be alone with my Christine," an' he slipped half-a-crown in my 'and.

Puttin' down the lamp, I slipped behind the Claimant—for it would not do to leave a loonatic alone with the figgers, as he might ruin the clockwork of some in a moment—an' watched 'im. It wos a curious sight. Down he went on his knees

in the sawdust, an' clasping his 'ands, said somethink of this sort: "Christine, once more I am at thy feet. Pity me! I love thee! Fly with me," and he got up suddenly an' was about to carry her off in his harms.

Out I come. "No, no, I say, "we can't spare er like that. We ain't got a murderess left what draws like 'er."

murderess left what draws like 'er." "Murderess." The exclaimed, frantically seizing the chocolate cream which, for realistic heffect, I ad stuck in her hand. "Murderess! Then you, too, would blight my love," and so sayin' he rushed from the show, threw a bit of orange peel at the tatooed man, an' wanished in the darkness.

I never see him more. An' we stayed on at Weston three more days, too; the last one being under the pattrunage of the local vocunteers, when, with a view to please, I put on the Markis o' Lorne a dark wig, stuck a rifle in his 'and, an' labelled him Private Mickie.

At Taunton, ten days after, I 'ad a letter put in my 'and. It was addressed thus:
"Christine ——, Mr. Mander's Wax Works, Bridgewater or elsewhere," Openin'

"Christine"—, Ar. Mander's wax works, Bridgewater or eisewhere, Openin' it I found it to be the ray ins of a ionnatic, and samed "Wilsam."

The werry next day a Westonssuper-Mare High Fulsiter came into my 'ands, an' it was a most flatterin' account of my visit to the place, which shows it ain't had policy to give an helectro teaper to the reporter's wife. An' just below were a little paragraph, which I will quote:

tle paragraph, which I will quote:

Singdow Daulh.—An inquest was held vesterday on the body of a young man named William Earlswood, who was found dead in his bed. For some years past he has been known to the inhabitants of the piace as a harmless launtic, and he has been living here in the charge of our respected town-man Mr. Keeper, of the High-street. A paper was found on the dressing-table with the words—"Christine, I die for thee!" on it. For the last ten days, we are informed, he has refused non-rishment aimost entirely, and has litterally wasted away. It is supposed he had formed some unreturned attachment. A verdict of death from natural causes was returned. turned.

Fancy my feelings on reading that. I could have smashed up the figger there an' en. But after all, as I said to the tatooed man, "What would be the use? It

wouldn't bring him back."

And the tatooed man replied, "I would't do it if it would." So you see he is a 'ard, unyielding man, but he does 'is war-dance capital for all that.-[Hornet.

# New Books.

FIX-LEAVES By C. S. C. Holt & Williams publishers, New York; A. L. Ban-

croft, San Francisco.

A little volume of verses that have attracted a great deal of attention in England deretands his subjects :

" O, if billows and pillows and hours and flowers, And all the brave rhymes of an elder day, Could be furled together, this genial weather, And carted, or carried, or wasted away, Nor ever again trotted out—ay me! How much fewer rhymes of verse there'd be!"

The Vicar's Datestree. By George McDonald. A Sequel to "Annals of a Quiet Neighborhood" and "The Seaboard Parish." Published by Roberts Brothers, Boston; A. Roman & Co., San Francisco.
"The Vicar's Daughter" is the autobiography of a sentimental, hysterical, gushing young woman, whose obtrusive piets and weak prattle soon weary the most patient reader. The story is very slight, and the plot is a sheader thread on which Mr. MacDonald strings chapters filled with wild twaddle and silly maunderings that are essentially sermons in disguise. The heroine, who does nothing but gush. The husband, a "great big huge bear," and a Miss Marion Clare, who soothes the London hoodlum's savage breast with music and singing, are the principal dramatic nersenge in this exceedingly study does. cipal dramatis personæ in this exceedingly stupid novel.

— We object to it, and will not state our reasons therefor; we believe in it, and there are no good reasons why we should do so. We do not see any particular good in it, and yet where's the harm! It is probably a good thing for women, children and ministers of the gospel, and is not a bad thing for the inmates of the State Prison, the Lunatic Asylum and the Police Court Prison. Whether it is continued or not, we expect the grass will grow, the water flow downward, and our appetite for virtuous desires increase. The thing is not a flagrant outrage upon the community, nor is it a particular benefit. Of course we do not refer indirectly to the miserable boshy sermons which are published in the duly journals every Monday morning. We may add that we do so directly and premeditately.

## Special Brevities.

—Any one who has read the London Daily Telegraph of late will not wonder why it can boast of the largest circulation of any journal in the world, for we cannot help feeling that it fairly earns that proud title. Its articles are always able, but those on American affairs are superior to the ordinary ran, both in style and in breadth of views. We do not deny that we feel flattered by the Telegraph's warm language in our favor, but a little reflection shows that it is not far from right. When we look at the immense tract of territory yet unsettled, the intelligence of our people, the extent of education, the activity of commerce, trade, and industry, and think what our population will be a century hence, we can hardly measure the full extent of prosperity in store for us. The Telegraph has a prophetic view of that magnificent future, and is generous enough to say so. Other journals could afford to follow its example, and perhaps gain in importance thereby, for it will be observed that this friendly view does not prevent the Telegraph from criticising us sharply at times, or from expressing its own strong opinions upon men and things in America. That is a proof of its sincerity which we appreciate.

— Formerly France contracted for money with bankers, as she did with any purveyor for State necessaries. In 1848 the plan of a public subscription was introduced; it was more democratic, it flattered the national pride, and distributed among the people the profits that financial agents pocketed. The wonderful loan of forty-three milliards, concluded in about a score of hours, is duly appreciated by the French, but they are not satisfied at the Liliputian slice of the three and a quarter milliards that must fall to their share, when all applicants, foreigners as well as speculators, receive their mathematical allotment of it—some seven and three-quarters per cent, on the total amount of applications. However, there is one satisfaction, the Germans are downright jealons of the great success of what they believed a beggared and crushed foe. They expected the French were to put on sackcloth and ashes in honor of their monetary triumph; forgetting that the treaty of Versailles, as hard as it was ungenerous, did not prohibit the conquered from displaying signs of satisfaction when they pleased.

The largest and most important of the fragments of the carved column dug up by Mr. Wood at a depth of 23 feet on the supposed site of the Temple of Diana, at Ephesus, has been set up in the Grace-Roman room at the British Museum. It measures about 6 feet in hight, and 18½ feet in circumference, and is supposed to have formed a portion of the first drum of one of the thirty-six Ionic carved columns, which with ninety-one others supported and adorned the edifice. Portions of the base and capital of the column were also found close by. On the other side of the drum, which has sustained comparatively slight injury, there are five figures of considerable heatity, but all more or less mutilated. Of only two of these can the identity be determined, namely, the figures of Mercury and Victory. The former is perfect with the exception of the face (which is slightly mutilated), and is regarded as a work of considerable merit.

— The papers tell us, says the Christian Union, that a project is on foot in London for purchasing a considerable extent of the most central portion of the Strand and erecting on the site an American hotel, larger and better than the Grand Hotel in Paris. The sum of \$3,000,000, all paid up, will be required, on which is promised a percentage of six per cent, or double the interest that is payable on consols. If it does no better than the great "Langham" experiment, the proprietors will have to take their dividend in "board." It is difficult to transplant into one country the institutions that are indigenous to another. Consequently the "American Hotels" in Europe are generally a mongrel mixture of American and something else. It is rather odd, too, that while all over Europe they are making great talk of establishing "American Hotels," our own hotels are coming to be conducted on the "European plan."

— A Russian paper says that a new sect has been discovered at Pskoff. It was founded a short time ago by a monk named Seraphim, who had run away from his monastery with a considerable sum of money belonging to his order. Seraphim preached the simple and very convenient doctrine that no one could enter the kingdom of Heaven without sin, and he accordingly soon made a great number of converts. One of the practices of the new sect is to cut the back hair of the women very short, and then arrange it in the form of a star. What is the oright of this cuetom is not known, but it has been maliclously insinuated that as the female members only of the sect were so treated, the object was to enable its founder to make a handsome income by selling their hair for chignons. Seraphim has now been arrested, and will shortly be tried as a religious impostor at St. Petersburg.

— The Metropolitan (London) Police accounts for the financial year ending the slat of March, 1872, show that the receipts for the service of the Metropolitan Police amounted to £909,859. The expenditure included £711,943 for pay, clothing, and equipment of the force: £46,235 for erection, purchase, rent, repairs, rates, and expenses of police stations and section houses; £70,887 for superannuations, in addition to £21,000 supplied from the superannuation fund. The number of persons belonging to the Metropolitan Police Force on the 1st of January, 1871, was 9,837. The year's salaries of the magistrates, clerks, etc., at the Metropolitan Police Courts amounted to £40,205 in the financial year 1871-72. These are paid from the public purse, the Consolidated Fund or Parliamentary vote.

We reprint the following interesting note from Harper's Weekly: "As is well known, grouse, pheasures, plarmigans, and some other gallinacea have a red patch or wattle above the eye, this being so conspiencious in some species as to resemble a piece of red flannel. This has been lately subjected to a careful analysis by Dr. Wurm, who ascertains that it contains a new organic coloring material, which he calls thromogenism, or grouse red. It seems to lie in the deeper strata of the epidermis, like the coloring matter of the human skin, and to be partly dissolved in the deep layers of the cells, and partly to common with the covering matter of the blood. The fact has been well known to hunters that if a white cloth be rubbed over this red process the color will come off."

The forty-second meeting of the British Association was inaugurated at Brighton on Wednesday evening. The stance was quite a brilliant affair, almost all the scientific notabilities of England being present. Mr. Stancev made his appearance about eight o'clock and was most enthusiastically received. The ex-Emperor of the French was also very warmly greeted, his free-trade tendencies always ensuring him a cordial reception in every assembly of Engashmen. The inaugural address of the President of the Association, Dr. Carpenter, is regarded as a strong protest against the prevailing spirit and philosophy of modern science.

— There is a panie at the Vatican just now on account of the very sensible oscillation and inclination of the gigantic capola of St. Peter's, which Mery calls "The eighth hill of Rome, created by Michael Angelo to approach nearer to food." That one side of the capola has sunk a good deal is particularly evident when seen from outside the Porte Cavallegger!.

— It is stated that Father Hyacinthe and the Abbe Michaud, late vicar of the Madeleine, propose to go to New Caledonia to establish a Church, in accordance with their own doctrines, among the political convicts of that benal settlement.

— A dispatch from Quito announces the death of M. Dulcat, French Consulgeneral and Charge d'Arlaires at that place. M. Dulcat had served in many diplomatic positions with honor to himself and advantage to his country.

— One John Molloy has been found guilty of a little naughtiness frequently mentioned in the Scripiures, and, greatly to his astonishment, has been fined \$690\$ therefor. If Judge Louderback continues this course of action, we shall seen have the city coffers full. We recommend this policy to Mr. Thiers, and predict as speedy ransom of France, if the law be rigidly enforced. Cannot the Atanta and Pacilic, a needy concern, make some arrangements with the city whereby they may levy assessments of the kind. It would be better than a subsidy. Indeed, if all oftenders were as strictly fined as John Molloy, we could pay the national debt in a day or two.

There is a vacancy on the island of Eromanza, in the New Hebrides group, for three or four missionaries. The gentlemen who last filled the position have been removed by a dispensation of an All-wise Providence the natives amused themselves by chopping them up. Young men of weak intellects, and too lazy to work, may find the place congenial; there is nothing to do, wages good and expenses paid, no brain or missels required. When nicely fattened, the playful natives will broll them. But they will have had an easy thing while it lasted.

We have the cheering intelligence from Arizona that the Apaches are still engaged in the role of butchers. Rancheros and miners make excellent material for them to practice on. A dozen American critizons slaushtered before breakfast is a repast in which the gentle Apache delights. A baby gutted or a woman brutally outraged come in as pleasant afterpieces. And all this while we can knock down an army of Major-Generuis, Brigadier-Generuis, Colonels, Captains, Lieutenants and High Privates in the streets of San Francisco.

If you desire to read a paper that is on file, but notice that some one is already reading it, rudely look over his shoulder or attach yourself to one, page while he is glancing over the other; if he be a gentleman, he wil leave it and you in disgust. We have observed this trick at the Mercantile Library, where it is common. We are unable to answer the conundram of an anxious correspondent, as to the difference between the average man and the average hog. As well as we can judge, there isn't any.

A purveyor of scandal; a libeler of honesty; a ridiculer of respectability; a journalistic prostitute: a receiver of stolen goods; a defancer of opponents: a partner in a conspiracy; a bired tool of rogues; a Bulletin. What can be more contemptible, unless it be a Call?

### Court Chat.

— The three masters of Eastern and Central Europe, the Emperors of Germany, Austria, and Russia, with their Chancellors, meet in Berlin. Great monarchs, and especially great monarchs whose interests diverge very widely, are not fond of meeting for social gossip, if only because they are apt thereby to disturb the minds of their subjects very much, and even to throw the politics of Europe into some commotion. They are much more comfortable apart, spending their holidays in watering places like Ems, and Nice, and Isch, where their crowns do not weigh so heavily, and they can obtain the mental relief which an interview in Berlin, with its ceremonial, and its negotiation, and its cares, will assuredly not bestow. Nations may be governing themselves, as the newspapers say and on some points, such as taxation, some of them no doubt are governing themselves—but their rulers can still do much, if it be only by initiating movements in which the nations will certainly acquiesce. The three gentlemen who meet in Berlin, either the artists, not to interfere with each other territorially, and not to permit a defeat of any one of them to be followed by loss of provinces. Their advisers would not resist that proposal—because they must have assented to it before it was made, and their subjects would see in it a new security for their own independence; and yet, if accepted, it would most seriously modify the politics of Europe. Such what any hope of success. It would set Russia free to pursue her schemes in Asia, some of which may yet be of the first consequence to Great Britain; it would rebe austria of her fear of seeing her German subjects join their kinsmen to the ruin of her power in the Valley of the Danube; and it would leave Germany free to conduct to the bitter end her warfare with the Pope. Those are very important consequences, and they might easily follow from a morning's conversation among the transfers that any defensive policy they may devise will be accepted without much poposition except from minorities like the

— A notable discovery, according to the Echo, has just been made by some workmen at Dumfries House, Ayrshire, which was formerly in the possession of the Earls of Kilmarnock. The house now belongs to the Marquis of Bute, and the men, in repairing the roof, found two half-length portraits rolled up and hidden in the rafters. On examination, one proved to be the portrait of that Earl of Kilmarnock who was executed for rebellion in 1746; but the other had no name with it, and perplexed those who attempted to identify it. Photographs of each were taken, and sent to London to an expert, with the information that in the unnamed picture the nobleman represented wore the Order of the Thistic, with blue ribbon. As the color of the ribbon of this order was changed from blue to green in 1708 by Queen Anne, it was evident that the picture must have been painted before that date. It was then found that the only person, being a Knight of the Thistic, who could be the subject of the picture, was John Drummond, Earl of Melfort, who was outlawed in 1694, and died at 8t, Germains in 1714. The fact that these portraits were taken from their frames, and thus hidden away forcibly suggests the political perils of former days. And one understands better how wide-pread these perils were on hearing that another portrait of the same nobleman, which was engraved and published by Vanderbane, was named not Melfort, but Lundin, Lady Melfort's family name—the name of Melfort being tabooed.

— President Thiers is just now enjoying himself at Trouville by working twelve hours a day upon the affairs of the State. But at any rate he has a cool and bracing sea-breeze to invigorate him, and is beyond the reach of "interviewers." The Villa Cordier is surrounded by troops, and a company of cavalry patrols the streets of the village for the express purpose of keeping off this dangerous class, as well as to warn away office-seekers and hores. At least we can suggest no other reason, for men of all parties are particularly anxious to preserve the President from harm, for the same motive, perhaps, which led a certain king to guard the life of the astrologer who had predicted his Majesty's death one month after his own. Every one seems so well convinced that it will be the "deluge" after M. Thiers, should he die before his work is accomplished, that no complaints would be made were he to take the whole army to Trouville, were it shown that it was necessary to guarantee his safety.

— The German monarch lives quietly, and is doing plenty of work as usual. The rising hour at 6 A. M., heure militaire: at 7 the Emperor takes his bath under the attendance of his old hydrotherapeut, Dr. Konigsberg; then takes a walk, accompanied by an aide-de-camp, not by a ratel de-chambre, as one of our contemporaries said, who also stated that the Emperor was cheerfully received at the Gastein station! This promenade extends to lonely highland paths. On his return the monarch takes to work with his reporting councilors. Dejuncer a la fourchette that takes place, and more work till dinner at four, which is followed by a drive, and then the grand final business of the day till cleven P. M. The windows of the imperial chateau are amongst those latest illuminated in sleepy Gastein. Two camp couriers from Berlin are daily bringing fresh business.

- The French writers are flush with their Louis at the present moment, and one of them has, we see, in a daily paper, given some piquant ancedotes of the various Louis which were not hitherto known. He says of Louis III, that one day he was walking on the road to St. Denis, when he encountered a peasant girl marvelously beautiful. He fell maddy in love, and for a long time faired to meet his inamorata; the 5th of August, 882 he saw her in the distance, followed her on horse-back, she field to a neighboring house, and the King destring to enter by the door, horse and rider were jammed to death; he was buried in the abbey of St. Denis, the young girl dying shortly afterwards of fright and sorrow. Sangular that this was never selected as a thome for an opera. What a splendid situation the last jam would be, and one affording such facilities for the theattreal rader, proverbially so abominably bad, and just likely to get into such a fix, so that all the unities would be preserved.
- Earl Russell promises to issue a pamphlet in the course of the winter, explanatory of his views respecting local legislation. For the moment he to reshadows his plan for Ireland thus: "Il Ireland were a lowed to cleet a representative assembly for each of its four Provinces of Leinster, Usier, Munster, and to omnaught the local wants of Ireland might be better provided for than they are at present." That might easily be the case; but Earl Russell would give power to the Importal Parliament to refuse to give a third reading to any bil assented to by the local assemblies. Earl Russell's plan is a modification of that proposed by Mr. Pan, M. P.
- ——It has been stated, apropos to the birth of another grandehild of Her Majesty, that by a special patent the children of Prince and Princess Christian are to be called "Royal Highnesses." Such a patent is quite unnecessary. The grandchildren of the Sovereign are entitled to the designation, and are not the parents Royal siready?
- Prince Napoleon has sold his house, 108 Lancaster Gate, and has left London for Prangins. It is said that he is to reside in Milan, where Victor Emmanuel has given him a plazzo as one of the members of the Royal Family of Italy.
- A prize was, it appears, won by the Duc de Guise at the Lycée Condorcel; it is to be rebound in black and sent to the Duc d'Aumale.
- We are assured in Paris that the Queen of England has forwarded the Order of the Bath to Mons. Thiers.
  - The Shah of Persia has decidedly renounced his intended journey to Paris.
  - A tooth of the Emperor Napoleon was lately sold in Brussels for 160 francs.
     The Queen of Spain is in an interesting condition.
- Is Stanley a Fraud? This much appears to be clearly shown: that he is an unprincipled man, bad yet hold: that he has formerly been a reckless writer for the press, zetting up pretended correspondence from all parts of the world, and that the letter ostensibly from Dr. Livingstone to Mr. Bennett is in Stanley a handwriting. One stupid blunder is this: the letter is directed to "James Gordon Bennett, Esq., Jr." Now, of course, Livingstone didn't know that the clier Bennett was dead, and wouldn't write such a stupid direction if he did. The "Jr." was evidently added by Stanley after he reached Europe and heard of Bennett seath; and it is in the same hand as the rest of the letter. On the other hand, Livingstone's son is satisfied that the letter to him was really written by the Dr., and there are other evidences that Stanley did see Livingstone. We are satisfied that he old. However, he Stanley a humbur or not, there is no humbing about Bradley & Ruiofson'ts photographs. They are true as the needle to the pole and a great deal truer. There are none equal to them. They are perfection.

Corpses float in the bay, and the sharks and shrimps are in glee. Body found with its legs sticking out from under a house. Dayly papers say it had auburn hair and a small red moustache. That accounts for the suicide. A man who has auburn hair and a small red moustache ought to go in under a house and hammer his head with a brick.

"Eloquent gentlemen" howled, driveled, lied; an "intelligent audience" howled back, gloaded over the lies, were noisy and unmannerly, and stunk with a great stink. Lord, Lord, with what a race hast Thou peopled the earth!

An English Judge has recently decided that phonetic reporting is skilled labor, not "protessional" work. In San Francisco every fellow who scrawls the proceedings of the Poice Court or runs to ascertain the whereabouts of a fire, is a "journalist." And why shouldn't be be! We give it up.

#### Theleme.

"Give me leave," said Friar John, "to found an abbey after my own fancy." And Gargantua, well pleased, offered him all the country of Theleme." —Rabelais, Book I. C. lvit.

I sat one night on a palace step Wrapped up in a mantle thin,

And I gazed with a smile on the world without.

With a growl at my world within, Till I heard the merry voices ring

Of a lordly companie,
And straight to myself I began to sing,
"It is there I ought to be,"

And long I gazed through a lattice raised.

Which looked from the old gray wall, And my glance went in with the even-ing breeze,

And ran o'er the revelers all.

And said: "If they saw me 'twould

cool their mirth

Far more than this wild breeze free; But a merrier party was ne'er on earth, And among them I ought to be."

And oh! but they all were beautiful, Fairer than fairy dreams, And their words were sweet as the

wind-harp's tone

When it sings o'er Summer streams; And they pledged each other with noble

"True heart, with my life to thee!"
"Alack!" quoth I, "but my soul is dry, And among them I fain would be."

And the gentlemen were noble souls, Good fellows both sane and sound; I had not deemed that a band like this

Could over the world be found: And they spoke of brave and beautiful things.

Of all that was dear to me; So I thought, "Perhaps they would like me well

If among them I once might be !"

And lovely were the ladies too Who sat in the lighted hall,

And one there was, oh, dream of life!
The loveliest of them all;
She sat alone by an empty chair,
The Queen of the feast was she;
And I said to myself, "By that lady fair

I certainly ought to be !"

And loud she spoke: "We have waited long For one who in fear and doubt

Looks wistfully into our Hall of Song,
As he sits on the steps without;

I have sung to him long in silent dreams,

I have led him o'er land and sea; Go, welcome him in as his rank be-

And give him a place by me!"

They opened the door, yet I shrank with shame

As I sat in my mantle thin,

But they hailed me with a joyous shout, And merrily led me in.

And gave me a place by my bright-haired love

As she wept with joy and glee, And I said to myself: "By the stars above

I am just where I ought to be!"

"Farewell to thee, life of joy and grief! Farewell to you, care and pain! Farewell, thou cruel and selfish world.

For I never will know thee again !

live in a land where good fellows abound. In Theleme by the sea;

They may long for a happier life that will-

I am just where I ought to be."

### A Vision.

From the blood of James King of William sprang the Vigilance Committee and The Bulletin. Now The Bulletin wants another Vigilance Committee. 'Tis well: Let us kill Fitch and see what will spring from his blood. Faith, we fear nothing more than some unsightly maggots and an exceedingly bad smell. We are tempted to dwell on the pleasing fancy. In our mind's eye we behold Fitch dressed pigfashion—neatly stuck in the throat, and hung up to bleed by a stick through his heels. A stream of black blood drips from the aperture, of the consistence of molasses and the odor of dead-dog. We approach the carcase with our butcher knife and drive away the flies which are making haste to "blow" it. A dexterous vertical sit allows to protrude a mass of watery viscers. The stomach, a flabby bag of horrible capacity, is found stuffed with Atlantic and Pacific Railroad stock, indorsed by Robinson and Coftin. The liver is congested with an unwholesome pulp, which proves to be the \$10,000 which Pickering subscribed and did not pay to the California Atlantic and Pacific Railroad. The lungs are dry and juiccless. The heart, which is black and swollen, drops to pieces in our fingers with emission of California Atlantic and Pacific Railroad. The lungs are dry and juiceless. The heart, which is black and swollen, drops to pieces in our fingers with emission of Sciences, who stands at our hand, pops it into alcohol. Cutting off the head, a dexterous slice with the cleaver exposes the interior. To our astonishment, a few cobwebs line the empty skull. The scientific party clutches it with giee. "Why, O man of learning, do you seize upon these unwholesome relices?" He replied with enthusiasm: "This rotten heart (he exclaimed) is the long-lost vital organ of Judas Iscariot. This empty skull is his long-lamented head. When the wit was in it, be exacted hard silver as the price of his service. When the brains were withered and gone, its last possessor was bought with worthless railroad stock. My collection (he continued) is nearly complete. I still lack the heart of the viper which was warmed in the countryman's cottage and the brain of the one which broke its teeth on the file. They are now doing duty in the body of this man's partner, Pickering. And what is odd, he wears false teeth to this day." So we awoke, and Fitch has not been killed yet and we have no Vigilance Committee. and Fitch has not been killed yet and we have no Vigilance Committee.

## Leaves from a Lady's Diary.

SEPTEMBER 5th.—My letter from Jenny, who is now in Paris, tells me that the women are furious about Dumas fils L. Homms-Fernme. They read it themselves, but keep the book out of their bushard's sight as much as possible. Of course, all but keep the book out of their nusband's sight as much as passine. Of consequent the literary ladies are sharpening their pens and their wits to answer it. Madame de Girardin has already published a clever reply entitled *L'homme et la Femme*, but Jency says that the best brochure is written by a new pen; she has promised tosend it me by post, Called on Mrs. W. and found her, as usual, hestituing between inclination and duty. She wants to go to Skaggs' Springs, but at the same time knows that it will be a grievons tax on her husband, so she asks ad her intitime knows that it will be a grievons fax on her husband, so she asks all her infi-mate friends what they think she ought to do, referring to the good it would do the children, to her own health, etc. Her friends are mostly too idle or too weak to point out the true line, and she will, of course, end by going, without a word of remon-strance from her good-natured, improvident husband. She has great talents, and is very well read, but when self is concerned she can only see its gratification, although never allowing such weakness in others.

although never allowing such weakness in others.

Sept. 9th. -Dimed with the S. s. During dessert there came a sharp, snappy ring at the door bell, and a middle-aged woman, done up in a shawl, with any quantity of bannet on her head, fussed into the room. It was the famous Mrs Nr. Petra. Her face is a mixture of zipsy and red Indian. Henry says she is like George C—— in petitionts. She has a perfect Count Cagliostro countenance, and like that celebrated charlatan, has an infinite flow of talk. She proceeded to adopt everybody present and monopoize the conversation. Our hostess, who has an impense reverence for her, hung upon her words; but there was a little German won't be asked there any more: for, although we were grateful for the rescue, Mrs. S—was furious at the rebellion.

was furious at the rebellion.

Sept. 10. - Went to see poor Fanny M's orphan daughter, who has just arrived from New Orleans. Poor child, she has been shameful y brought up. She knows a great deal too much, and has seen a great deal too much, and has seen a great deal too much of the dark side of human nature to be absolutely pure in thought, though I am convinced that she is a great deal too much, and has seen a great deal too much of the Gark succession abunds nature to be absolutely pure in thought, though I am convinced that she is pure in action. She is like one of those likes one meets with in a swamp, there is malarin and misams all around, but the flower is fresh and fragrant. At the same time there is a forced precorety in its growth. We had quite a party in the eventors. So many people called that we had some dancing. I was string at one end of the room talking to Mr. B.— and young Louis F.—, looking on at a couple who were waitzing very gracefully, and remarked that they were readly enjoying themselves, whereupon a discussion grose as to wherein lay the enjoyment of dancing. Now these two are good, honorable men and pure minded gentlemen, as much as men of the world can be, and yet they advanced opinions that would-shock and oftend most young girls. Both of them insisted on the sensions does of dancing; that it must be divested of all feeding of pleasure of dancing for mere dancing take. They believed that women fell as they did, and were astonished and incredulous when I assured them that I could answer to the contrary for mweel and larged waists. We regard it as the pleasure and excitement of rapid unition, inspired by music and with a certain added zest afforded by the guiding and supporting many arm. Resides, women dance with one another. Taking of descellars shoulders and within the rice and display her but. Henry says she is neck or nothing.

Sept. 11. Waiking home along Monteonery street saw a dense crowd at the cortex of Washington. They were an executive and waiting an all supporting and supporting the context of the context

Sept. 11. Walking home along Montgomery street saw a dense crowd at the corner of Washington. They were surrounding a carriage and waiting as I learnt, her of Washington. They were surfulled a telephological contract and carried and carboning a beauting to be known a wretched woman who has been hereaff looking on death for two years, to been an instant a welled criminal as she passes swiftly into the carriage which is too bear an instant a welled criminal as she her back to her prison, and then to go home with a full breath of satisfaction as of a duty performed. Lucy B— is here as gay and light-hearted as ever. She will marry again and has no regret for her former husband. They were both into wrong, but his life is one of stern remorse. The Hebrews have a tradition that the

man was ready to submit to any sacrifice or punishment to regain Eden, but the woman positively retused to participate in any atonement.

# Universal Stump-speaking.

The influence of Anglo-American ideas and customs is rapidly extending throughout every portion of the earth. Especially is this the case no Japan. The Tenno, in his late travels through the Empire, was dressed in the costume of an English or American gentleman. He is represented to have spoken some pieces very cleverly. And now comes the intelligence that the youthful Kine of Siam has completed a tour through the British Indies. He did so in a plain, uno-tentations manner, and, besides, delighted his subjects, at various places, with of-land speeches, which made him highly popular. This is copying after the Hon. Hence Greeley. We hope to be able to record soon that the Sultan of Turkey and the Rhedive of Egypt are making "stump speeches" throughout their dominions. Nor shall we be astonished to learn that the Emperor of China is publicly addressing his fellow-citizens and soundly berating us Western barbarians for stoning his Celestial subjects in the streets of San Francisco. The influence of Anglo-American ideas and customs is rapidly extending Celestial subjects in the streets of San Francisco.

## Wayside Gushings.

[BY MRS. HARRIS.]

Lor! what a week this 'ere 'ave been to Sayrah and to me, Goldwha's about from more to night the warious sights to see: Fust come th' Hallan Circue, vich did set poor Sayara bild, Especially the 'ossmanship of that there hinfant child, Who galloped and a-standing firm upon the Creole's shoulder And galloped that correct she didn't need to 'old 'er. And kept'er balance that correct she didn't need to 'old 'er.

Ven Sayrah saw the 'osser dance the polka and quadrille
'Er hextasies was that hintense I couldn't keep 'er still;

Missua,'' says she, ''l think there's truth in vot old Stone do say,
That hanimiles 'ave human soles, or they couldn't dance that way;
I'm sure sich waltzing is beyond the power of any hoof,
And to chasser in that graceful style, of reason 'tis a proof; Like human beings they've been taught, by fear of future tortur,
To awoid taking wicked steps, sich as they didn't ought ter.
Likeways by 'opes of 'eavunly joy in gettin' hextra feed
Theyv'e been hindoosed to dance correct and gallop at sich speed. Reward and punishment, we see, alike move man and 'oss— Both find transgression's way is 'ard, and hindolence is loss. But werry few of those young men who try at balls to dance Both mid transgressions sways and, and inholoned is loss.

But werry lew of those young men who try at balls to dance

Can step as graceful as an 'oss, nor so helegantly prance.

I do vish vun of them 'osses vould teach a dancing school,

For a partner as can't keep in step do look a perfect fool;

And some do drag vun's body werry nearly off vun's back,

Likeways do tread upon vun's skirt, vile, like a hawkward 'ack,

They trot, and amble, and stand still, and then go bobbing round,

Till it's a mercy if the gal ain't spilled upon the ground.

But oh! just look at Prince and Duke, vot grace is in their motion—

Saxe Coburg's Juke can't dance like that, nor no Prince across the ocean.

And vot a ear for music! You may see it as they waltz,

For nobody can dance whose ear for 'armony is false.

That trained 'oss Sylvan, too, 'ave got the helegantest shape,

And 'is capres comes quite nait ral, 'cos they brought 'im from the Cape,

I almost wish I was an 'oss to dance an 'Ighland fling

Arm in arm with Chiarini and that sweet four-legged thing.

Lor! Missus, vot the deuce is hup? Just turn your hi's hup there,

And see that wenturous young gal suspended in the air,

Her fragile corpus 'anging down, dependent on 'er toes,

And if 'er big toe should turn faint 'tis sartn down she goes.

Ah! greeshious! vot tremenjous power is in a voman's law Ah! greeshious! vot tremenjous power is in a voman's jaw Ah I greeshious! vot tremenjous power is in a voman's jaw
As can strap up and support a man; she's a female Samson, sure."
"Tis hawful, Sayrah," I replied. "She'd best mind vot she's a doin',
For 'istory says a voman's jaw 'as hoften proved man's rooin,"
Ven the trained Guanaco vos brought into the riug,
Me and Sayrah vos delighted vitt the gentle, doclie thing.

"O, vot a dear!" she cried, vich caused a hargument between us;
For, "'haint no deer, Sayrah," says I, "though something of that genus.
Look at your 'andbill, vich do give its proper name and natur—
The fust one of its famil'y to perform at a theayter,
And take up vith civilization, and learn to live by rule—
"Tis the first Christian conwert of the Guanaco school."

Sunday hevenin', feelin' lonesome, we both set off, after tea, To the operatic concert of the Signora Fabbri;
And 'tis werry long since Sayrah 'ave enjoyed so rich a treat,
And says she, "Dear Missus, hain't the singin' hexquisitely sweet? And please mum, I would muchly like to practice the pianny, And cultiwate my wocal woice, vich I think is a sopranny." That gal 'ave got a red-'ot operate gush upon 'er, And swears she vill not rest content till she's a prima donna, And sivears she vill not rest content till she's a 'prima donna, And sings at public concerts dressed helegant in vite Like that sweet young Anna Elzer, as did sing he other night; And all this veek she 'ave kept up an 'ordic aterwanling. And almost robbed me of my vits a-screechin' and a-bawlin'. Vot to do vith the wain critter I'm sure I do not know, For fresh crochets keep a-comin' as fast as old ones go; Vun time she'll be a habbess, and next minute a danseuse, And 'tire clear the poor young thing don't know vot line of life to choose. But vile old 'Arris lives that gal von't vant for a pertector, Although I feels myself in dooty bound to give 'er quite a lectur For vanning to turn dancer, prima donna, nun and 'oss, And I tells 'er, "rollin' stones, Sayrah, do never gather moss.'

## Something Like Rejoicing.

A correspondent of the Times calls the attention of a humane and civilized people to a most excellent bit of fun which was emerted the other day by some jovin naval officers at Forniand. He says when the Frunce of Wales went there to quenthe new breakwater, the weather was so hoisteous, that the programme of the Royal proceedings had to be changed; bit athough the winds effected this change, they ards of aftern from the troops of the Royal proceedings had to be changed; bit athough the winds effected this change, they ards of aftern from the grant of a five himself, the says, "The threat time the poor fedows were kept in this persions position for more than half an hour. Then cold and trembing they all came down but two—a sad exception; these two had fallen from the yards on to the decks of their ships dead." This was extremely amusing—and all done in hone of the prince! What jobly chows those navel officers are to be sure, they aimest recall to one's mind that facetions King of Abasama—that cheerful old Theodore, whom we sent an arms out after, you know, and who used, when he felt especially jobly, to have a drove of magers brought before him, so that he might shee at them right and left with his safter, and send their woodly heads rolling about like skuttles. Then there was that merry of King of Houng acquital sport it must have been to be sure; but then you sae Theodore and the King of Bonny were somewhat coarse in their fun, they wanted the refinement of the English navy. Chopping is all very well his way but there is a certain vilgarity in it; and again, to kill the skunks that way, requires exertion on somebody's part, but nothing can be more refined and easy than ordering the amusing casses up to the yards in the bitting wind, and seeing them drop with the cold one by one they one of the end of the fine of the process of the wives and chuldren, or refinement and civilization, and for real hearty rejoring. What for it must have been to see those two by is strong-learned fetows who would have ded like tons

## Africa Revolutionized.

The meeting of Dr. Livingstone by Mr. Stanley, the New York Herald correspondent, has been treated by the press generally in a semational way. As the exectments subsides, we discover that the instorical meeting in the wide of Africa has given birth to two powerful ideas, and that these have taken strong hold and he must of the British public. The first refers to the slave trade as now carried on in Africa. The letters of Dr. Livingstone give us a graphe description of the must of the trade, and the English people, ever the opponents of this crime upon humanty in a Locantres, are determined to take steps for its overthrow in its mixes stronghold. Associations are being already formed towards this end, and the meeting of Stanley and Livingstone will prove to be the death knell of slavery throughout the continuent of Africa. It will take time to accomplish this grand and noble work, but the foundations are had. The other great idea is that Livingstone, like his producessors, Grant, Speke and Baker, has demonstrated that shough the valley of the Upper Nac and in Central Africa, there are sphendid opontings for the genus and enterprise of the Angle-Savon race. Already a line of radroad, six hundred mines in length, has been surveyed. The initial point is Wady Kalfa, and the terminal Khartonin, where forms the junction of the Bue and White Nies. The route runs up the valley of the Nile, within sight of "the mysterious rive," but distant enough to be above the line of the periodical inundation. The day is from the sources of the Nile. This is an extraordinary age, for in our discoveries we have produced that fabled lever by which Archimedes said he could move the world.

We learn from the Heraldo, of Lima, that a miracle has agitated the minds of decomb people in that city. A paralytic patient, who had suffered much for three years, has been restored to perfect health by means of the ceasestal specific known as "Again de Nuestra Señora de Lourdes." She drank but a nitice of the wonderful water, and immediately arose and wasked. This is certainly a novel-and simple cure for paralysis. All who suffer from this terrible disease should hasten to import a plint or so of the Water of Our Lady of Lourdes.

## A Domestic Dialogue.

HE: -What is the grief that clouds my Chloe' brow-Why do her lips such angry phrases atter?

SHE:—Oh, pooh! I don't know where to turn, I vow, For eggs and butter!

HE:--Nay, heed not eggs and butter, Chloe! beef And lamb and mutton rather patronizing.

SHE: -In that suggestion see I no relief, Since meat is rising.

HE:—Then let fat bacon hiss on embers hot, Or sausage, which cheap food for hungry soul is.

SHE:—A good suggestion, dear ?—considering what The price of coal is.

HE:—Alas, each scheme I urge has met defeat, Adown my cheek despair's chill teardrop trickles!

SHE:—We have one refuge left—Australian meat—Tinned meat, and pickles.

-Fun.

### Chiarini's Superb Horses.

The ancients used to say that a man who loved a fine horse could never do any-The ancients used to say that a man who loved a fine horse could never do anything displeasing to the gods. If the saying is true as regards modern people, then we are the special favorites of the Olympian deities, for we grow rapturous over the sight of a magnificent-looking horse. In this respect we have realized our highest ambition, by a visit to the stables of Signor Chiarini, proprietor and manager of the Royal Italian Circus, now performing nightly to immense audiences in this city. ambition, by a visit to the stables of Signor Chiarfni, proprietor and manager of the Boyal Italian Circus, now performing nightly to immense audiences in this city. In examining his matchless stud of performing animals we were struck with the beauty of two California thoroughbreds—'Gen. Grant' and his brother, 'Othello.' 'General Grant has received his historic name from the fact that he was purchased in this city on the day on which the great military chieftain was elected President of the United States. He is a noble-looking, proud-spirited animal; stands 16 hands high, is six years old, and sound in every way. He was sired by Belmont from a thoroughbred English mare. Since 'General Grant' was purchased in this city he has traveled all over the world, and in the meantime was being carefully trained by Signor Chiarini. Next week, for the first time, he will be presented to the California public in several dances and waltzes. To the music of the Spanish song, Me Gustan 'Vodos, he beats time like a skilled musician. His brother, 'Othello.' 'is five years old, stands 15½ hands high, and jet black in color. He is a trick horse of 'infinite jest.' This noble animal also makes his first bow to a California audience the coming week. As Californians, we await with the greatest anxiety the debut of these two beautiful animals. Last week, Signor Chiarini bought the very handsome dapple grey stud, 'Dick Taylor.' He is a thoroughbred horse, raised in Tazewell county, Kentucky, by Col. R. Smith. Dick Taylor is five years old and stands 15 hands 3 inches. He is now under special training, and Signor Chiarini intends to exhibit him in the arena before departing from San Francisco. This gentleman has also purchased a gen of a sorrel chesinut mare, four years old, and just as handsome as a picture. She is likewise under special training, and signor Chiarini when sa handsome as a picture. She is likewise under special training, and it is the intention to have her make her debut before quitting this city. Of the other noble hor with human intelligence and the grace of a Spanish coquette. "Sylvan" is one of the manager's favorites. "Abd-cl-kader," a thoroughbred Arab steed, was presented to Signor Chiarini by the ill-fated Emperor Maximilian, while wearing the royal crown in Mexico. He is called the "Silver Steed," on account of the great purity of his color. The best judges of horse-flesh in the country pronounce "Abd-cl-kader" to be one of the most superb animals in the world. "Monte Cristo" is a secretarily in any day that the latter the favorite charge of Silver Steed," and the country pronounce "Abd-cl-kader" to be one of the most superb animals in the world. "Monte Cristo" is a secretarily in any day were possible animals. grey gelding, and a very beautiful animal. He is the favorite charger of Signor Chiarini, and makes the entrance in the dance of the Lancers in a spirited, magnificent style. One of the wonderful feats of this animal is that he jumps from the ground, raising his four feet at once, to the tune of music, with extraordinary precision. There are several other equally famous and noble animals attached to the cision. There are several other equally famous and noble animals attached to the Royal Italian Circus, but our space prevents a further enumeration at present. This is the only circus in the world that can give a change of programme, almost daily, in performing horses. This feature is a splendid one, for horses, like men, are the better of having a rest from their arduous duties. We learned that the great secret of Chiarini in the management of horses—and in this he has no equal citter in Enrope or America—is that he believes in the exercise of moral power over this noble animal. He never abuses a horse. With gentleness, patience, kind treatment, and perseverance he reduces the most stubborn animal to the gentlest submission. This humane mode of treatment has made Chiarini's name powerful throughout the weeld world.

# Letter from "Jeems Pipes of Pipesville."

The State Prison, San Quentin—Beautiful Situation - Lonely Scenery - Lient, Gov. Pacheco Prison Statistics What the Prisoners Make Interior of Prison— Description of a Ball there given - Marin County Water Company - William T. Coleman-An Affecting Incident.

Messes. Editors:—I am dotting these lines to you from the office of the Commissary of the Prison, Capt. W. M. Harron, an od. Sacramento City acquaintance, who looks even younger than he did twenty years ago, with no gray hairs on the top of his head, and very few writekes on his face.

The view as I look from the open window this morning is surpassingly beautiful.

The view as I look from the open window this morning is surpassingly beautiful. Before me the gorzeous waters of the Bay, fanned by a cool and decisions breeze, while the purple hills on the opposite shore, with their clean-cut, wavy outcome against the bright ban sky, entires me to stroll through their cozy pathways and nooks, and then as if to charm the eye still more, before you enter the grim from gate, set in the red brick wall of the prison, there is a charming little garden patch, with variously different controllers. gate, set in the red brick wall of the prison, there is a charming ittle garden paten, with variegated flowers, and nucley aid out walks, fenced in with a pretty white railing, with a guard-house in one quarter, with its watchful sentine, with loaded ride, while birds are caroling and chirping away so sweet y that you for a time forzet the gloom and despondency of the unfortunate immates, in the exquisite beauty of the surroundings and position of its entrance.

Lind, Guarming Budges is at the load of artises, house and the State is building

Licut, Governor Pacheco is at the head of atlairs here, and the State is building for him an elegant private residence, mostly by convict labor. The Governor is extremely popular, and by his gentlemanly, courteous, and considerate manners,

extremely popular, and by his gentlemantly; courteaux, and considerate matter, endears himself to all.

As an item of interest, the Gate-keeper, Mr. R. M. Apgar, intormed me that he had received and discharged the following prisoners for the month ending Aug. 31: On hand, July 31: 95; received during August, 29; discharged, 33; pardoned, 8: died, 1; on hand, Aug. 31, 922.

I am indebted to the courtesy of Capt. Harron for conducting me through and cheart the Disconsideration and the various discardinants. Here, then are manufac-

about the Prison, showing me the various departments. Here, then, are manufactured all sorts and kinds of house furniture, from an elaborately carved bridal bedstead to a baby's chair, and I noticed some extraord nary and remarkably good specimens of carving and upholstery work, also some beautifally main work-boxes, in mapie and various other kinds of wood. All sorts of farming and express wagons, women's and men's boots and shows, and I am informed that Messrs. Stone & Hayden, of San Francisco, have some two hundred convicts employed in tanning and currying hides, the leather being made into harness and saddlery of all descriptions. descriptions; whip lashes are also manufactured, and every variety of Mexican and Californian saddle-trees are to be seen.

and Californian saddle-trees are to be seen.

In the interior of the Prison everything is neat, compact, clean and orderly, and the din, hum and bastle of the various workshops, with the convicts intent upon their different occupations, give you rather an agreeable than an uppleasant sensation, as you samter through the rooms. The prisoners are rong out at four to develop the prisoners are rong out at four to develop the prisoners are rong out at four to develop the prisoners are rong out at four to develop the prisoners are rong out at four to develop the prisoners are rong out at four to develop the prisoners are rong out at four to develop the prisoners are rong out at four to the every morning; breakfast at six; go to work at half-past; due at about twelve; leave of the tour; get their supper, then locked up for the night.

A ball was given on Friday last in the chapet insade the walls of the jail, for the benefit of the San Upontal section of the same present the same property of the same present and the same prison present, many of the leading families of San Francisco, San Rafaled, and San Prancisco, San Rafaled, and San Pran didn't seem to care a D. for Mrs. E., a rather ellierly youn.5-looking woman of about seventy-four, dressed in a well flounced bombazine crape shawl, with tight-fitting sleeves, and stomacher, with yeller gloves, and han, who danced with Mr. E., also dressed in a brass coat and blue buttons, with kilds, who kept dancing with Miss G., dressed in a brass coat and blue buttons, with kilds, who kept dancing with Miss of, dressed in white, with blue roses in her hur, which was soft red, and received he had been buttons, with kilds, who kept dancing with Miss of, dressed in white, with blue roses in her hur, which was soft red, and receive her shounders, fowards Mr. H., who struck out with his left leg so defly that he hit me with his back right in the saumaick, causing me to fall right find the lap of Mrs. L. a. J. K. ween of great beauty, dressed all over m green, with a great many newspapers in the proper place. She looked like L-caving before support, but Messrs, M., N., O., P., Q., R., S., T., U., V., W., X., Y. and Z. told her to be seated, which she did, to the datening out of six Alias, four Calls, four Chronicles, three California Farmers, and ten Pioneers. Gov. Pacheco, assisted by his officers, did the hospital ties of the occasion most charming Y. a sumptions supper was provided, and dancing kept up till four in the morning.

The great drawback to this Prison and its surroundings, and indeed to their neighbor San Rafacl, has been the lack of water. I am informed that the hydrants inside the walls of the Prison have had to be locked in order to commiss the use of water. Now, however, I understand that the Board of Directors of the State.

his de the wars of the Frison have had to be posset in order to be change to be of water. Now, however, I understand that the Board of Directors of the State Prison have made a contract with Mr. Wm. T. Coleman, of San Francisco, the managing spirit of the Marin County Water Company, to furnish a sufficient and ample quantity of the fluid even to the extent of 100,000 gallons a day, if needed, for all purposes at an expense of \$\frac{1}{2}\text{1,000}\$ a month. This sum in the aggregate would appear a very large one to pay for water alone, but when it is considered

that there are from 1,000 to 1,100 persons to be supplied daily, it will be seen that it is less than the charges of the Spring Valley Water Company at the Bay. On entering the Prison gates at about eight. I was startled upon hearing some admirable singing, from some of the cells, with now and then the tinkling of a fiddle or a guitar. Then I heard a quartette sing a hymn to some well known words most admirably. I was fairly riveted to the spot, and as the harmony of their voices, exceping through the iron bars of their window cells, rang out upon the clear night air, it seemed to me that they were pouring out from their hearts, to father, mother, brother, or sister, the pent up feelings that possessed them of their shame and dishonor—and which mere words were too weak to express and that perhaps some ministering angel might bear to the ear of the loved ones at home, in this simple prison some, contribing for their past mighteds and a blessar. home, in this simple prison song, contrition for their past misdeeds, and a blessed hope for the future. Who knows?

home, in this simple prison song, contribut for their past inflactor, and a hope for the future. Who knows! passed again under the cell windows, everything then still and calm, sleep—as it does to us all—having come to their relief, it seemed to me that their slumbers were made sweeter by this little evening hynn, and their better nature comforted by the thought that it might be acceptable to "they are presented by the strength of the presentation of the strength of the str "JEEMS PIPES OF PIPESVILLE."

Heaven.

#### \$1,000,000 a Year.

The amount of direct taxes annually collected in San Francisco from the assessment of real and personal property is something upwards of two million dollars. If railroad subsidy bonds to the amount of twelve and a half millions be issued, as proposed the annual interest on them, to be collected by direct taxation, will be small as proposed. A sinking fund to provide for the ultimate extinction of the bonds must also be provided, which will raise the annual amount of level. million dollars. This is an increase of nearly one-half on the present rate of tax-ation. The policy of ganting the proposed subsidies presents itself, therefore, primarily in the form—Will the benefits to accrue from a connection with a second trans-continental railroad, together with the development of the country through which our terminal road is to pass, be worth paying an increase of nearly one-half on our present rates of taxation in order to secure! This question has scarcely yet been examined at all. It is one that ought to be examined in the fullest manner. The considerations which go to support a negative answer ought not to be ignored. Some of them naturally present themselves under the form of questions, the force of which are sufficiently obvious:

(1) Will the increased burden of taxation tend to prevent manufacturing enter-prise from establishing itself in San Francisco? Will it constitute a sufficient consideration to induce capital seeking this kind of investment to select Oakland or any other point outside of the corporate limits of San Francisco?

(2) Will the increased taxes have a sensible effect in increasing rents in San Francisco!—or, if the demand for houses should fail to sustain an advance in rents, will the taxes so diminish the net income from real property as to diminish the market value !-or will the effect only be to check further advance in values !

(3) How would our case resemble, and how would it differ from, that of the Iowa

(3) How would our case resemble, and now wona it time from that the formal and New York towns which, by excessive aid of public works, forced away population to other points until their languishing interests compelled repudistion of their obligations? And if our case is not in danger of being reduced to that extremity, to what extent would our progress be retarded by operation of the causes

which ruined those smaller communities?

which rained those smaller communities?

(4) Exactly what are the sources of money returns which are to be realized from the completion of a second overland road? We mean, advantages not expressed in phrases and sounds, but capable of expression in the figures of trade returns. What increase in exports, imports, and local manufactures is a second overland road to produce, and will the profit thence ensuing exceed the increased taxation required to meet the building of the road? Will any merchant doing business in San Francisco give the public an estimate of the exact advantage which may be expected to accrue to his business from the second rail connection with the East? Will any San Francisco manufacturer do so? Can anybody offer a set of figures (of fact, not of speech) indicating what the amount of annual advantage to the community may be expected to be?

[3] Supposing we fall in the attempt to show that the trade profits to accrue to San Francisco from a second overland road will justify the subsidy, the next conservations.

(a) Supposing we tall in the attempt to show that the trade profits to accuse to San Francisco from a second overland road will justify the subsidy, the next consideration is the advantages to accrue from the development of country along the California and Arizona portion of the line. So far as the California portion is concerned, it is perhaps being sufficiently taken care of already by the Southern Pacific and San Joaquin Valley roads. At least, are not these roads being built as fast as the development of the country affords remunerative business. And if not

fast as the development of the country affords remunerative business! And if not, what amount of subsidy would it be justifiable, safe, and business-like, to invest in procuring the further development of this railroad system? For this purpose, is an investment of ten million dollars by San Francisco prudent, or necessary, or called for? Would two millions fully accomplish what is required in this direction? (7) If the last question be answered affirmatively, the next is, Is it justifiable to vote the remaining 8 millions in order to obtain a connection with Arizona? In framing an answer to this, we know that the Texas Pacific Railroad will be completed to the Pacific occan, and will thereby give us the Arizona connection, without the proposed road, so far as the Arizona trade is concerned is, that it will

give an all-rail connection. This is an advantage; but is it worth paying 8 millions of dollars tor? Will its money return be equivalent to the balf million every year required for interest on that amount of bonds.

(6) Is the time for undertaking rateroad building on a large scale opportune? The price of iron has recently advanced nearly 100 per cent. Labor is scarce. Would the present be a judicious time to invest money in a rai-road as a private

venture! Is it any more judicious to do so as a public venture?

(10) Is the present time a squ one to set an enterprise of this magnitude on foot, looking to its financial conduct! Quotations from the most trustworthy American looking to its linanean conduct. Quotations from the most trustworthy American and English writers which have appeared in these columns, 20 to show that the premoultory symptoms of one of the periodic financial resultsions are the kind to the air. The American railway system, it is shown, is not earning interest on its obligations. A sertling day, and with it a break down of railway cred is, is shown to be in the not distant future. In England speculation has out-strapped producer, in Germany it has proceeded to extreme lengths. If the predicted revursion shall come, can we rely upon being able to negotiate the securities the proceeds of which are to build our California road!

(11) The credit of San Francisco is now high, her finances healthy, her securities commanding confidence and full value. What will be the effect on their standing of issuing upwards of 12 mil ions more? Will some financiar who commands the of issaing adjunctive representations on this point? Is it even certain that San Francisco 6 per cent, bonds to this amount can be negotiated to realize as high as 90 cents the dollar? Would it be judicious to invest the money as proposed at a

still greater discount than this

(12) A concluding statement in recapitulation will show the conditions under which it is proposed to create an indebtedness of to or 12 million do tars in order which it is proposed to create an initialisations of 10 or 12 million to lies in order to bind a rational to connect with the Texas Pacific or Atlandi and Pacific, and we will observe that it may be particularly useful at the present produce if any financier or merchant of approved standing wil, give the public a responsible statement upon any one of the several heads. The propositions are as follow. That the sum of 0 million dollars or approach is san Francisco for present honds, cannot be negotiated for 50 cents on the dollar, cash. That there is defined charger of such financial disturbance in the money markets of the world within the period of such flumeral disturbance in the money markets of the world within the period of five years requisite for completion of the road, as may prevent the successful negotiation of further securities to the amount of 20 millions or upwards, required to construct the road. That owing to the high price of iron and labor the road must require a larger cash outlay than would be required at an ordinary period. That the advantages of an all rail contraction with Arazona, over a contraction part by water to a point on the southern coast of California, do not warrant the proposed ontiay. That the complete railway development of the better portion of Southern California can be seened at much less cost. That the advantages to accure from a second all-rat, connection with the Eastern States are of a money value so sight that in contemplation of the proposed outlay they become instructioant and may be practically disregarded. On this point we would be the realer not to let him-celf be put off with phrases, but attempt to attain some definite approximation to terl be put on with pursases, our accuracy to another some definite approximation to the value of the actual trade effects which the new road work work. That the additional faxation due to the proposed debt, amounting to an increase of one half on the faxes now paid, would exert a sensible effect in deterring the investment of on the taxes now paid, would exert a sension energy in operating the investment of capital in manufacturing or other taxable enterprises within the assessment limits of san Francisco. That the present rates of renta would not probably is spoul to the advance in faxation which would therefore duminish the income obtainable from real property, and either proportionately diminish its present value or impede advance.

- If a stranger were to come and ask us for a daily paper that is honest, dignified, courteous, able, clever, which he might read with profit and put implicit reliance in, we would hand him the Bulletin; for we are nothing if not sarcastic.

— Duke Augustus has fled from us. An interviewer got after him and drove him hence in horror. The poor Duke elected to forsake Yosemite rather than submit to the torture of interviewing "most foul, as at the best it is."

- The mockery known as the Fair trial progresses a little. Why continue it ? Doesn't every one know that there is no intention to punish this woman? Why the expense and scandal of a trial?

<sup>-</sup> Ladies near Selby's smelting works complain of boys bathing without dress. It is wrong for the dirty youngsters to wash themselves. But the ladies might put away their opera glasses.

### Court Chat.

Queen Victoria is of an inquiring turn of mind and generally contrives to pick up useful information in odd places. The Scotsman tells of her visiting the cooks, while on her late visit to Edinburgh, so that she might see how the Highlanders fared in barracks, and how they did their work upon the home principle. After inspecting the guard-room, her Majesty asked to be shown the rest of the establishment, and was ushered into an apartment containing only two men, whose duly it was to cook their comrades' dinner: The visit of her Majesty took these free soldiers by surprise; indeed one of the cooks, hearing that her Majesty had left the palace, and wishing to catch a sight of her, was in the act of rushing out of the door when her Majesty entered. Both cooks had divosted themselves of their jackets, and with their shirt-sleeves tacked up, they felt rather taken aback. Her Majesty first took notice of the studyart Highlander in full dress; and graciously addressed him, inquiring his name and birthplace, as also the length of time he had been in the army. The man answered the Queen's queries, and modestiv stated that he had been twenty years in her Gracious Majesty's service. Her Majesty took note of and examined the four medals which decorated the gallant fellows' breast, these being the Crimean medal with clasps for Alma, Sebastopol, and Balakhava; the Indian medal, the Lucknow medal, and the Turkish medal. Her Majesty then turned round and examined the appointments of the guard-room. She asked if the benches were the sleeping places of the men, and on being answered in the affirmitive, the Queen was pleased to state that the whole place was very clean and tidy. Her Majesty then advanced and spoke to the cooks—Grant and Wilson by name. She watched their operations a few moments. Wilson, who, on the entrance of her Majesty, had been making a practical experiment as to whether the potatoes he was cooking were sufficiently boiled, was rather put about, and he could only lay down his "dish-clout," touch his forage ca

Here are some details of the coronation of Queen Victoria: "At the moment when the Queen, kneeling, had the crown placed on her brow, a ray of sunshme fell upon her face and head. The day had been quite dull and gray until then; but with the sudden sunshine upon the diamonds in the crown making a sort of glory around the head of the fair young Queen kneeling there, the effect was very striking. And I remember that when her Majesty was conducted to King Edward's chair—the throne (to which the Peers came to swear their allegiance)—the Duke of Wellington having, like the rest, to back down the steps of the throne, threw his robe over his arm, and his great military boots were visible under it up to his knees; but still he succeeded in making a safe and not ungraceful descent. When, however, among the other peers, it came to Lord Rolle's turn to walk backwards, he lost his footing and rolled down. Many were the easy jokes made upon this pas perdu, but never have I heard any mention made of what I myself particularly noticed at the moment, and this was that when poor Lord Rolle was stumbling backwards from the throne, the Queen started forward as though to save him."

Our London letter, of date August 29th, brings us those items: "Her Majesty Queen Victoria still continues at Balmoral and takes her accustomed walks and drives. Having been invited to Inverness, she has intinated her willingness to receive an address at the railway station there, but she stated that she would not be able on this occasion to visit the town. The Prince of Wales has been making a cruise along the French coast with the Duke of St. Albans in his yacht. On Thursday they touched at Trouville, and on the sea-shore met with President Thiers, and had a good chat with him. On Saturday the Royal yacht put in at Dieppe, where it was received without any public demonstration. The Duke of Edinburgh has composed and published a waltz, named after his own ship. The piece is dedicated to the Princess of Wales. The Marquis of Bute has met with a severe accident, having been thrown from bis dog-cart last Friday. His arm was broken, and he was very much cut about the face and severely shaken. During Friday night his state was such as to give rise to much anxiety. Since then he has improved, but complains of great suffering in his forearm and elbow joint."

The New York Sun, of the 9th inst., has the following: Madame Ben Holladay and her daughters, the Countess Pourtales and the Baroness de Bussiere, were at the Everett House during the latter part of the week, en route for San Francisco, where they will meet Mr. Holladay. The Baron and Baroness de Bussiere lately returned from Europe, and take Mme. Holladay and the Count and Countess Pourtales with them as guests to their occidental home upon the golden slope of the Pacific. The party left on Saturday over the Union Pacific Railroad.

It is reported that Princess Beatrice is betrothed to the Marquis of Stafford. The Princess is in her sixteenth year, the Marquis in his twenty-second.

- Here is a portrait of the famous Duchesse de Berry: "Not long after the marrage of the Duchesse de Berry I was introduced to her. Atthough in Ita'sin, she had a beautiful with recomp expon, and in figure she was so slight that she looked almost a crad. Her eyes were large and prominent, but though of a listrous bane, there was an uncertainty in the expression of one or both of them; I say uncertainty, because the effect of this expression constitution of the said despition in store for her, and often when her hisbail returned to the Tulbertes or the Elysis, after a first absence from her said, she would break away from the courtly care in which is she was surrounded and run down stars to meet him, just for the pieus ure of them; as carried up again in his arms. Sometimes, on a wet day, she would be a number of chairs in a row, and amuse herself by jumping from one to the other."
- Lamartine came near the truth when he said that the tricolor of France had made the four of Europe on the car of Vv tory. Each they has had its transplace onch has been associated with defeat, and as combined of dimestic oppression and corruption, they stand pretty nearly on a par Louis XIV, was as despote as the first Naporson, and Charles X, even less meaned to Constitutional Government than Naporson III. It remeats to be soon what fresh justice will accure to the tricolor ander the Republican segme of M. Thieres.
- Lord Buchan the first Lord Erskine's brother), then about 60 years old, protested that he was a bundred. "for the said! I never sleep more than five hours, and I have never had an hours: thouses: when I catechare the time most people sleep beyond five hours, and then add to it the time ensally taken up such year by illness, I find that the balance is so much on my side that I am at least a centenarian."
- Voltaire, on his return to Paris in 1778, is thus spoken of: "His out-of door dress was a vast pelisee transmed with far, which completely enveloped his field body. A lung-Louis Quatorze wig of wood shaded his than checks, and the wig was surmounted by a red exp trimined with fur." He drove about, aimd the acclamations of the populace, in a sky-blue carriage studied with stars."
- A correspondent says that the Emperor William of Germany is "creet and soldiery in his carriage, postly but not obuse in figure, and resembles an English country gentleman or a solid man of Boston."
- The Countess of Blanchery, who in one of the battles of the France German war feaght with a masket in her hands as a private soldier, has just had the Cross of the Legion of Honor conferred upon her.
- We gladly confess to an intense and remarseless hate, we own up to having a heart bathed with an ocean of gall and butterness, we desight in being revengent and erred, we gory in our ansurpassed facilities for a consing interactual poisson from this brain of ours, we smark our lips at the thought we can batcher anothers some repriations, we revel as the brief that we can scap gody hypecritis whose some repriations, we revel as the brief that we can scap gody hypecritis who extraord mary skil, we got to determine the fact that we do scap gody hypecritis and extraord mary skil, we got to the result of the fact that mail this we can trace the hand of Decane Provincence. Somebody is born to ask, whip, scorage, pound, thempound keep the series, transle, appointers and scoundeds who adher this we common ty. We flatter ourserves that we were born to in fit this high and hot office. This agony is the result of going to hear Dr. Store last Sundly exchang. According to this venerable redigious sham, the people of San Francisco are the most boood thirsty and industriants ourselving that is mean, shocking, and turboty. The reverence above an defauer or correlation, where the grossest martial initial these exceed. Whether the Rev Dr. was personal or not, we decline to state. Now we object to this eternal backing at humanity this thing of continuals thing digital this such to things pure and holy. Residuoling dirth its free, this employing congression; tood Lord undue the heart of thy servant to things pure and holy. Residuoling dirth its free, this employing this is the sall so baccate the classity of Thy san Francisco ands. Failing in this, we shall so baccarte Thy servant with gain and bettermess as to cause great mourning throughout his flock. Let our will be done, good Lord.
- A man has no moral or mental weight in the world until he is thirty; at thirty at comman has seen her best days. Money comes to us on crutches and dies from us on wings. A bitter trath is not recished, but a perfumed he is sweet to our cars. There is a great deference in men medicentally speaking; morally, they are six of one and a hard dozen of the other; there is a great of freque in women, morally; interelectuals, they are six of one and a hard dozen of the other. A woman who has once aroused the divine passion in the heart of man, and reciprocated it findly, can allord to die; a woman who has not ought to die. These are the private opinions of the Town Crier.

### An Unpleasant Predicament.

The workman strikes
For higher pay;
Does as he likes,
And gets his way.
Masters refuse
(Not over nice)
Profits to lose,
So raise their price,

The workmen gain,
The masters too
(This fact is plain,
I hope to you).
Strikes ne'er destroy
The masters gay;
Those who employ
The masters, pay.

### Photo-Mechanical Printing.

The new and beautiful art of photographing on stone and afterwards printing from the picture thus obtained, is making great advance in Europe. The art teok its rise two years ago in Germany and France, the artists of which countries stole quite a march on the photographers of England and Scotland in the extent to which they had developed it before their insular brethren began to practice it at all. During 1871 a number of British artists began to devote themselves to the subject, and at this time several important establishments are producing the photo-lithographic prints of great beauty and perfection of finish, which possess the invaluable quality that they can be profitably sold at a trifle of the price required for any other forms of nictorial production were inferior in most they of Conserved Chessenson Chess able quality that they can be profitably sold at a trifle of the price required for any other form of pictorial production even inferior in merit. Ohm & Grossman of Berlin early took the lead in developing the new process, and two of their pupils McGlashan, of Bdinburgh, and Sawyer, of the London Antotype Company—introduced it in a commercial way to Great Britain. The Antotype Company—menced with six presses, but within a year of their organization were compelled to creet a large building capable of containing many times that number, from which their works are now issued. The processes employed at different establishments vary in some of their details, but all are founded upon the original process of Poitevin, which has, ever since its invention, been worked with commercial success by Lemercier & Co. of Parls. "This consists in laying a coating of albumen, gelatine or other colloid body upon a flat stone or other surface. The colloid substance is rendered sensitive to light by treatment with a bi-chromate, and an image is impressed thereon. The insolated image has the property of taking up printing ink when "rolled up" (as the lithographers say), while the non-insolated parts, readily absorbing water, reject that ink in proportion to the degree to which praining in which found up this the languagners say), while the hon-insolated parts, readily absorbing water, reject that lik in proportion to the degree to which it has been protected by the dark parts of the negative—there gradation of time. By the newer process of Woodbury and Ernest Edwards we are informed that pho-By the newer process of Woodbury and Fruest Edwards we are informed that photo-idithography and photo-engraving have made immense strides; or, as a recent writer tersely says, "Photo-raphs can now be printed without grain, in printing link, at a common printing press." And, he adds, "With the permanence of prints the industrial future of photography will grow in immense propertion, because topography and lithography will multiply its products beyond all imaginable limits, and the industry of the heliographic art will rank with that of printing and be compared with it. It will acquire by this comparison a degree of superiority due to the more artistic character of the designs produced by light." Naturally it has have attempted to acquality the negocity in this, grand invention by recognition. to the more artistic character of the designs produced by light." Naturally it has been attempted to monopolize the property in this grand invention by procuring patents designed to cover the processes or some essential step in them. Thus, under one patent, the heliotype, the proprietors endeavored to monopolize the operation of "hardening the film of gelatine, etc., previous to the image being obtained on it." But this claim failed, for it was shown that this step was in common practice before the helicity or motor than a surficient for a Acoustic patients and includes tice before the heliotype patent was applied for. Another patentee desired to monopolize the process of printing with two inks—one much more fluid than the other, by which a sharper picture as well as more delicate gradation is secured; but this claim failed because the printing with two inks is a common practice in lithography. Still a third patentee attempted to claim the device of "masking" porthis claim failed because the printing with two discussions of "masking" portions of the printing to prevent the ink coming to them, thus obtaining improved effects; but "masking" was shown to have been openly practiced since 1858; and thus this claim failed. In short, the attempts of the English photographers to invent and secure any valuable improvement on the French and German processes of Poitevin and Ohm appear to have been a general failure. The Antotype Company, the practitioners of the heliotype process, and others pursue the tenor of their way, turning out as many and as fine "printed photographs" as they can, and fairly competing with each other for the favor and custom of the general public. In the United States the new art is hardly yet fairly introduced. It was brought somewhat prominently forward in Boston at the time of the Jubilee, and we hear of measures taken to extend it. As in England an attempt is made to control brought somewhat prominently forward in Boston at the time of the Jubilee, and we hear of measures taken to extend it. As in England an attempt is made to control the art by letters patent which have been issued to the proprietors of what is known as the "Albertype" process. High prices have been asked for this patent right in the different States, but as yet few operators have feit justified in placing considerable sums of money in an investment which seems so open to attack. The processes in public use in Europe might be introduced in the United States in spite of the "Albertype" patentees. For the benefit of the public, as well as of generally established throughout the country. Fairly weighing all the testimony which has been brought forward on the subject, it does not seem too much to say that the art of photolithography promises to attain an importance not second to the original discovery of photography itself.

## The Chinese Educational Mission.

The last steamer from China brought to our shores thirty-six Chinese students, from twelve to fifteen years of age, who are to be educated in American Colleges, at the expense of the Government of China, one million dollars having been appropristed for that purpose. They are in charge of a number of dignitaries, who intend traveling throughout the continent and acquaint themselves with our form of government. During their stay here they have visited the various interesting sights, receiving everywhere the kindest attention. They left on Monday on their journey eastward, but before zoing published the following card of thanks:

We wish to thank Captain Howard, of the Great Republic, his officers and crew, for the great kindness and civily, with which we have been treated on our voyage from Japan to San Francisco. We congratulate the Pacuic Maii Steamshep Comroom Japan to San Francisco. We congramme the Facility was Sesanish permit-pany for having such able Captain and officers in their service. Also, we tender our hearty thanks to Captain Mawzer, of the Custom Honse, and his others for the kindness and gentlemently treatment we have received from them on our arrival the kindness and gentlemently freatment we have received from them on our arrival in this city. Also to the propertor of Woodward's Gardens for personal and friendly attention received from him. And last, but not least, to Philip Meshane, Esq., General Manager, and George H. Smith, Chief Clerk of the Occidental Hotel, for their uniform kindness. We are, sir, your obscient servants,

Then Landing Chan Laisun,

Yell Yun Sing.

#### SAN FRANCISCO, Sept. 16, 1872.

The Shanghai News Letter gives the following in relation to the mission: At 10 A. M. Aug. 1th, the front of the American Consultate-General presented an extra-ordinary appearance, no less than torty sedan chars being congregated in the each side of the street, while the crosses and subtrees tormed a considerable crowd. The cause of the concourse was an official visit to the Consulate by Chun-lan-pin a mative of Canton, and an under-Secretary of the Board of Panyshments, the Chief Director of the Chinese Educational Mission to America; Yeh of Nankin, the Chinese preceptor who will accompany the pupils; Chan Laisun their Instructhe Chinese preceptor who will accompany the pupils; Chan Laisum their Instruc-tor bit bacton in foreign learning, and hence forth general Governor and Interpreter to the Mission, and Kwang, who succeeds Mr. Laisum as Instructor of the next detachment of pupils, who, after a year sustruction here, wil follow their prede-cessors to America. Mr. Laisum had wish him the turty pupils to whom he has been imparting preparatory instruction since the beginning of the year, and who, clad in uniforms of cream-colored gauzy grass cloth, girlded with foreign easitic belts of blue silk with ornamental gilt chaps in front, from which depended their fans in tastefully embroidered sheaths, and wearing official bats of rice straw orna-mented with scarlingful hair and surpromuted by a significant belt and heavy the present mented with scarled-dyed hair, and surmounted by a gixt ball, and showing throughout the most ceremonal toliness presented a most interesting and creduable appearance. The party on emerging from their chairs formed in procession and appearance. The party of emerging from their clears formed in procession and ascended the Consular stairs, at the landing of which they were received by O B. Bradford, Esq., Vice-Consul-General, and by D B. McCartee, Esq., M D. Acting Interpreter. The purples being drawn up in double file on the verandah, saluted in their national style, by joining their two hands in front, depressing them towards the ground and their arising them to the forechead. Mr. Laisant their read to them the following remarks by Mr. Bradford, translating it into Chinese, sentence by sentence, as he proceeded :

I am pleased to see you, as the first youths selected by examination to go to the

United States to be educated in Western science.

To the energy of the lamented late Viceroy, Tsen Kwo Fan, is your country in a To the energy of the innerted rate Viceroy, Tsen Kwo Fan, is your conntry in a great measure indebted for the successful accomplishment of this praiseworthy scheme, which has been carefully introduced to your government by Mr. Yung Wing, a graduate of Yale College, Another leading man in China, Li Hung Chang, is its surviving promoter, who will watch with interest the announcement of your progress in your studies, and success as scholars.

You go abroad under the auspices of your Emperor, to be educated at the public expense; and it lies with you to attain, each for himself, such proficiency in learning that when, at the end of your term of study you return, you may be fitted to

occupy positions of usefulness in the government of your country

occupy positions of userumers in the government of your co. nity.

You will see much that is strange to you in your travels, and during your lives
as students. You will be among the people of a great and progressive nation, and
culoy advantages not to be found in your own land. Strive to so conduct yourselves that you will prove ornaments to your country, and valuable aids to your
government in later years. Your condert while abroad will be closely observed by the people among whom you will live, and I want you to be a credit to your ancesand good representatives of the rising generation of Chinese

try and good representatives of the riving generation or connect.

Two of your guardians, have experienced the advantages of Western education.

They will advise you well. Be deferential to them and to all who teach you.

The precepts given in one of your elementary books teach, that he who learns in youth and acts when of mature age, extends his influence to the prince, benefits the people, makes his name renowned, renders illustrious his parents, reflects glory on his ancestors, and enriches posterity

I hope you will each do credit to yourselves, to those who instruct you, and to

your country, which educates you.

I hope some day to meet most of you in my native land, and I now wish you success, and a kind good-by

This address being finished the pupils again saluted. With one or two excep-

tions they had shown a steady attention during the address, and, at those passages which spoke of their possible future usefulness and eminence, some of them were observed to smile with all the complacency of hope.

The Seniors now entered the Consulate, where a conversation ensued with Mr. Bradford as to their journey, the regulation of their correspondence through the United States Post-ollice, and the prospects of their Mission generally. Mr. Bradford informed them that, as they would travel on the footing of public officials, their baggage would not likely be subject to the strict Customs regulations at San Francisco. Chuu and Yeh who, as yet, do not know English, expressed their intention of taking with them the English-Chinese chrestomathy, so as to acquire the most necessary words and phrases while on their voyage. They also take with them a considerable store of Chinese literature for study and amusement during their sojourn abroad. After the interchange of the usual compliments and good wishes, the four seniors repaired to their chairs. The pupils then filed with military precision off the verandah, each saluting as he passed down. They gained their chairs with business-like method and quietness, and the lengthened cortege wound its slow length along through the Settlement, to pay a similar visit of respect to H. E. the Taoda in the city. The Seniors now entered the Consulate, where a conversation ensued with Mr. spect to H. E. the Taotai in the city.

At his yamen a ceremony almost identical with the one described above was gone through, H. E. addressing to them the same hopes as to their propriety of behavior, and their zeal and success in study as are given at length above. The pupils were then conducted back to the school in Shautung Road, which they will

finally quit next Sunday to begin their most interesting voyage.

### Fashionable Women.

There is a passage in Lord Jeffrey's review of Miss Edgeworth's "Tales of a Fashionable Life," in which the great critic describes, with admirable force, the miscries of the fashionable. This wretched hant after a reputation for fashion, with its constant heart-burnings and defeats, its, he considers, more productive freal miscry than the serious calamities of life. This may seem a strong assertion, he adds, but is his deliberate conviction, and his statements on this head are strengthened by the opinions of one fully as competent to form just conclusions— Sir Henry Holland.

In his recent autobiographical sketch that celebrated person states that he has

In ms recent autoolographical sketch that celebrated person states that he has known people to be made absolutely ill by their anxiety and disappointment in regard to tickets of admission for Almack's balls in London.

Speak'ng of fashionable women, the London Lanert has lately had some very sound remarks in the same strain. "Fashion," it says, "kills more than toil or sorrow. Obedience to fashion is a greater transgression of the laws of woman's return a greater injury to her wheelool and mental constitution, that the kardeline sorrow. Obedience to fashion is a greater transgression of the laws of woman's nature, a greater injury to her physical and mental constitution, than the hardships of poverty and neglect. The slave-woman at her task still lives and grows old, and sees two or three generations of her mistresses pass away. The weather woman, with scarcely a ray of hope to cheer her in her toils, will live to see her fashionable sisters all extinct. The kitchen-maid is hearty and strong, when her lady has to be nursed like a sick baby. It is a sud truth that fashion-pampered women are worthless for all good ends of life; they have but little force of character; they have still less power of moral will, and guite as little physical energy. They live for no great ends. They are dolls, formed in the hands of milliners and cervants to be fed to order. If they have children, servants and nurses do all save to conceive and give them birth; and when reared what are they? What do they amount to but weak scions of the old stock? Who ever heard of a fashionable woman's child exhibiting any virtue and power of mind for which it became entinent? Read the biographies of our men and women. None of them had a fashionable mother." ionable mother."

Chile, is at the Grand, where, with his daughter and a party of gentlemen Santiago de Chile, he will remain a few weeks prior to making a visit to Europe. The contract for the construction of the railroad from the port of Mejillones, Bolivia, to the mines of Caracoles, about one hundred miles inland, has been awarded by the Bolivian Government to Mesers. Watson & Meiggs and Don Marcial Martiby the Bolivian Government to Mesers. Watson & Meiggs and Don Marcial Martinez, of Santiago. Mr. Watson reports that the new silver mines there worked are wonderfully rich, and in product surpassing expectation. This new district, though suffering under many deprivations, such as water, wood and grass, has become the El Borado of South America, within the last two years. At Mejillones there are vast guano deposits, worked by Harry Meiggs, with great energy. Besides being the contractor to remove the guano, he has invested largely in the native product, and to provide facility for working, he has constructed an aerial arroad, which is successfully operated. This desert coast promises to produce great vessith wealth.

<sup>-</sup> The gross earnings of twenty of the leading railroads in the Atlantic States for Angust show an aggregate of \$0,641,000, an increase of \$572,000 over the same month last year, while for the first eight months of the year the amount was \$62,807,000, an increase of \$7,530,000 over the corresponding period last year.

### In the Lists.

Could I choose the age and the fortunate season When to be born.

I would fly from the censure of your barren reason, And the scourges of your scorn

Could I take the tongue, and the land, and the station That to me were fit,

I would make my life a force and an exultation, And you could not stifle it!

But the thing most near to the freedom I covet Is the freedom I wrest

From a time that would bar me from climbing above it, To seek the East in the West.

I have dreamed of the forms of a nobler existence

Than you give me here,
And the beauty that lies afar in the dateless distance
I would conquer and bring more near.

It is good-undowered with the bounty of fortune-In the sun to stand ;

Let others excuse, and cringe, and importune,

I will try the strength of my hand!

If I fail, I shall fall not among the mistaken,

Whom you dare deride;

If I win, you shall hear and see, and at last awaken

To thank me because I defied!

—Bayard Taylor.

# Mischievous Misrepresentation.

A. W. Roysden recent'y delivered an address before the San Joaquin Valley Ag-A. W. Roysden recently delivered an address before the San Joaquin Valley Agricultural Association, which is copied without dissent by the Sacramento Union. The speaker told his hearers that they due to the following were "the most oppressively taxed people on the globe: the taxes paid to enrich corrupt brokers and ruinous monopolies." One of these taxes was pointed out as burking in the freight on wheat from San Francisco to Liverpool, which said the speakers is \$25 per ton this year against \$10 per ton last year. He adds that "it is estimated that this year this State will ship 700,000 tons of wheat, of which 400,000 tons comes from the San Joaquin Valley." There is no nut matten in Mr Roysden's comes from the San Joaquin Valey." There is no internation in Mr. Reyselen's remarks that the fact of this large shipment and consequent demand for tolunge has anything to do with the enhanced rates of freight. He calls the attention of the farmers only to the fact that upon their 400,000 tons of wheat they will. "Pay six inflicings of dollars to enrich men who glory in their ruin." From this address it would appear that the freight money is jaid to sone one in San Francisco instead of to the ship owners in the Atlantic States and Europe. We merely call attention to these remarks asson illustration of the sert of declamation which means betom to these remarks asson illustration of the sert of declamation which means become the series of the special properties of the State, and to which they appear to have listened without disapproval. A second point presented by the speaker was the rates of rail transportation." The farmer is compested to pay the saids a rairond monepoly \$5 per 100 for transportation \$00 miles. In the East, where there is competition, it costs \$2 per 100 to transport wheat 1,000 miles. "Now there is no single rail route of 1,000 miles in the Atlantic States over which wheat can be transported, at times of ruinous in the Atlantic states over which wheat can be transported, at times of ruinous competition, 1,000 miles for less than \$\$15. With a tole rable acquaintance with transportation rates over the most important Atlantic railroads, we cannot now the call any 200-mile length over which wheat can be transported for iess than \$\$15. call any 200-mile length over which wheat can be transported for less than \$4- for the charges are higher per mise over a short route than over a long one. And we are aware of routes in Pennsylvania and Virgonia over which 300 mises of transportation costs more than \$6- the rate charged in the San Joaquin Valley. The cheapest transportation, other than for coal, of which we are aware in the United States is that effected on the Pennsylvania Railrond main stem, which cost for operating expresses in 1811 his expects of a cent per mile equal to \$6.25 per flower and nules. Probably the statement which Mr. Roysdan had seen somewhere was, that a first transportance in the Albarte States costs. that wheat transportation in the Atlantic States costs \$2 per ton per 100 miles dot per 1,000, which is not far from the average rate. He should have remembered per I,000, which is not far from the average rate. He should have remembered that the difference in cost of fuel alone between those roads and ours is equal to a dividend on the cost of the road. The speaker concluded his remarks with the valuable suggestion that the San Joaquin Valley farmers should subscribe and build a narrow gauge railroad throughout the length of the valley. The San Joaquin Valley farmers can probably as well afford to make this experiment as any other body of men in the State, and as tending to settle the question of the utility of the narrow gauge, which is lable to break out violently at any time, perhaps it would be as well that they should do so.

<sup>-</sup> The American residents at Paris are preparing a grand banquet to the representatives of the United States at the Geneva Tribunal

#### In Settlement.

The people of San Francisco may, and doubtless will, continue to entertain different opinions upon the propriety of subsidizing railroads. There are many arguments to be used against the propriety of placing ten millions of dollars in the arguments to be used against the propriety of placing ten millions of dol'ars in the hands of individuals to construct competing lines of railway. But upon the proposition of compromise with the Central Pacific Railroad and the agreement entered into between Mr. Stanford and the Committee of One Hundred, there should be no hesitation. The sum of two and a half millions of dollars is by no means large, and when we consider the direct and immediate advantages to be gained by its expenditure, it is money well and profitably expended. The railroad authorities had determined that it was for their interests to terminate their rail at Goot Island and do their business with San Francisco by means of ferries across the waters of the Ray. Our people have, after low-and careful consideration of the matter, come Bay. Our people have, after long and careful consideration of the matter, come to the conclusion that it is better for San Francisco to bring goods and passengers into the city by a continuous rail. This necessitates a change of line, the construction of twenty-eight miles of additional road and the construction of a bridge across tion of twenty-eight miles of additional road and the construction of a bridge across our Bay. To build this additional road, estimating its construction at the average cost of railways in America \$44,000 per mile—will cost the company one million two hundred and thirty-two thousand dollars. A bridge will, at lowest estimate cost seven hundred and fifty thousand dollars. The company, in addition to the cost of rail and bridge, promise to expend within our city limits in offices, depots, warehouses and class and other improvements, the willians of dollars. All of warehouses and shops and other improvements, two millions of dollars. All of this property will be liable to taxation. Considering all these things, and the fact that the terminus of one road within our city insures the termination of roads to be that the terminus of one road within our city insures the termination of roads to be hereafter built, and that the benefits to business are to be immediate, we think our business people should not hesitate to secure the settlement upon the terms proposed. The Supervisors will undoubtedly submit the proposition, and we believe the people will unhesitatingly vote the amount.

### Diamond News.

The sensation of the week among diamond sharps has been the receipt of the files of the London Times for the week ending Ang. 31st, containing the letters of Pittar, Leverson & Co., diamond brokers) and L. Keller & Co., diamond dealers), detailing mysterous sales of precious stones to Americans of forbidding aspect—a description which tunder favor applies to neither Mr. Harpending, Roberts nor Dore, who are pioneers in acquiring information of the American diamond discoveries. The interence is lett to be drawn that the ground prospected by Mr. Janin was "salted" with the stones purchased in London from Messrs. Leverson and Keller. Yet, perchance the reader shall find his account in holding his horses and going slow for a season. The American diamond discoveries were first made public in the Daily Financial Postscript to the News Letter, and we have evidence enough on the matter to entertain and express an unomalified belief in the interrity one in the Daily Financial Postscript to the News Letter, and We have evidence enough on the matter to entertain and express an unqualified belief in the integrity of the "find." Time will justify us. And just here we may remark that, it is strange to us that so importants discovery as this should have met with the violent opposition it has from Mr. Pickering's dailies, published in this city not only was the integrity of the discovery attacked but the emiment and well known gentlement connected with it were signaled out and abused, for no other reason than they would not give the courters the location of this ground. would not give the reporters the location of this ground,

would not give the reporters the location of this ground.

There has been nothing to justify what these papers have written, as they had Mr. Janin's reports, in which he stated facts(and none who know Mr. Janin doubts him) that if true the property is worth much more than what the whole property has been stocked for. That stock has not yet been offered to the public for sale; and as it is nearly all owned in San Francisco, it is so much addition to the value of the property in California. In the face of this Mr. Pickering's Press has stigmatized this as a swindle, and foreign journals(not knowing the worthless character of the papers they copied from) are using these articles to the detriment of some of our best citizens. We would not be surprised to see some of these articles re-published here, to show with what importance they are looked upon in foreign lands.

foreign lands.

# Horner's Warming Pan.

Our medical profession is progressive. Old methods give place to new. Bleed ing has gone out, baking has come in. Horner (not "little Jack," who, for aught we know, is still "in the corner,") is the man. Where a new born infant does not exhibit sufficient liveliness he "warms" that infant on the stove. Like another distinguished physician, Satan, M. D., of the infernal tropics, he bids the cook "to put more fire on while I toast this infant on the gridition." [The reader need not look for this quotation in ancient authors as he will not find it. We make up our look for this quotation in ancient authors as he will not find it. We make up our own quotations pro re-nuta.] The process renders the infant so hot and cross that it resembles a "hot cross bun." It saves the trouble of putting blisters on, as the fire draws 'em out beautiful. This medical Herod has our sympathy in his laudable efforts to slaughter the innocents. But he must not expect gratitude from the parents. The more he does for their children in thatway the less grateful the unappreciative maternals will prove. Yet not all: some will no doubt do as much for the Doctor. "One good turn deserves another," and we hope to see him "done to a turn" after he has finished cooking the babies.

### The Bapteesement o' the Bairn.

BY ROBERT LEIGHTON.

[We have been requested by a large number of subscribers to republish the "Bapteesement o' the Bairn." In compliance with that desire we now subjoin it.]

The following poem, from the pen of a talented Dundonian, Mr. Robert Leighton, now of Liverpool, is one of the best and raciest thurgs of the kund that has appeared for many years. Mr. Leighton is the author of a volume of "Rhymes and Poems," which has already gone though several editions, and which should be on the book-shelf in every Scotchman and Scotchwoman's house. Many of the pieces included in that volume—such as "The Laddie's Lamentation on the Loss o' His Whittle," "Jennie Marshal's Canty," "Our Ain Auld Toon," "Auld John Broon," etc., have acquired a very wide popularity for their humor and pathos. Mr. Leighton is a true poet, and he would doubtless have been more widely known as such had he been less modest and retiring in his habits and disposition. "The Bapteesement o' the Bairn," as a piece of pawky Scotch humor, surpasses the best efforts of Alexander Wilson and Hector M'Neil; and frequently reminds us of Burns' own richest humor:

Od, Andra, man! I doot ye may be wrang To keep the bairn's bapteesement aff sae lang; Supposing the fiver, or some quick mischance, Or even the kinkhost, whup it aff at ance To fire and brimstane, in the black domains Of unbelievers and unchristened weans I'm sure ye never could forgi'e yersel', Or cock yer head in heaven wi' it in-Weesht, Magge, weesht, ' mame not the wicked place; I ken I'm wrang, but heaven will grant us grace. I havena been unmindfu' o' the bairn, Na thocht on't till my bowels began to yearn; But, woman, to my sorrow I have found Our minister is anything but sound; I'd some break the half o the commands. Than tour branch is bapteesement in his hands. I wadna say our minister's depraved I wadta say our minister s cepraved;
In fac, in all respects he's well behaved;
He veesits the hall parish, rich an' puir;
A worthier man, in worldly ways, I'm shure
We couldna hae; but och, wae's me, wae's me,
In doctrine points his head is all agley. We him there's no Elect all are the same; An honest heart, an' conduct free frae blame, He thinks mair likely in the hone o' death To comfort ane than loads o' Bible faith; An' e'en the Atonement, woman, he lichtlies, so It's dootfu' whether he believ'st or no; Redemption, too, he a most sets aside, He leaves hopeless, wanderin' far an' wide, And whether saved or damn'd we canna tell, For every man must e'en redeem himsel'! Then on the Resurrection he's clean wrang.
"Wherefore," says he, "lie in your graves sae lang;
The specrit is the man, and it ascends The very instant that your breathin' ends; The body's buried, and will rise nae mair, Though a' the horns in heaven should rout and rair." Sometimes he'll glint at Robbie Burns' deil, As if he were a decent kind o' chiel But to the downright Satan o' the Word, Wac's me! he disna pay the least regard; An hell he treats sae brief and counts sae sma' That it amounts to nae sic place ava, O dear, to think our prayers an' holy chaunts, And a' the self-denyin's of us saunts, Are not to be repaid by the delight Are not to be repaid by the delight
Of hearing from that region black as night
The yelling, gnashing, despairing cry
Of wretches that in fire an 'brimstane lie!
'Twill never do, gnid wife, this daft divine
Shall ne'er lay hands on bairn o' yours and mine.
Ye're richt, guidman, rather than hand like his
Bapteese the bairn, we'll keep it as it is—
For aye an outlin' wi' its kith and kinA Hottentot, a heathen steeped in sin! Sin did ye say, guidwife! Aye, there again Our minister's the erring'st 6' men; Original sin he almost laughs to scorn, An says the purest thing's a babe new born, Quite free from guile, corruption, guilt, and all The curses of a vessionary fall— Yes, "vessionary" was the very word! Bapteese our bairn! it's morally absurd! Then, Andra, we'll just let the baptism be,

And pray to heaven the bairn may never dee. If Providence, for ends known to itsel Has ower us placed this darken'd infidel,

Let's trust that Providence will keep us richt,

And aiblins turn our present dark to licht.

Maggie, my woman, ye're baith richt and wrang:
Trust Providence, but dinna sit ower lang
In idle hope that Providence will bring Licht to your feet, or any ither thing The Lord helps them that strive as weel as trust, While Idle faith gets naething but a crust; So says this heathen man—the only truth We've ever gotten trae his graceless mooth Let's use the means, and heaven will bless the end; And, Maggie, this is what I now intend: That you and I, the morn's morn, go forth, Bairing the bairn along unto the north, Like favored ones of old, until we find A man of upricht life, and goodly mind, Sound in the faith, matured in all his powers, Fit to bapteese a weel-born bairn like ours Ph to dispute a weer-out mann a clear be fed— Noo, then, the partitch—flesh mann clear be fed— An' I'll wale oot a chapter—syne to bed. Eh, but the mornin's grand! that mottled grey Is certain promise o' a famous day.

But, Maggie, lass, you're gettin' tired I doot, Gie me the bairn, we'll tak it time aboot.

I'm no that tired, and yet the roads look lang; But, Andra, man, whar do ye mean to gang?

No very far; just north the road a wee, To Leuchars manse; I'se warrant there we'll see A very saunt—the Reverend Maister Whyte— Most worthy to perform the sacred rite; A man of holy zeal, sound as a bell, In all things perfect as the Word itsel'; Strict in his goings out an' comings in; A man that knoweth not the taste of sin— Except original. Yon's the mause. Wi'him There's nae new readin's o' the text, nae whim That vectuates the essentials o' our creed, But scriptural in thought, in word, and deed-No. let's walk up demurely to the door,
And gie a gentle knock—one knock, no more,
Or else they'll think we're gentles. Some ane's here.
Stand back a little, Maggie, and I'll speir
If Mr. Whyte—Braw day, my lass; we came To see if Mr. Whyte-

He's no at hame! But he'll be back sometime the nicht, belyve: He startit off, I racken, about five This mornin', to the fishin'—

Save us a'! We're o'er lang here-come, Maggie. come awa', Let's shak the very dust frae off our feet— A fishin minister! And so discreet In all his ministrations! But he's young— Maybe this shred of wickedness has clung This lang about him, as a warnin' sign That he should never touch your bairn and mine. We'll just hand north to Forgan manse an' get Auld Doctor Maule—in every way most fit— To consecrate the wean. He's a divine Of and experience, and stood high langsyne, Ere we were borne; in doctrine clear and sound. He'll no be at the fishin'. I'll be bound. Wae's me, to think the pious Maister Whyte In catchin' troots should tak the least delight! But, Andra, man, just hover for a blink, He mayna be sae wicked as we think. What do the Scriptures say? There we are told

Andrew and Peter, James and John of old, And others mentioned in the Holy Word, Were fishermen, the chosen of the Lord.

I'm weel aware o' that, but we forget That when the Apostles fish d'twas wi' the net; They did not flee aboot like Hieland kerns, Wi hair lines and any wands whappen the burns. No, no; they shahed i' the lake o' Gallilee— A libur lone, almost as big's the sea. They had their cobes, too, wi' says and oars, And piled their usefu' trade beyond the shores; Besides, though first their trade was catchin' fish-Art honest craft as one could wish -They gave it up when called upon, and then, Though they were fishers still, it was o' men. But they you me Maister Whyte first cut a call To fish for men, and -oh, how sad this fall! The learned, pious, yet unworthy skoot, Neglects his sacred trust to catch a troot! Not here comes l'or, an neuse annue the trees, A coz e spot, weel sko\_ t frae the breeze, We'll just walk ane by ane up to the door, An' knock, an' do the same's we did before. The doctor she in a brich for a his life; Ye a most tak the servant for his wite. She's such command o'er a' that's said and dune— Hush' this mann be the che pin o' her shine. How do you do, mem! There's a bonny day, And Ilke to keep sae. We've come a' the way Frac Edenside to get this barn baptersed By Doctor Mau e, it you and he be pleased

We've no objections, but the doctor's zone shootin'. Since the shootin' time cam on A-shootin'

A shooth. Since the sum is a kindly been.
The lard protect us? Was the like e or seen?
A shooth 'minister! Think shame, and wife!
Were be the only manister in Fib. He'd never lay a hand on burn o' mine Irreverend, ponchen', posither-m'-lead divine! Let's shock the dust frae off our shone com; Come, Maggle, come awa'. I hardly ken Who ke o 'he twa's the warst, but I wad say The shootin' minister—he's auld and grey; Grey in the service of the kirk, and hence, We age and service should have gathered sense. Now let's consider, as we step alm\_ Doon to the waterside we needna ganz; I'm tau d the min sters preach recthing there But cau'd morality new-langed ware. That draps a lateth, and trusts to warks alone, That cange at train, and this see with sadar. That cange skin deep, but never courses the bone. We'll just hand ower, for frofin it is wearing late, By Pack certhin, and then wast the cate To auld Kilmeny, it slants haffiin hame Whilk for the sake o' this foom, gramblen' wame, I wish were nearer. Hech' to save my saul! I never can get ower and Doctor Mande:

I have consequenced the record sharps and the sun!
Whate, Magaze, whater's your Scripture for the gun!
Od, Andra, as we've come along the road.
I've just been kurner' through the Word o' God,
Batth auld and new, as I can mind, But not the least iota can I find That mak's the doctor want than Maister Whyte, And on his ain auld head brings a' the wyte It does. The word gives not the merest hint O' guns, and poother's never mentioned in't. They had their bows and arrows, and their slings, And implements o' war—auld-fashioned things, I racken—for the dingin' doon o' toons, An' spears, an' swords, an' clubs for crackin' croons; But as for guns and shot, puir here's to kill, There's nae authority, look whaur ye will. Losh, see the suns gaen red, an' looks askance; The gloamin' fa's, but here's Kumeny manse. Hark, Andra, is that music that we hear. Londer and louder, as we're drawin' near? It's naethin case. Ise wad my braw new goon It's naethin case. Ise wad my braw new go. The must r's trac hame, an some wild oon Comes fiddlin' to the lasses. O, the jads!

The minister's awa-they've in their lads, An' turned the very manse into a barn, Fiddlin' an' dancin'—drinkin', too, Is'e warran'!

Tod, Maggie, but ye're richt; I fear ye're richt, An' here's grey gloamin' sinkin' into nicht, While we're as near our erran's end as whan This mornin' wi' the sunrise we began We'll e'en gang roond upon the kitchen door An' catch the ill-bred herpies at their splore! Hush! saftly! I dinna hear their feet, An' yet the fiddle lilts fu' deft and sweet, It's nae the little squeakin' fiddle, though, But ane that bums doun' in its wame and low. They hear us speakin'—here's the lassic comin'—

They near us speakin'—here's the lassic comin'—
The minister's frae hame, I hear, my woman.
The minister frae hame? He's nae sic thing,
He's ben the hoose, there, playin' himsel' a spring.
The minister a fiddler? Sinfu' shame!
T'd sooner far that he had been frae hame.
Though he should live as long as Methuzelem,

I'll never bring anither bairn to him; Nor will he get the one we've brocht—na, na; Come, Maggie, tak' the bairn an' come awa; I wadna let him look upon its face— Young women, you're in danger, leave this place! Hear hoo the sinner rasps the rosiny strings And nocht but reels and ither warldly springs!

Let's shak' the dust aince mair trae aff oor shune. An' leave the pagan to his wicked tune

An' leave the pagan to his wicked time,
But, Andra, let's consider; it's sue late
We cama noo gang ony ither gate,
And as we're here we'll better just haud back
An' get the bairn bapteesed. What does it mak' Altho' he scrapes a fiddle noo and then ! King Dawvit was preferred above all men, And yet 'twas known he played upon the harp; And stringed instruments, bath flat and sharp, Are mentioned mony a time in Holy Writ, I dinna think it signifies a bit-The mair especially since, as we hear, It s me the little thing see screech an' skeer, That drunken fiddlers play in barns an' booths, But the big gaucy fiddle, that sae sooths The specifi into holiness and calm

That even some kirks ha'e thocht it mends the psalm, Tempt not the man, O woman! Maggie, I say-Get thee behind us, Satan !-come away; For he, the Evil One, has aye a sicht

O' argument to turn wrang into richt He's crammed wi' pleasant reasons that assail Weak women first, and maistly aye prevail; Then she, of coorse, maun try her wiles on man, As Eve on Adam did. Thus sin began, And goes on, I fear, unto this day, In spite of a the kirks can do or say

And what can we expect but sin and woe When manses are the hotbeds where they grow? I grieve for puir Kilmeny, and I grieve For Leuchars and for Forgan—yea, believe, For Sodom and Gomorrah there will be A better chance than ony o' the three-

Especially Kilmeny. I maintain For a' your reasons, sacred and profane, The minister that plays the fiddle's waur Than ony o' the ither twa, by far. And yet, weak woman' you would e'en return

And get this fiddler to bapteese oor bairn! Na, na; we'll tak' the bairn to whence it came, And get oor ain brave minister at hame. Altho, he may be wrong on mony a point, And his salvation scheme sair oot o' joint, He lays it doon without the slightest fear,

And wins the heart because he's so sincere; An' he's a man that doesna need to care An' he s a man that doesna need to care.
Wha looks into his life, there's naething there—
Nae sin, nae slip o' either hand or tongue
That ane can tak' an' say, "Thou doest wrong."
His theologic veesion may be skew'd.
But, though the broken cistern he has hew'd
May let the water through it like a riddle.

"The third salars absorbed one plays the fields."

He neither fishes, shoots, nor plays the fiddle.

### The Tax Levy.

The members of the San Francisco Board of Supervisors assembled last evening The members of the San Francisco nearer in Supervisors assembled, as evening as a Committee of the Whole, at the instruce of the France Committee, to consult upon the rate of tax levy to be imposed for the current year Anditor Ashbury, Tax Collector Austin and School Superintendent Widner were present. The total value of property now on the assessment re-was stated at \$22 millions of dollars, mortrage debts excluded. Mr. Austin estimated that taxes could be collected on \$22 millions Mr. Ashbury thought on \$20 millions of thesamount. The principal point under discussion was, whether the full amount of money necessary to defray point amorting the city government for the term of system months covered by the new my law should be collected. The alternative would be to run nto debt and new fix laws should be collected. The alternative would be to run into debt and let the amount thus incurred 20 over to another year. The Supervisors determined on the latter course. They propose a beytor city and county purposes of one per cent. to produce say \$8,250,000; estimated reviewe from other sources of consess, poll taxes and special for food, \$200,000; estimated deficience, \$6,200. The State lax is 30 cents on the \$100, and should produce the additional revenue for State purposes of \$1,125,000. This is a departure from the first paractice of sound municipal government. Pay as yon 20. It is unjust to the purpose control making him wait for his money it is unjust to the tax-payer, increasing the charges made account them the first paractic departure. against them by those who dear with the city in order to cover the delay and discount of their claims; it is minrious to the public credit, showing that the city expenses are of their claims, it is minrious to the public croft, showing that the CN expenses are outronning income and speaking of bad financial management, it has the burden of interest for borrowed money on the fax-paper, which the Supervisors have neight, as a question of policy, to do: it sends the administration of next year into business hampered by a flowing debt which must then be provided for it the amount be funded, the art involves compounding subtrest on the deterred dougstions, which is a violation of the first principle of good business management. The financial department next year is likely to have additional new charges to provide for the first principle of good business than general. The inancial department next veries likes to have additional new charges to provide for an that of Raxenswood and perhaps other bonds, and ought to be natramezed to make its negotiations to the best advantage, if the city finances be the disorganized by a cumbrane fleating debt, whatever new bonds may be not forth must be negotiated at a grave disordantage, which will tell heavily in the discount exacted by capatalists. To shirk the peament of the current year's obligations of the current year's obligations. tions is a moral cowardice, and one which there is no reason to input to the tax-payers of the city. The supervisors have committed an error of indement. The payers of the city. The Supervisors have committed an error of indement. The expenses of the city government are to be paid, and tax-payers are we mg to pay as they go. They do not wish to shork this year an amount when they must pay another year with compounded interest, with adderional and heavy charges for imparted public credit. They will have paid no taxes for sixteen menths, and they are willing to pay for the whole form. The rate of levy necessars to raise the estimated in the contraction of the are willing to pay for the whole form. The rate of new massage to raise the estimated dericiency of nearly \$700,000 is only about 30 cents on the \$100, the fotal tax levy will thus be, for State, city and county purposes, \$1 set on the \$100 instead of \$1 50 on the \$100, as now proposed. The price is not a heavy one to pay for sound municipal credit, and the true economy of administration which theme ensures. The bunden is too small an one to be escaped at the expense of imported public credit, demora wed finances, increased current expenses and consequent false economy of administration.

The Big Trees.—Professor Asa Gray, the retiring President of the American Association for the advancement of Science, gave at the opening session an interesting sketch of his botamica, observations at the West, reterring particularly to the "Big Trees" of Carifornia, the sequent gianteles, their history and reason to the observations from the fossi frees of geological ages. Of the possible thearies respecting those forces the fossi frees of the sequent gianteles, their history and reason to the fossi frees of the sequent of the sequent presentation of the sequent presentation of the sequent presentation of the sequent presentation of the sequent is summed up as follows: At the beginn ug of the tortiary period the mothern temperate zone was a region of people has Sammer. Gradually, glaciers rolled down from the north diving all vegetation far to the south. Then a warmer climate came again, and freed the greater part of the northern bemisphere from its fetters of ice. As these melted away vegetation (At held northward, but not to its former limits. These facts furnish a clew to the history of the "Big Trees." If their ancestors were numbered by the great ice flood that swept over the northern half of the globe. Research has found the tossi sequent gingment throughout the miscene formations of northern Europe, and in those of Ice and, Spitchen, are almost the same as the "Big Trees." of today. This crucoal test claws that before man sprang from the dust of the Carden of Eden according to Genesis, or was evolved from the ape of northern Area, according to Darwin, the sequence against the same as the other carden of Eden according to Genesis, or can see the second of the carden of Eden according to Genesis, or can see the second of the northern Area, according to Darwin, the sequence against the same as the other carden of Eden according to Genesis, or

<sup>—</sup> The number of Americans registered in Europe on Angust 24th, as appears by the Paris American Register of that date, was greater than ever before. In Switzerland and throughout Germany were great crowds. At Backen Barlen alone the names of Americans in small type fill one of the large columns of that paper. Californians were registered as follows: At Paris, Mrs. S. L. Hasey, V. C. Janin; at London, L. H. Newton; at Baden Baden, Mr. L. L. Arno d, J. A. Donahoe and family, Mr. Peake and wife; and at Frankfort-on-Main, Mr. Rest and family.

### A Tyrant in the House.

"To make a Pandemonium where she dwells, And reign the Hecate of domestic hells."

This is the office of the reigning power in our households-the servant girl. hear growls about railroads, about elections, stocks, and diamond mines, but very few about the powers that be, by whom our homes are held in bondage. A good dinner is a very desirable thing, but a good dinner is spread upon comparatively few boards in San Francisco; this, too, in one of the best markets in the world,

where we have everything that is requisite except a cook.

"Born in a garret, in a kitchen bred," is searcely applicable to the damsel women we entertain in our kitchen, for the interesting event took place in an establishment which formed one harmonions whole, with Mother Earth for a floor, and the air of Heaven playing through the chinks with delightful freedom. Breakfast, dinner and supper consisted of the mealy potato and a sprinkling of salt. These are the antecedents of the lady who presents herself before us as a good cook, and demands all the modern conveniences with which to work; who dislikes to answer the door-bell, and doesn't wish to be seen cleaning the front steps; who declines to live beyond Leavenworth street, and positively refuses to live in the country specified objects of an increase of the population in the family where the who decluding operated an increase of the population in the laining where sine gets clothes and money enough to lie off for a month or two, and then walks away without warning; who partakes freely of the contents of the sideboard, and if remonstrated with upon any subject, becomes obstreperous, is impudent and aggressive, and perhaps curves the whole family. Families are driven from under her iron rule into hotels, boarding houses, restaurants—any place where she is not. Why do they not strike? Workmen and workwomen have struck repeatedly. Let why no they not strike? Workmen and Workwomen may struck repeated. Let their employers take a turn. Let the ladies dispense with the services of these maids until the maids will learn to work, for a servant should serve her time as well as a milliner or dressmaker; but of the maids will learn to be content with respect to the content wi sonable wages, for they have more money now than a schoolmistress, after her board sonator wages, to tury nave more more more than a cotton gown and a sensitive wrap, instead of a silken garment at five and six dollars a yard, and a shawl whose price ranges from one to there hundred dollars; until they learn to speak respectfully. and not appear before the mistress in an attitude of defiance and perpetually on the war path. Such a strike would bring peace to our kitchens for a long time to come, and shed happiness upon the souls of our weary, strife-worn womanking.

- Real estate is declining on Valencia street, and the inhabitants, in agony of despair, have dressed themselves in sackcloth and ashes. The cause of the decline, and the agony, is due to some nice young man who is learning to play the flageolet in that locality. This merrie cuss toots the machine eighteen out of every twenty-four hours with an unearthly tooting. Like the live Chronicle and the Call, the poor devil appears every morning to afflict his neighbors. Like the Bulletin and the Examiner, he appears every evening harping on the same old tune. This flageoe'te hayer is a monstrous nuisance. We like him for it. Now the cup of our happiness would be filted if this bright individual roomed next to us. We would like to have in an adjoining room a couple of roating lions, a hyena or two would like to have in an adjoining room a couple of rouring lions, a hyena or two in another appartment, three or four hungry jackals down in the cellar, a few wolves in the garret, a couple of tigers hitched to the bed post, a couple of John asses tied to the parlor knobs, a dozen teething babes close by, a scolding wife, an evertasting talker of a mother-in-law, and various additional live furniture of the kind. With these surroundings how sweet and peaceful would our sleep be. We long for them. They would be musical geniuses to use every one of them. Out upon the inhabitants of Valencia, with their unmusical cars. Can't stand one miserable flagcolet player! What damphools some persons are!

Our venerable friend, the Alta, has given another fitful exhibition of "enterprise." We all remember that when the "last spike" was driven at Ogden, the prise." We all remember that when the "last spike" was driven at Orden, the Alta proudly headed its account of the glorious consummation, "Evans at the Front." Now we read with awe, in connection with the tumbling of the Vallejo Elevator, that "Hittell, of the Alta, was the first person to stand on top of the wreck after the disaster." Astounding enterprise! Remarkable daring! Brilliant rivalry of Stanley! Truly, the Alta still lives, and is determined to annaze the world rivalry of Stanley! Truly, the Alfa still lives, and is actermined to annaze the world by shining examples of enterprise. Evans may be lost to it, Hittell may pass away, but the glorious company of Notists will still contain gallant spirits to do and dare all in behalf of the Grandmother of the Press. Why have we not Bret Harte to immortalize the during Hittell, as he did the gushing Evans, in heroic verse? When the great crash of matter and wreck of worlds comes, we shall expect, if we are around, to see MacCrel'ish himself, with an Alfa note-book in hand, courageously and nimbly climbing to the top of the rubbish heap. Great is the Alta,

<sup>·</sup> The Republican of Monday last had a thoughtful and well prepared article on the religious question.

# "The Sick Child."

"Oh mother I feel so weary, so weak, and faint, and ill:
Though the fire is burning bright, mother, yet I am dump and chill.
And I know by your sad, sed tree mother, and the tear that s in your eye,
That the time is quickly coming when I must say good-bye.

But before I say goodnight, mother, come sit beside my bed, And tell me what will happen, when I am cold and dead. Shall I meet lutte sister Mary, who died two years ago! And will she have great iong wings, mother, like angels have, you know?

I should like to take her the dolly, you show us once a year: (The one Annt Fanny gave her.) Do you think she d like it, dear? I'll tell her about the party we had last Christmas day

And the fun we've had this Summer, making houses out of hay.
I'll tell her about the baby, that Doctor Simpson brought.
And all about the squirrel, that Uncle Harry caught.
Girls give me a kiss to take her,—and when we meet above
I'll tell her that you sent it, and lots and lots of love.

Oh what is heaven like, mother? is it a pretty place? And will our Saviour kies me? and shall I see his face? And do you think he!! like me! for I often have done wrong, And shall I have to sing? mother, all day and all night long?

Give me a drink of water, mother, my throat is O! so sore; Come twist your arms around my neck, and I won't talk any more. I'll try to go to sleep, mother, there hold my hand quite tight. For I feel so weak and tired, one more kiss, then good night.

W. L. EYRE, San Francisco.

### The Teaching of Languages.

The generous endowment of a Professorship of Oriental Languages and Literature by the Hon. Edward Tempkins, who has donated land to the value of \$50,000 for that purpose, should stimulate the State University of Carifornia to larger efforts for the public good. The more encyclopadic are the studies the more will be institution fulfill its name of a University. In this cosmopolities commonly all languages are spoken, and therefore instruction in any of them should be within reach of the University student. A knowledge of Oriental languages, in view of our constantly uncreasing intercourse and commerce with Asatic rations, will be of the greatest possible utility to those who are to engage in mercantice pursuits. It is to be hoped that a competent Professor will be found. Perhaps one of the present Professors would not object to add a few more recondite languages to those he already teaches. Signor Proda, the Mezzotanti of the State University, already teaches Italian, German, French and Spanish. The Asiatic tongues would be a good supplement to those. An Italian who can participate a Frenchman, spread Destacle like a Amadaria. Perhaps he might be induced to take the Oriental tongues under his linguistic wing. His French, it is true, is said to be like that of Chaucer's Nun, who spoke it

"After the school of Stratford-atte-Bowe, For French of Paris was to her unknown."

And many of the students tell us that they would gladly learn French, German or Spanish, but are sensitive about accent, and don't want to be learlied at by "the natives." It's a wise child, they say, that knows it's own father, and a still wiser German that can understand the language of Enderland as enunciated by the Italian Professor. Perhaps the addition of t'e A-static tongress would native a heteraceut, and make the Professor's omniliargual instructions as intelligible as the tongres of Babel. The gift of tongres is a great thing, especially when endowed with a good salary.

There are some persons who pocket insults as gracefully and cheerfully as they would twenty dollar gold pieces. We admire this class of individuals exceedingly, as through their amiable and for lying natures, we can induce in the only poetry for which we can find a market, and get good pay. But beyond this, it is neither wise, philosophic, or Christian to get mad simply because some intellectual savage perforates your hide with a dose of sarcasm. He has a right to do it, and it is your duty to bear it mainfully. Men of brains are secree, and when they are discovered in the surging crowd of brainless mortals we approved them they are discovered in the surging crowd of brainless mortals we approved them they are discovered in the surging crowd of brainless mortals we approved them they are discovered in the surging crowd of brainless mortals we approved them they are discovered in the surging crowd of brainless mortals we approved them they are discovered in the consideration of the property o

### Leaves from a Lady's Diary.

SEPTEMBER 15.—My birthday, which I shall only keep two years longer, as I shall then be forty, and after that time the anniversary is no longer a fête. Many of my old friends sent me presents, as they have been accustomed to do for years past, and I was amused at the incongruity of some of these offerings. The dear old souls had been racking their brains for a week past what to send me, and then, in a fit of desperation, at the very last moment rush and buy the most inappropriate thing in the world. Not quite so bad as B—, who, on three successive New-Year's Days, gave a lady the works of the same poet. Mrs. F— called, with her sharp nose and glib tongue. She was full of Mrs. S—'s surprise party the other night, the husband being the only one that knew nothing about it before hand; and how the tuneful broker, who knew what was going to take place but hadn't been night, the ausonad being the only one that knew nothing about it before hand; and how the tuneful broker, who knew what was going to take place but hadn't been asked, crept in by saying carelessly to the master of the house, "By the way, I'decome and pay you a visit to-night, if you like." The other, of course, was "delighted." She then rattled on about some of them getting tipsy and noisy, and the affair breaking up sooner than it would otherwise have done, which was owing to the presence of strangers. Henry quoted from Chaucer:

the presence of strangers. Henry quoted from Chaucer:

"The piping Roger made alle heartes righte merrie
Till some besotten waren, payne-full verie."

SEPT. 16.—The twelve fresh men are sworn to try Mrs. Fair, and they are all very stupid or very indifferent. In this country, where every one reads the papers, and where the usual question after greeting is "What's the news," it is hard to think that any one has not heard or formed an opinion of the guilt or innocence of the prisoner. I pity that poor sewing machine agent who is on the jury, for if he bring in a verdict of guilty he will be obliged to resign his agency, as the women will all be down upon him. Two ladies, utter strangers to me, called this morning for a subscription to some hospital or other. I was obliged to decline, but Mrs. E—, who had come to see me about her school, put down her name. "It will be printed," said she, after they had gone, and so I saw that she had used her donation as an advertisement. I thought within myself that when people are not charitable from principle, nor from the love of Heaven, it is still necessary to be sometimes from motives of interest.

SEPT. 17.—People are coming back from the country and parties are beginning

Sometimes from motives of interest.

Sept. 17.—People are coming back from the country and parties are beginning again. Went to a rather pleasant one at the S—s. Old S—does not invite only gold bars to his house, so that agreeable people come there. That affected skeleton Mary B—was there with a very light ganzy dress and scarf, through which one could almost fancy to see her bones. Henry whispered to me that she looked like a spider dancing in its own web. I thought of a pterodactylus as one

looked like a spider cancing in its own web. I thought or a preroducty its as one sees them in pictures of animals of a past world.

SEPT. 18.—A card from Mrs. Minnie Myrtle Miller; what a euphony of alliteration. She styles herself with becoming modesty "The Poetess." Does she mean to infer that having married a poet creates her a poetess in the same way that a Duke's wife becomes a Duchess! That she is a woman, is abundantly proved by the programme of her intended lecture, wherein she is evidently going to "show up" the unfortunate Joaquin. A very modern woman, also, proclaiming her wrongs at the rate of a dollar a hearer and exposing her domestic sorrows to a parcel of scandal lovers. Very unlike that faithful, loving, devoted woman of whom it was said-

Not she, with traitorous kiss our Saviour stung; Not she denied him with unholy tongue. She, when Apostles shrank, could danger brave; Last at the Cross, and earliest at the grave.

What a relief that there is a lull in the newspaper railroad war; one can read the dailies without coming across the words Atlantic and Pacific. The endeavors of the Bulletin to raise up the ghost of the old Vigilance Committee, reminded me of the time when the Romans subjugated Greece and the Grecians always chose Thermopylae as their battlefield, hoping that the name and place would act as a tailsman, but the army was invariably defeated and ran away.

— The Bulletin gravely deprecates the personalities of the political campaigns. Yet these personalities are mild and pleasant compared with the Bulletin's unwarfed abase of everybody who refuses to be driven by it and its ring into indorswearest abuse or everyous who refuses to be criven by it and its ring into indorsing the scheme to rob this city of ten millions for the benefit of the bankrupt and fraudulent Atlantic and Pacific Railroad. A very complete Handbook of Vulgarisms and Abusive Epithets might be compiled from any week's issues of the Bulletin. The Bulletin says: "We have never known a campaign in which there was so much blackguardism, unrelieved by rational argument." Oh, Mr. Fitch! Your campaign against our leading business men and most clear-headed lawyers beats it all hollow.

<sup>&</sup>quot;Whene'er I take my walks abroad, how many snobs I see," would have snng Dr. Watts, had he visited this city in 1872. But we may take many walks, and search closely and long, without finding another hotel to compare with the Racine House, 1023 Kearny street, for comfort and elegance. This house ranks above all others in these particulars. The wants of guests are attended to with the most provident care.

#### Prote.

(An Epitaph on a little Girl aged eight years.)

Thou art not dead, dear Proté, First of our broken band; Although thy little footsteps Have sought the better land.

Once in our earthly dwelling
The brightest and the best,
Thy new home spreadeth over
The Islands of the Blest.

All joyous thine existence, Apart from earthborn pains, Where deck the fadeless flowers Those bright Elysian plains. There winter never vexeth,
And summer heats ne'er smite;
Nor sickness like that last one
Which quenched thy little light.

Hunger and thirst thon never—
Ah, never more cans't know;
Not one regret thou feelest
For bypast life below.

Since now thy bliss is perfect, Amid the golden rays That fill with cloudless sunshine

That fill with cloudless sunshine Olympus' happy days. — Tinsley's Magazine.

### Important Steamship Sale.

It is reported that the Pacific Mail Steamship Company has bought out the North Pacific Transportation Company, its Southern business and steamers—embracing the following:

Name. Class Tons. Name. 674 Pacific. Class. Tons California. Propeller. Side-wheel 876 California. Side-wheel. 874 Senator. Side-wheel. 1,021 Orizaba. Side-wheel. 1,244

Total tons.

4.680

The business transferred with these ships is understood to be that on the southern coast and Mexico. It will be remembered that in July last negotiations were closed by which the North Pacific Transportation Company soid to the Oregon and California (Holladay) Railroad Company, their routes and business between San Francisco and Portland, and Portland, Puget Sound and Sitka, together with the following steamers:

The same Company had previously sold the side-wheel steamship Moses Taylor to the Australian (Webb) line. By the present transfer to the Pacific Mail Steamship Company, the North Pacific Transportation Coupany, which under its successive names of Holladay line, California, Oregon and Mexico Steamship by Company-has for ten years enjoyed a monopoly of the coastwise steamship business on the American Pacific Coast—will, it is presumed, pass out of existence. The San Francisco News Letter of this date says: Of the value of the business now purchased by the Mail Company, and the fitness for it of the steams which they take, it is needless to speak to Californians, but New Yorkers may need a word of explanation. Every route understood to be included in the transfer pays a good profit. The Southern Coast line to Los Angeles has uniformly coined money for years. To the Steam Navigation Company, the Senator, under Captain Scely, was a notorious mine of wealth; while the same business in the hands of the North Pacific Transportation Company has increased many fold in aggregate and in net profits. The terms of this reported purchase are not yet made public, but it may be assumed that the price paid has not been extravagent, while the net income of the business is something handsone. The steamers themselves are the smaller part in value of the purchase. The business is the thing. One effect of the new arrangement when it may go into operation must be to increase in a material way the labors of the San Francisco Steamship Agency. A line of steamers to Chian, with quite as wide a margin for the exercise of judgment in promoting the trade, curtailing expenses, and producing favorable net results. In view of these increased responsibilities, the Agency of Eddridee & Irwin presents a conspicuous instance of the individual we producing favorable net. Edilidady & Brenham, we presume, now retire, while Mr. Norris continues as agent of the Oregon Raliforad Company.

When a whale is fatally lanced, he "blows" blood. The Bulletin blows blood; it clamors for the gore of Supervisors Forbes and Story; it is very like a whale-fatally janced. Its advertising columns yesterday do not contain current expenses. Experto crede: there are but eleven columns of advertisements out of the thrity-two columns of that paper. The Bulletin has suspended blackguardism for the nonce, and now souffles a saintly tune. For why? "The devil was sick, and the devil a saint would be." Let the people see to it that this flend gets sicker.

#### Our Rails.

The Board of Supervisors at their meeting Monday finally passed the ordinances submitting to popular vote the following railroad propositions:

First: The Ravenswood bridge ordinance, by which, in consideration of the sum of two and one-half million dollars, city bonds, the Central Pacific Railroad Company agrees to abandon its application for a lease of part of Goat Island, to fix its permanent terminus on the Mission Bay lands within the city of San Francisco, to expend immediately in the improvement thereof the sum of two millions cisco, to expend immediately in the improvement thereof the sum of two millions of dollars, making connection therewith from the existing railway system of the State by way of a bridge across the bay at Ravenswood, in San Mateo County, south of San Francisco. All railroads connecting with said bridge and connecting track to have the right of way over and use of the same. Second: The San Francisco and Colorado River Railroad ordinance, by which, in consideration of the issue of ten millions of dollars in city bonds, the Company

is to give good and sufficient security to construct a railroad from San Francisco to the point on the Colorado River where it is intersected by the line of the Pacific Road, 900 miles long, passing through the large southern counties of California, there to connect with that road from the Mississippi Valley and Gulf of Mexico, and with any other road that may be constructed from the East to the Cal-

fornia State line.

The Supervisors at the same session refused to pass the ordinances for granting subsidies to the North Pacific Coast Railroad to Humboldt Bay, and to the South-Subsidies to the North Pacine Coast Railroad to Humboldt Bay, and to the Southern Coast Range to Sinta Cruz and Watsonville. A reformed ordinance, proposing a subsidy of eight millions of dollars to the California Atlantic and Pacific Railroad organization, in aid of a road from San Francisco to the intersection of the Colorado River and Thirty-fith parallel, 700 miles, there to connect with the Atlantic and Pacific Railroad of Missouri,

should the same be built, was voted down.

These ordinances and the propositions they covered may be considered in order. Among the objections at the propositions are y covered may be considered in order.

Among the objections to the California Atlantic and Pacific scheme were the following: The people at large are against it. Attempts to evoke demonstrations of popular approval have failed in a way to demonstrate this fact. At Ward meetings which have been called, a limited attendance has been procuped only by the device of filling them with employees of two daily newspapers. The meetings refused to pass "strong" resolutions which were offered and compromised only on fused to pase "strong" resolutions which were offered and compromised only on non-committal and meaningless ones. General public meetings which were called, were attended by but few persons, who could not be induced to exhibit the strong feeling which has been attributed to them. A petition to the Supervisors asking the passage of the ordinance, was signed with indifference, and large numbers of signatures were forged. A stock subscription list was circulated for signatures, while the canvassers took pains to state that the nominal subscriptions were not binding in law and would not be called for in fact. This looked like an attempt to procure working voters when the proposition should come to a vote. But, an udisguised fraud, it disgusted those whom it was designed to attract. And these, when they cannot the advocates of the scheme treating this fraud as a loon fide substant when they cannot the advocates of the scheme treating this fraud as a loon fide substant when they cannot the advocates of the scheme treating this fraud as a loon fide substant when they cannot be a loon for the scheme treating this fraud as a loon fide substant when they cannot be substant to the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the substant in the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the scheme the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the scheme treating this fraud as a loon fide substant in the scheme treating the scheme treating this fraud as a loon fide substant in the scheme treating this fide scheme the scheme treating disgussed trane, it disgusted those whom it was designed to attract. And these, when they found the advocates of the scheme treating this fraud as a bona fide subscription, came to distrust them and their project. Persistent attempts to former violent and illegal demonstrations have fallen still-born. The project in its original content of the project in its original content of the project in the project in its original content of the project in the project in its original content of the project in its original content of the project in the inal form was illegal, yet its promoters clung to it long after its illegality had been shown to the satisfaction of the community. It was impolitic, proposing to convey shown to the satisfaction of the community. It was impolitic, proposing to convey the California built road to a foreign corporation, thus insuring its being run in the interest of another community with discrimination against San Francisco. Its managers endeavored to promote it by slandering and denouncing men whom the people of San Francisco respect, and in whom they have confidence. These assanits were unsupported by evidence. They outraged the popular sentiment for "fair play" and the sense of public decency. Successively, these men abandoned every point upon which they had laid stress: They claimed to amalgamate with the Missouri road, next promised to maintain their road independent—but would not bind themselves to do so—denounced subsidy while favoring subscription, and the last dust night habandoned their whole, ground and asked for a plain subat the last (last night) abandoned their whole ground and asked for a plain sub-sidy-taking up the identical ground for which they had visited the members of the colorado Company with unmeasured abuse, and accused as honorable a Board of Supervisors as ever sat in San Francisco of the crimes of bribery and betraying their constituents. This course had the effect of breeding a wide-spread and general distrust of their capacity to control the proposed enterprise, distrust of their motives, and disgust at their conduct.

The San Francisco and Colorado River Railroad Company was organized as a means to defeat what appeared to be the imminent calamity of a grant of bonds means to defeat what appeared to be the imminent calamity of a grant of bonds under a proposition which could only result in their loss to the people of San Francisco—or, worse than mere loss, their being used in the interest of St. Louis to break down our trade by bringing our own customers in connection with that great manufacturing city without the protection of any such discriminating rates in our favor as are enforced on the Central Pactfic road, and have alone saved our Nevada trade from the competition of Chicago. The Colorado River Company was formed at the juncture when it had become apparent that the original Southern Pacific Railroad following the Thirty-second parallel, now known as Texas Pacific, under the management of Thomas A. Scott of Pennsylvania, would be pushed to completion. This road, crossing the Mississippi river at Memphis, Tenn., connecting thence on the shortest line with Richmond, Virginia, and so straight on to the Northern sea-board cities, connecting also on the shortest lines with New Orleans and with St. Louis, will be the great overland highway. The breaking out of the war alone prevented its construction prior to the present high Northern road. So far as the Pacinic Coast is concerned, the chief effects of this road are to be, first—the opening up to settlement and development of the whole wealthy mineral territory of Arizona, and second—providing for the direct distribution of our tea imports and domestic products to the entire Mississippi valley and wealthy cotton and sugar growing States of the Guif. North of the line of road, Missouri and Kentucky, directly on the line, Arkan-as and Tennessee, and South of the line, Texas, Louisana, Mississippi, Alabama, Florida, will be brought into the same direct relation with San Francisco for the purposes of trade, the Nebraska, lowa and Dilinois now are by the Union Facilic road. Arizona and New Mexico will be opened to us as Nevada and Utah are now.

This Texas-Pacific road is to be built, and will be completed within five years from this date. Our relations to it are those which we sustained toward the Union Pacific road when its construction began at Omaha. The question for San Francisco and California is—Shail we build our own road to meet it, to be controlled in our own interests, or shall we wait for it to come all the way to us, to be controlled in our own interests, or shall we wait for it to come all the way to us, to be controlled in the interest of strangers? The example of the Central Pacific Railroad sheds the light of experience on this question. The construction of that road bas been a main element in the development of the State of Nevada, in doubling its product of precious metals, in doubling our trade with it, diminishing the cost of mining operations and increasing their profits, and in creating property of great value which is mainly held in San Francisco. Had the Central Pacific Railroad not been built, owned and operated in the interest of California, establishing discriminating freights which compelled goods to come to San Francisco for sale and redestribution, these benefits would have accured to Chicago and other Eastern cities instead of to ourselves. Too few of the general public understand yet that the same price is charged to deliver a barrel of whisky from Chicago to Reno as to bring it first through to San Francisco, then take it back to Reno. Were it not for the system, small store of goods should we sell to Nevada. Most of what we do sell them comes first from the East, and the whole of this would be sold to them directly by the East were it not for the system. San Francisco. The question to-day is whether the trade of the undeveloped was San Francisco of the age has been completed without her said, while much of her proseposing the "Dutch Flat swindle," and wake up to find that another of the greatest works of the age has been completed without her aid, while much of her prosepority depends directly upon it.

The last proposition to be considered is the railroad compromise or Ravenswood bridge ordinance. The object of thus is to bring into the city the whole of the enormous interior traffic of the State which is concentrated on the eastern shore of the bay. The city needs this business even as the business needs the accommodation which the city only can adequately afford. While to-day our warehouses are not yet much more than half filled, there is wheat enough lying affeid in risk of injury for want of shelter to fill the warehouse capacity of the cits twice over. This wheat pours down in a volume only limited by the capacity of ships to receive it, to the whartes of Oakland and Vallejo. Ont of seventy ships dispatched since the last of July, more than one-half have loaded at these points. These considerations give some idea of the traffic which is to be brought into San Francisco by the Ravenswood bridge connection. Other important facts to be borne in mind are that two midions of the proposed subsidy are to be expended directly on the terminus itself, creating taxable property to an equal amount; that as incident to the location of this terminus, other large amounts of property come into demand for private warehouse and other purposes; that the effect of such demand is to advance the values of eligible property for a large area adjacent to the railroad terminus. All this is an addition to the private wealth of the city as well us to the aggregate of the assessment roll. It is not difficult to see how the increase of the assessment roll rom this direct source may be equal, before the five years necessary for the construction of the Colorado River Railroad shall have elapsed and the proposed subsidy bonds have been all issued, to the whole amount of the proposed subsidy bonds have been all issued, to the whole amount of the proposed subsidy bonds have been all issued, to the whole amount of the proposed subsidy bonds have been all issued, to the whole amount of the proposed subsidy bonds have been all issued, to the

Mr. Loring Pickering, publisher of The Morning Call newspaper, asserted note for \$20,000 go to protest, and was indebted to Mr. Alvina Hayward in the sum of \$50,000. This was done by way of argument to show the propriety of defeating the Colorado Rairioad subsidy ordinance. The Chronicle on Sanday, in behalf of Mr. MacCredish, and The Alia also, pronounce the story a fabrication. The property assessed to Mr. MacCredish in the city and county of San Francisco, all unincumbered, aggregates upwards of \$250,000. Other large amounts, also free from encumbrance, are assessed to him in other counties.

#### A Sensible Lover.

I never-never did desire A maiden blest with "eyes of fire;" Because such flaming things mayhap Might singe, if not consume, a chap.

I never did a liking show For maid whose "bosom was of snow;" Because frost-bitten one might be, From hugging such a girl as she.

You'd have to pick 'em-which is rum !

Nor is the maid who boasts a cheek "Just like a peach," the one I seek:

1 never—be the truth revealed— Enjoy a peach that isn't peeled.

The maid whose brow is "ivory white" Would never give my heart delight: Although it's good for paper-knives, I don't like ivory in wives.

The maid with lips "like cherries ripe" One taste I with the poets share—Has never been my passion's type; I like a maid "with golden hair;"
Because, when Autumn time had come, But would she let me—deuce is in't!— Shave it, and send it to the Mint!

> My notion of a girl is this-A girl that one may hug and kiss; No ivory, or gold, or snow,
> Or fire, or peach, or cherry!—No!
> But just a girl—as girls now go.

-Fun.

### Something About Culture.

Professor Agassiz has, on two occasions during his sojourn in California, felt called upon to address remarks to the public on the subject of culture, the tenor of which indicates a clear impression in his mind, that more ought to have been done than has already been done for what is understood as "the higher education" in this State. The News Letter, prior to the establishment of the State University, to the building of the Mercantile Library, to the firm establishment of the Menanics' Institute, the organization of the Art Association, harped with a mighty harping upon this same string. Now it is become fashionable with certain people who have a mind to be accounted intellectual, to prolong the echo of our strain. It has been the fortune of Prof. Agassiz to fall in with his "set." They have bleated their blents in his ear, and fired him with a generous indignation. We accord to his position in the world-republic of science and letters, a right to rebuke us for neglecting to provide all proper means for culture—provided the neglect be a real one. But we deny the fact. We repel the charge utterly. We affirm the converse of it. We assert that the provision made for the higher education is adequate to the demands upon it. It is in actual excess of the demand. Further provision in that direction at this time would operate neither healthfully nor well. The Professor is in but partial possession of the facts. His conclusions are, and therefore not unnaturally, erroneous. Professor Agassiz used to be "great" on embryology. He would show you how a young mackerel took first the form of a cephalaspie, then changed to the outline of a shark, until at last its tail went in and its mouth came forward, and there you had it—a fish worthy of the breakfast-table of a naturalist. Youthful echinoderms were seen on the black-board to cling to the rocks like plebian polype; time developed their matteatory apparatus and they walked away on their mouth—a joy to the student of nature. In all this, in all nature, and, therefore, in al Lowell? What with Gray? The mere thought of having all that intellectual apparatus over here and being responsible for its usefulness, is alarming. It becomes at once apparent that a Harvard, such as the Professor has left, is the particular thing that California does not want. Then what does she want? We will not undertake to argue out the answer to the question; in general terms, we affirm into be—Precisely what she has: a public school system, sustained by grants of public money, unparalleled in the United States, supplemented by a State University which is more than adequate to the demands upon it. The law of growth is operation, Professor, and we who have watched its fruits perceive that it is working mightily, and we suggest that a naturalist may find enough to study in the polymoid intellectual echinoderm to divert his attention from the necessity of nonliness. poid intellectual echinoderm to divert his attention from the necessity of pointing out to the pedunculated creature the superior advantages of locomotion.

<sup>—</sup> A member of the Board of Education has had one of the meetings of that body adjourned on the ground that he "felt stupid." The mind staggers and falls limp in the effort to depicture the condition of cerebral opacity and induration which can impress itself upon the consciousness of a member of the Board of Education as one of more than normal stupidity.

#### Our Steam Lines.

The steamships recently sold by the North Pacific Transportation Company to the Pacific Mail Steamship Company along with the Southern routes and business of the first named company, are the following, instead of as first reported: Sidewheel steamers California, Orizaba, Pacific and Senator, and the propeller Montana. The price paid for the steamers and good will of the Southern coast lines are as annexed:

Name.	Tons.	Amount.
Name. California	874	\$125,000
MOntana	1,002	100,000
Orizaba	1,244	150,000
Pacific	876	50,000
Senator	. 801	75,000
Total—Five steamers	. 4,899	\$500,000

As intimated, the purchase includes the Mexican line, in which the Montana is now running. This leaves the North Pacific Transportation Company but three steamers, nanely, the California, Idaho and Pelican, all propellers. The California is now in the Northern trade, running between Victoria and Portland. The Pelicans is running to Northern California ports, and the Idahois plying between San Francisco and Honolulu, in the interest of the Webb line. We called attention some two months ago to the organization in London of the Trans-Pacific Steam Navigation Company, with a capital of \$750,000, to run a line of steamers between San Francisco and Yokohama and Hongkong. A letter dated London, August 31st, states that three of the company's steamers are completed, and another is nearly ready. The line is to be started about the 1st of January, the first steamer sailing from Hongkong. Burrell & Co., an American house in Hongkong, are mentioned as agents at that end of the line, and it is stated that a prominent American house in this city will be the agents at this end. Mr. Edward H. Green, Director of the London and San Francisco Bank, will be one of the managers, and the bank with which he is connected, the financial agent in this city. It is stated that the vessels will shorten the passage from this port to Yokohama to 16 days, instead of the present schedule of 22 days. The letter says that, should the line prove a failure, the steamers will be placed in the South American trade. In New York there have been heard remonstrances in regard to the overland tea trade, and the fact is noticed that several steamers had been chartered for that port via the Sucz Canal. The arrival of the first of these vessels (the Glenartney) is now announced, having made the passage from Amoy, including six stoppages, in 65 days. Unless the Pacific Railroads can guarantee shippers much less time than this, it is predicted that those steamers will prove formidable rivals, as the less cost of freight is sufficient to get the teas, to say n

When Mrs. Stowe published her smutty story about my Lord Byron, Harper's Weekly seized the occasion to print a likeness of Lady Byron, the admirable Miss Milbanke. The Town Crier took a copy of the sheet home to Mrs C. and laid it silently upon her lap. A gleam of intelligence lighted up her fine features as she perused the lineaments of Lady B. "That (she exclaimed) accounts for it!" It did. Narrow, chill, self-righteousness was written in each of the lines ecored on the severe visage. Since then Mrs. Cryer and her spouse have held Lord Byron justified for his infractions of the moralities; in fact, his lordship has a sheltered nook in their regard in return for the trouble he inflicted on this she-cruet of moral vinegar. And now here comes Mr. Joaquin Miller and runs away from the lady who owned him, leaving her to her own resources and slender fare. The manly gorge rises at this conduct of Mr. Miller, and we all prepare to wither him with the blast of our scorn. But next comes Mrs. M. and delivers "a lecture" whereof the text is her peccant spouse. Upon this we have comment to offer. Most men are aware of a sleek, pearly, soft-voiced breed of women, with the craft of a monkey, the heart a snake and the pure cassedness an Apache—whose words are wasp-stings and their caress a blister—whose faculty it is to make a home a hell on earth—who torture dependants, stab their maids with word-thrusts, and nag a husband till that slower-witted animal howls and breaks his breakfast cup—well, that lovely type of humanity is Mrs. Minnie Myrthe Miller. If she be not, the T. C. will forswear his name and submit henceforth to be called Bungletoe. Before hearing Mrs. M. speak her little piece, we had but small esteem for Joaquin. Now he commands our sympathy to a degree verging upon regard.

Curious circumstances will occur in a man's lifetime. Chan hai Sun, of the educational party who stopped at the Occidental Hotel the other day, and who signed with others a card acknowledging the kind attention they had received there, was in 1864 in the employ, at Shanghai, of an American cotton broker styling himself Clapp & Co., who failed on the close of the rebellion in the Southern States, About the same time several other firms collapsed, namely: Kuntz Rohl & Co., Alex. Cocke and the late Mr. Wainwright, formerly of this city. Frivolous minded foreigners found in the names and misfortunes of these firms material for scurvy jests.

### Penn Calvin.

Search high and low, search up and down, "Nay, these be heathen words we hear;
By light of stars or sun,
And of all the good folks of our town
There's like Penn Calvin none.

Am is that clings to temples drear
And altars overthrown."

He lightly laughs when all condemn, He smiles when others pray: And what is sorest truth to them

To him is idle play. "Penn Calvin, lift, as duty bids, The load we all must bear?"

He only lifts his languid lids, And says: "The morn is fair!" "Learn while you may! for Life is stern, And Art, alast is long." He hums and answers: "Yes, I learn

The cadence of a song."

"The world is dark with human woe; Man eats of bitter food."
"The world," he says, "is all aglow

With beauty, bliss and good!"
"To crush the senses you must strive,
The beast of flesh destroy!"

" God gave this body, all alive, And every sense is joy !"

"I reck not how nor whence it came,"
He answers; "I possess:
If heathers felt and owned the same,

How bright was heathenesse !"

"Though you be stubborn to believe, Yet learn to grasp and hold: There's power and honor to achieve, And royal role of gold." Penn ('alvin placked an open rose And carolled to the sky:

"Shine, sun of Day, until its close— They live, and so do I!"

His eyes are clear as they were kissed By some unrisen dawn;

Our grave and stern philanthropist
Looks sad, and passes on.
Our paster scowls; the pious flock
Avent their heads, and flee;
For pestilence or earthquake-shock Less dreadful seems than he.

But all the children round him cling, Depraved as they were born; And vicious men his praises sing, Whom he forgets to warn Penn Calvin's strange indifference gives Our folks a grievous care:
He's simply glad because he lives,
And glad the world is fair!

-Bayard Taylor.

# Young Men's Christian Association.

Lo, these many years a band of closest brotherhood subsi-ted between the little flock known to the law as the Young Men's Christian Association, and their shep-herd, the Rev. News Latter. When he has stood up in the midst and beauted benignantly upon those hairless heads and furrowed visages bowed around him, he has raised his eyes to the hy-specks on the celling and prayed that he might not be spared to look upon such another gathering. He and hes little band of hoary bucks and weather-beaten whethers had aged together. Those precions brethren, Soapenhad weather-mean wethers had aged together. Those precious brefitren, Soapenlocks and Square-toes, have gone from among us. One farries yet in San Quentin,
but the other rests where the fire dieth not and thieves do not break through because they are already inside. When, in the earlier days of the band, the old
Adam arose within the brethren, and they fell by the ears touching the division of
what was in the scrip, and swore point blank, one against the other, till the lights
of the court-room glimmered dimit through the thick blue perjury which hung in
the air, News Letter rushed between and strove with them. He wrestled until
they med composition one, with worther and be saint conset. they made composition, one with another, and the saints ceased to be scandalized. they made composition, one with another, and the saints ceased to be scandarized. When they devised a dodge of crafty mendicancy by means of unpaid ietters in the postoffice. News Letter gave to the pious work the widest publicity in his columns. When that man of grace, Noah Brooks, was bell-wetter of the band, News Letter held him up to public admiration and proclaimed his godliness as with a trumpet. When he betook him away, and the bell was affixed to Brother Lawrence. News Letter felt that the Y. M. C. A. was no longer a fit topic for his columns. He tearfully withdrew him from an association which a decent regard for appearances would no longer allow him to maintain. Yesterday an appeal reached him from his former flock. In touching language they dwell upon their age and growing helptesness. Few are able to read after nightfail, many are deaf and several fall in intellect. Of this infirmity a sad instance is mentioned in the case of one of the elect who last week gave a sick widow a dime instead of a tract. By a vote of forty-two against eighteen, they have decided to drop the prafts "Young," hence forth they will be called simply "The Christian Association." This faithful oldwives are to be admitted to membership, that they may convoy their shouses homeward o' nights after their religious orgies. To this appeal, the News Letter has not the heart to be obdurate. He will again admit the society and is proceedings to his columns—but only upon one condition: when a member is detected filehing the magazines from the reading-room, or is convicted before the civil courts of perjury, breach of trust or indecent assault, he must positively be expelled.

Under the caption "Beginning of a New Industry," the Builetin contains an article in which a cursory perusal fails to detect any glaring misstatement of fact. We hasten to congratulate the evening paper on its "new industry," and would bid it persevere therein. It is quite as easy as lying, at lease equally decent.

#### The Times and the American Diamonds.

The Financial Postscript of August 30th contained the following: "An assoclated press dispatch from London yesterlay gave the substance of a "card" addressed to The Times by a respectable firm of diamond brokers, mentioning that an American had bought from them some time ago a parcel of rough diamond without regarding their quality. The Times is represented as connecting this purchase with the American discrete discrete. without regarding their quality. The Times is represented as connecting this purchase with the American diamond discoveries, and as expressing surprise that Messra. "Latham, Barlow and McClellan" should have become connected with the enterprise. We will venture to doubt that The Times used the names of those gentlemen or of any gentlemen in this connection. It is not an unsafe prophecy to say that when the issue in question shall be received, it will appear that these mames had been interpolated in the dispatch in the United States. But to-day the "city article" of The Times will make mention of the fact that parties interested in the American diamond discovery have been communicated with by cable, and whatever significance may be attached to the diamond purchase in that city, it cannot throw doubt upon the reality of the American discovery. The circumstance attending the gathering of these stones rendered a "salting" of the ground impossible; and besides, at least one diamond in the collection could not have been possible; and besides, at least one diamond in the collection could not have been sold by the London brokers without special mention; and upon inquiry they will certify to having had no such stone in their possession. All of which will not appear in the dispatches of the California Associated Press."

Following is the dispatch in question, dated San Francisco, August 30th, copied from the columns of The London Times:
Telegraph advices to the Press of this city state that Pittar, Leverson & Co., dia\_ Telegraph advices to the Press of this city state that Pillar, Leverson & Co., dismond brokers, write to your paper that an American bought of them a quantity of rough diamonds, and that a belief is expressed that these diamonds were used as a basis to deceive the parties forming the San Francisco and New York Mining and Commercial Company, and further that your Press expresses astonishment that certain members of that corporation should lend their names to such an onterprise, thereby included in the content of the company of the company of the content of the company of the content of thereby intimating that the corporation contemplates a fraud upon the public. undersigned directors of the above corporation carnestly request your stating that the evidence inducing the organization of the corporation has been in their possesthe evidence inducing the organization of the corporation has been in their possession over a year. The organization is private, and no attempt has been nor will be made to induce any one to purchase shares without positive proof that all statements presented are true. Wm. M. Lent, President; T. H. Selby, Vice-President; Wm. C. Ralston, Treasurer; Wm. Willis, Secretary; Milton S. Latham, Albert Gansl, W. F. Bubcock, Louis Sloss, Maurice Dore and G. B. McClellan. The remarks of the Postscript have been verified to the letter. No mention has yet been made by the Associated Press papers of the card by which a dozen of our leading attitudes with the contraction of the card by which a dozen of our

yet been made by the Associated Press papers of the card by which a dozen of our leading citizens relieve themselves of an aspersion. Diligent examination of the columns of the Times fails to discover any allusion to the names of "Latham, Barlow, or McClellan." Our San Francisco friends of the Associated Press, by way of garlifying malice, appear to have tampered with their dispatches, and in fact been guilty of forgery.

The T. C.'s health, he regrets to say, is failing fast. His midnight dreams, which, thanks to a good conscience and digestion, have hitherto been sweet and tranquil, are now so no more, and over his haggard brow hovers not the drowsy tranquil, are now so no more, and over his haggard brow hovers not the drowsy god. For in an adjoining yard to his residence on Hyde street, has grown up, matured, and entered society, a young female cat of Rose McKinley turn of mind. And like her fastidious prototype she seems determined to try an hundred beaux before she cleaves permanently to one. She has cleaved to forty-eight already, by the T. C.'s private memorandum, and still she keeps on cleaving. A Committee of One Hundred visited her last night, but still no affinity. One old black fenced-straddling villian, with strabismus, called "Pick," offered himself, but was decidedly not her pick. Plucky as Emily Pitstevens, she threatened to put a bullet in him if he ever made her another call. And still they come. Cats on fence, barrel, barn, and house-top; brown cats, yellow cats, black and white cats, speckled cats: one eyed cats, lame cats, mangy cats, cats without a tail, tortoise shell cats aristocratic, and piebald cats parrenus. All tom-cats but one, and she perseveringly coquettish. The T. C. has cleaned out his room. His wash-basin, pitcher, and other China utensils, his boots and Oxford ties, the slats of the bedstead, his spittoon and inkstand are gone. In one last dispairing effort he empties stead, his spittoon and inkstand are gone. In one last dispairing effort he emptied his shot-gun on the army below, and then lay down in acute brain fever. He

<sup>—</sup> We have no personal objection to the Bulletin's printing descriptions of every "den of sin and shame" (as it beautifully terms them) in the city. We know every "den of sin and shame" (as it beautifully terms them) in the city. We know how it is ourself, and so do our very good frieuds, the male readers of the News Letter. True, we do not habitually talk about them. Sometimes it becomes proper to show up the sores in the social body with a view to their amelioration. But to show them up for the sake of showing them up, argues a mind akin to that which should walk hospitals for the sake of handling the be-festered bandages and sniffing the very peculiar taint they impart to its atmosphere. But men who do this thing commonly wash their hands and air themselves before they come into our houses. The Bulletin brings its trophies away with it and deposits the choice scabs and fragrant clouts within our doors. We repeat—We do not object.

# Chinese and Japanese Workmen.

It may be worth his while to call the attention of the British artisan to a cloud in the flastern horizon. It has been several thousand years throatening, but it is coming at last, and has already come in many quarters where it was as little expected as here. It is that immense reserveor of human industry and skill what has accumulated for ages in China and Japan, and which has now burst its barriers and is fleeding the earth. At the present rate of progress, or rather of diffusion, there is not a spot in the whole world which can consider itself safe from the invasion of quiet, clever, active, and thrifty Chmamen, with their next title ways, their quaint Josses, their queer ceremonials, and not irrational superstitute, having made that they are they in the eyes of the burepean or American subserver or artisan, for they understud him; they work long, they don't drunk, and they make little fortunes, which they intend to carry back to the wife and children, present or to come, in the Flowery Land. There is nothing which is not said against them, but the only thing which can ever be ascertained is that they are industrious, peaceable, frugal, and generally honest. Now, perhaps, our people may think it will still be a long time before the Chinaman becomes a regular and important part of the English community, but it is not at all necessary to weigh the chances of a Chinese invasion. No great question is a local question in these days. England is the very last country which should think that here or there matters much now. She is doing the work of the whole world, and her competitors, as well as her customers, are everywhere. The Chinaman may beat us in the market of the world without leaving his own shores.

A war steamer of 2,700 tons has just been constructed at Shanghai entirely by Chinese artificers, under the guidance of only four Europeans. The same can be done in Japan. Such is the natural docility and adrottness of the people in both those countries, and so steadly do they work, that there is no doubt they can compete with us successfully in many branches of manufacture so as to meet us in our own market as well as in the is. They have coal and iron. Indeed, nothing whatever hinders them from becoming our most formidable rivals all over the East, the Southern hemisphere, and the shores of the Pacific. Nothing is now wanting but capital, enterprise, and skill; but these are things which in their very nature are bound to no spot and are jealous of restriction. Threaten the capitalist that you will divide his spoil among the many, and he will carry it off to a place of safety, however distant. Our industrial combinations wield a power beyond their conception. They can do for all England, changing it from a populous region into a desert, and from a garden into a ruinous heap. The working classes of this country have only to agree, and they can drive away all the elements of wealth and prosperity, except labor and manual skill, to remote regions, where labor and manual skill can be obtained in any quantity. There really is no reason whatever why any man should not sail to-morrow with a few skilled comrades, the proper us is simple enough. Either enterprise, capital, and skill will go where labor as to try at home. If matters 20 on as they have gone on lately, the question before us is simple enough. Either enterprise, capital, and skill will go where labor is to be found, or the supersbundant labor of other countries will find its way bree. Combination believes itself able to deal with the European form of this dilemma, but it can do anothing with a population computed at a third of that of the whole carth, and as new to as as if it bad dropped from the moon. But there would be nothing to offend our taste in the

<sup>—</sup> The Board of Public Works, appointed in accordance with the Act of the last Legislature, have completed their report of estimated damages, costs and assessed damages incident on the opening of the proposed Montgomery Avenue. It will be open for public inspection to-day and continue so for thirty days, when, if approved by the County Court, it will become flust. The Beard, which consists of the Mayor. Tax-collector and city and County Surveyor, was organized on the 19th day of last June by the election of the Mayor as President: H. S. Tibbey, Secretary, and M. M. Estee, Attorney. They have continued ever since, holding daily meetings, and have completed their labors the far with dispatch.

#### Commercial.

- WE ARE NOW in the midst of an active Fall trade. Business has of late revived materially, and the various wholesale departments show considerable anima-tion. Imports recently have been more liberal, and assortments that had become much broken have been renewed, stocks replenished, thus enabling us to execute interior orders with increased satisfaction. Exports of Grain are continued upon a princely scale, and would be doubled had we the necessary tonnage at command.

An important auction sale of Refined Sugar and Golden Syrup, the joint product of the California and San Francisco and Pacific Refineries, was held at the auction rooms of S. L. Jones & Co. on the 26th inst. The attendance was large, and the interest evinced by the jobbers was considerable. The terms were liberal, 60 days for approved notes, payable in gold coin, or a discount of one per cent per month, for cash, at buyers' option. The offering consisted of 5,000 bbls White Refined Sugars, Crushed, Powdered, Granulated, Patent Cut, etc., in the usual variety of packages. 3,000 bbls Yellow C Sugar, Extra C and Yellow C, in bbls and half bbls. Also, 8,000 kegs and 400 bbls Syrup, extra heavy. The price bid was for Circle A, Standard Crushed, and each purchaser had the option of taking an assortment of bbls, half bbls, or boxes of all the different kinds and qualities at the usual and customary trade rates. With this understanding the price bid for Circle A, Crushed, was \$12.05 per 100 bs, and at this rate 6,550 bbls were sold and divided up among the trade. After this the Yellow C Sugar was put up, with the understanding that purchasers could have the Extra Golden C at a half cent above the standard price. The first buyer took 500 bbls at \$10.25 per 100 bs, when the sale was stopped peremptorily, much to the chagrin, annoyance, and mortification of - AN IMPORTANT AUCTION SALE of Refined Sugar and Golden Syrup, the joint standard price. The first buyer took 500 bbls at \$10 25 per 100 bbs, when the sale was stopped peremptorily, much to the chagrin, annoyance, and mortification of thetrade. However, after much consultation the Refineries concluded to go on, if any one would advance the price. This was promptly responded to, resulting in the selling, in lots to the trade, 3,100 bbls more Yellow C, at \$10 37% per 100 lbs. This closed the Sugar sale, and establishing a decline of about 62% per 100 lbs on rates previously ruling. After the auction sale, it is asserted that the Opposition Bay Refinery closed out all their surplus stock of refined at the same rates—thus establishing the prices for at least thirty days to come—as the Refiners, through the auctioneer, proclaimed that no sales would be made by them at less rates for a mouth to come. After this came the Golden Syrup, 8,000 kegs and 200 bbls, advertised. The bid was 45% for the entire lot in kegs; half bbls 56 less and the bbls month to come. After this came the Golden Syrup, 8,000 kegs and 300 bbls, advertised. The bid was 45½ for the entire lot in kegs; half bbls 5c less, and the bbls 7½c less, as customary. Thus closed the most interesting trade sale of the season. Friend Jones, the auctioneer, did himself full credit, rattling off as he did a la Hoffman in a very few minutes, and at satisfactory prices, a money value of \$250,000 in Sugar and Syrup. Another interesting feature of the week is the appearance yesterday of the first beet Sugar of the season from the Alvardo Sugarie. Messar, Hockoffer & Reed have been appoined agents for its sale. The Company have raised more Beets this season and will turn out a much larger amount of Sugar than they did last year. The factory at Sacramento has also commenced grinding, and will manufacture at least 2,000 bbls. The Beet Sugar business has become an established industry in this State, and is expected to increase until it ultimately readers us independent of imported Sugars.

The market for some time past THERE IS QUITE A LITTLE STIR in Coffee. has been quite sluggish, but the re-appearance of St. Louis orders caused increased inquiry, resulting in the sale of 2,500 bags Central American greens, of which 1,000 bags go to St. Louis, the shipment being made through Messrs. C. A. Low & Co., The price demanded for the best samples of green is now 19%c., and for O. G. Java, 22%c.

THE RICE MARKET is greatly depressed, stocks burdensome, and most of it fish cost; China rules from 6 to 7c; Patna and Japan, 6½@7c; Hawaiian Table, 9c.

Table, 9c.

— Freights continue to rule high, although the tonnage supply is increasing. We note the arrival of the ship Agenor, 41 days from Callao, in ballast, consigned to Master. This is a good sign; other arrivals during the week from domestic and foreign ports, give relief to those having Wheat to ship. To Liverpool, 25 18s. 6d. has been paid this week, and to Cork and a market, it is probable that £5 18s. might be paid. Ships to arrive in January and February next, have been secured for Wheat to the United Kingdom at £4 15s., even up to £5. This shows the confidence felt in the future of the Grain market.

OUR WHEAT EXPORTS for the current season embrace 75 vessels to the United Kingdom, with 2,198,063 ctls., valued at \$3,596,760.

— Our Wheat Crop has certainly not been over estimated. The Stockton Independent reasons thus in regard to high freights: "This great advance in freights is very unfortunate for the farmers, because it materially lessens their profit; but is it right to charge to the operations of a wheat ring, or a shipping monopoly, results that come in a great measure from natural causes, or the unchanging operations of the laws of trade? Our farmers and grain dealers have not prepared themselves to take advantage of the high prices in the Liverpool market, for owing to the want of accommodations to store the surplus crop and protect it from the coming storms, they are themselves bidding against each other to put up the price of wheat so that the crop of individuals may be saved. Do these men who are howling about a grain ring expect that five hundred shins can be brought into bowling shout a grain ring expect that five hundred ships can be brought into the howling shout a grain ring expect that five hundred ships can be brought into the hard before of San Francisco and loaded within the ninety days that intervene between the close of harvest and the commencement of the rainy season without materially increasing the price of freights? Such a proposition is preposterous. Instead of

creating an imaginary ring and monopoly and charging it with the present high price of freights and consequent low price of wheat, would it not be ter better for the farmers to cook upon this question in a business-like manner." Whether this the memory as ook upon this question in a question-rice who therefore the light rate of freezelts has been brought about by the workings of nation laws of trade-or by combration, how will common high intaken long as good continuous to be forced upon the market faster than vessed can be obtained to corry staway. Our farmers, therefore, instead of wasting their breath in abusing rings and monopoless, should prepare themselves to take care of that what until such that the market is tayorable. They should foin together in the construction of warethe market is lavoration. The should join together in the conservation of which houses, at points accessible to market all all sorsoons and as their crops are harvested thos should, instead of forcing it upon the market to such an extent as to send up the troughts and restince their own receipts, bold it must be market by wholly satisfactory. Into some extensive system of this kind - adopted by the farmers they will be who is at the mercy of the fluctuations in the market, caused by the workings of the natural laws of trade."

The St. Gothard Tunnel. After protracted negotiations of a very difficult nafure with various contractors, the administration of the St Gothard Rulway has closed, on the 7th inst, the agreement with reference to the construction of the great Alpine funnel between Goeschenen and Airolo. The successful competitor for the perforation of the greatest tennel under the Alps is a Swiss contractor, M. Le Favre, of Genera, who has already executed very considerable and various railways and tunnel works in a manner which was consulated to commend strongly this approach on for the colosissi undertaking. M Favre has, moreover, succeeded in accuring the services of Professor Co"adon, of Geneva, who has placed an emin accurang the services of Professor Colladon, of Geneva, who has placed an eminent part in connection with the Mont Cents tunner works, and whose collection on the St. Gothard will consequently be of great value. M. I. Favre has rendered a security to the amount of eight military of france to the administration of the St. Gothard Railway: this sum to be held as a marantee tower's the prompt initialment on the part of M. Favre, of the agreement signed between bimself and the derection of the undertaking, and of which agreement we now give in extract with regard to the principal articles. According to the proposition of M. Favre, the total cast of the averation of the great tunner. It's Kiemetres in eachth, or rather more than nine English miles with be fifty mileous of frames, or, say, two millions of pounds sterions, thus mile in the first interfere, about the millions of frames below the estimate of the international commission, and twelves and laft millions be withe offer of Signery contribution made by the gentlement on ballet of the great contribution made by the gentlement on ballet of the succession of the great contribution made by the gentlement of the contribution of the contribution of the order of Signery contribution made by the gentlement on behalf of the great contribution made by the gentlement of the contribution of the contri frances below the estimate of the international commission, and tweeve and a nair miscours be ow the offer of Sugner teration made by the gentemant on behalf of the Società Italiana di Levori Pabbier, of Turin. M. Favre engages himself to finish the timies within eight years from the date of approva of the agreement by the Swiss Fegleral Council. In the case that Mr. Favre should succeed an competing the works before the specified period, he will be entitled to receive for each ing the works become the specified period, he will be entitled to reserve for each day of such premature accomplesiment of the undertaking a premium of 5,000 frames, should, on the other hand, the completion of the works be retarded—no matter for what cause—beyond the said period, then the contractor well have to pay for each day the sum of 3,000 frames. If the delay exceeds sly months, the deduction from the contract price will be increased to 10,000 frames per day and at the expirition of one year the agreement will be cancelled, when the security of eight millions of frames will become the property of the St. Gothard Railway Commany. Engineeric Company. | Engineering.

Udolpho Wolfe's Aromatic Schiedam Schnapps

Seems to be extensively gaining our public confidence, and promises to take the place of every other liquer now in use, especially for medicinal use. This is not emprising, for apart from its being found in most of our Drug Stores in this extra and country, and its being strongly recommended by the placebanes, the null and agreeable tasts of this article, contrasted with the strong, pagent and actual sensition produced on the paints by the common deleterious article, which is now the general complaint of nearly all the medical faculty of this country—would, of interest, suffice to give it the decided preference. If prescribed as a medicine, it is not bad to take, and to use as a beverage, it is considered by indiges to be superior to any article of the kind ever imported into the country.

PLATT & NEWTON, Sole Agents for the Pacific Coast.

<sup>-</sup> The Bulletin piteously appeals to its former good behavior as furnishing ground for a stay of proceedings against if on the part of our business men. Judge Louderback hears the same piece every day. But former good character can at best but poorly condone precent infquity.

<sup>—</sup> The Pacific Mail steamer Arisona, Capt. Parker, sailed at noon vesterday for Panama, with \$25,000 in treasure, and merchandise to New York to the value of \$195,000.

### Special Brevities.

— The following challenge has been offered by the owner of the Sappho: "I will sail any schooner in England from the Nab to Cherbourg and back three races; the winner of two ont of three to take the prize, say a 60 or a 100 guinea cup. Flying start, the days and hour of starting to be named and yachts to sail regardless of weather. Royal Yacht Squadron measurement, and scale of time allowance. No restrictions as to hands, canvas, etc.; but no trimming by dead weight during the race. This offer will be lett open for one fortnight from date, and I shall require one week's notice to prepare.—Sappho, Cowes, August 19th.—W. P. Douglas." The above is the challenge to all England, and we own we are surprised that it has not been accepted. The course is a perfectly fair one, and one calculated to test the sailing qualities of the respective vessels. Mr. Douglas has named an eight or ten knot breeze, in order to save the race from being one of those unsatisfactory drifting matches, of which so many have been seen this year, but in order that nothing should stand in the way of so interesting a trial, he has agreed to waive this stipulation. Of course, if the challenge is not accepted, the American yachtsmen have a perfect right to claim the championship of the occun, and, with such vessels as we have, the Guinevere among others, we own we are surprised that the Sappho should be allowed to, what in racing phraseology would be termed "walk over the course."—[Court Journal. " walk over the course." -[Court Journal.

Paris is devoting much attention to the subject of food and cooking. It was the general impression that in this latter respect nothing was to be desired; such is not the case. Discussion is hottest over the texts—soup and broth. Science is not the case. Discussion is hottest over the texts—soup and broth. Science asserts that soup pieases but does not nourish; yet the French army, the peasant and the ourrier subsist on the pot-au-feu. There are three things a gastronomist never touches—soup, side-dishes and dessert dainties. Yet soup is held to be to the dinner what the portice or peristyle is to a builder, or the overture to an opera. Brillat Savarin remarked that soup was the preface obligee of every good dinner; but the Marquis de Cussy reminded him that good books have no need of prefaces, which shade, the children and the proposed of a weighter of the control of the preface. but the Marquis de classy reinhard that that good tooke an Aberton which shows that whilst an Atheist may be converted or a politician changed, a gastronomer with an idea is akin to the laws of the Medes and Persians. In the many soups—five hundred, it is said—prepared in Paris, there is one that is generally advertised in cales as well as restaurants, namely, "onion soup and cheese." ally advertised in cuies as well as restaurants, namely, "onion soup and cheese." This repast is of a "pick-me-up" nature, a sort of perfect cure for too much alcohol. It is an open question here, whether the host or the servant shall help the soup; the safe rule is to guard the plate when given to you.

— English military morality is not so black as it has been painted, to judge from a letter in a contemporary from Lord Shaftesbury on the conduct of the soldiers now encamped round Salisbury. Upwards of 10,000 of the first and second divisions of the Southern Army visited his estates. They, took possession of the downs, and showed such "order, discipline and civility," as delighted him. "After service on Sunday, hundreds, I may say thonsands," Lord Shaftesbury says, "bathed in the river, and walked and strolled about my garden; and I am sure that not a leaf is missing nor a flower-bed trampled on." The peasantry and the farmers are as much pleased as Lord Shaftesbury at the "quietness and sobriety" of the men.

— Florence was invaded on the first day of this month by a prodigious quantity of butterflies. All the distance of the Lung'arno, between the Piazza Manin and the Barriera, and in all the adjacent streets, the passage was almost obstructed by an extraordinary quantity of these insects that had swarmed in such thick clouds round the gaslights that the streets were comparatively dark. Fires were immediately lit by order of the municipality and by the citizens themselves, upon which the butterflies burnt their wings. Half an hour afterwards one walked upon a layer formed by the bodies of the butterflies an inch thick. They are of a whitish color, and some of the streets appeared as if covered with snow.

The appointment has been made in Paris of butter inspectors at the octrois and halles, apparently for the purpose of putting a stop to a kind of adulteration which has been discovered in England as well as France. Butter is largely manufactured in Paris with flour, suct, lard and unwholesome coloring matters, and, having been packed in little square jars and baskets, it is sent to the suburbs to be sent back again to Paris. In passing through the octroi the greasy compound is stamped "Brittany Butter," and it is afterwards purchased at from two to three

France a pound.

The enthusiasm for Stanley among the Brightonians knows no bounds.

The Brighton Daily News contained an advertisement offering for sale an autograph letter of the distinguished traveler, for which the moderate sum of three guineas only was asked. It is to be feared that if such prices are gained for an autograph letter the New York Herald will before long lose the valuable services of their correspondent, who will doubtless leave the arduous work of journalism for the essier one of letter writing.

- The inhabitants of Sedan resolved to celebrate the 1st of September as a day of mourning. At an early hour most of the houses displayed the tri-colored flag, draped with long pieces of crape. At nine the German soldiers ascended and removed all those emblems, that measure being induced by some imprudent person, who had inscribed on his colors "Vive la France! A bientôt la revanche?" All which were not draped with black were left.

- There are now 207 fixed points in London where policemen can be found when wanted.

- The idea of strikes seems to have reached a culminating point now. In consequence of the recent determination of the Nenagh (Ireland) (ias Company to raise the price of gas from 7s. 6d. to 10s. 10d. per thousand, most of the larger consumers, including the railway company, have signified their intention of striking, and using paraffine oil instead of gas, as heretofore.
- General Tom Thumb has distinguished himself in target-shooting at Stony Creek, England. If he is going into the American army in earnest, and not merely as an "artist general," it is hardly a fair proceeding; for who could hit such a mark as he would present in return for his shot? He is all bull's-eye.
- Victor Hugo, in his fall from popularity, has dragged his publishers down with him. The astonishing prices which he put upon his works, and which Lacroix & Co. paid, together with the present decline in the sale of the books, has brought on financial ruin, and the firm has been declared bankrupt.
- A few months ago a famous Prussian General was inspecting some military stables. "What do I see there!" he said, in tones of thunder, to a ser ceant; "cobwebs!" "Yes, sir," was the respectful reply; "we keep them to catch flies and prevent their teasing the horses."
- Sham maneuvers, unparalleled in military annals, are taking place in eastern France. The young German soldiers in training are being shown how the French were routed from Woorth to Styring, and from Argonne to Sedan, and the French authorities received a list of the towns and villages to be occupied during the operations.
- Paris frog vendors have of late adulterated their wares with numerous toads, which appear to be far from wholesome food. The police have been accordingly instructed to pay great attention in future to the barrows of the itinerant frog vendors.
- A little vital statistics: There are 1,450 hunchbacks in Paris, 1,100 persons with only one arm, 1,200 with only one leg. 150 legiess, or moving along in a sort of bowl on wheels, 4,800 blind—or one unfortunate for every 260 "perfect" citizens.
- Subject to certain conditions, Lord Northbrook has made the splendid donation of a thousand pounds to the Mahomedan Anglo-Oriental College.
- The Geographical Society of Russia has presented Mr. Stanley with its gold medal. He has been similarly honored by the geographers of France.
- There is some probability of sleeping carriages, after the American pattern, being shortly introduced on some of the English lines.

#### Court Chat.

- The Emperor Napoleon has taken Beaulieu House and Padshun Villa, two adjoining properties, at Cowes, and took possession of them on the 5th inst. The above houses are situated at the west end of the rown, next to the batha, and close to Egypt. Their Imperial Majesties are early risers, and the Emperor generally takes a stroil before breakfast, which is served at nine 'clock. Acting upon the principle of doing in Rome what the Romans do, which saying was Mulapropised by a celebrated lady, who is supposed to have declared that in Turkeys on should do whit the Turkeys do, the Emperor, Empress, Prince Imperial, and suite give up their tass: de caje on rising, and their deponer a la fourchelt at 11.30, as is the custom in France, and have adopted the English breakfast, which we hope differs from what Moore the poet calls—"Your real English breakfast, your tea and your toast."
- Messrs. Plon, the well known publishers of Paris, are bringing an action against Louis Charles Napoleon Bonaparte, formerly Emperor of the French, and now residing in Chischlurst, England, to recover 332,2994, 25c for printing and delivering the small edition of the "Life of Casar." This case will be tried before the First Chamber of the Civil Tribunal at the beginning of the next term. By "delivering "the "Life of Casar," Plon means sending capies gratis to functionaries, reviewers, and landlords of the country time, who were the only persons that could be induced to take them. The large edition cost the publisher 20,000f., for which he laid seizure, with other casellitors, on the personal effects of the Emperor and Empress found in the Garde-Meuble.
- Notwithstanding the advanced period of the season, important and interesting additions are being made to the contents of the International Exhibition. The Counters of Dudley's almost priceless gens have, within the past few days, received the noble accession of a fiara or coronet, which was only presented to her ladyship recently, by the Eurl, on the occasion of her brithday. The ornament is a perfect blaze of magnificent diamonds; the center stone a pear-shaped brilliant of wonderful lustre and perfect form, weighing forty-six carats and a half. This one diamond alone cost Lord Dudley £30,000. The Counters' aut of pearls and diamonds, including six rows of strong pearls, is valued at something over £16,000.
- A very impressive ceremony, says the Jewish Chronicle, took place at the ancient synagogue of the Siephardim congregation in Bovis Marks on Sunday morning last, when Sir Moses Monteflore attended to offer up his thanksgiving to his heavenly Master for his prosperous journey and safe return. The venerable baronet, having been called to the Law, made munificent offerings in thanksgiving for the protection vouchsafed to him by his heavenly Father during his recent journey. Numerous complimentary offerings were made by the congregation.

- A touching incident occurred at the military maneuvers recently. An old Waterloo pensioner, Hiscott by name, who formerly served in the 19th Hussars, had come to More Critchell Park to see his old regiment and his young Prince. Lord Ashley determined to introduce the old man to the Prince of Wales, and, after the inspection, he stepped forward and asked his Royal Highness leave to introduce a faithful subject who had done the State some service in his day. The Prince readily assented, and the old man tottered slowly forward. Stooping from his charger, the Prince shook hands heartily with the old soldier, and in a few well-chosen words expressed his pleasure at meeting one who had done his duty so well at the last great English victory with the regiment the Prince was so proud to command. His Royal Higness then asked some questions as to length of the old man's service, and seemed much struck at being told that for thirty-one years the brave old fellow had been on duty without once returning to England. After shaking hands with him again, the Prince rode on, leaving John Hiscott a prouder and richer man. More than one person among the witnesses of this little incident remarked on the pretty picture that was formed by the young Prince, in all the glory of youth and strength, bending tenderly down from his charger to shake hands with the faithful old soldier, white with the snows of many winters, and bowed down with age. Not a bad subject for a picture, and an addendum to the other and kindred pictures on Waterloo subjects.—Court Journal.
- The prospects of the succession to the throne of Holland are noteworthy in the present state of Europe. The King has two sons—the Prince of Orange, now about thirty years of age, and a younger Prince of very inferior bodily and not strong mental health. Hitherto the Prince of Orange has not only exhibited an indisposition to marry, but has, it is currently said, expressed a determination to remain single. Thus far, neither the entreaties of his family nor the advice of his personal friends have been able to induce the prince—who is, nevertheless, a man of capacity, intelligence, and cultivation—to exhibit any inclination for matrimony; and as his younger brother is unfit for the active duties of sovereignty, practically Prince Henry of the Netherlands, his uncle, in next in succession. He has lately Prince Henry of the Netherlands, his uncle, in next in succession. He has lately Prince Henry of the Netherlands, his uncle, in next in succession. He has lately become a widower, and is childless; so that, to all present appearance, much now depends on his marrying again. Failing issue from these princes, the succession to the crown of Holland will devolve on the children of the Grand Duchess of Saxe Weimar. But, as Holland will devolve on the children of the Grand Duchess of Saxe Weimar, et al. (It is to be hoped, in a year or two, consolidate monarchy in Holland by marriage.
- On Monday, the 1st inst., being the anniversary of the birth of the Prince Consort, the Duke of Edinburgh and Prince Leopold, with the gentlemen of the Court and servante, as also the tenantry of the Royal cetates, in accordance with the usual custom, met at the obelisk in the east of the castle, Balmorai, and drank in silence to the memory of the Prince. The Duke of Edinburgh gave a short but feeling speech in connection with the anniversary which they were met to celebrate. In the afternoon the Queen, with the Princees Beatrice, drove out a little way up the north side of the Dee, and on returning paid a visit to Mr. and Mrs. Brown, Micras. Driving from thence they passed along the south side of the river to Abergeldie and Balnacroft, where they visited Mr. and Mrs. Peter Farquharson, On the day following the Duke of Edinburgh went out deer-stalking to the "White Month," and killed three very fine stages.
- Her Royal Highness the Princess of Wales is reported to be enjoying in the quiet of Bernstorff Castle a desirable rest with their Danish Majestics and all the Royalty of the land there assembled. Her Royal Highness makes daily drives into the country, but the excessive dryness of the weather and the dustiness of the roads prevent the august guest from enjoying the beautiful landscape around as otherwise she would.
- A magnificent pianoforte has just been sent from London to the Empress of China. The manufacturers, doubtful of the ability of the celestial lady to play, have thoughtfully added "a grinding apparatus." The tunes chosen are "God Save the Queen," the "Misercre" from Trovatore, the "Lancers' Quadrille," and the "Marseillaise."
- The Royal family of Italy met on the 30th ult., at the Royal villa, Petraia, where the bride of Count Mirafiore, morganatic brother-in-law of the King, was presented to them. The King made the bride a present of a suite of jewelry worth about £2,400.
- Prince Arthur will return to Dover after the maneuvers to rejoin the First Battalion Rife Brigade. His Royal Highness is expected to remain the winter months at Dover, and will in all probability leave the Rifle Brigade in the spring of next year.
- At the recent wedding of the daughter of the chief of the Piute Indians with a young lieutenant, at Salt Lake, the bride was "attired in a blanket decollete, with oyster-shell necklace, and ate heartily at the wedding feast of fricasseed prairie dog."
- It seems that a portion of the Emperor Napoleon's jewelry has been sent to find an Indian market, and has been forwarded to Baroda. It is stated that the jewelry is valued at thirty lacs of rupees.

#### The Sea.

And wert thou not content, oh, cruel sea!

Rich with the countless riches of the earth,

That thou shouldst enatch at what belonged to me,

All that my little life and hopes were worth?

I poor, thou very rich, oh, wealthy sea! With all the stolen hoards of centuries! Each day, each hour the world doth lose by thee, And yet thou art not satisfied with these.

I had one treasure—oh, thou cruel sea! I hugg'd it, hid it deep down in my heart, And cried, not any of the powers that be Shall dare to touch it—we shall never part!

My treasure—all I had—oh, heartless sea! What could it add to any wealth of thine, That thou shouldst poorer make my poverty, Or to thy hoard add this one mite of mine?

Ah, cruel calm, thy lips still kiss the sand;
But answer comes there none—oh, silent sea!
It is so strange and cold through all the land,
I am so lonely—give him back to me. —People's Magazine.

### The Bull and the Bear Lie Down Together.

Thursday, the 26th inst., was the decennial anniversary of the organization of the San Francisco Stock and Exchange Board. The Bourd adjourned over the afternoon session, and devoted the time to bilarity. The anniversary is burned widdly into the memory of the proprietor of the NewsLetter by a truling circumstance. Ten years ago, the "affable Secretary" of the Board approached him and bearingly unfolded the little game. "Now can't you the said give us a \$25 to help set the thing agoing?" Our proprietor responded as a large-hearted and somewhat clear-headed citizen ought. He hath not been without reward. Goodly store of shekels have returned to him from the bread thus adventured upon speculative waters. As then organized, the Board contained thirty-seven members.

We have no data of the sales of the Board for the first fifteen months after its incorporation. However, since January 1, 1864, the annual sales foot up the following aggregates:

1864	25,832,715 1869
1865	49,205,520,1570
1866	32,835,894 1871
1867	66,274,577 1872 (to date)
1868	

formed in the first fifteen months.

So on Thursday the boys (as we parentally term them) set forth tables Isden with creature comfort, and the vintage of Champagne glinted topazically thereon, and bubbled with a marmurous sizzling and gurgaed meiodiously adown the dear lads' throats. President Peckham spoke his little piece, and then they gave toasts. The healths of J. B. E. Cavalher, first President; Franklin Lawton, perpetual Secretary; H. Schmiedel, first Treasurer; John Perry, Jr., and Harry Logan, first buyer and seller; William Sharron, the King of the Stock Market; Alvanza Harbward, the brother near the throne; the New York Board, the Virginia City operators, Wm. C. Ralston, President Peckham and "Our Noble Selves"—were drunk with enthusiasm.

When the toasts were all drank, the members gathered in the center of the Hall, and everybody's friend, Mr. Bob Rogers, warbled the "Star Spangled Banner," accompanied by a resounding chorus. Then "Aud Laug Syne" was suing less larmes and rois, shen Mr. George Smiley pronounced the benediction. During the service a collection was taken up for an ex-member of the Board, in reduced circumstances, which amounted to several hundred dollars, none but members being allowed to contribute.

Californians in Europe are reported in the Paris American Register for the week ending August 31st, as follows: In Paris, A. E. Dewey, Isaac Hecht and family, H. S. Homans and wife, M. Meagler and wife; P. Spreekies and family, and George T. Whitteli, in London, Dr. C. H. Bradford, N. Hubert, Hon. George Turner and wife, Miss Nellie Turner; in London, Mr. Kinkofstrom; in Geneva, Mrs. A. L. Barnes, Mrs. J. Clarke and family, Chris. Reis and wife, Dr. H. D. Cogswell and Mrs. E. E. Cogswell; in Baden Baden, Mrs. W. Hood, Miss Sarah N. Pope, Mr. Spencer and wife and J. W. Spencer; in Frankford-on-Main, Isaac Walter.

#### The Saints' Theatricals.

EDITOR MAIL BAG:—People are very early here of a night; in fact. as there are no amusements, there is nothing to stay up for. They have demoished the only two "gay" houses in the town, so I expect that adultery and shooting will soon be very prevalent. Oh, I forgot the theater. I went there alone last night. The frequenters of this place appear to be familiar with the numbers of every seat in the house. When I arrived at the ticket office, a young Mormon, seeing I was in doubt as to what part of the busic I should paronic, voluntered that No. 64 was the best send in the parquette, adding that he himself bud taken No. 63. I therefore book No. 64, but I was it doubt until I found myself scated in one of the front rows of stalls, whether his vanity had prompted him to call that the best seat because I should have the honor of sitting next to him or not. He was not at all proud, however, and as soon as we were seated he pointed out to me twenty of Brigham's daughters sitting in a row on my right in the first circle, young ladies of isrignam's canginers sitting in a row on my right in the first circle, yoing ladies ranging in years from five to five and twenty. Judging from the color of the hair, their lather has been rather partial to blondes. After an overture by the orchestra, which, although not numerous, was by no means bad, the curtain rose and disclosed a gentleman talking to a young lady in a manner that her papa would not have approved of. The young lady presently retired, observing that her father was coming, but to the great relief of the lover and utmost dismay of the actor, no father appeared. The lover, however, remained at his post awaiting the dreaded visit for full five minutes, that the entrial dround. The audience are made and the control of the proposition of the proposition of the color of the color of the proposition of th not have approved of. The young lady presently retired, observing that her father was coming, but to the great relief of the lover and utmost dismay of the actor, no father appeared. The lover, however, remained at his post awaiting the dreaded visit for full five minutes, then the curtain dropped. The audience appeared accustomed to such scenes, and did not appear at all surprised, scarcely a whistle coming from the gallery. Several minutes elapsed, and then a head appeared two or three times from the corner of the curtain, being each time rapidly withdrawn. There appeared to me to be fear depicted on that face. I thought it was looking to see if there were any pistols directed at it. But at last the whole body was exposed, and it marched pinckily to the front, and in a nervous voice said (entirely ignoring; the presence of ladies). "Gentlemen, one of the performers is unavoidably absent. When the performance commenced his absence was not noticed. I beg you will use your forbearance. The performance will go on presently." Again getting very nervous—"I beg you will use your forbearance." And would you believe it, they did use their forbearance. The performance will go on presently." Again getting very nervous—"I be gyou will use your forbearance." And would you believe it, they did use their forbearance. They absolutely applauded this very tame appology. The curtain remained down some minutes, when the same gentleman appeared again before it. "Gentlemen," he said, "the cause of the performer's absence, I may as well mention his name at once, Mr. Foster" ("Oh, oh," from the gallery! "was owing to a fall. He is seriously hurt; so seriously hurt that he cannot appear to-night in his character. This will only affect the first act slightly. Mr. Somebody (I did not catch his name, but as he had to run away in the last scene to pull the curtain down, I presume he was the stage manager) has kindly voluntecred to read the part. I again beg for your forbearance." This last sentence was superfluous, and the audience cheer BRETON. tention.

<sup>—</sup> The "live paper" of San Francisco has given fervid descriptions of the persons and clothes of certain horse sharps who have lately arrived in Sacramento from the East. The live paper's live correspondent falls into a trance at the "sparkling diamonds," "nut brown coats," and "spotless shirt fronts" which are characteristic, we believe, of every species of black leg from the faro-table to the turf. In the frenzy of this young man's adoration he goes so far as to call one of them "a regular heart smasher." Perhaps "bugle smasher" might be more precise—though it is not inconceivable that the too susceptible chambermaid should palpitate in viewing the glorious person of a too successful ostler. We have before now marveled at that spirit of flunkeydom which grovels before titular nobility; we have even groveled a trife ourselves when passing the compliments of the day with a royal duke; but it is a new revelation to us to behold a fellow-being prostrated at the ammoniated boots of a horse-sharp, and mumbling to kiss his red knuckly hands. But this is enterprise. knuckly hands. But this is enterprise.

### Leaves from a Lady's Diary.

SEEP. 23. San Francisco Society is like an alumanc, and we know by the signs that Antumn is upon us. The sight accing visitors are leaving, and the people of the cold North, like migratory birds, are preparing for their departure into Winter quarters. Our wandering water-place population is gradually wending it way homewards, the evenings are getting long and the equinox wat hand. Took little Henry out in the cars to Lone Mountain, and was delighted with two addes who were escouted by a venerable rustic, who rejoiced in the tile of Papas. But a shread Western grid drow the whole concern. She had not been long sented when she careft the conductor and wanted to pay for three conductor expanned that she could do so by taking four tickets. "I'm from Cheago," sad she, "and they don't impose on in-like that out there." She then expatated on the superiority of everything in Cheago, more especially the house architecture, which she tound here much too loaded with pastic ornament, wanted to know what was the rent of such and such a house, and the last I saw of her, she was running at full speed after the Chill House stage, which had started before we carrived. Her sister, younger and prettier, affected the fine lady, and looked out of the window angry and discainful.

SEET. 24.—Went to a reception by a young and rising artiste, whose family leave no stone unturned to secure her success. So, as was the case in a certain marriage feast, every body was invited, the senator jostled the snob, and the judge squeezed in with the hoodium. The women were better, although many oil dowagers were there, who took up much valuable room, for the house was decidedly small. The prima downs at in a corner receiving her word, and the congraturations of many friends, whose names were bailed out by a relative. An apportion of a musci stool, and battered the piance most unmercifiedly. He pianed very well indeed that at every pause he plunged his hands into that wilderness of hair, until one would fancy his fingers would get lost. An uneducated young barstone, a section of the house, sang something; the young people got up a dance, and I was tred and went home. Why is it that because one member of a family has an extraordinary talent all the others think that they must be equally gitted? They might as well misst that of one were butten by a flea, all the others should scratch themseves. Reading Tame's "English Literature," and am much pleased with it. Taking of the early Saxon faith, he says, "Theirs is the grant God of the Bible, omnapotent and unique, who disappears almost entirely in the midde ages, obscured by his court and his family. He is not blotted out under prous romances, by the elevation of the sants, or under feminine caresses to benefit the infant Jesus and the Virgin." I think the phrase "court and tannly" capital, it so thoroughly and tersely expresses the innovation of the Roman Catholic Church.

SEPT. 25.—Party last week at Dr. II—'s, crowded and lively; coming away, that very pretty Lucy M— wore a little for cap, and with her black eyes and are countenance looked so be witehing, that all the men's heads were turned. The consequence is that all the gerls have been unitating her. There was that scraegy Miss G— with one on, and it looked like a herry caterpillar cur ed round the and of a knuting-need'e. Went to hear Agassiz, and admired the cheerful case with which he spoke, which is only acquired by the partiest knowledge which study and practice have given him. His picture, by Bradesy & Rulotson, is executed. As the clear, simpa, yet carnest words fed from his lips, I was inwardly conscious that the man was perfectly sincere, and spoke from his immost conviction. I could not help recalling the line:

"And O! love Truth, But never deck her statuary limbs With the presumptuous garb of paradox."

Everything he said was so plain, so unclogged with technicalities, that one felt that the speaker was too exalted in thought to be obscure in speech, and too much in love with his subject to deck it with tawdy oratorical ornaments.

#### Encouraging Home Industry.

"Encourage home industry." By all means. It is the first article of the Californan creed. Unto it we make sacrifice of divera pagan lives every week. High-priests of the faith, prayerfully incited thereto by our cherished prophet, the Hubettin, arm themselves with the sacrificial brickba? and cheefully crash the unbelieving skull. This is done in the interest of 'home industry,' We have detected the Bulletin in a special act of encouragement to home industry, and hasten to trumped its example in enforcement of its precept. The Bulletin proprietors have just purchased ten thousand pounds of new type—five thousand pounds for the Evening Call and five thousand for its morning celo. There are absolutely no better by pes cast in the United States than in San Francisco. Nor are those from the Atlantic States furnished any cheaper. When we learn, therefore, that the Bulletin proprietors new supply was purchased in New York, a very natural surprise is changed to admiration on learning the additional fact that the sellers pay a commission to Mr. James Simonton, manage of the Associated Press and joint owner in the Bulletin, whose position enables him to do quite a stroke of business in this line.

#### The "Overland" for October,

The Overland Monthly for October opens with the second installment of Joaquin Miller's "Isles of the Ainazons." The versification is smoother, and there is poetical imagery galore; but reading it is like cating jam: cloys—and jam with an occasional fly in it—as when the diction falls not merely into prose but vulgar prose. Thus the Amazons pause from heroic "training" (meaning military exercises) for a resting "spell." To train and to take a spell, in the sense used, have long ceased to be good English words. The action of the poem develops, and it begins to be apparent that, if reduced to rather less than one-fourth the present bulk, would not be worse than many other things we are willing to preserve and read. The "Northern California Indians, No. 5," is slow, and "Hawaiian Fun-Beams" ghastly. "The Victory at Fort Fisher" is well enough as part of the record (as the lawyers say). "A Romance at Gopherton" besides being a plagiarism from Bret Harte, is notable for a singular poverty of invention and infelicity of construction. "Phonectics and Dollars" is a lame and senseless statement of a familiar controversy. "An Inexplicable Fancy," a slight story from the French; "Japanese Wrecks in American Waters," a useful compilation of recorded wrecks on the American North Pacific Coast of vessels from Asia, illustrating the flow of the great Kuro Sivo (Pacific "Gulf Stream") and bearing on some ethnologic speculations; "El Rio Colorado del Sur" is a su nornamental as it is useless; "Seeing a Prime" is simply stupid—though it will be read all the same, for one is led on to expect something which does not come. "Etc.," after some shallow criticism of the materialism of California society, hapses into a waste of art-criticism, which conducts to an oasis of information concerning the Chinese Education Mission. Here we learn how it has happened that Lung Wing "is a man of the rarest culture and attainments; fully posted on all philosophical, scientific, and ethical subjects; conversant with current topics of interest; fami

# Mayor Brown of St. Louis.

Mayor Brown of St. Louis, one of the most respected residents of that city, has been long connected with the Missouri Pacific Railroad, and upon the reorganization of the Atlantic and Pacific Railroad Company, the indorsement of his name was sought to contribute in lifting the new management above the unfortunate reputation which had attached to that enterprise. Believing that the reorganization was undertaken in good faith, with legitimate objects, Mayor Brown consented to become a director, and engaged actively in forwarding the interests of the road. A few months ago the Atlantic and Pacific directors took a perpetual lease of the Missouri Pacific road, binding their company to pay a rental of fourteen per cent, per annum on a capital stock of 3½ million dollars—an amount which was half a million per annum in excess of the earnings of the road. It was understood at the time that this transaction, which was denounced by every Eastern financial authority as shameless stock-jobbing, was consummated, notwithstanding the opposition of Mayor Brown. It was then expected that he would resign and retire from all connection with a class of transactions inconsistent with lifs reputation, social standing and business honor. He has since done so, availing, it appears, of the earliest opportunity to do so. We hasten to do this justice to the reputation of an eminent and useful American citizen, whose deserved prominence in the business circles of St. Louis may yet bring him into relations with San Francisco, where his real character ought to be understood.

The people of Sacramento are in a state of dangerous excitement over the State Fair. It is not easy to discern the elements of moral intoxication lurking in this exhibition. Perhaps we do not know how to make proper allowance for the effect of prolonged residence in Sacramento. That it is calculated to breed a maniacal melancholy, is indeed obvious; but why the mental faculties should also become enfeebled to the pitch of finding joy in a worsted "sampler" and the elements of hilarity in a sewing-machine, is not so apparent. It is reassuring to find that though on pleasure bent, the Sacramentans have a frugal mind, and that, with a view to dispoiling wagrom rustics of their silver, the city ordinances against thimble-rig and the sweat-loth were enthusiastically repeated by the city council. We call the attention of an effect civilization with something of pride to the high spirit of our capital city, which flings off unworthy prejudices, and while encouraging the horse-jockey, refuses to discriminate against other varieties of the black-leg.

<sup>—</sup> The stage coach which left Aurora, Nevada, for Battle Mountain, on the evening of the 25th instant, was stopped by highwaymen and robbed of bullion of the value of \$10,000.

# Man's Love.

When woman's eye grows dull, And her cheek paleth, When fades the beautiful Then man's love faileth : He sits not beside her chair, Clasps not her fingers. Twines not the damp hair That o'er her brow lingers. He comes but a moment in. Though her eye lightens. Though her cheek, pale and thin, Feverishly brightens. He stays but a moment near, When that flush fadeth, Though true affection's tear Her soft eyelid shadeth.

He goes from her chamber straight, Into life's jostle,
He meets at the very gate
Business and bustle;
He thinks not of her within, Silently sighing, He forgets in that noisy din That she is dying. And when her heart is still, What though he mourneth, Soon from his sorrow chill Wearied he turneth. Soon o'er her buried head Memory's light's tteth. And the true-hearted dead

Thus man forgetteth.

# The California Theater.

The California Theater, remodeled and redecorated throughout, was lighted up last evening for the benefit of members of the press and others descrets of seeing the new improvements. During the time it has been closed, the theater has undergone a surprising change. The ceiling has been closed, the theater has undergive resonance to the voice. Perdunt from the center is a magnificent than delice of gilt and crystal, hearing a bundred and fifty burners of the new parent, healting the editice with dazzling brilliancy. Clusters of burners are also placed above the upper proseculum hoxes. The ceiling, walls and entrance are run with a brilliant property of the propert upper prescenium boxes. The ceiling wells and cutraine are run with a brilliant Byzantine border of glowing colors, interspersed here and there with medal ions of classic painting. The center-piece, from which hangs the chandelier, is adorted with paintings of the Muses all bearing their appropriate symbols. Calloope, queen of the muses, bears the tablet and stylins; Clio, muse of history, a volume: Enterpe muse of lyric poetry, the dust crain, muse of astronomy, a globe, Terpischore, of choral dancer, a tambourine: Thallia, of comedy, a comic mask and branch of sys; and Ento, muse of amorous verse, bears the lyre. Pollymnian muse of the sublime, having no relation to the drama, is omitted. The press-minism is so constructed with arched and concave surface as to throw the sound forward upon the andhence. A frieze of stuce and exit adorns the ton, the center of which upon the andhence. is so constructed with accounting the content and the surface and surface iron, ecgantly wrought, and cushioned with crimson velvet. The benches of the gallery have also been changed, and are upholstered in crimson rep. But the cheef drance of the redecoration is a magnificent drop-curtain, painted by Porter, and representing Yosemite Vailey. The gashights are ighted by the tour-inch spark of a Ruhnkord'coil. The wires were laid by Stephen Field, Electrician of the Western Union Telegraph Company. This areaucement admits of the lights being slut off entirely, when darkness is needed for seeme effects. The Californa now equal in appointments to any theater in the Union. We are proud of it and the News Letter is not proud of many things. Mr. John McCullough, manager, has our reapectful salutations. During our visit, Miss Anna Elzer, of the Fabbri Open Tronpe, sang a fragment of opera in her own sweet style, to try the acoustic qualities of the theater. The clearness of the sound, and its resonance, prowed that the main fault of the theater hitherto has been cradicated. In leaving the building was noint the duger of scorn at the vien in front, which is not worthy of the good taste. point the inger of scorn at the sign in front, which is not worthy of the good tasted displayed clewhere. The house opens on Monday evening with the comedy of Look Bejone You Leap. The hox list shows that a crowded audience, embracing all of "our set," will be present.

The dailies are making it merry for Mr. Pickering of The Call. This is charged, that he is a sly, treacherous, double-faced oid fraud, a slip of nature, a man of sm. a scarlet beast, a paragon of rognery, an Arizona diamond, a Committeeman of One Hundred: Still, he is not a Buhetin man. We do not hesitate to say that much in his favor. And this entires us to profier him our walantheened. Mr. Pickering should give his powerful mind to maintaining his valuable paper in distinction of the daily of the same statement of the same statement. Mr. Pickering smouth give his powerful mind we maintaining his variable paper in its interesting symmatics as a fence straddler. Let him eschew association with other committeemen of the One Hundred: They contaminate him. Let him leave Mr. MacCredish's bank account alone: He does not owe Mr. Pickering anything. Let him join the Young Men's Christian Association, to which he would be an ornament, and read the News Letter every night before going to bed. Then he may wipe his nose on his coat tail and run along like a little man.

<sup>-</sup> The Directors of the London and San Francisco Bank have declared a dividend on account of 6 per cent., being 12s. per share, out of carnings for the half year ending June 30 last.

#### Practical Men.

The address delivered by Mr. J. F. Bramwell, C. E., before the British Association for the Advancement of Science, on the 17th of August, is so full of practical suggestions that we regret our inability to give more than a mere outline. Mr. Bramwell said that in thinking over many subjects connected with mechanical science, he could discover nothing more important than "coal," the staff of life of the steam engine. He referred to the increasing drain upon the coal resources, of the steam engile. The received to the increasing train upon the contribution, which, however great, had a limit, the amount raised in 1855 was 64 millions, in 1860 80 millions, and in 1869 108 millions of tons, while the price of coal in the colliery districts had advanced within the past year one hundred per cent. Unlike wood fuel, which grows year after year to replace the annual consumption, coal fuel is given us once for all, and should therefore be regarded as a precious trust of which we are the guardians and stewards, justified in using all we require for legitimate purposes, but criminal in respect of all we waste, whether through carelessness or ignorance—an ignorance as culpable as carelessness. He next passed in consideration the various possible substitutes for coal as a source of power. Wind, the force of streams, and the force of tides, pointing out various methods by which these agencies might be more fully utilized than at present. He referred to the waste of coal in mining; the duty of mining engineers to reduce this waste to a minimum; then the waste of coal when brought to the surface in domestic use and in manufacturing; the grates and chimneys in use-fire cannot burn withuse and in manufacturing; the grates and chimneys in use—are cannot burn out air, no means whatever provided for the air to come into the fire, the fire being placed below the chimney, the main part of the heat goes up and is wasted, leaving blace on the beam of the room to be warmed principally, if not entirely, by the radiated heat. He referred to the admirably simple fire grate, invented by Captain Donglas Galton, which had found but little favor in England, but the merits of which had at once been acknowledged by the French, who made the most careful and scientific investigations. been acknowledged by the French, who made the most careful and accientific investigation of their working, and found that with such fire-places three times the effect was obtained from a given weight of coal than could be got with those of ordinary construction. No doubt there are many other plans by which the same end may be attained, yet we go on year after year building new homes without change and wasting the preclous fuel. With regard to waste in manufacturing uses, Mr. Bramwell discussed many sources of it and the remedies for them; called attention to modes of firing, construction of boilers and furnaces, and other methods of economizing fuel, as well as to the wastefulness of many steam engines made by manufacturers who are macquainted with the principles of the art they follow, and altogether in the rear of the scientific knowledge of the day. Were all the steam engines employed in the United Kingdom improved up to the highest standard, the result would be a saving yearly ef millions of tons of coal. Why are the users of steam engines engines they are the users of steam engines so blind to their own interests? In prosperous times they are too busy; in bad times too dispirited; there is much to justify their conduct in both busy; in bad times too dispirited; there is much to justify their conduct in both instances; it requires a really comprehensive and large intelligence, and a belief in the future possessed by few only out of the bulk of mankind. There is a further and a perpetual bughear in the way of such improvement, and that bughear is the so-called "practical man." Mr. Bramwell had been brought up as an apprentice in a workshop, and had practiced his profession all his life. The truly practical man and old others he admired, by whom he wished persons to be guided, because the truly practical man is one who knows the reason of that which he practices, who can give an account of the faith that is in him, and who, while he possesses the readiness of mind and the dexterity of action, which arises from long contained and daily intercourse with the subject of his profession, possesses also that necessary amount of theoretical and scientific knowledge which justifies him in pursuing any process he adopts, which in many cases enables him to devise new pursuing any process he adopts, which in many cases enables him to devise new processes, or which, at all events, if he be not of an inventive quality of mind, will enable him to appreciate and value the new processes devised by others. This is the truly practical man. But the practical man as commonly understood means the man who knows the practice of his trade, and knows nothing else concerning it; the man whose wisdom consists in standing by, seeing, but not investigating, the new discoveries which are being made around him; in decrying those discoveries; in analyting to those who invent improgrammats, even the very creates. eries; in applying to those who invent improvements, even the very greatest. the epithet of schemers, and then when he finds that, beyond dispute, some new matter is good and has come into general practice, taking to it grumblingly. The aim and object of such a man, indeed, is to insure that he should never make a mistake by emburking his capital or his time in that which has not been proved by men of large heart and large intelligence. It is such a practical man as this who delays all improvement, as illustrated by the experience of Bessemer, Siemans, Galton, and many others. This conduct of the so-called practical man arises not only from ignorance of the principles of his profession, but from another one, and that is, you offend his pride when you came to him and say, "Adopt such a plan; it is an improvement." His instinct revolts at the notion that you, a stranger, very likely his junior, and very probably, if the improvement he an original and radical one, a person not even connected with the trade to which that improvement relates, should dare to assert that you can inform him of something connected with his business that he did not know. In too many instances the owner has intrusted the managment to a foreman or manager, who was often one of the so-called, or distinguished from the real, "practical men." He pointed out how such persons scoffed at and obstructed inventors, and derided them as schemers; pointed to Mr. Bessemer as a victim. In conclusion, Mr. Bramwell advocated the formation of a maintenance. epithet of schemers, and then when he finds that, beyond dispute, some new matter maintenance.

# Eastern and Foreign Dottings.

Eastern and Foreign Dottings.

The Old Catholics are having a Congress. If our Young Christians could get at them, how would the grey hairs ity:—The Chinese students arrived in Chiego. They took an "object lesson" in total deprayity.—The political campaign wares vizorous. They have killed a Greeley hoy in Cincinnati and a Greeley man in Charleston. Score two for Grant.—Athinic steerage passengers complain of their grab. Let them travel in the cabin.—The I. O. O. F. propose to revise their ritual. Let them write it on a slate-then use a spange.—The Government finds that nobedy is to blame for the sub-treasury defalention. In New York Parties destring a superior article of white-wash will apply to the Treasury Department.—Four persons killed by lightning in Illinois: A judgment for itying in Roumania.—There are cordial relations between Russia and France. This is important if untrue.—Pressident Grant scaked his feet on Wedinesday and cut his corns.—Mirders exerywhere. Keep the ball a-rolling—Turkish Ambassa-dor dud in France. And descended into held the unbeliever.—Consul-General Butter, of Egypt, has been dismissed as a backguard. A brithmit political career opens before the nephew of his nucle at home—Jase Henry Coniers. a South Carolina darkey, has been appointed to the Naval Academy. Sing.—Three negroes killed by Irish railroad laborers in New Jersey. They are angels now, Sing.—Wary Frances Ward, colored, applies for a mandanus to let her into Agrees killed by Irish railroad laborers in New Jersey. They are angels now, Sing.—Three is a sick King Christian in Demark.—Prussia is proposing to make it lively for the recalcitant Catholic Clercy.—The Spanish budge it sput in a healthy state by stopping the ecclesiastics rations. Root, hog, or die.—Rev. Peter Cartwright, the Methodist, has handed in his cheeks. He was a good egg.—A rain-storm has spotted the oats near Aberdeen, and the Scots are wardy.—"Alden," as we gracefully term him, has left Liverpool.

## Local Dottings.

The game law has expired and "fools" (as the Scotch say) are plenty in market. Let Pickering look out for gunners with a Scottish accent.—Only eighteen mining incorporations this week, with fourteen and one-half midlion dollars of capital stock. Business is slack with the boys.—The Alta says Californians flut one trip East sufficient. We should find it so, if the Alta would make the trip and stay —Mr. Giuseppe Harrington has done a picture called "Saved." Our old friend, Joe Harrington, should have "saved." his Christian name.—The Morning Call now chains a daily circulation of 7,244. Believe it lies.—New York papers announce the death of Theoron S. Doremus, a prominent member of the Produce Exchange of that city. Mr. Doremus was a gentlemm to whom the consignments of California butter were sent last spring, and he appears to have partiken of it.—A couple named Conway are engaged in proceedings for the possession of a child.—Senator Cole made a speech on the Goat Island bill. Is it worth while to galvanize this Cole corpse: —The Morning Call asks "who pays" the taxes of San Francisco? We blandly reply that Mr. MacCroche pays sixteen times as much as Mr. Pickering.—Man drowned off the steamer Donald. Only a sallor.— Let Pickering look out for gunners with a Scottish accent. Only eighteen minof San Francisco? We blandly reply that Mr. MacCredish pays sixteen times as much as Mr. Pickering. — Man drowned off the steamer Bonold. Only a sailor. — Dead journedist in Sacramento. Happy Sacramento — Mushy human cadaver fished out of the bay, the head plugged with a builet. It is of no use to any one but the owner. — On September 26th, twenty-six years ago, Stevenson's regiment sailed from New York for California. Which was rough on California. On September 26th, sixteen years later, the San Francisco Stock and Exchange Board was formed. Which was rough on San Francisco. — Buletin reporter awoks in one and prates of "City Dens by Daylight." — D. W. Cheesman, ex-United States Assistant Treasurer in San Francisco, has gone into bankruptey. A man official opportunities, too! — Geo. A. Pahn blew his brains out. If you don't believe he has gone to hell, ask your parson. — They have opened a "Christian College" at Santa Rosa. Miss Chapman teaches the godly wax-work.

# "Give me you rose-crowned cup

With god-like nectar brimming,"

Sang Anacreon of old. Homer makes his heroes quail deeply of the "nectarean bowl." Horace devotes one of his best odes to his bottle, and in nearly all of them refers either to the fiery Falernian or the sweet-tempered Chian. Tibulius. Propertius, Catulius and all the master poets of antiquity have lauded wine, and their praises are imperishable. Only in modern times has it been at all decried, and that the histogram winded adults heroined bloom. We'll mone of them. We take the genonly by sour-minded, addle-brained bigots. We'll none of them. We ake the gencrous juice of the grape, when skirfully prepared, as, for instance, that most deli-ctous wine, the Gerke. It caims the mind, elevates the thoughts and brings man to the highest perfection of intellectual activity-witness the present paragraph.

Young men don't consider their scarfs, ties, shirts, or sleeve buttons stylish, unless they are of the importation of Bullock & Jones, from London.

# Nothing in the Papers.

If the papers are not enough to put one in a passion it would be difficult to suggest anything that is. Here are things happening on this round world of ours that excite an intelligent curiosity. Here is the Suez canal revolutionizing the India trade. India itself building railroads at a rate that rivals the United States, the French indemity disturbing the money balance of Europe, British industries disorganized by the advance in coal, national debts rolling up at a rate that staggers the understanding and starts startling speculations, political changes of the first significance in progress. Spain actually putting forth a budget without a deficit, the sick man putting forth another that bespeaks him sicker than ever, the Pope "accepting the situation" like a gentleman and scholar, the India trade seeking Venice once more as its Mediterranean embarcadero, the Old Catholic agitation spreading over Germany, foundations for a common school system ladia in France, Church dis-establishment coming forward again in England, white men bushing north and south into the interior of Africa, Japan progressing by leaps and bounds to the front rank in modern civilization, China arousing and sending her boys abroad for an European education—bless us! here are matters to be looked into. When the philologists, and ethnologists, the comparative anatomists, the astronomers, spectroscopists, microscopists and moral philosophers are "going it" in all directions, making astonishing assertions, and proving them true! Here, indeed, be matters to look into. We do look into our papers for them—and what do we find! Weary, dreary iteration of thread-bare railroad topics. Egad, what worthy fellow-citizens, and columns of the pointiess, profitiess, dishones chatter of disreputable politicians, gabbling for hire through a "campaign" which, in Californiaat least, is a mere personal squabble. Does not this afford cause chatter of disreputable politicians, gabbling for hire through a "campaign" which, in Californiaat least, is a mere personal s

#### Arrival of Mr. Edmund H. Yates.

Mr. Edmund Hodgson Yates, the well-known English novelist, lecturer and critic, arrived in New York last week by the Cuba. Mr. Yates will appear in this country chiefly, if not exclusively, as a lecturer, in which capacity he is announced to treat of such subjects as "Modern Society," "Princess of the Pen," "English Parliament" and "Good Authors at a Discount." His engagements aready number about sixty, and if the satisfaction of his auditors is anything like equal to the remuneration of the lecturer, the American public has a great treat in store. Although Mr. Yates has discharged the functions of various literary offices, as editor, theatrical critic, biographer, periodical contributor and feuilleton-writer—he having been the "Flancur" for The Morning Star—it is as a novelist that he is known in this country. "Broken to Harness," "Running the Gauntlet," "Kissing the Rod," "Land at Last," "Wrecked in Port," "Dr. Wainwright's Patent," "Nobody's Fortune," are among the products of his pen, and are the works upon which his American fame has chiefly been built. Mr. Yates was born in 1821, and is a son of the actor of the name, who for some time leased the Adelphi in London. He for a long time retained a Government position in the Postoffice, which he has quite recently relinquished in order to devote himself exclusively to literary pursuits. He at present holds the editorship of the Temple Bar Magazine, and was presented to President Whitelaw Reid and most of those present. His first lecture was delivered yesterday.

Musty Old Archæologists, moth-eaten and mouldy as the parchments they handle, are always pining and sighing after the good old days, the grand old days, the incomparable days of antiquity. "O, the Romans'did this, and did that and the other, regardless of expense. Why, Vitellius sent to Great Britain for oysters!

Just think of it!" Now what asininity! If Mr. Vitellius lived in our days he would only have to send to 410 Pine street, and Emerson Corville could have supplied him with oysters of as good quality and a great deal fresher.

Our city is advancing steadily in all that which pertains to the splendor of a metropolis. Our hotels are unexceptionable, as travelers certily; our thoroughfares are filled with elegant equipages; new and handsome buildings are being run up everywhere. Not only are they fitting up magnificent places of business, as the New Mint, but perfect epicurean palaces, as is the "Laurel Palace," where the choicest brands of home and foreign liquors are dispensed. And the "engineering" of Mr. George Kahman is simply superb.

## The End of the Stupid Season.

The reopening of the California Theatre, and the promise of a term of opera, are something more than events in the theatricas word. They mark the approaching end of the social visuagid season. And it has been redelogists singed. The writer of this, a positively abstemious man, has been replaced y drivin to excesse in his cups, in Sincer desporation to escape the social horrors. We have hards had a wedding worth speaking of in six mentiles, and not more than three six chy had a wedding worth speaking of in six mentiles, and not more than three six chy had a wedding worth speaking of in six mentiles, and not more than three six chy had a fixed had a wedding worth speaking of in six mentiles, and not more than three six particles and the first class of the social season. It will go into the dark in the season and a six in the case some season. A set of "Germans" is cumanitied, and we may who speaking that the season street. There are some advantages and "set down" far by East on Frontiers for a bail that, also cuite a worth, can be "cka set be few, and eyes on by none." Wonder it we shall even have another bad in Sun Francisco que equal to that one in the words. The result were take another bad in Sun Francisco que equal to that one in the words. I have write a work in the season shall. No, burds and Little Words it which "Professes "furnishers do not independent and the symmetries do not independent and are water work are shockingly out. But the polys enson is approaching and promises to be a content one, Good was to it. Let the dressimakers take heart at our words. They shall have more business than ever before.

Among the Fine Arts, painting is fast losing its patronage in portraiture. In days of loss, the master who could handled the next a beautiful face, and infuse into the major of the growing cauries the iring traits of the constraint, the fire of the speaks he give, the woods, fast nature of the carmine lip, the soft, over yer pression of a the features, log-fleer with the gracefle out the office was a nero a man to be worshiped one whose flate would us ends among to the fleer, we as a ferro a man to be worshiped one whose flate would us ends among to the pages of history and pass down to poster by among those of the worshiped of the sort as an at Who down not need to see the profession for a set, or as it is not contage to \$400 cm, and the beauty of which as the third for a set, or as it is not contage to \$400 cm, and the beauty of which as the third of no as for past emistrics? Who does not reverence the names of Radice of Lecture Galvine of Thinn, of Mistare Angele, of Martho, simply because they need to the past of the form the part of the provided are formed by \$500. On the past of part of the past of the past of chicator, lip, it is the past of defined on Lip, it is that of the past of chicator, lip, it is that one had all all of the past of chicator, lip, it is that one had shadows on the counternance, is still requisite. Mr. I. W. T. Jeer, at No. 16 Montgomers street, is participle, is set of requisite. Mr. I. W. T. Jeer, at No. 16 Montgomers street, is participle, is the set artistic photographer in America, as all who see this work will doubless certify.

A man with bunions cannot walk along Montgomery street with safety. There is the brookers corner, for ustance, where the pedal extremities of presentant are as image a singler a sender a steam typicalization and the side with "K attacky beauts" is rather money in that quarter. But, beass you, that its notice to what one encounters at the lower down the steet. The creat pointing in any could of Bray by a Rectson a proteograph and cry is something removes at the posters appeared. Near, and them had a too. But the same as send the forement to a single region of the months and the made in the same and the forement of a single region of the product of the same region of the floaties toolers over one a own, does not particularly improve them in combined. And there is no be plugglit in front of Bradley a Ru of some . Their repeats on now a such that nothing is sufficiently "high toned which does not come from their galacty.

Recently the Board of Supervisors received from Robert Robinson, Eag, law comes of the Scattern and Central Parcial Radiroad Companies, a communication a which he points out that the ordinance passed to carry into effect the Rasenswace brade compresses to void for informative in the proceedings of the Roserd. In order to care the detect, a new order, being the same as that previously passed after amendment, was introduced and passed to print, by a voic of eight aver be one no—supervisor King. The order will come up on its final passage on October Let.

The vast number of pleasure seekers who leave the city on Sunday would furnish a find of material for the anthropologist or metaphys can. The sober and secute wek Oakand, due hole, the young and merry. Succel to, those who know the true persons of the taxe a spin to San Bruno, and pass the day at Thorpe's Gardens. They are knowing ones.

#### How We Ship Teas Overland.

There was complaint in New York of delay in forwarding the teas received in, San Francisco per steamer America, which arrived in port on July 13th. Investigation has elicited the facts that when the steamer arrived in San Francisco the rail cars were in waiting as usual, but the Teas were not delivered from the ship multi the evenings of the 18th, 19th and 20th, that is to say, a delay of six days. If the last of the Teas arrived in New York August 10th, the time occupied between the two cities was twenty-one days, which time is much above the average. The method now in operation in forwarding teas overland which arrive by steamer is as follows: As soon as a steamer arrives the railroad freight agent makes up a train on the Pacific Mail wharf, and the moment the steamer is ready to deliver the Teas they are assorted into invoice lots and so loaded into the ears. The train thus loaded departs the same night for the East. Thus no delay whatever occurs in San Francisco, and the Teas go forward assorted, and do not require five to seven days in New York after arrival for that purpose. It will be observed that one freight train departs each day, consequently where a cargo consists of three train loads the whole goes forward in three successive days if there is no delay at the steamer, and each invoice is in a car entire, unless it is so large as to fill more than one car, and all arrive in New York or Boston without further handding. The trains being started for Omaha, the eastern route the Tea may take thereafter is in the control of the owner, unless, as is usually the case, he leaves it with the Centrain Pacific Company, which, by courtesy and custom among railroads on the same line, has the control in respect of them. With an intelligent understanding of the interests of the shipper, the freight has always been forwarded by the shortest and most practicable routes, and by the most attentive fast freight lines.

#### Wanted -- A Saint.

That venerable Pope has been at it again. The supply of immaculate conceptions, assumptions, nativities and infallibilities having glutted the market, his holiness has turned the erank of the saint machine and ground out another beautified intercessor. The party is a Jesuit father, who has been comfortably decayed these centuries. It is well. If he refused to look on his mother after he got "converted," or to shake hands with a woman, he should be as good as St. Aloysius, who abstatined from these maughtinesses. If he belabored his blessed gluttens maximus nightly with the cat-o-nine-tails, starved his well-meaning stemach three times a week, and smet lil, he was as holy as St. Anthony of Padua. Provided he belonged to a princely family (all respectable saints do), and ran away from home and a lady love to be a monk, he is as exemplary as St. Starislaus, who has that enviable reputation. And so he said his prayers nightly, and raised several rows in the convent by his ecstacies and other excentricities, vowed poverty, chastity and obedience, he is better than the News Letter. If he only wore sackeloth and put peas in his shoes, the N. L. objects to his canonization. An interesting future opens before this dilapidated Jesuit. His mouldy carease will be yanked out of its resting place and enshrined in silver and gold, whilst the faithful world will hold its nose and adore. Dammit, this inspiring! We do not know the new saint's name, but congratulate him on his success. When the N. L., too, shall peg out, our spirit shall meet the new saint's with fraternal clasp, and will shake him for the drinks. And, speaking of saints, why can we not have them in America? There is the Gutter Snipe, who is dead and gone. He smelt extremely ill and devoured decayed cabbage stalks. He is an eligible party to begin with. Or Pickering would make an acceptable martyr. Who will kill him?

"Laugh and grow fat" is an old motto, and mayhap a good one. But we haven't any predilection for obesity. We don't want any increased development in our unbilical. We don't relish the idea of having small boys in our neighborhood assail us with opprobrious epithet. Architects and builders consider a "swelled front" stylish. We don't, at least for our sex. A touch of emboupoint, now, in lovely woman, is another matter. Those who would grow fat, then, may langh till the midriff crack—give us us the sweet and gentle smile. Aha! that is the true rule of life. "Smile and be happy!" When we smile it is with Hotaling's Cutter Whisky. There's blissfulness!

In nothing is good taste more characteristically displayed than in the selection of furniture. To have the carpets matching the colors of the walls, the shape and material of chairs and sofas adapted to the room in which they are placed, the curtains selected judiciously, is an art which few ladies carry to perfection. But no wonder, there are so few places where they have a proper opportunity to exercise their choice. At Plum, Bell & Co.'s furniture establishment, Post street, the finest taste will find material to supply its most critical exactions.

#### On. Ye Brave.

We paid four bits to view the great riot from a window in Montgomery street, and never shall forget it, no, never! We saw the gathering of the clars, headed by the haughty Fitch. Borne on the breeze we heard his warlike cry, "Now could I drink hot blood!" Yet alas no one fetched him anything but hot toddies. Then the martial Pickering fundered along on his gallaut charger, the spirit of '76 and Old Bourbon gleaming from his countenance. A deep frown settled on his massive brow down to the end of his nose, as his voice rose above the din of battle exclaiming, "What, ho! there, minions! I defy ye!" The Avenger of Blood at the Bella Union was but a cooing dove beside him. And lo! a form of resplicable the Bella Union was but a cooing dove beside him. And lo! a form of resplicable healty, the incarnation of a poet's dreams. It is the gay and festive Pitts Stevens, arrayed as a Petroleuse, brandishing aloff a gory oil-can, wherewith to fire the New Mint. Her lovely architecture, half visible through her decolete robes and extremely short petticoats—it was a sight to make a young man old! Far and high her clarion rung. It was this: "Meeker, beware! thy time hath come!" And this was all. O degenerate age!

In all the town are there but three To make a new Thermopylae?

This disgusting apathy is too many for us. Waiter, a bottle of strychnine—or stay! something that will do the business quicker—bring us a file of the Call.

#### Interest Rates.

Finding the interest on any principal for any number of days. The answer in each case being in cents, separate the two right hand figures of the answer to express it in dollars and cents. —Four per cent.—Multiply the principal by the number of days to run; separate right hand figures from the product and divide by 9.—Five per cent.—Multiply by number of days and divide by 72.—Six per cent.—Multiply by number of days and divide by 45.—Nine per cent.—Multiply by number of days, separate right hand figure and divide by 6.—Eight per cent.—Multiply by number of days; separate right hand figure and divide by 4.—Nine per cent.—Multiply by number of days; separate right hand figure and divide by 4.—Fitteen per cent.—Multiply by number of days and divide by 24.—Eighteen per cent.—Multiply by number of days and divide by 24.—Eighteen per cent.—Multiply by number of days and divide by 18.—Twenty per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Multiply by number of days and divide by 18.—Twenty-four per cent.—Twenty-four per cent.—Twenty-four per cent.—Twenty-four per cent.—Twenty-four per cent.—Twenty-four per cent.—Twenty-four per cent.—T

"Kentucky corn juice" is a popular favorite among imbibers of what is good. But the sad stuff asually imposed on a credulous public as pure whisky is enough to cradiente the taste in even the most confirmed. The genuine article is difficult to get, owing to the vast number of spurious mixtures which glut the market, each and all clamoring for precedence. Away with them, Give us Goewey's Blue Grass Whisky, if you please: thank you—with just a grain of sugar.

The Call says this city is under "a reign of tyranny which is worse than that which existed in New York under Tweed and his confederates." There's richness, there's humor. The Call man is evidently disposed to set up as a wit. Bungletoe, on the first page, is sad enough; but the Bunsby in the editorial column is really entertaining. The Call's professed witty paragraphs read like funeral notices; but its editorial lucubrations are droll enough to have been cribbed from a comic almanae.

The Racine House, 1023 Kearny street, is an immense success. People who are weary of the din of the large hotels, always filled with transient lodgers, seek here and find quiet, pleasant apartments and a delicate solicitude on part of the proprietors in attending to their wants. It is the place.

The Cliff House Road, fascinating though it be, gets rather monotonous. Country-loving pleasure-seekers vary the drives with a spin along the San Bruno road, and take a bracing "nip" at the Six-mile House. Harry Blanken knows what's what.

Columbus discovered America, but it has been found that the only economica shoes for children are the celebrated Silver Tipped—never wear out at the toe, and are worth two pairs without Tips. All dealers sell them.

# British Emigration.

Says the London Daily News: "The main cause of the present extraordinary Says the London Daily News: "The main cause of the present extraordinary prosperity is, of course, the enormous expansion of our foreign trade. Never before has anything like it been seen. During the first six months of the year the increased value of our exports was, under iron and steel, 4,200,000%, woosen manufactures, 4,000,000%, cotton manufactures, 3,000,000%, and coal, 1,230,000% in the year 1850 the exports were valued at 190,505,22%, while in 1871 they amounted to 222,519,772, heing a difference of 23,000,000%. One effect of this prosperts has been to dominish emigration very greatly. So vast an increase in the exports of products of British industry could not take place without producing an advance of the rate of wages, and our people find that this is after an a better contrict to live in than they had at one time been inclined to consider it. Two or three years ago we had two large Squelies on toot formed for the nurrose of author presents and we had two large Societies on foot, formed for the purpose of aiding persons out we had two large Societies on foot, formed for the purpose or away, of work to leave these shores for others where occupation was more readily attainable. Now, as Lord Derby has put it, two masters are after one man. The result is, that the British and Colonial Emigration Secrety, of which the Lord Mayor became the President, and which in 1850 collected upwards of 25,000% for emgration purposes, is almost at a standstill, while the National Emigration Society must find its sphere of operations considerably restricted. A large emigration is a ways going on from this country to the United States, Canada, and the Asstralian Coornies, irrespective of fluctuations in the demand for labor; but that variable emigration which is stimulated by seasons of distress may be said, as far as the skilled portion of the working classes is concerned to have ceased. The number of natives of the United Kingdom who wen abord last year was smaller by 9,750 than in 1270, and this year we may safely predict the falling off will be much greater."

- The medical gentlemen do not object to Mr. Horner's stove lids but think a little of it coss a great way. It has been proven according to testimony that the delicate dish set before the Ryan family was not broisel, but steamed bothy. The fact will probably be developed that Mr. Horner really prepared enfant at la principal was not been supported as the province of the control of ansee.

- Thiers is suppressing newspapers, quashing meetings in honor of the anniversary of the First Republic, and showing various other symptoms of swinging round the Napoleonic circle. "Thiers, idle Thiers, I know not what you mean."

To protect the understanding of humanity nothing is like leather fastened together by Cable Screw Wire. Boots and shoes made in this way never rip, or leak, or come apart.

Shirts to order.-If you want perfect-fitting shirts, have them made by Bullock & Jones, 421 Montgomery strect.

<sup>-</sup> The Bulletin thinks a railroad subsidy would be bad morals. The Bulletin ought to know: it is an expert in bad morals.

#### London.

During the past year the police have had to extend the guardianship over 226 new streets and two new squares, representing a total length of 38 miles and 722 yards. When enthusiastic travelers expatiate on the marvelons growth of American cities, and regard as something aki; to the miraculous the rapid conversion of the silent and lonely parire into the bustling and noisy pavement, they entirely forget that to an observant Londoner the so-called miracle is a matter of daily and painful remark. The speculative builder of America cannot cover land with houses more rapidly than his London rival, nor is it possible for the former to build more uninhabitable dwellings than are run up by the latter in a few short weeks. Let the English traveler who has been amazed at the sight of St. Louis, Chicago, or San Francisco, and has retailed the history of these cities for the benefit of uninstructed readers at home, read the following sentence from the pen of Col. Henderson: "During the past ten years there were built in the Metropolitan Police district 149,905 houses, and the additional length of streets placed in charge of the police is 635 miles, equal to the distance from London to Inverness and 40 miles beyond." Assuredly if to cover the earth with houses be the highest ambition of civilized men, and if to make a green field a veritable casis amid a desert of bricks and mortar be the result of human progress, then the end is being attained in and around London with a rapidity which leaves nothing to be desired.—London Daily News.

#### Death of the King of Sweden.

The telegraph announces the death of Charles XV.; King of Sweden, or rather of the Kingdoms of Norway and Sweden, at Malmo, a small seaport of the latter country. The deceased monarch was born in May, 1826, and was therefore but forty-six years old. He has not long survived his wife, Queen Louise, who the last year. He ascended the throne of his father Oscar in July 1859, having for two years previously officiated as Regent during the severe illness of Oscar. Under his rule Sweden and Norway have enjoyed a fair share of prosperity, and he was generally beloved and respected among his people. He was an artist and poet of ability. He was the grandson of Bernadotte, a French soldier under the First Empire, who became one of Napoleon's Marshals, and who was in 1810 cleeted Crown Prince or heir to the throne of Sweden. On the death of Charles XIII., in 1818, he ascended the vacant throne, as Charles XIV., having in the meantime reannexed Norway, so that the King of Sweden became also King of Norway, although the latter for the purposes of government, was recognized by Sweden as an independent State. The Kingdom of Norway and Sweden is hereditary in the male line, so that the vacant throne will be filed by Prince Oscar, Duke of Ostrogothia, brother of the late King, and not by his only child and daughter Louise.

#### Anna Sonntag.

There is pleasure joined to pride when we Californians welcome the return of one who went forth from us in the promise of unfledged talent and comes back with that promise fulfilled and ratified by the applanding voice of the land in which that talent was developed. Mile. Sonntag felt that the gift of song was her own, but in order to educate that gift it was necessary to study in Europe, where severe application in the most finished schoo s of musical art could alone make that gift appreciable. Before she returned to her native California, Milan, Vienna, Paris and London rang with the praises of the young prima donna; and now she comes home flushed with victory, crowned with laurels, and is going to prove that the labor was not in vain, nor has the gift been neglected. She appears next week in opera, supported by a troupe which is worthy of her fame. The young baritone, Signor Rossi, possesses not only an excellent voice, but is eminently handsome and of great dramatic power. We promise great entertainment to the musical world in the forthcoming season of opera so ably organized by Signor Bianchi.

A traveling correspondent makes a detailed report showing the wheat crop this year of the Sacramento, San Joaquin, Livermore and Napa valleys, to amount to nearly 13,000,000 bags. Several hundred thousand tons of this will remain stacked afield and along the railway lines, protected as well as may be by temporary shelter when the rains begin. The interests of the wheat owners no less than of San Francisco, seem to demand that this crop be brought into direct connection with the city, where it could find storage and ready shipment. It will be remembered that the railroad companies commenced the crection of warehouses to accommodate this grain, but desisted in deference to a clamor raised by Stockton and San Francisco papers that they wanted to "monopolize" the warehouse business. It is within the bounds of careful statement to say that the loss which will result to the farmers from this enforced change of railroad policy will be five times the value of the papers which induced it.

Muller's Brazilian Pebble Spectacles are said to be an entire remedy for near-sightedness.

The Sydney Herald is responsible for the following singular story: The craving for food by the helpless young has in many cases been known to prompt kittens and whelps to take milk from very different genera of the manuallar; but one of the most extraordinary incidents of this mature is related to have occurred lately in Sydney. The circumstance has no such features as would render publicity objectionable, and the authenticity of the subjounced statement is vouched for by the husband of the woman referred to. Mrs. Byrne is a married woman, residing in Devonshire street, Sydney, her husband, a native of the colony, being well known in the metropolis. Some months ago she bore twins, one of which died, and the surviving intant, now about seven months old, became ailing. This the mother attributed to an insufficiency of milk. For several days she observed peculiar scratches on her bosom, unlike those that would be produced by the child. However, she ascribed them to the efforts of the child when hungry at might to get at the breast, and took the precaucion to pare the child's nails. Stir fresh scratches were notified. No rats had been seen about the room until the cat started one which had found a hidney-place behind a cask. Immediately the rat found testif chased it ran to Mrs. Byrne, as if for sheiter. The scratches on her breast were at once identified as those produced by a rat's claws, and the impression that this creature had robbed her during the might of the milk for which her child was pining, was supported by the fact that when the rat was killed she had a pientiful supply.

Insurance Against Marriage.—The climax of novelty in the insurance business has been reached in Austria, where a company recently proposed to insure people against getting married. At least, that was about the effect of the arrangement, which was, in other words, that the company would pay a certain sum to the policy-holder whenever he took to himself a wife. Upon a stite reduction it does not seem that there is anything absurd in this plan. A man can make provisions by which he will be compensated for the destruction of his property by lire or the loss of a limb by accident, and by which his family will be compensated for his removal by death. Why, then, should be not be able to provide against another very common cal—contingency? But it would be interesting to know how the turiff of rates was calculated, though it is probable that the charge was adjusted, by some mysterious process, to the age, personal appearance, and susceptibility of the policy-holder. It would be gratifying to report the success of the Austrian experiment, but the facts will not permit it. There were numerous policies issued, and the business seemed to be in a thriving condition, when the officers of the company all got married at once, and absorbed the assets, leaving the outsiders to be preyed upon by handsome females, without any hope of pecuniary consolation.

There were some 200 persons congregated last Monday evening on Kearny street in front of the City Hail. A large number of them were policemen in pain clothes, a larger number were idlers come to see the row, and it may be presumed that the remainder were pick-pockets and members of the press. After leanging around awhile and until it became apparent that the public meeting which adjourned to reassemble "in front of the City Hail" had no idea whatever of doing so, the loungers dispersed. While the demonstration which it was attempted to forment thus came to nothing, due credit in the premises should be given to three parties: First, to the Chief of Police, who had taken effective measures that it should come to nothing; second, to the proprietors of the Bulletin and Call, who did their best that it should come to something; and third, to the people themselves, through whose good sense and bodily absence the most staggering rebuke though whose good sense and bodily absence the most staggering rebuke though whose good sense and budily absence the most staggering rebuke though appeals for a "popular uprising" should have been absolutely taken no notice of, is crushing.

The sudden advance in Pacific Mail stock in New York on the 25th instant from 67 to 71½ indicated the turn of some stock-jobbing screw by which some operators could not fail to suiter. To-day we have a pendant to the "turn" in the story that a stockholder has discovered a remarkable discrepancy between two statements furnished by the Company in a lawsuit, one dated May 27th and the other September 14th. The first gives the amount of the investments of the Company at \$5,693.763, and the other at \$1,37,147. The sensational form at which the statement is forwarded by the Associated Press would lead to the inference that the officers of the Company had made away with one and one-half millions of dollars. Yet the fact is apparent that the story takes its rise from the struggle of stock operations, and is the howl of an injuried "bear." The way in which it is treated by the Associated Press, reflecting by implication upon the managers of a great public enterprise, is a gross impropriety.

Storey county, Nevada, is out of debt, and within twelve months the treasnry will contain \$250,000 surplus. And yet, Storey county, the "people's" papers say, is governed by what they call a bank-ring. It appears to be go erned to good purpose.

The North American Boundary Commission.—Orders were received at the School of Military Engineering, London, on July 17th, calling for volunieers for service with this Commission. Forty-four men were required, including four teen non-commissioned officers. Great inducements were held out to the men to volunteer, for, in addition to their regimental pay, non-commissioned officers receive extra pay ranging from 8s, to 4s, 6d, per day, and the privates 4s, per day. They are provided with free rations and a special kit. The men required were topographers, drughtsmen, signalers, carpenters, wheelwrights, smiths, farriers, shomakers, collarmakers, tailors and photographers. By telegram from Toronto, Canada, September 19th, we learn that a large party of these engineers, under the command of Captain Anderson of the Royal Engineers, had left for Pembina, where they expect to meet the American party appointed to determine the forty-eighth parallel boundary between Canada and the United States, from the Lake of the Woods to the Rocky Mountains. It is thought that the work will occupy three or four years. The War Departmant has received a dispatch from General Sheridam, dated Duluth, September 8th, saying that Colonel Baker, after reaching the mountains of the Yellowstone valley, was obliged to come back on account of the surveying engineers deciding to go no further for fear of the Indians, and therefore the expedition is a failure.

— We are in the habit of speaking of "the sun" as the greatest object in the system of creation; yet the splendid star Sirius is at least two thousand times larger than our sun, if the light he gives out be of the same intrinsic brightness as that emitted by the sun. If the sun were placed where Sirius is, it would be barely visible from our present standpoint. Aldebaran and Capella, Vega, Castor, Pollux and Procyon are each far larger than the sun. Indeed, among all the thousands of isolated stars, there are probably not any which are very much smaller than the sun while the greater number appear to be several hundreds of times larger. Our own globe is but an atom.

A San Francisco daily paper, alluding to the imposition of doubling the unpaid rate on letters paid only in part and forwarded through the mail, has the following: "The following is the law of Congress upon which the new order is based: 'A letter deposited for mailing weighing one-half an ounce, but less than one ounce, prepaid by a three-cent stamp, should be forwarded marked 'due six cents,' to be collected on delivery.'" It will need a new Stanley to find any such "law of Congress," as it exists only in the imagination of the Washington clerk who wrote it. As a matter of fact the above quotation is in violation of the recent law of Congress, section 151, which requires only the unpaid rate to be collected on delivery.

— The total amount of sales at the San Francisco Stock and Exchange Board for the week ending on the 25th instant was \$3,246,258. The feature of the week was again Meadow Valley, of which the sales amounted to 10,550 shares; Belcher, 3,655 shares; Belmont, 3,925 shares; Caledonia, 3,505 shares; Crown Point, 991 shares; Consolidated Virginia, 2,230 shares; Chief of the Hill, 7,335 shares; Eureka Consolidated Virginia, 2,230 shares; Chief of the Hill, 7,335 shares; Eureka Consolidated, 2,990 shares; Agi90 shares; Ophir, 1,535 shares; Raymond & Ely, 866 shares. Other stocks, of which 2,500 shares each, or upwards were sold, are Huhn & Hunt, Imperial, Ingomar, Julia, Orlginal Hidden Treasure, Pioche, Phænix, Pioche West Extension and Senator.

— The New York Commercial of the 27th instant says in reference to the published statement that there is a large reduction in the securities of the Pacific Mail Company between May 27th and the 15th inst., that the Company, besides paying \$700,000 for the Central American line of steamers, has paid as much more for steamers now building.

— American securities closed in London on the 17th inst. as follows: Central Pacific and California first mortgage bonds (4s. 6d.), 80@81; Union Pacific land grant first mortgage bonds, 64@66; Pacific Railroad guaranteed by Missouri, 95; Panama Railroad stock, 132%; ditto, general (sterling) mortgage, 93@95.

— The Call carnestly advises its readers to vote down the compromise agreement. All right. Now we'll see whether the Call has such a big list of admiring subscribers. The vote will be a better test than the turning of the affidavit machine.

— Wells, Fargo & Co. shipped from the Ely Mining District during the week ending the 22d inst., bullion to the amount of \$115,755 05—a falling off.

# Notice to Subscribers of the California Mail Bag.

As a just tribute to the greatest professor of natural history of his age, as well as a memorial of the visit of

## LOUIS ACASSIZ

To our shores, the forthcoming number of the CALIFORNIA MAIL BAG will contain a Splendid Photograph of the distinguished naturalist, executed in the finest style of art by

#### BRADLEY & RULOFSON.

The portrait will be accompanied by a memoir, which will be a lesson to all students of Nature, exemplifying, as it will, the power and world-wide utility of industry, perseverance and study, combined with intelligence. Leave your orders with your bookseller, or at the office of the Mail Bag, No. 623 Montgomery street.

Grass Valley Mines.—Following is a succinct memorandum of the present condition of quartz mining in and about Enroka, Nesagh County, California, and progress of a few of the most prominent mines: The Eric mine is turning out to be a splendid and valuable property, this mine is undergoing a renewal of all is machinery, pumps, engines, new horsting works, etc: its third level is complete; the main shaft prospected all the way. One trouble herstofore in working its machinery, pumps, engines, new horsting works, etc: its third level is complete; the main shaft prospected all the way. One trouble herstofore in working the mine has been on account of bad air, but a new air shaft has been sink. They will soon start drifts from their main shaft to develop the 300-foot issel. There are saxty men employed. This mine is owned in England.—The Aucho mine, near the line, is being developed into a good property, a ledge over rise feet thick having been struck a short time ago.—The Black and Young mine is now under the control of its owner, the creditors having worked the mine during the past year and all have been paid up. It is the intention of the owner to sink deeper and run new bevels, the vein getting larger as they go down.—The Rismg Star mine is developing into a splendid property, a ledge having been uncovered over severe feet wide with ore in sight estimated to last for a year. The Company are about laying in Winter supplies and to let out contracts for wood and timbers. A tentangent stant milh is on this property, which also embraces a wood ranch of 640 acres, enabing the Company to obtain their wood aft a very low signer. The ore pays about §13 per ton. The Empire mine: Since the strike made in this mine the sum of \$30,000 has been taken out; the rock now being crashed pays \$40 per ton. The Empire folk were about fought works on the mine when the strike was made, they have to use show those on the sum of an interface of the nown of Eureka they have to use snow shoes. Eureka, or Granteerfler, is destined to be quite

# A New Hotel -- The Galt.

The progress making with the New City Hall and the tangible reality of the New Mint is helping people to realize the steady "set" of business in the direction of the line of Market street. What has been long perceived by the far-sceing is beginning to be generally understood—that the character of Market street, between Kearny and the Hall, is to undergo such a change as has been seen to take place with Kearny street. A recognition of this progress has been one consideration with Messrs. Gilbert & Asher in inducing them to take a step in furtherance of it, in opening the Galt House, No. 622 Market street, between Montzomery and Kearny. The Galt House contains fifty-four rooms, is newly furnished and carpeted throughout, and fitted in all its appointments as a first-cass hotel. The proprietors are not excelled as accomplished hotel keepers, and guests may entrust their comfort to their hands, with confidence that every attention will be extended them.

— The Pacific Mail Steamship Company have purchased from the Panama Raifrond Company the steamers forming the Central American line, and will continue to run the same steamers regularly on the Central American and Mexican coasts.

<sup>—</sup> Silver has again slightly improved in price in London, and may now be quoted as 60 5-16d. to 60% d. per oz. standard.

#### A Nevada Funeral.

[BY MARK TWAIN.]

There was a great time over Buck Fanshaw when he died. He was a representative citizen. He had "killed his man." not in his own quarrel it is true, but in the defence of a stranger beset by numbers. He had kept a sumptuous saloon. He had been the proprietor of a dashing help-meet, whom he could have discarded without the formality of a divorce. He had held a high position in the fire department, and had been a very Warwick in politics. When he died there was a great lamentation throughout the town, but espectally in the vast bottom stratum of society.

On the inquest it was shown that Buck Fanshaw, in the delirium of a wasting typhoid fever, had taken arsenic, shot himself through the body, cut his throat and jumped out of a four-story window and broke his neck; and after due deliberation the jury, sad and tearful, but with intelligence unblinded by its sorrow, brought in a verdict of death "by the visitation of God." What could the world do without

juries?

Prodigious preparations were made for the funeral. All the vehicles in the town were hired, and all the saloons were put in mourning, all the municipal and fire

were hired, and all the saloons were put in mourning, all the municipal and fire company flags were hung at half mast, and all the firemen ordered to muster in uniform and bring their machines duly draped in black.

Regretful resolutions were passed and various committees were appointed; among others a committee of one was appointed to call on a minister—a fragile, gentle, epiritual new fledgling from an eastern theological seminary, and as yet unacquainted with the ways of the mines. The committee-man, "Scotty Briggs," made his visit,

made his visit.

Being admitted to his presence, he sat down before the clergyman, placed his fire hat on an unfinished manuscript sermon under the minister's nose, took from it a red stik handkerchief, wiped his brow and heaved a sigh of dismal impressiveness explanatory of his business. He choked and even shed tears, but with an effort he mastered his voice, and said, in lugabrious tones:
"Are you the duck that runs the gospel mill next door?"
"Am I the—pardon me, I believe I do not understand."
With another sigh and half sob Scotty rejoined:
"Why, you see we are in a bit of trouble; the boys thought maybe you'd give us a lift, if we'd tackle you, that is, if I've got the rights of it and you are the head clerk of the doxology works next door."
"I am the shepherd in charge of the flock whose fold is next door."
"The which?" "The spiritual advisor of the little company of believers whose sanctuary adjoins these premises."
Scotty scratched his head, reflected a moment and then said: "You rather hold

Scotty scratched his head, reflected a moment and then said: "You rather hold over me, pard. I reckon I can't call that hand."
"How! I beg your pardon. What did I understand you to say?"

"Well, you've rather got the bulge on me. Or maybe we've both got the bulge somehow. You don't smoke me and I don't smoke you. You see one of the boys has passed in his checks, and we want to give him a good send off, and so the thing I'm on now is to rout out somebody to jerk out a little chin-music for us, and waltz him through handsome."

I'm on now is to rout out somebody to jerk out a little chin-music for us, and waitz him through handsome."

"My friend, I seem to grow more and more bewildered. Your observations are wholly incomprehensible to me. Cannot you simplify them some way? At first I thought perhaps I understeod you, but now I grope. Would it not expedite matters if you restricted yourself to categorical statements of fact unincumbered with obstructing accumulation of metaphor and allegory?"

Another pause, and more reflection. Then Scotty said: "I'll have to pass, I judge," "How?" "You've resised me out, pard."

"I still fail to catch your meaning," "Why, that last lead of yourn is too many for me—that's the idea. I can't neither trump nor follow sult."

The clergyman sank back in his chair perplexed. Scotty leaned his head on his hand, and gave himself up to reflection. Presently his face came up, sorrowful but confident.

"I've got it now, so's you can savvy," said he. "What we want is a gospel-sharp. See?" "A what?" "Gospel-sharp, parson." "Oh! why did you not say so before? I am a clergyman—a parson."

"Now you talk! You see my blind and straddled it like a man. Put it there!" extending a brawny paw, which closed over the minister's small hand and gave it a shake, indicative of fraternal sympathy and fervent gratification.

"Now we are all right, pard. Let's start fresh. Don't you mind me shuffling a little, becuz we're in a power of trouble. You see one of the boys has gone up the flume." "Gone where?" "Up the flume—throw'd up the sponge, you know."

"Thrown up the sponge?" "Yes—kicked the bucket—"

"An—has departed to that mysterous country from whose bourne no traveler returns." "Return? Well, I reckon not. Why, pard, he's dead."

"Yes, I understand." "O, do you? Well, I thought may be you might be getting tangled once more. Yes, you see, he's dead again—"

"Dead before? No. Do you reckon a man has got as many lives as a cat? But you bet, he's awful dead now, poor old boy, and I wish I'd never seen him this day, I don't know n

Fanshaw to go back on a friend. But it's all up. It ain't no use. They've scooped him." "Scooped him?"
"Yes death has. Well, well, we've got to give him up. Yes, indeed. It's a kind of hard world, after all, ain't it! But, pard, he was a rusteler. You ought to see him got started once. He was a bully boy with a glass eye. Just spit in his face, and give him room according to his strength, and it was just beautiful to see him peel and go in. He was no it he worst son of a thief that ever draw'd breath. Pard, he was on it. He was on it bigger than as highor "On the 'On what 'you continents' for "on the shoot. On the shootler. On the facht. Understand? He didn't give a continents for "world" for "anyloty. Bey want partient, friend for evenive the facht.

continental for—anybody. Beg your pardon, friend, for coming so near saying a cass word—but you see I'm on an awful strait in this palayer, on account of having to cram down everything so mild. But we've got to give him up. There an't no getting around that, I don't reckon. Now, if we can't get you to help plant him—"Preach the funeral discourse? Assist at the obseques?"

"Obs quies is good. Yes, that's it, that some little game. We are going to get up the thing regardless, you know. He was always nifty himself, and so you bet up the thing regardless, you know. He was awars this unestimate from the his funeral ain t going to be no slouch; solid suver door-plate on his coffin, six plumes on the hearse, and a niger on the box, with a biled shift and a plug hathow's that for high. And we'll take care of you, pard. We'll fix you all right. There will be a kerridge for you; and whatever you want you just step out and we'll tend to it. We we got a shebang fixed up for you too and its behind in No. 1's house, and tool your hea, if you don't sell a claim. Furl Burk through as bully as you can, pard, for anybody that know do him will tell you that he was one of the whitest men that was ever in the mines. You can't draw it too strong. He next could stand if to see things going wrong. He's done more to make this town peaceable than any man it. I've seen him lieft for Grant for the more to make this town peaceable than any man it. I've seen him lieft for Grant or eleven montes myself. It at him want of regulating he want to the man to go browsing around after somebody to do it, but he would go in and regulate it himselt. He warn't a Catholic, but it didn't make no difference about that when it came down to what a man's right was—and so, when some roughs jumped the Catholic hone-yard and started in to stake out town lots in it, he went for 'em! and he cleaned 'em, too! I was there and seen it myself.

"That was very well, indeed-at least the impulse was-whether the act was strict a defensible or not. Had deceased any religious convictions! That is to say did he feel a dependence upon or acknowledge allegiance to a higher power?"

More reflection.

"I reckon you've stumped me again, pard. Could you say it over once more, and say it slower?"

"Well, to simplify it somewhat, was he, or rather had he been connected with any organization sequestered from secular concerns and devoted to self-eacrifice in the interests of morality!

"All down but nine-set 'em up on the other alley, pard!"
"What did I understand you to say!"

"Why, you're most too many for me you know. When you get in with your

"Why, you're most too many for me you know. When you get in with your left, I hund grass every time. Every time you draw you fil; but I don't seem to have any luck. Let's have a new deal?" "How?" Begin again?" "There is see that; don't put another chip till I look at my hand. A good man, sad—" "There I see that; don't put another chip till I look at my hand. A good man, sades, you. Pard, it ain't no name for it. He was the best man that ever pard, you would have doted on that man. He could lame any galoot of his linches in America. It was him that put down the riot, last election, before it got a start; and everybody said that he was the only man that could have done it. He waitzed in with a trumpet in one hand and a spanner in the other, and sent fourteen home on a shutter in less than three minutes. He had that riot all broke up and prevented on a sinter anybody ever got a chunce to strike a blow. He was always tor peace, and he would have peace; he could not stand disturbance. Pard, he was a great loss to the town. It would please the boys if you could chip in something about that and do him justice. Here once, like when the Micks got to throwing stones through the Methodist Sunday School windows, Buck Fanshaw, all of his own nothrough the Methodist Sunday School windows, Brick Fanshaw, all of his own notion, shut up his saloon and took a couple of six-shooters and monnted gaard over the Sunday School. Says he, 'No Irish need apply!' And they didn't. He was the bulliest man in the mountain, pard; he could run faster, jump higher, thit harder, and hold more tangle-foot whosky without spilling than any man in seventeen countres. Put that in, pard; it il please the boys more than anything you could say. And you can say, pard; that he never shook his mother.' "Never shook his mother." "That's it—any of the boys will tell you so," "Well, but, why should he shake her?" "That's what I say—but some people does!' "Not people of any repute?" "Well, some that average pretty so-so." "In my onition a man that would offer yielency to be mother could to..."

"In my opinion, a man that would offer violence to his mother ought to-

"Cheese it, pard; you ve banked your ball clean outside the string. What I was a drivin' at was, that he never throwd off on his mother don't you see! No, ina.drivn' at was, that he never throwd off on his mother don't you see! No, indeed. He gave her a house to live in, and town lots and pienty of money; and he looked after her and to-k care of her all the time, and when she was down with the small-piox. I'm darned if he didn't set up nights and nuss her himsel! Beg your pardon for saying it hopped out too quick for yours truly. You've treated me like a gentleman and I am't the man to hurt your feelings intentional I think you're a square man, pard. I like you, and I'll leck any man that don't. I'll lick him till he can ttell himself from a last year's corpse. Put it there!' Another fraternal hand shake and exit.

The obsequies were all the boys could desire. Such a marvel of a funeral pomp

had never been seen in Virginia. The plumed hearse, the dirge-breathing brass band, the closed marts of business, the flags drooping at half-mast, the long plouding procession of uniformed secret societies, military batalions and fire companies, draped engines, carriages of officials, and citizens in vehicles and on foot attracted multitudes of spectators to the sidewalks, roofs and windows; and for years afterward the degree of grandern attained by any civic display in Virginia was determined by comparison with the funeral of Buck Fanshaw.

#### Court Chat.

— A correspondent who was in the midst of the crowd at the Copenhagen Exhibition, on the occasion of the presence of the Royal family, says he had opportunities of listening to some interesting remarks among the more unsophisticated portion of the visitors, such as the inhabitants from Amager and the peasantry of Zealand. Princess Alexandra was the min topic, and the expressions applied to he were very naive indeed. "Oh, why there she is now, the sweet angel!" said a peasant woman in a very excited and sympathetic voice. "Where!" said her younger companion, "the one furtherest to the left!" "No, no, no, she is in the middle; Alexandra must always be in the middle, that is her proper place. But fancy her not having become English yet! how proud ought we not to feel! She is just as she used to be." The mother of a family from Amager—a Dutch inland colony just out of Copenhageu—was very much struck with the appearance of the Princess when she proceeded gracefully and modestly beside her Queen mother to the balcony of the landing and sat down. "There she is," she said, "I know her from her likeness, bless her!" Then she lifted up a little chubby girl, in funny costume, to give her a chance of seeing the Princess, exclaiming as she did so, "Perhaps I shall be some day as proud of you as the Queen is of Alexandra now!" Turning to her husband, she said: "What joy and pride the Queen must feel in having her children thus around her, before these thousands of her subjects." All this evinced, at all events, a good tamily spirit. The Princess seems to be in some mysterious way, passing into a legendary individuality among the good folk here, and really bids fair to become the heroine of some popular legend.

— The snuff box presented by Her Majesty, the Queen, to Mr. Stanley is worthy the occasion. It is not only beautiful in itself, but it is a valuable gift, as a Royal gift should be. It is an oval-shaped gold box, blue cnamel ground. On the lid is a Royal crown, set with diamonds, rubies and emeralds, with the Royal monogram, "V. R." underneath, surrounded by the Rose, Shamrock, and Thistle. The flowers, leaves, and buds of the symbolical plants are diamonds, two of them very large ones. There are fifty diamonds in the setting of the lid, exclusive of those which make up the monogram and surroundings. The box could not have cost less than five or six hundred gaineas. The New York Herald contains a grateful acknowledgement of the lotter of thanks addressed in the name of the Queen of England, to the discoverer of Dr. Livingstone, Mr. Stanley, and alludes also to the gift of a gold sunfi-box, studded with diamonds, which accompanied the verbal recognition. "The letter," it is remarked, though "short and formal as such notes usually are, breathes a warmth and fulness of grateful feeling which no stiff official phrasing can obliterate, and is creditable alike to the Englishwoman and the Queen." "We rejoice," the Herald adds, "at the appearance of this generous tribute to American plack and enterprise."

erous fribute to American pinck and enterprise."

— The Emperor Napoleon and Empress Engénie on the 10th instant embarked on board the American schooner Suppho, the property of Vice-Commodore Douglas. In addition to their Majesties' suite, Count d'Avillier and Madlle, de Lamirat, the following distinguished purty had the honor of being invited: The Duchess of Montrose, La Buchesse de Galisteo, the Countess of Harrington, the Ladies Stanbope, Lord and Lady William Lennox, Lady Elizabeth Adeane, Mrs. and Miss Beckwith, Mrs., Mrs., and the Misses Van Zaudt, Mrs. and the Misses Jerome, Madlle, Rouher, Mr. Inglis Jones, and Mr. E. Deacon. After a delightful craise to the westward luncheon was announced. Their Majesties expressed themselves highly delighted with their excursion. In the evening their Majesties entertained Lord and Lady William Lennox, Lady Elizabeth Adeane, and a select party at dinner.

— On Septemer 10th the Duke of Edinburgh went out deer-stalking in the Ballochbure, forming the western section of the Royal forest at Balmoral, and recently annexed from Invercauld estate, under leasehold. Two noble stags fell to the Royal aportsman's rifle, averaging about sixteen stones each, and carrying pretty anthered heads. Since his recent arrival at Balmoral Castle, nineteen stags have been killed in the adjoining forest by his Royal Highness, whose goodly fame as a sure and skilled marksman and excellent deer-stalkhr is reported as of a high order.

It has just transpired that a very neat retort courteous happened to the Marquis de Beauvoir during his stay in Pekin. An autograph letter was received by His Celestial Majesty of China from the Emperor of the French, from the Marquis, inviting him to send some specimens of Chinese curiosities to the Exhibition in the Champ de Mars. "You are very good," His Celestial Majesty is reported to have answered, "but you have taken all my most beautiful things from the Summer Palace; exhibit them yourself."

— The Prince of Wales' stud passed north through Scotland on September 10th, by special train for Ballater, on the way to Abergeldie.

- It is stated that the inhabitants of Salisbury blame the Mayor and Corporation for inflicting themselves upon the Prince of Wales as he went to the Cathedral. It was generally understood that his Royal Highness wished to attend Divine service in a quiet aed nostentations manner; but some time before the Prince arrived at the doors of the Cathedral, the Mayor and Corporation, in chains, and robes, and furs, were drawn up in six carriages, each of which was guarded by two policemen. The Prince appeared somewhat annoyed, and passed into the Cathedral without taking any notice of his too zealous admirers.
- The Princess Pierre Bonaparte now presides over a London dress-making establishment. She is a tall, bandsome woman, and has arranged her rooms with taste and elegance. Having adopted this bosiness as a vocation, ahe has entered heartily into the spirit of it, and desires the custom of the poor as well as the rich. Among the few pictures which adorn the walls of her modest ware-room are full-length portraits of the parents of Napoleon I.—[London Correspondent.
- The ex-Queen of Naples, Maria Sofia, who resides near Munich, in a chatean which her sister, the Empress of Austria, made her a present of, has just had a bad fall from her horse, the accident causing the miscarriage of a male child. Her Majesty had already a daughter at Rome, who died at a very early age.
- The Emperor William I., of Germany, has a private rent-roll of two million thalers (£390,000). The Emperor Francis Joseph of Anstria has hardlyany private fortune at all. He generously paid the debts of his brother, Maximilian, which nearly consumed all his private means.
- King Victor Emanuel is expected in Rome on the 12th instant, and in Naples about the 21st. By what we hear, the Countess de Mirafori is to inhabit the Palace de Capodimonte this Winter, which perhaps lead us to suppose that His Majesty will spend the best part of the Winter in Naples.
- The wife of Ximenes, Spanish Minister to Rome, was formerly Miss Addison, of Pittsburg, and is described as "one of the loveliest of our American ladies."
- Authoritative contradiction is given to the story that Miss Nellie Grant, a daughter of the President, was to be married to M. Duvergier de Hauranne.
- The impending marriage is mentioned of Mdlle. Natalie Dosne, niece of M. Thiers, with Mr. John Stuyvesant Cruyer, of New York.

# Special Brevities.

- The Japanese have fireworks made expressly to be let off by daylight. The following description of them is taken from an account of a recent festival in the Yokohama Herald: "The second day was occupied with exhibitions of the Ingenious daylight fireworks, of the manufacture of which the Japanese appear to be the sole masters. As usual, these consisted mostly of bombs, which, exploding high in the air, discharged sometimes various colored jets of smoke, and sometimes closely-folded packages of wire and paper, which unfolded themselves into parachutes of great bulk and symmetrical design. They were sometimes fish, which swam leisurely through the atmosphere to the ground; or snakes, which writhed themselves away over the tree-tops; or great birds, which hover kite-like and motionless for an incredibly long time. Occasionally they took the shape of cottages, temples, human beings, magnified crests of Daimios, trees and flowers—almost anything which a lively imagination could suggest. The smoke figures, however, were the most amusing. One of the most frequently attempted was a cuttle-fish, with a body of thick, fuliginous black, and arms of lighter hues. Of course the illusion was very brief, the wind not allowing the smoke to remain undisturbed for more than a few seconds, but while it lasted it was perfect."

   At the last meeting of the Chemico-Agricultural Society at Belfast, under
- At the last meeting of the Chemico-Agricultural Society at Belfast, under the presidency of Dr. Knox, late Poor Law Inspector, the subject of whisky adulteration was brought under consideration by Dr. Hodges, who exhibited a specimen of that liquid brought to him by two men who had been physically incapacitated by drinking a small quantity of it in a public house. He found on analysts that it contained a large amount of naphths. He had also discovered that ingredients of even a more deleterious character were used in the process of adulteration—instarces containing sulphate of copper (blue stone), Cayenne pepper, sulphuric acid (vitriol), and a little spirits of wine. One specimen submitted to Dr. Hodges was number of provision curers and enters, was composed of naphtha and a slight coloring of whisky. The men who had imbibod a small quantity of it were affected with serious symptoms, and this, said Dr. Hodges, was a fair specimen of the drink sold in low class public houses. The trade in this noxious compound is carried on with impanity, no local suthority in Besissi, or in the province of Ulster, carried to exercise the powers with which the Legislature has invested them for the suppression of the traffic.
- Father Secchi communicates to Les Mondes the particulars of a violent solar explosion on the evening of the 7th of July. The internal movements of the incandescent vapors were so intense, that the luminous clouds were seen to change form rapidly, their hight being six times greater than the earth's diameter. The eruption continued about two hours. On the same date, aurors borealis was seen at Madrid and in many other parts of Europe, and the magnetic perturbations were very violent at all the observatories.

The Madras Times speaks sadly of Madras. It writes "with shame" that Madras' most fashionable drive runs through a parcherry, "which is often overswept by the smoke and fumes of burning bodies." Then "the fine equipage rolls past, and —ugh—it has to roll through everywhere floating odor of fish, ghee, and rancid hair oil; naked children play about, squall lustily, or fly their kites in the faces of the borses as they speed along. A little distance more, and a wall is come to that only fartislly conceals a filthy burning ground. A murmur of voices is heard faiutly from the other side. Your heart rises within you with horror. You know what is going on there—they are committing a body, that of a man, who, for all you know, has died of cholera, to the pyre. You can hear the fames crackle, you can see the smoke—yea, and it sometimes (whenever the land-wind is blowing) floats right across your path, as you give your horses the whip to make them dash by the fragrant spot as fast as possible." What sweet thoughts on mortality a "crackling body" suggests to carcless sinners on pleasure bent! The writer concludes by exclaiming, "May the Millenium of Noses soon arrive when the odorous burning ground, the fragrant parcherries, the sweet-scented drains, and the perfume-breathing Cooum, will be things of the past!"

The editor's letter box is not often opened bone fide to the general public. There are many wrong impressions current about it. One is that the amatory correspondence of which so much is made in print in different magazines is manufactured. Some of it is, but not for want of a good supply of the real article. I have seen letters by the score from lade and lasees asking the most innocently amusing questions about sweethearts, and weddings, and "all that," "How soon after we first knew each other should I allow a gentleman to kiss me?" "Is it proper to sit on a gentleman's knee after he has been paying his addresses about three months!" "A gentleman whom I have only seen twice altogether took me to Rosherville, and while there kissed me several times by force, though very polite in his manners. Do you think I ought to inform my aunt, with whom I am residing, having lost my mother?" I have seen questions like these by the dozen in the editor's box.—St. Paul's.

— Sir William Bodkin (says the Builder) has a friend who wishes to lead persons conversant with the subject to consider the practicability of producing a form of stove for ordinary sitting-rooms and kitchens, to consume as far as possible its own smoke, and to ensure the most perfect and judicious use of the coal to be commed therein, and has empowered Sir William to guarantee any reasonable amount (say £500) for prizes or otherwise, in the confident expectation "that the effort may lead to a satisfactory solution of what has been truly stated to be one of the urgent problems of the day—"the attainment of sufficient warmth for cooking and for comfort, with the least possible consumption of coal." The council of the Society of Arts have accepted the duty of appealing for designs, and have appointed a committee to confer with Sir William Bodkin, and concert with him the proper action to be taken. We advise some of our readers to set to work and get the prize, which will not be the £500 offered, but a fine fortune.

— The Emperor of Russia has issued a ukase, ordering the immediate establishment at St. Petersburg of a school to train midwives, as up to the present time no such institution has existed anywhere in that immense empire. The curious part of the matter, however, is that the direction of this school is placed in the hands of the Minister of War, who, under date of the 10th of August, published the regulations of the institution and the programme of the studies. This anomaly results from the fact that the new school is subordinate to the Academy of Medicine and Surgery at St. Petersburg, which also is under the control of the War Department.

— At San Gabriel, Rio Grande do Sul, while a number of gentlemen were amusing themselves at night during a thunder-storm, a joker, Juca Tigre by name, wished that the lightning might strike the house and turn everything topsy-turvy. Instantly a loud report was heard, five men fell down, one dead, one was burned, and three senselees. The lightning had struck the house, killed a man whose head rested on a wall, and thrown down two others leaning against it. Another in the same room, who was supping, was seen enveloped in fames, and on being stripped, all his clothes were burnt inside, a vest pocket, wherein were two gold onnes, were all burned on the lining side, and one of the coins melted. His hat was in shreds and his boots all burnt.—Anglo-Brazilian Times.

— The curator of the Brighton (Eng.) Aquarium had a treat the other day which must have brought joy to his scientific heart. While he was watching a cluster of the grape-like eggs of the cuttle-fish, a young one "literally rushed into existence, so sudden was its exit from the egg; and, as if to announce its safe deliverance, the baby cuttle instantly fired a sepia sainte."

— The culture on a large scale of sugar beet is about to be commenced in the County of Cork by thoroughly experienced continental growers.

— A firm of opticians at Manchester have presented 1,500 pairs of spectacles for distribution to the poor of the workhouses.

— A London paper publishes the following anagram: "David Livingstone—Go (D.V.) and visit Nile."

In the three years ending the 31st March, 1872, gold coins of the nominal value of £1,975,716 were cut by the Bank of England. The loss sustained by the owners of the coin amounted to £25,415, a seventy-eighth part of the nominal value.

#### Ballad of William Jinks.

IN IMITATION OF THE AMERICAN STYLE. Bill Jinks was a miner on Ballarat, A most tremenpous bloke

He lived in a cabin in Murderer's Flat, And did nothing but swear and smoke;

And when he d got on bis "whisky hot,"
"My word," says Parson Parr,
"When Bih Jinks drinks! always thinka
The gate o' hell's ajar!"

From the Island of Cockatoo, [stretch, When the cheerful wretch had got fifteen A With five still left to do.

'Twas Porky Clark made that remark

As a sort of amusin' rumor; But Jinks let drive with a Bowie knive, And spoiled his sense of humor !

Now, drinking one night at the old Napier, Now how he did it no one knows, Where Bill would off retire.

There comes in a horror upon us three Of some one crying "Fire!"
We rushed to the door, and Bill, before

A blessed soul could speak. Cries, "By the hoky, it & Kinder's store, My mate on Chiliney's Creek!

The flames ran roaring like the sea, All yellow, blue and green "Its all along," says Bil, to me,

"O' that blusted kerosene. Serves Kinder right for being an ass An' storing the cussed stuff

Say, let s go back for another glass, I guess we've seen enough.

I thought the same, when the roar of the

And there at the garret winder Old Maggae Dod, the cripple, stood -She as minded the kids for Kinder Out jumps our Bill I feels a thrill When I think of the figger he made

(Just then came thunder n over the fall The Ballarat fire brogades. [brown, The Ballarat fire brigades. [brown," That woman, says he "is a frizzlin' "That woman, But the crowd said never word;

"Who I come with me to help her down?" But never a man of 'em stirred.

There was a report that Bill was brought "You curs," he says " if that bag o' bones Was a woman plump and young,

A callen for help in her tresh young tones, There'd be all of ye givin' tongue; But because she's nonghit but that rum old

A virgin of eighty-three, [sort, You d wel, you lisee har d d, in short, Ere you'll burn for such as she."

It has always been a pazz'c, But he serzed the and of the angine-hose, And seated himself on the muzzle.

"Now pump like furnes my hoys," he cries,
"And pump me up to glory!" [flies,
They pumped! and Belt on the stream jet Borne straight to the upper story.

He gripp'd a holt o' the window ledge (Old Maggie was turning brown) And wait d, hanging on by the edge

For the p t to take him down [stream, They pumped' and Bil on the sinking With Meg in his arms descended,

When something got wrong with the engine-beam.

And the water suddenly ended!

Was split by a woman's shrick
That cieft, a quivering clear, and clean, a through the crowd the one that lived
The rolling fire reck.
The chering fremen bore.

The chering fremen bore.

[guest Trues Mer. survive]

This smooth [gness.

Just makes my eyelids smart; But Bill was just an unpleasant mess, Like a trod-upon raspberry tart !

Perhaps in Heaven there ain't no Bars, Where triends can meet each other (I haven't made out this world yet, Lord, let alone the other). But if there be, I ll there meet him-For God is just I thinks And liquorin' up with the seraphim

-Australasian

# Sits the soul of William Jinks! Now and Then.

When Governor Stanford projected the Central Pacific he came to San Francisco, and, in company with a prominent member of the Bar and a very large real estate owner, went about to the offices and stores of all the merchants of San Francisco soliciting in the most earnest manner aid for the great undertaking. Governor Stantord asked them to take the controlling interest in the road, that the interests Stanford asked them to take the controlling Interest in the road that the interests of San Francisco might be protected. Some of the merchant princes treated the Governor and his party with bare civility; others took no pains to conceal their amosement, contempt or wonder that anybody should supose they would take stock in an enterprise of this character. Only three subscriptions were obtained from Sam Brannan, L. and M. Sachs and Mr. Patterson, Attorney. Now, Governor Stanford is not to be ignored. Now, she can obtain an audience of our most liberal public-spirited merchant princes. Patience and persistence can win even with the culightened public of California.

<sup>-</sup> Californians in Europe are reported in the Paris American Register for the Veck ending September 7th as follows: At Paris, H. W. Harkness, Nuna Hubert, Albert C. Jeron and O. E. Shafter and wife, at London, Captain C. H. Harrison, and wife, cooper Thruner and wife and Miss. Ne he Turner; at Manchester, Mr. Magairie, at L. vappool, Mr. Fargo, at Brussels, C. H. Bradford, at Geneva, A. L. Rarties, and wefe, Mrs. J. Clarke and family, and C. Reis and wife; at Branslotten, on the Main, Mrs. L. Arnold, Charles Crocker and wife, and Mrs. C. A. Peake; and at Hanover, James Phelan.

#### Letter from Lower California.

[Correspondence of the News Letter.]

Life Under Mexican Rule-Capital Punishment-Compulsory Education-An Enlightened Republic.

This Republic of Mexico is foremost in bearing the banner of progress—a fact very imperfectly understood abroad. How delighted that illustrious bard and philanthropist, M. Victor Hugo, will be (supposing he is a subscriber to the News Letter) to learn in what amicable manner that grave queetion of capital punishment is treated and solved in this model Democracy! I proceed to facts: A few weeks ago, an old native of this country, father of a numerous family, while peaceably walking along an open path, carrying a sum of money wherewith to pay the week's wages to the workmen at a neighboring mine, was waylaid in broad daylight and numbered. Hone sarch the bedy was famul next day among the hashes near the murdered. Upon search, the body was found next day among the bushes near the road, horribly mangled with seven murderous stabs. Near the scene of the massacre a blood-stained knife and a hat were found, which gave a clue for the discovery of one of the assassins. It seems that this fellow during the scuille had dropary of one of the assassins. It seems that this relief of the picked up the hat of the ped his own sombrero, and that after the deed was done he picked up the hat of the victim in a burry and ran away, not during subsequently to return to correct his mistake. He was tracked to a den in the village and arrested with three others and a woman, all falling under strong suspicion of being complicated in the affair. Brought before the Judge of this District, two confessed to having been direct par-Brought before the Judge of this District, two confessed to having been direct participators in the murder, a third courade, apparently their principal, had ran away with the bay of money (\$150 in silver coin, and so far is "non inventus." The woman, wife or concubine of the absconding Captain, gave the signal that the victum was appreaching. Two men were engaged to watch the road on both sides of the point of attack. It was a most savage and premeditated murder, with the sole aim of robbing that unarmed old man. The whole gang was escorted to La Paz to have sextence passed over them there by a higher tribunal, but luckily capital punishment had been virtually abblished some time ago in this happy country, with some exceptions regarding political offenders. Prompt punishment for ordinary crimes might depopulate the country too rapidly. Robbers and murderers are not liable to be executed unless caught "in flagranti," or if fully convicted by self-confession or undealable ocular evidence, and then the execution must follow within forty-eight hours. If delayed beyond this time the criminal cannot be judically put to death, and as we have no regular State Prison or Penitentiary, he will within forty-eight nours. In easyet open data that the training carino of pull-cially put to death, and as we have no regular State Prison or Peniteutiary, he will be set free after a short detention. Because, what shall we do with him? Why should the virtuous community incur the expense of furnishing the rasked with free should the virtuous community incur the expense of turnishing the rasea with the board and lodging for a length of time? And might such generous treatment not become rather an incentive to other hombres thus to gain an easy and comfortable subsistence by simply killing their fellow-citizens? Such seems to have been the result on the present occasion. That time of forty-cight hours having expired, two of the convicts have been already discharged from custody, and the release of the ment will neabbly expense. rest will probably soon follow.

rest will probably soon follow.

Another important question which sgitates the public mind to some extent in the old countries, is that of compulsory education. Now I will tell you how the same is understood and practically carried out in this enlightened community. One find morning the Alguard (constable or policeman) ponnees on a group of noisy children, playing in the street opposite the school house; "What are you doing here, you little scamps? Why don't you go to your school?" O, the school master has not come yet; we are waiting for him." "What, not come yet, at this time of the day? I must look after this?" So the eccentric officer struts off to the master's countries and appostronly see him; in a high? way for prefer they high divise. The man quarters and apostrophizes him in a bluff way for neglecting his duties. The man of learning indignantly retorts, "that it is none of the other's business." But the muscular man of order takes the vainly-struggling pedagogue by the collar, gives muscular man of order takes and varing struggling produced the gymnasium—there to the act the young idea how to shoot." Independencia y Libertad!

Cordially yours,

M. \* \* \*

#### Gipsy Monsters.

A spirited Red Riding Hood, aged twelve, was met by two wireworkers whilst carrying some food to her friends warking in a field near St. Andraez, Hongary. The two gipsies demanded of the girl to let them have the provisions, but were stontly relused by the girl, when the monsters seized her and tied every limb of her body with wire so tight that the flesh was cut into, and then they passed a wire through both lips of the little sufferer, and twisted it tight to reading. This horrible martyrdom was enacted in a maize field, where the sends consumed the meals so valor ask defended. The owner of the field happened to pass by, and hearing a faint meaning, the fightful sight soon opened upon him. Retreating hastly to fetch help, he fortunately met the commissaries and two pandours, who were chasing vagrants. The monsters were taken into custody a few hours afterward. A emith had to be called to open the wire net in which the interesting martyr was tortured, but, sad to say, when the wire was extracted from the lips the poor girl breathed her last.

#### The End of the Pair Trial.

The Jury in the case of Laura D. Pair, on trial charged with murder for the killings of A. P. Crittenden. Esq., this morning returned a verdict of "not guilty." The question must at once arise in the mind of every thoughtfu critizen—Where does the responsibility for this verdict rest? A grave responsibility rests somewhere. The circumstances of the killing need not be recapitulated. According to the com-The circumstances of the killing need not be recapitulated. According to the common understanding of our criminal laws, they were instituted for the exact purpose of procuring a condemnation of murder in a case like the present. On trial, the system has broken down. Where was its weak point? with the jury 'with the Court' with the prosecution' the witnesses' the law itself' In our judgment, the answer to this question is the most important matter before the community of San Francisco to-day, affecting permanently their social well-being.

Mrs. Fair's defence was insanity. A number of medical men, the "experts" so-called, were secured to teelify that she was insane. It is true, a number of others testified that in their judgment she was earn. But between the testimony of these two sets of men there was room for the formation of a legal "doubt "G such a doubt, the account is prognounced by law entitled to the benefit. If such a doubt, the account is prognounced by law entitled to the benefit. If such a doubt, the account is prognounced by law entitled to the benefit. If such a doubt, the account is prognounced by law entitled to the benefit. If such a doubt

two sets of men there was room for the formation of a legal "doubt." Of such a doubt, the accused is pronounced by law entitled to the benefit. If such a doubt is honestly entertained, the jurymen are forbidden to convict. The course of the trial in the present case was such that the verdict could have rested upon no other ground. The fact and the circumstances of the killing were not attempted to be denied by the defence. There was no suggestion that they failed, if performed by a person of secund mind to bring the act with no the legal definition of murder. The sole point upon which a verdict of guilty of murder was avoided, was the alleged unsoundness of mind in accused at the time of the killing. And upon this point, the doubt resulted by the law to amount the control by the law to amount on accused. point, the doubt required by the law to support an acquittal, was created by the testimony of the "experts" for the defence.

festimony of the "experts" for the defence.

This brings up the question of the character and value of "expert" testimony, which has of late engaged a renewed attention in the Eastern States. There recent trials have brought it into prominence. Two of these were cases involving issues of chemical and visis: The Wharton trial in Marytand and the Schoeppe trial in Pennsylvania. Both resulted in verdicts of acquittal. As was said of the first by a distinguished lawyer and diplomat of nations, reputation, "The jurymen were the only twelve men in the country who were probabiled from finding her guitty." In other words, the evidence had failed to be absolutely conclusive that the nam Mary Wharton was recomed of relicious to the country who was the country who was proposed to the country who was the country when we want to be a country when the country who was the country when the country who was the country who was the country when the country who was the co guilty." In other words, the evidence had failed to be absolutely conclusive that the man Mrs. Wharton was accused of poisoning had actusly died from poison. The third case was that of a young woman in Brooklyn. New York, who in cold blood shot her employer. She alleged facts to constitute extreme prosocation, and though the racts were feebly supported by evidence, medical "experts" were retained to testify to the same sort of "insanity" which has now served to acquit

Mrs. Pair, and with equal success.

The difficulty in attaining the objects of the law under the present methods of its administration, is seen therefore to its, when reduced to its ultimate source, with the testimony of certain "experts." This class of testimony causes such repeated. failures of the law that they constitute the rule while its successful enforcement is This being the fact, it results that our legal methods of admitting b that testimony require revision. It will not do to rely upon the the exception. and dealing with that testmony require revision. It will not do to rely apon the professions themselves to reform the mischlef by bringing pressure of opinion to bear upon members who may be thought to have defeated crunnal justice. The remedy is inadequate and too uncertain in its application. The most practicable remain is that requare and too officerant in its application. The most practicable reform probably should be to refer disputed questions of scientific fact to a jury of scientific men, themselves qualified to attach to the scientific testimony its true value. If a question of fact arise as to the discovery of poison by chemical analysis, let that issue be tried before a jury of chemists, they might be three in number, or let that issue be tried before a jury of chemists they might be three in number, or five, or as convenient, who should return a verdict on that point for the guidance of the court and jury who try the other issue, whether the poison was administered by the accusad. If a defence of insanity be interposed to a charge of murder or other felony, the fact of insanity might be tried before a jury of medical men, who should report their finding to the court and jury who try the general issue of the alway designed for the protection of human life would frequently be followed by enforcement of the prescribed penalty.

— An indication of the temper of the public mind in California on the question of extending aid to railroads, is afforded by the election held in San Diego on the 27th inst. The issue was upon issuing city bonds to the amount of \$130,000, for the purpose of purchasing the franchise of the San Diego and 69th Railroad Company and terminal grounds for the Texas and Pacific Railway, passed off very quietty. In the First, Second, Third, Fourth and Fifth Wards, 324 votes were cast; of this number 226 voted for the bonds and 7 against their issuance. One blank vote was cast. There is reason to suppose that nearly equal unanimity would be exhibited by the people of San Francisco on the question of bringing the State railroad system into connection with the city by the proposed Ravenswood heridge.

We learn from the City Press (London) that in consideration of the present high price of provisions, the governors of the Bank of England have added a gratuity of five per cent. to the salary of every officer, clerk, and porter in the tablishment.

### Fair but Foul.

Mrs. Laura Fair D. Fair, Your feed has won you great renown; You shot to death a generous heart

For pastime, as you went to town. Him you had wiled and long beguiled, He saw the snare and he retired;

The relict of a dozen men, You were not one to be desired.

Mrs. Laura Fair D. Fair,

Are not strange memories in your head?

Not twice our branching limes have blown

Since you beheld your victim dead.
O your soft eyes, your low replies;
A great enchantress you may be
But there was that in your false heart Which we had scarcely cared to see.

Mrs. Laura Fair D. Fair

There stands a spectre at your wall,
The guilt of blood is at your door,
Though murder 's now no crime at all.

You held your course without remorse, You went for all that he was worth

And last, when breaking through your toils, You smote him basely to the earth.

Trust me, Mrs. Laura Fair,
By you blue heavens above us bent,

All honest hearts who read your notes, Smile at your claim "abandonment."

How e'er it be, it seems to me Your gushing phrases were but snares; Kind words were meant for corner lots,

And simple faith-in Belcher shares.

I know you, Lady Laura Fair,
You pined within stone walls and towers
Until set free—to your surprise—
By those bright jurymen of ours.
In glowing health, with stolen wealth,

Sweet murderer you can take your ease; For crime stands clear, and none need fear

When Justice plays such pranks as these!

W. H. M.

On Tuceday last, a rare and radiant maiden of romantic turn of mind, who dwells high up somewhere, went, as usual, to her cloistered sanctuary, unsuspecting of cvil. Quickly she disrobed. The Dolly Varden was laid creaseless and uncrinkled on a chair. A flutter of white linen followed, and something like a roll of crinkled on a chair. A flutter of white linen followed, and something like a roll of paper fell down. A yard and a half of elastic in twin circles was next withdraw; two tiny feet appeared, and then she took off—well, she took them off and hung them on a chair. Then in spotless but brief attire knelt she down. Short but fervent was the prayer, the gas was exinguished, and this angel in flesh nestled amid the sheets—a rose on snow. The droway god hovered o'er with tremulous wing; then, lifting her gently, bore his precious burden to the mystic land of dreams. All was serene and beautiful without; the stars twinkled in merry cadence, and looked down with smilling eyes on the rarely beautiful picture of that sleeping virgin. Silence reigns supreme, and—but hark! "Dreaming of Thee" comes floating up—steals in through the window, and down the ear of the damsed floating on the dulect notes of a hand-organ. Below her lattice, in the back yard, may be descerned by the faint light, a cadaverous youth grinding at the instrument. floating on the dulcet notes of a hand-organ. Below her lattice, in the back yard, may be descenced by the faint light, a cadaverous youth grinding at the instrument. Hearing no response save the regular nasal overture of his Juliet, he pitches his voice yet higher. Again he shifts his barrel, and "Come into the Garden Mand" is wailed forth. The sound of this familiar air awakens the damsel. Her thoughts, ever romantic, are given vent. "That's Jim," quo' she; and rising softly she ambles to the open window. There was a rattle of a casement, a gleam of white crockery flying through the air, a youth entangled in the wreck of a hand-organ—one universal damage. And the next day a father proceeded down town with an order for a new washbasin. As an invention, this paragraph angule be thought to praye powerty of imagination. prove poverty of imagination. As the calm bath en of an actual occurrence, it is perhaps a success.

<sup>—</sup> A man "arrested for the murder of a Chinaman in Weaverville!" Do our eyes deceive us! "Is visions about! or is the Caucasian played out." No: Oh—the man arrested was also a Chinaman. Which accounts for it.

#### The Young Mustache.

Nor touch a single hair Your razor, brush, and other trash. Must never venture there.

At last the bud has blossomed out. By much caressing taught :

Oh, barber, spare that young mustache, Though well laid out and wide the field, Whence this young mustache shoots; The sickly soil no more can yield-Oh, well guard then its roots;

For should the murd rous blade sweep o'er That curv'd lips shadowy mist,

Its frail young tendrils how they sprout—The tender plants would bloom no more—
Then, barber, touch it not.

Then, barber, oh, desist.

Think of the dear young girl, whose lip
Was wont so oft to press
That budding mouth its sweets to sip— Oh, think of her distress; 'Tis unfledged manhood's pride and joy, With sighs and tears 'twas brought, Let no rude stroke its life destroy— Oh, barber, touch it not.

#### New Books.

SAILING ON THE NILE. By Laurent Laporte. Translated from the French by Virginia Vaughan. Published by Roberts Bros., Boston. A. Roman & Co., San Francisco.

In these days of universal travel and universal authorship, it is rare to find a work containing so many new ideas on such an old subject as the Nile. As the author says: "Originality is an intermittent but an inexhaustible fountain; even in subjects apparently the oldest, those that have been the most often treated, talked about to all eternity, there is always some new point of view to be considered, some new form to be observed, some new aspect to be described. is nothing older than the spring, the green fields, and the flowers; but neither is there anything sounger, that there will always be birds, and poets to sing about them." For instance, the view that he it always of obliques is so entirely different them." from the usual experience of travelers and letter-writers, that we are tempted to quote it: "You have heard the saying, that the street is the place to look for wit? In Paris the street-boys monopolize it; in Egypt the donkeys. You cannot imagine, indeed, the ardor—I was going to say, nerve—of these pretty beasts, so spirited, alert and gay. With their wide-awake, animated expression, they win all hearts from the very first. A shrewd, sagacious physiognomy; eyes tender, although keen; well-shaped, clean-cut hindquarters; and, above all, the most coquettish ears in the world. Their gait is either a quick, short trot, or a fast canter, and this they keep up for hours, and even for whole days; for there is no other creature so indefatigable and fabulously abstenious. Oh, these adorable little donkeys, worthy descendents of the ass of Balaam!"

The author's novel views of traveling conveyances are not confined to the land. Hear what he says about water traveling: "The sailing vessel is the child of antiquity. It plays an important part in the early history of all nations, and is especially at home in this old valley of the Nile—the primitive cradle of the human race. The steamboat belongs exclusively in the vortex of modern times. It represents progress, haste, confusion. The old system of navigation, the spirit of the past, these survive in the sailing vessel: that adventurous, free, hopeful spirit, which never ceases to believe in adventures, to love novelty, and trust the from the usual experience of travelers and letter-writers, that we are tempted to

spirit, which never ceases to believe in adventures, to love novelty, and trust the spirit, which never ceases to believe in adventures, to love novelty, and trust the future. Man is the God of the steambout: it depends upon him for its every movement. The sailing vessel relies upon its good genius, that mysterious and invisible force which comes from on high." His description of the desert is florid and poetical, and his word-painting as vivid in colors as the sunsets he describes: "Far as the eye can reach you see nothing but a sandy plain, a bare sweep of desolation, an empty void of space—that strange feature of natural seenery, in a word, which we call Sahara. The desert is always being compared with the ocean, and not without reason. With its grand, heavy, level horizon lines, it impresses and, indeed, overawes the mind as the ocean does; it rises into hillocks of rounded and movable-like waves; it closes quickly over the track of ninoess of rounded and movable-like waves; it closes quickly over the track of travelers; and, like the ocean, it devours corpses. When in repose, it is covered with small regular ripples; but tempests are hidden in its bosom, and its red waves beat incessantly against the base of the Pyramids, correding them and strewing them with a foam of ashes."

Of the Pyramids he says: "Suddenly, we all cried out with one voice, 'the Pyramids!' The first ray of the rising sun had just struck their summits, and in

the mists of the misty aureole of the morning they arose before us white and shadowy as a vision. What shall I tell you about them? Any sort of a description would seem to be superfluous; for their magnitude is really the only remarkable would seem to be eagermone, for the imagintude is really the only that this mere vastness produces a sablime impression. These long straight, rigid, unbroken lines; these large surfaces, smooth, unadorned, lighted by a single sweep of sunshine, taken in by the eye at a single glance-what could be more effective? How wonderfully those old Egyptians understood the human heart! With no idea to embody but this cold geometrical form, they succeeded in producing a monument of the sublimest description, which, even now, wrests from our weakness a cry of

admiration. And herein, perhaps, lies the secret of the feeling it arouses; for human weakness always admires grandeur, force, just as uncorance is awed by what it does not comprehend. What does history teach? Posterity forgets and despises the peaceful genial virtues; it reserves all its crowns, all its applause for pride and egotiam, when displayed on a guantic scale. Thus, then, we shinter the tomb of Cheops as we do the exploits of a great conqueror, because they seem to exceed the limits of what can be accomplished by human strength. What contrast could be more striking than that between our cathedrals, built voluntarily by a Christian people, and these tombs, erected by troops of slaves, trembling under the rod of the oppressor '--our churches, symbols of the faith and love of a whole nation; these tombs, monuments of the barbarty, the cruelty, and menstrons pride of a single man. The Chrastan Church is typical of the soul's flight to heaven. The Egyptiam monuments declare merely the stability of matter, the immutability of the mummy, the immortality of death."

CHRISTINA NORTH. By E. M. Archer. Published by D. Appleton & Co., New York.
A. Roman & Co., San Francisco.

This is a charming little love story, tender and pathetic. The story is confined to a few characters, but these stand out with all the vividness of reality. Any of our readers who wish to forget their work-day cares and vexations, will do well to peruse this *kille* volume.

Also from A. Roman & Co., we have :

STORIES AND POEMS, by mother and daughter. By Caroline Gilman and Caroline Jervey. Published by Lee & Shepard, Boston.

PICKED UP ADRIFT. By Prof. James de Mille.

# Laura D. Fair.

The trial and acquittal of Laura D. Fair for the murder of Mr. Crittenden, can not, and will not be passed in silence. The verduet of the jury struck everybody with surprise. It was supposed that they might not agree. It was believed that she would have been admitted to bail, and that after long delay, and perhaps renewed but void attempts to bring her to justice, she would in the end go unpunished. The verdict of acquittal was unexpected. This bad weman of infamous history, this female of many husbands, and more lovers, not only goes unpunished, but the jury pronounce her guiltless of crime in having, with premeditation and malice, taken the life of her paramour. In her first defense the attorneys for the prisoner undertook to browbest public opinion and brave public indignation. It was virtually a confession and justification of the act. It went upon the theory that America had established a new code between the wanton and the lover, and that killing by a betrayed woman is no murder. The defense failed because the conviction in the public mind, and the testimony before the jury, was that Mrs. Laura Fair was not an innocent madlen, but an artful and brazen adventing, he was, in his relation to her, a weak and infatuated fool. She was found guilty of murder in the first degree. The Supreme Court gave a new trial, and in that trial with new counsel there comes an entire change of defense. Her own self-confident testimony was withheld, and instead of the bold and default average of woman's wrongs, she played the part of the sorrowing and weeping victim of man's inhumanity.

A frail and feeble thing, a "poor waif," driven to frenzy through her too confiding leve, reason had descried its throne, and, in a moment of insanity, had perpetrated the unconscious act of taking the life of the leved one. From a panel of nearly five hundred jurors, twelve had been found obscure and ignorant enough the given the properties of "not guilty" is rendered, and the legal curtain drops again upon this bloody farce. What will be the next act in the life drams of this notorious female we wait with patience to be developed. Hers has been a strange and eventful life. Love, marriage, suicide, divorce, murder, have followed each in quick succession through her sensational and eventful career. She has now her freedom and—What will she do with it? is the problem lying before her. Will she retter from the public gaze, and, by a modeat deportment, evidence a fincere descrete unde the wrongs of her career, or, with brazen confidence, will she ring up the drop curtain, and shall we again see her before the footlights in some new dramatic act? Rumor runs through the town that this fair fiend with the golden locks intends to give her bloody hand in marriage to the counsel who so ably conclusted her defence. If we are correctly informed. Mr. Crittenden made her acquaintance in defending her for murder or manslaughter, in Nevada.

#### Uneven-handed Justice.

In the corrupted currents of this world, Officere's gilded hand may shove by Justice—HANLET.

Shall Justice hide her drooping head, And throw her sword away; Shall murder don her robe of red, And scornful laugh and slay? Shall gilded crime usurp the sword That Justice used to wield, And sanctioned murder walk abroad Bearing a golden shield? In California's favored clime The gifts of God are fair,

The gifts of God are fair,

Shall earth-worms soil them with their No more we bide a haughty want,

Then scatheless go elsewhere?

No more a purchased ruth. In this our dark and bitter hour,

Justice to-day is bought with gold. The scales no more are just;
Her mandates now are bought and sold By jewelled crime and lust, But let us hope the day will dawn, When Justice shall awake, And struggling through the misty morn Her golden fetters break. Let that day dawn. A people's want Let not the unavenged dead Guilt careless dares the day;

Hath it but charms, or wealth, or power,
To work its sincous way.

Let not their bitter tears be shed
That Justice reigns no more.

# Leaves from a Lady's Diary.

SEPT. 30TH.—Henry came home to lunch to-day quite cross. He has received a commission from some ont-of-the-way place in Europe to hunt up two children who are here and have come into some forests and swamps in Transylvanina. He has had applications from half a dozen rough looking foreigners who claim to be the had applications from Ball a dozen rough looking loreigners who claim to be the heirs, all of them treating him as if he had their rents in his pocket or was authorized to advance them fabulons sums on their patrimony. He declares that he will introduce a bill into the next Legislature, enforcing that each child of foreign bits shall be branded with a national seal, referring to its parentage. Such seal to be placed on record, as well as on the baby, in the part designated by the mother. Went to the opening of the renovated California Theater. Very clean, white, bright went to the opening of the renovated Canfornia Theater. Very clean, white, oright and gay, those horrid pigeon-holes, called boxes, removed, and the remodelling a great advance. The piece not much, and the great attraction a private box containing the Countess and Baroness, with their husbands. The Countess is very pretty, and her sister tail and striking-looking with her fine figure in a tight black slik dress—for they are in mourning. The Count was invisible, but the Baron showed in front rather superclibusly surveying the audience, and without gloves. It was strange to see him turn his back to his wife during the performance and not regard some tape of her fan on his skoulders. Such things have been seen in Paris, but are strange here. The curios studies and the strange here. The curios ty monger came to see the new theater, and the play was not attractive enough to entice the dilletanti.

Ocroses 1.—The Roman Emperors, when they wished to please the people, used to bring together at their shows in the amphitheater people from all nations of the world. I thought of this when I went to hear the Fabbri-Müller troupe sing. "Norma," the great priestess, cursed "Pollio" in German, he implored her parion in excellent French; "Adalgisa" whimpered her part of the famous duet in Italian, and the Druids very properly roared their choruses in English. Yet I was very much pleased with the singing. Mary B—— came to see me again to-day, and was more demonstrative in her affection than she was yesterday, and as though she had only known me these two days. There are some people who go on for years on good friendly terms one with another, till all of a sudden it dawns upon on of them that she quelt to love still more and so the persistently forces her parts. years on good friendly terms one with another, till all of a sudden it dawns upon one of them that she ought to love still more, and so she persistently forces her parafection upon the other, even to the extent of satiety. Some children say simple, wise things which puzzle their elders. I was telling little Lucy M—— that it was the fairies who had showered the rose leaves in her garden bonnet, when she innocently asked, "Why, then, did they choose my dirty bonnet to put them in?"

OCTOBER 2. - Went with the rest of the world to the Sonntag night, and felt sorry for the poor girl, for the cold compassion of an audience is more bitter than open for the poor girl, for the cold compassion of an audience is more bitter than open disapprobation, showing, as it does, how very little excellence would call forth applause. Bessie T— was sitting just before me, and for a long time I could not make out why she was continually bowing and bowing, and always nearly in the same direction. I looked, but could not see anyone answer her salute. At last found out that she had a new bonnet, and the trimmings on the back were always getting into her neck, whereupon she was bowing them out. Went to see John S——'s good collection of paintings, which are going under the hammer. The ex-Senator is one of those spoilt children of fortune who become add of good things. Sated of political power, weary of the sameness of an uncheckered existence, tiesd. Senator is one of those spoil children of fortune who become sated of good things. Sated of political power, weary of the sameness of an uncheckered existence, tired of looking at his beautiful pictures, he sells them off and takes himself off to new faces and new works of art. Poor little Minnie F—— has awakened from her daydream of love, and finds her handsome boy-husband to be what everyone else knew he was—selfish, ignorant and vain. She reminds me of that line of Worsley's—

Slowly and sad, like one that hath her wish, And finds it other than she hoped—not gain, But bitterest loss—such Echo sadly felt And mourned Narcissus.

# Out of the Noose.

Ring down the curtain, put out the light. The play is played, and we have all Ring down the curtain, put out the light. The play is played, and we have all had our grin. Benedicks now skurry home before the shades have fallen, and can not be tempted out after dark. They skuds up and streets and dodge into deor-ways on the appearance of a petitroni in the distance, abject fear departed in their ways on the appaarance of a pettreoat in the distance, abject fear depacted in their faces. Grosers, butchers, laundrymen assail the wives of their bosoms for the money which is not fortheoming, while the Aspassas are gluttering with rings, brasislets and no klaces, since the rendering of the famous virilet. Mr. A., whose grandfather's life was saved at Waterloo by means of x peaketbook, carries one in every available spot about his clothing; Mr. B., who served in the Confederate saved at Yarkee bullet in the dagmertestype of his sweetheart, and was saved thereby. He carries a whole stack of Mrs. B.'s portraits as beassworks most confederate, who has just finished reading an interesting article on the paper armor of the Japanese, wears a file of the News Letters as a harricade to all his vital parts. News Letters as a harricade to all his vital parts. fan tringe, and who sports but one tooth—a mekanchely renamder of the past—is still a great tavorite with the ladies. W. is rich. His family has been rusticating. stell a great layerine with the ladies. We is rich. His family has been rusticating in Gilroy for a month or two past, and were expected home on Tuesday evening. He being busy, requested News Lettin, as the family friend, to meet them. Mear a returning family in these parlions times. Net and for News Lettin: The San Jose train arrives in the dask of the evening. N.L.'s ow head is baid, and his hair is white. Aspassa in the glosin neight easily mistake him for the other man. N. L. politely, but untilly, declined. Such are a few of the effects of the Paravierdict. The closing scenes of this interesting drama were internsely dramatic. Mistress Laura, who had telt extremely limp all day, twined her nalk-white hands -milk white save one "little spot"-ground the neck, and reclined her insane From the shoulder of the cloquent Curtus, Greene, with commendable dex-territy, removed a from that sect to his knee. She might bute—for the symptoms of her hysteria, retrocedent goat, insemina, etc., are many and various. Miss Emily Pitts Premeer and the faithful Loomis were seen to enter the vacated jury room. to see it any of that whisky were left. Emough was found to brew a small punch, for, when last seen, the twain were executing the "Essence of Old Virginny," with great vigor, and proposed winding up the festivities with a " can-can." the extraordinary occasion, Emily shook hands with Mecker across the bloody chasm," and invited him to dance. He was deprived of his weapon at the dear, but the wom n all went armed. Indeed, the number of pistels, very handled and gilver mounted, that have passed from the establishment of Mesers, Labille & Kaeding into the pockets of silken-robed damsels since the disbanding of the Twelve is semething marvelous And now that the noose has been coiled up and Twerve is scheduling marvegous. Also now that the mass has been coner up and had away for some other poor devil—the "Chricken." maybap—we would conjure Mrs. Fair to get her hence, as soon as may be, to "the sunny land" where she was born; the "sunny land" where Greene Curtis was born; "the sunny land" where a number of individuals have come into the world, and a large proportion of them have gone out again, with a leaden pill in their inwards. And we would be seech Mars. F. that she stay in that "sumy land." Let ber not come back any more to get our citizens into the uncomfortable habit of dedging out of the way of her bullets and these of her followers.

# Common Sense in Japan.

The Radical Progressives in Japan have had a set-back, and a Conservative Ministry appear to have come in, who are reported to have dism saed a part of the American Staff of the Government. We await further explanation of the grounds of this action. If it shall turn out that the Japanese already knew a great deal more about agriculture than their Yankee teacher knew himset, we sha, not be astonished. If they have found out that an unconvertible currency is in some respects inferior to good and salver, and therefore turned out the Superintendent of the Bank-Note Pricting Department, we shall not be confounded. If it transpires that there observations of the practical workings of American and British law fed them to the concession that they would be better without it and to the dism'ssal of the course! therein, we shall not a sonorous. "Amen." Even if they shad affirm that European civilization is a cheat, a shan and a holo over land, we shall not stuffe our conscience to controvert them. It is an old proposition asserted in these commen, which may be repeated on the present occasion, that whether the chief end of Government be the protection of life and property, or be the welfare and happiness of the governed that of Japan is now and has for centures been the most successful on the face of the earth, superior beyond the passelsisty of comparison, to that of any country in Europe or America. And that proposition we are prepared to maintain against all comers.

<sup>&</sup>quot;The fisheries of our Coast are, according to respectable authorities, superbaric East betray his ignorance by flouring this fact. Let him first point to the new-paper in his own land which is edited by a Soule and of Macreish ownership, and then he may turn up a nose at the ancient and fish-like savor of our Alta's paragraph. Not before.

### Woman's Love.

When man is waxing frail,
And his hand is thin and weak,
And his lips are parched and pale
And wan and white his cheek!
On then doth woman prove
Her constancy and love!
She sitteth by his chair,
And holds his feeble hand;
She wateheth ever there,
Ilis wants to understand;
His yet unspoken will
She hasteneth to fulfill

She hasteneth to fulfill.

She leads him, when the moon Is bright o'er dale and hill, and all things save the tune Of the honey-bees are still, Into the garden's bowers,

To sit 'midst herbs and flowers.

And when he goes not there. To feed on breath and bloom, She brings the posy rare Into his darkened room And 'neath his weary head The pillow smooth doth spread. Until the hour when death His lamp of life doth dim, She never wearieth, She never leaveth him : Still near him night and day, She meets his eye alway, And when, his trials o'er, And the turf is on his breast, Deep in her bosom's core Lie sorrows unexpressed; Her tears, her sighs, are weak

and flowers. Her settled grief to speak.

And though there may arise
Balm for her spirit's pain,
And though her quiet eyes
May sometimes smile again,
Still, still, she must regret;
She never can forcet.

# Blackmailing the Arctic Fleet.

Prior to 1864-65, the Arctic whaling fleet had visited Honolulu for supplies and to ship their catch. In those years the fleet made the experiment of visiting San Francisco. There were a number of advantages to induce them to do so, especially that of being in communication with their owners at New Bedford, Mass. From the arrival of these ships in port to the date of their departure, they were persecuted by blackmailing suits instituted by petitiogging attorneys, which at last became intolerable. The fleet abandomed the port of San Francisco and has not since returned. During the interval, the chief of those legal muisances has died. His trusty clerk and cadiquito survives to disgrace his profession and pester commerce. The class of lawsuits which drove the whalers away are not those which are prosecuted to a trial; they involve the need of giving bonds and retaining counsel; then they are abandoned. But this involves expense and inexpressible annoyance. This year the Arctic fleet will again visit San Francisco. Three of cheir agents have already arrived in the city, and the balance will be here within a few weeks. These ships contribute in a material way to the business of the port. They purchase large supplies, and their outfit and overhaning gives employment to a number of mechanics. The trans-shipment of their cargoes accrues to our carrying lines, and their money drafts pass through our banks. They can be driven away again as they were before by the action of men who are insensible to public opinion and wise to keep themselves within the bounds of the law. To this situation, we call the attention of the men who stand to lose employment and business if these persecutions be successfully renewed. We will not affirm that a ducking of the attorney and subsequent rubbing down with an oaken towel is the only remedy that can be applied. The ducking might perhaps be omitted. Will the Riggers, Stevedores, Salimakers and Longehoremen give the question attentive consideration?

# Dr. Bunsby Stillman.

Dr. Stillman is Coroner of the city and county of San Francisco, a retired physician from Sacramento. Captan Bunsby was a retured sea captain, great rirend of Captain Cuttle, and immortalized by Dickens. Dr. Stillman is an expert on insanity. Captain Bunsby was an expert on all matters touching the sea. At the Fair trial the Doctor attended regularly, listened pat ently, looked orneular, and was finally placed upon the stand to testify. With a loud confidence he testified positively—pertinaciously. He knew it all; he had studied everything; he was a learned graduate; he had d plomas—experience—skill. "Have you ever read Stobel on insanity?" saked the attorney for the devence. "Yes, sir," promptly replied the Doctor. "Do you remember the chapter upon female diseases as superinducing mental derangement?" "Yes, sir, "answered the witness. "Who was Stobel?" "A German," says Dr. Stillman. "When did he write?" "About twenty years ago." "You are sure you have read Stobel, are you, Doctor?" "Very certain, sir; remember it distinctly," replied the expert. "Well," says the attorney, "you are a remarkable witness. as no such book was ever written, and there is no such person as Stobel." Poor Bunsby! He has given an opinion as was an opinion. Wooder if Dr. Stillman will send his bill to the Board of Supervisors for \$100 per day as an expert. There are humbug doctors in this town of ours.

#### Our Incarcerated Lunatics.

There are now only fourteen prisoners in the San Francisco County Jall under indictment for murder. Following is the list, with an abstract of each case: Ah Sing, charged with murder of Sam Quin: Sing approached Quin from behind and gently shot him under the ear with a pictot; he claims to have oeen harmiesaly insane. Ah Hing, charged with murder of Sing Loy: Hing heat Loy's brains out with an iron bar; he thinks his insanity was of the violent type. Boy Tang, charged with murder of Tang Tuck Kee; Tang eviscerated Tick Kee with a knife; the doctors affirm that he was moodily maniscal at the time. Fred. R. Lancharged with shooting Harvey Smith; Smith had called Lane names, upon which emotional insanity supervened, resulting in the death of Smith. Jacob Wilkerson, charged with the murder of Harriet Buckhardt: Harriet had thrown off on Wilkerson, charged with the murder of Harriet Buckhardt: Harriet had thrown off on Wilkerson, is legal defence is homicidal mania. Henry Beck, charged with the murder of Garoline Prenel: Caroline ate oysters at the expense of "another" on June 30th, and supped in Paradise; Beck pleads midaummer madness. Wim. J. Bryan, charged with killing a Chinaman; Bryan pleads that he acted in self-defense; the Chinaman looked at him, and, he houghly, was going to bite: justifiable homicide. Henry McCausiand, charged with murder of Noah Mullennore: McCausiand "lay" for Mullendore and put a bullet into him; we forget her name; his defence is simple insanity. Hugh McMenomy, charged with the murder of James Hogan; "sare, he throd on the tail of me 5-st;" delence, silenation of mind. James Sampson, a lad, charged with murder of John Wilson; W.-son had polled his ear; defence irresponsible by reason of tender years. Charles A Russell crazy; the jury which acquitted Charles Danne for shooting a Secessionist will be specially impaneled to represent the McNamara and Richard Jackson, charged with the murder of Henry Wilde: McNamara and Richard Jackson, charged with the murder of Henry Wilde: McNamara and

We hasten to call the attention of our working classes to the establishment of a Mission School at the Church of the Advent, Howard street, which is attended by pupils who are described as "docile, tractable, bright of comprehension, and most eager and zealous in their efforts to learn." Need we explain that these papils are not of Caucasian parentage? No; their conduct betrays the darkly depraved Chinese character. Need we point out more specifically to the youth who attend the ministration at the sanctuary of St. Ignatus Loyola, that here is their opportunity? Perhaps we had better, for the youth of St. I. L. are the reverse of bright of comprehension. We remark then: The young Chinese emerge from their Sunday School about two o'clock P. M., an hour which will allow the pupils of St. I. L. to conclude their own religious exercises and partake of a light repast in time to waylay these heathen and beat in their heads with paving stones. The police will make a note of the hour in order that they may carefully absent themselves.

Let the soul of the reader sing within him: Here are a parcel of dentials in trouble, for the Goodyear Patent Company are after them. The miscreants have been torturing their feilow men and cheating the Patentees out of their blood money. Good luck attend the suit, and may the tooth-twisters be cast in rulos damages! May the fang of the attorney enter their soul and the bill of his costs be as the drawing of eye-teeth. May the pocket of the patentee be plugged with their gold while he laugheth as one demented by nitrous-oxide. May their patients be possessed of an atrocious breath, and go away without paying their fees. A dentiat is a being beneath the notice of his Redeemer, but a dishonest dentist is beneath the notice of the devil.

An English iron worker has produced an article which he calls "mineral cotton," the use of which in the arts may become of no small importance. By injecting a stream of air into the slag of the iron furnace the mass assumes the condition of filaments which are flexible, tenacious, and possess generally the external attributes of raw vegetable cotton. It is thought that the new mineral thread may be woren if not spun, and thus used in the manufacture of a textile fabric. The iron slag which is now all waste may thus come to possess commercial value.

Rich and elegant baggy robes just opened at Bullock & Jones, 431 Montgomery street.

#### The Lullaby

OF A FEMALE CONVICT TO HER CHILD THE NIGHT PREVIOUS TO EXECUTION.

\*Sleep, baby mine, enkerchieft on my bosom, Thy cries they pierce again my bleeding breast; Sleep, baby mine, not long thou'lt have a mother, To lull thee fondly in her arms to rest.

Baby, why dost thou keep this sad complaining, Long from mine eyes have kindly slumbers fled; Hush, hush, my babe, the night is quickly waning, And I would fain compose my aching head.

Poor wayward wretch! and who will heed thy weeping, When soon an outcast on the world thou'lt be: Who then will soothe thee when thy mother's sleeping, In her low grave of shame and infamy!

Sleep, baby mine.—To-morrow I must leave thee,
And I would snatch an interval of rest; Sleep these last moments, ere the laws bereave thee, For never more thou'lt press a mother's breast.

\* Sir Philip Sidney has a poem beginning, "Sleep, baby mine."

# Let us Have Immigrants.

We are so submerged in politics, railroad wars and social conflicts, that we may lose sight of subjects that are at least as deeply interesting. We are so wrapped up in our personal desires and ambitions that we may forget the best interests of the State and the welfare of others. It is well occasionally to expand our views and go out in search of those who are seeking knowledge in regard to the attractions and opportunities which California offers to them. We are constantly receiving letters from various quarters of the Old World as to the prospects awaiting immigrants in this State. This subject has been frequently discussed in the press, and societies have been formed for the purpose of furnishing the desired information. We can only repeat that California is one of the most desirable States of the Union for immigrants to settle in. The middle-class population of Great Britain would find it especially attractive. This State possesses soils, climate and scenery, that are not surpassed by any country in the world. The agricultural lands are wonderfully rich, and in many places a perennial system of cultivation is possible. They can produce with absolute certainty the cereals and fruits of the temperate, semi-tropical, and tropical climes. The great diversity of temperature is a boon to this State. Any person can have almost any clime he desires. Means of transportation by rail, steam, sail and stages, are ample to reach any part of the Pacific Coast. Schools and churches are numerous. Law and order exist throughout the State. We are in regular steam communication with China, Japan, the Colonies of Australia, with Mexico, Central and South America. With ease and comfort the journey from London to San Francisco can be made in thirty days. Fares have been reduced to the lowest figure, so that persons of even ordinary means can make trips between these two great central points at will. In cases where colonies might be organized, no doubt the fare would be greatly reduced from the fixed individual standard. It will standard. It will thus be seen that California is not a wilderness, nor is it isolated from the world. San Francisco, the great commercial metropolis of the entire coast, is linked in constant communication with every part of the world. So that if immigrants arriving here did not like the prospects, they could readily seek other climes. But all things considered, where can a family in middling life, and desiring to better its condition, find such opportunities as this State offers Where, in fact, can the middle classes of Europe settle with such great advantages? There are thousands in Great Britain who carnestly desire to improve their social and dinancial condition, and we say to them that California is open, and that in the race of life their chances are equal and that their prospects are bright when they come here.

— Unhappy France has received another blow. During a decade of years her birth rate has been decreasing. The average number of births in wedlock is but two to each married couple. The population has only been maintained by the healthy number of births among unmarried couples. It is now announced that many of the French priests will follow the example of Pere Hyacinthe and marry. Naturally each will then beget but two offspring, the number of "by blows" will be reduced, and the population of France will no longer be maintained.

<sup>-</sup> The increase in the circulation of the Morning Call at San Quentin, Marin The increase in the circulation of the Morning Call at San Quentin, Marin County, during the month of September, was one copy. Following is reported by Capt, James Towle, of the Guard at that point: Number of prisoners on hand Aug. 31, 1872, 992; received during September, 23; total, 945. Number of prisoners discharged under provisions of the Act, 14; by pardon, 2; by death, 1; sent to Insane Asylum, 3; by order of Court for new trial, 2; on hand September 30, 1872, 933; total, 945. Increase during the month of September, 1.

#### Mrs. Miller as Joab.

Our pions neighbor, the Alta, after ransacking the bible, heads an account of Mrs. M. Myrtle Miller's lecture on Joaquin Miller, with the following text: "And Joah took Amasa by the beard with the right hand to kiss him. But Amasa took no heed to the sword that was in Joab's hand, so he smote him therewith under heifth rib, and he died." And adds that for Joab you may read Mrs. Miller, and for Amasa the much bemauled poet. The delicate flattery of the comparison must grant from the lecturer, for we always considered that traitorous kiss that Joab gave his friend to cover his coward blow, the most dastardly act on record, not excepting the Judais kiss that betrayed Christ. Certainly of all the texts in the bible, our sweet old Lorenzo Dow Redivivus blundered on the most fedicious one. The application is so obvious, for what else was the lecturer's "naught in makee talk, her pretense of extenuation, her air of tender regard, her "painful-duty" dodge! What were all these but the kiss of Joab, veiling bitter ency and concentrated hate! What but the veiter paw sheathing venomons claws! Yes, "Joab" by all means, my ancient driveller. The text fits the case pat, all save the dying part. But, adds the Alta, "ir he does not die in consequence of the lady's lecture, he deserves to." And if Joaquin has any decency left in him, he will go somewhere and defunct, that the Scripture might be fulfilled which was spoken by the mouth of the prophet Alta. About the "viviscetion," It was a masterpiece of safire. That sacratic hit about the house selling for \$44.75 in him, he will go somewhere and defunct, that the Scripture might be fulfilled which was spoken by the mouth of the prophet Alta. About the "viviscetion," It was a masterpiece of safire. That sacratic hit about the house selling for \$44.75 in him, he will go somewhere and ferment him the server of a function of the prophet Alta. About the "viviscetion," It was a masterpiece of safire. That sacratic hit about the house selling for he fulfilled which was spoken by the mou

We have had our picture taken; yes, our thin-nostriled, patriarchal, aristocratic nose, our cagle penetrating eye, our firm yet sweetly expressive mouth, our venerable baid head, our silvery hair, our general noble figure, our everything has been faithfully copied by that master artist, Light, and now, gilt-framed and glazed, hangs amid those of Agassiz, Duke-Alexis, Emily Pitte-Stevens, and other illustrious men, at Bradley & Rulofson's Gallery. And we are proud of it.

HON. CHARLES CLAYTON.

# HON. CHARLES CLAYTON.

UNDER the Congressional Apportionment Act, passed at the last session of the present Congress, California became entitled to four members in the National House of R presentatives. The last State Legislature redistricted the State to meet the new political condition, and erected the City and County of San Francisco into one Congressional District. The first election under the new apportionment was held on the 5th of November, 1872. The candidates were Hon, Charles Clayton, nominated by the Republican party, and Wm. A. Piper, nominated by the Democrats and indorsed by the Liberal organization. At the polls the Republican Presidential ticket was successful by a majority of 500 votes; Mr. Clayton's majority was 1,055 votes. The significance of these figures will be best appreciated by the circumstances attending the election. The city had been warmly engaged for some months in controversies over railroad questions. The public press had maintained a bitter personal attack upon the individuals directly interested in existing railways, which had been extended with an unreasoning ferocity to the more prominent merchants and bankers having business relations with them. The charge was reiterated daily for months that the Railroad Company controlled the Legislature of the State and the organization of the Republican party. It is undeniable that an important, if unreasoning, element of the population had been brought to regard the State railway system as a public burden, its managers as unfriendly to the public interest, the Republican Nominating Convention as a subject of suspicion, and its nominee-whoever he might be-as an object of distrust. The Convention nominated Hon. Charles Clayton almost unanimously on the first ballot, and the same portion of the press-Republican in its general politics-reiterated against him personally all the charges it had intimated aforehand. He was accused of being "trammeled" by obligations to the Railroad Company, if not secretly pledged to them; and efforts were made to procure a non-political anti-railroad organization to support a candidate in opposition to Mr. Clayton. Had there been any general credence in these charges, there is little reason to doubt that such an organization, respectable in numbers, might have been formed. Had the charges received any credence whatever, it is safe to say that Mr. Clayton would have lost at least the 300 votes, a change of which would have overcome the majority received by the Presidential ticket. Mr. Clayton did not "take

the stump," as the politicians say, during the canvass. To the Convention which nominated him, he made the simple statement—" I am free from any pledge or obligation, expressed or implied, to any human being; if elected by the people of this city, I shall go untrammeled as the representative of the whole people." Mr. Clayton's word, supported by his character, bore down the open abuse and covert innuendo with which he was attacked throughout the "campaign," and at the polls received the popular indorsement of five hundred votes from political opponents. These, it is well known, came from the Democratic merchants and citizens of the better sort, who selected the merchant Clayton as the fittest representative of this commercial city. His election, and especially the figures of his majority, furnish a gratifying proof of the substantial value of an unblemished reputation, won through many years of active business life, to turn aside the shafts of personal slander aimed by an unprincipled or reckless press.

Charles Clayton was born in England in 1825, and is therefore fortyseven years old. He came to the United States at the age of seventeen, in 1842, and five years later was a resident of the frontier State of Wisconsin. In the Spring of that year, 1847, he set out for the Farthest West, crossing the Rocky Mountains into Oregon. He arrived in San Francisco April 2d. 1848, and soon after established himself at Santa Clara. Here he was Alcalde in 1849 and 1850. He entered into business, and in 1552 built the Santa Clara flouring mills, the product of which-made from the unsurpassed wheat of the Santa Clara Valley-has established a reputation second to none in California. Mr. Clayton then removed to San Francisco and engaged in general wheat, flour and other produce commission business, in which he soon took the leading position which he has ever since continued to hold. From that date to the present, while holding himself absolutely aloof from the "wire-working" branch of politics, he has been repeatedly placed in representative political position. In 1864, the people of his Ward, in non-political organization, selected him to represent them in the thankless and arduous position of city Supervisor. Here he was Chairman of the Finance Committee, in which he offered unwavering and effective opposition to the schemes of municipal plunder which were then operated by a "Ring" in that body, the savor of whose operation has not yet departed from our nostrils-redolent as they were of misgovernment and fraud of every species. Through those years of misrule, a compact minority of which Mr. Clayton was one, courageously exposed the schemes, the consummation of which they were powerless to prevent, and paved the way to the overthrow of the corrupt power a few years later. In 1863, the mercantile element in San Francisco was canvassed to indicate a member from their own number to represent their interest in the State Legislature, and with remarkable unanimity indicated their choice of Charles Clayton. Mr. Clayton

was elected by a large majority, and upon taking his seat as a member from San Francisco, his standing was recognized by his appointmentas Chairman of the Committee on Commerce and Navigation, and as a member of the Committee on Ways and Means-two of the most important positions in every legislative assembly. The mercantile element of San Francisco was so well satisfied with Mr. Clayton's management of their interests that, in deference to their demand, he was re-elected—thus serving in the State Legislature continuously from 1863 to 1866. It was during this term that the Paid Fire Department for San Francisco was organized, a measure of which Mr. Clayton was the steady friend and active promoter. It might be added as to the credit of his sound sense that he opposed-with unfortunate lack of success-the official introduction of the Nicholson pine pavement into San Francisco-from which wretched measure a number of her thoroughfares are nearly impassable to-day. At present Mr. Clayton holds the position of Surveyor of the Port-one to which no fitter appointment has ever been made. There is no man in the city who bears a higher reputation for honor and uprightness in all the walks of life. In intelligence, culture, good breeding, popular manners, business aptitude and legislative experience, he possesses the peculiar qualifications for the work before him. In easy circumstances pecuniarily, he is independent of the temptations to which too many Congressmen of weaker personal character notoriously succumb. It is to be hoped that when Mr. Clayton shall take his seat in the National House of Representatives, the presiding officer may recognize his own personal fitness as well as the claims of the constituency which he represents, by assigning him to Committees where his influence may be favorably felt upon legislation. In selecting Mr. Clayton, San Francisco desired to get a useful representative in Congress-a man who can look out for her and help her. She wants her commerce promoted and her local interests protected in the tax and tariff changes. In this matter a representative's politics will not weigh a rush. In order to get votes for steam subsidies he may (and will) have to trade off his own to Pennsylvania on the iron duty, to Maryland on coal, to Georgia on rice, Louisiana on sugar, Michigan on lumber and Massachusetts on cottons. This is the practical legislation of the day, and there is no other way of doing it. What we wanted was, a man who, in doing it, would know where to place his vote without hurting us. If he has to choose between Michigan lumber and Maryland coal-that is, must vote a duty on one or the other to get the Michigan or Maryland vote on the steam subsidy, which will be the one thing that we want-he must know which we can best afford to pay the duty on. Perhaps he could do better than either by trading off on the burlap (wheat bags) duty. We wanted a man who knows enough about the interests of San Francisco that no one need feel called upon to undertake to teach him. These are the qualifications which

were sought for in Mr. Clayton, and have been secured in his election. His opportunity for usefulness will be extended or curtailed according to the committee work to which he may be assigned. He is the first representative who has been sent to Congress from the Pacific Coast who is entitled to be thought of in connection with the Committee of Ways and Means. Mr. Clayton's experience in legislation is sufficient, as far as it goes, to constitute a qualification to take part in the labor of that eminently laborious Committee. In sentiment he is a "moderate," or rather a conservative revenue reformer. He believes that the first object of a tariff is revenue, and the time will come when the last object of a tariff in the United States will also be revenue. But he recognizes the fact that large vested interests have grown up under high tariff legislation which have a right to "protection" against precipitate and radical change of that legislation. This is little more than an enunciation of the general sentiment of intelligent opinion throughout the country. But a practical difficulty is encountered when men attempt to agree on the actual details of legislative reform. Much of this arises in the real ignorance of legislators concerning the complicated relations of industrial and business affairs, and more in the contending local interests which obstruct every effort at reform in whatever direction. Himself a merchant and a monufacturer, Mr. Clayton is competent to deal with these difficulties, and to point out to others the practical operation of those universal principles which govern human industry, in a way that will facilitate their own dealing with these questions. Finally, Mr. Clayton is a man of energy, self-reliance and putiring industry. As a worker he would be appreciated on this workingest of Congressional Committees. In conclusion, we remark that the Pacific Coast has a claim to be represented on the Committee of Ways and Means when it sends to Congress a representative who can be assigned to that Committee without detriment to the performance of its arduous labors. Mr. Clayton is such a representative, and we claim the place.

# CALIFORNIA MAIL BAG.

## The Diamond Diggings -- General Account of the South African Fields.

[By Charles A. Payton-"Sarcelle" of "The Field."]

The first diamond discovered in South Africa is said to have been found in the Hope Town Division, Cape Colony (near the Orange River), in the year 1867, by one of the children of a Boer, or Dutch farmer, named Jacobs. For some time it was merely considered as a pretty pebble, and used as a plaything, no one having any idea of its value. Another Boer, named Schalk van Nickerk, calling on Jacobs and seeing the diamond, was struck by its lustre and weight. He offered to purchase it from Mrs. Jacobs, but it is said that the worthy vrouse laughed at the idea of selling a stone, and let him have it for nothing. The stone next passed into the hands of a Mr. O'Reilly, and was taken by him to Hope Town, where the idea of its being a diamond met with such ridicule that he was very near throwing it away. its being a diamond met with such ridicule that he was very near throwing it away. He took it, however, on to Colesberg, and from thence it was forwarded for the inspection of a scientific gentleman, Dr. Atherstone, of Gruham's Town, who at once pronounced it a veritable diamond. Its weight was 21 carats odd, and, I believe, it was sold to Sir P. E. Wodehouse, the then Governor, for £500. Another diamond was soon afterwards found on a farm called "Paarde Kloof," on the Orange River, also in the Hope Town Division. It was a beautiful stone, weighing over 8 carats.

weighing over 8 carats.

After these discoveries, many people, both natives and Europeans, of course began to search superficially in the Hope Town Division and neighboring districts, notably along the banks of the now world-famous Vaal River, and a few of the searchers were rewarded with fine gems. The first famous diamond, called the "Star of South Africa," appears to have been found, or at any rate to have first come into the possession of a white man, early in 1869. The first known owner of this gem, which weighed 83% carats, and will, it is believed, cut into a brilliant of the finest class, was a Kafir witch-doctor, or sorcerer. This savage conjuror was with some difficulty induced to sell it to the same Schalk van Niekerk, who was quasi-discoverer of the first South African diamond. The "Star of South Africa," in the rough, was of an irregular shape, and about the size of a small walnut. After being exhibited at Port Elizabeth and at Cape Town, and visited by crowds of reenle it was finally forwarded to England, where, I believe, it passed into the nose.

the brough at Port Elizabeth and at Cape Town, and visited by crowds of people, it was finally forwarded to England, where, I believe, it passed into the possession of Mesers. Hunt and Roskell, and was valued at £25,000.

News of these discoveries having reached England, Mr. Harry Emanuel, a London dealer in diamonds, dispatched a Mr. Gregory to South Africa to make inquiries as to their reality. This gentleman made an examination of the geological features of some parts of the country, and on his return to England reported, at first in private and in speeches, but subsequently in a paper published in the Geological Magazine that "the whole diamond discovery in South Africa is an imposture—an exposed Mr. Gregory's erroneous statements, and none more successfully than W. B. Chalmers, Esq., at that time Civil Commissioner and Resident Magistrate of Hope Town, who, in a letter to the Journal, gave such particulars of a large number of diamonds that had passed through his own hands as to place the matter beyond all doubt. In the earlier part of 1870, the number of diamonds found was so considerable that it attracted the attention of the inhabitants of the various colonies and republies in South Africa. Gradually a "rush" set in from all quarters, and the bank-of the Vaal in a few months became covered with thousands of busy diggers. diggers.
When the traveler passes through the Free State by Fauresmith, he has the tabu-

When the traveler passes through the Free State by Fauresmith, he has the tabular mountains and "spitz-kops" (sharp-pointed hills and peaks), so common and all-prevailing in South Africa, till he arrives within a few hours' distance of the Vaal. A manifest change sets in, and for miles on miles there is a luxuriant and undulating plain almost undisturbed by any hills. He feels that there is a break in the structure of the country. When he comes to the Vaal, an entirely different land-scape appears before him. The perpetual greenstone porphyries of the Colomby have vanished, and genuine basalt makes its appearance. This basalt he finds protruding through conglomerate and amygdaloid trap. Gilttering pebbles of every form and color glisten at his feet, and he feels indeed that he is in a new region.

The subsequent discoveries of the dry diggings, far inland, twenty-five miles away from the Vaal River, and the finding of diamonds at great and varying depths, and in every varied strata, upset some of the theories at first formed.

Equally astonishing and subversive of theory have been the strange finds, for which I can vouch, of estrich eggs, entire or more often fragamentary, a human skeleton, portions of an ant-hill, and heads and parts of shanks of nails, at considerable depths in claims on the dry diggings. With the establishment of Mr. Campbell as British Commissioner for Kip Drift and all the diggings on the Tenswal or introduced in the side of the Vaai River, speedily ceased the "Diggers Mutual Protection Society," and the Presidency of Mr. Parker. Offences against "Diggers' Laws and Regulations." were fermerly treated with summary justice, a la Lynch; parties guids of theft, or other crimes which roused the indigantion of the diggers, being quickly tried and sentenced. The general sentence was "To be expedied the camp and dragged through the river."—an unpleasant operation when we consider the uneven bottom, swift currents, and sharp and rugged shores of the Vaal. Another amiable punishment was "making a spread-cacle," wherein the culprit was tied down on the ground to short stakes, arms and legs extended, and left for some time to the heat of the sun and the tender mercles of files and other used tomentors. But, long before I reached the Fields, police-courts were established, and diagars had ceased to think of taking the law into their own hands. The "cut" was in full swing; of this terror of garetters in England, and thieves, both white and black, on the diggings, I have more to say amon.

At the cerry period spoken of above, linch prices were paid for diamonds by the great Moritz. Unger, and the few other diamond merchants whom the fame of the great discoveries had attracted to the banks of the Vanl. No one appeared to have an inkling then of the great depreciation of "off-colored" or yellow stones in the European markets, which was to cause some of the early buyers so much loss, and many an apparently lacky finder so much disappointment. Can no market be found for these specially discoveries, and which often occupies the minds of diggers and of buyers too, and which has received no satisfactory solution as yet. So much for the early discoveries; and now lot us carefully review all the principal diggers, both on the riverside and inland, as they were during nearly the whole of 1871.

#### THE RIVERSIDE DIGGINGS - AND HOW TO WORK THERE.

The banks of the Vaal River, which for a long time after the first discoveries gave its name to the South Afr'ean Diamond Frelds, have been found to be, in many places, extremely rich in diamonds, and most of the early diggers at Pavel, Klip Dritt, and neighboring places, were well rewarded for their toil. But the 'dry diggens,' I ving about twenty-five miles away from the Vaal River, have been found, during the year 1871, to be so much more uniformly remanerative than those on the banks of the river, that the latter have become by this time comparatively deserted, though some of the diggers who have remained at the different waterside camps do still occasionally turn out something good, and the diamond is dound by the riverside are, as a rice, of slightly better quality than those from the "dry diggings." During a few days stay I made at Pinle, in November, 1871 a diamond of 34% carasts was found there by a digger who had been long unsuccessful, and several smalter stones by other parties. But the "dinds" are so small on the average, as compared with the wonderrul riches daily yielded by the dry diggings, and the instances of long-continued ill-luck are so sadly numerous, that I second one had been what so flow them.

would not advise our "new chums" to pitch their tents on the banks of the Van! I wil, however, culdeavor to give some bitle account of the different riversade camps, premising that I have not worked there myself, and can only speak from the experience of others. Pincl and Klip Drift form the centre of the river digings. Pincl is a very stranging liftle town, or rather villings, situated on the brown and slope of a hild overlooking the Van! River, which is here some two hundred yards broad. Between the town and the river, on the slope of the hill or "kopje" are the "claims." They are big holes, of various sizes and depths, full of larger ironstone howlders, he necessary removal of which makes the work here very heavy, slow, and expensive. Among these bowlders is the gravel in which the diamonds are found. This gravel is generally washed, to free it from sand and dir, at the riverside, otherwise water must be brought up from the river to wash it. Generally, the "cradle" is erected close to the edge of the water. In either case, the cost of a cart, with a couple of nucles or oxen, must be added to the ordinary expensessof a digger's outfit. When a cartload of gravel or "stuff" has been dug or of the esam, it is carted down to the river and emptied into a large trough made in the ground, with smooth bottom and sides, or merely on to a smooth floor. A proper quantity of it is put into the "crade," which is a strong wooden framework holding two or three sieves of perforated from or zine, or wire meshing, one over the offer, the top one having large-holes, and the bottom one very small ences the whole framework resting on two strong rockers. While the stuff is being rocked in this gradle, one of the diggers pour bucketfulls of water into it. The gravel being thus thoroughly cleansed by this double process of sifting and washing, the large stones in the tops seve are having large-holes, and the bottom one very small ences the whole framework resting on two strong rockers. While the stuff is being rocked being thus thor

have been found on the river-diggings; garnets are very numerous but almost valnave over round on the river-diggings; garnets are very numerous but almost valueless, and the gravel contains immense quantities of beautiful gates, also correlians, jasper, chalcedony, and other pretty pebbles, which I am sure might be cut and set in large brooches, bracelest, etc., like the Scotch pebbles which at home form such an important item in cheap jewelry. Rock crystals of pretty shapes, clear and shiny, glitter occasionally among the bright and many colored pebbles, and woefully deceive the "new chum."

At Phiel was formerly published the Diamond Neros, the earliest and most important newspaper on the "Fields," but it was removed in September last to Du Toit's Pan. Another newspaper the Diamond Field, is published at Klip Drift.

About twenty-five miles from Klip Drift up the Vaal River, on the same side as About twenty-nive miles from Kilp Drill up the vasi Kiver, on the same side as Kilp Drill, is Hebron, where there was a busy camp during the greater part of last year, and many very good finds, but also a good deal of unsuccessful work. Hebron has been gradually growing less popular, owing to the wonderful finds at the dry diggings; but a good many still persevere there, some of them being well rewarded, and Hebron has turned out one or two large stones lately. It is a pleasant camp, with pretty scenery, good bathing and fishing, and well supplied with provisions and all necess ries. For the benefit of my English readers I must explain that if a claim has been left unworked for a certain time, in some camps three days, in others eight, it may be "jumped," i. e., any person may jump into it, and take possession, on payment of the ordinary 10s. license, and the original owner has no redress.

Down the river there are several pretty good digging camps. Twelve miles from Rlip Drift, on the same side, is Cawood's Hope, an early favorite, but not thought very much of now. Opposite to it is Gong Gong, generally considered to be pretty well worked out. About five miles lower down, are Forlorn Hope and Delpori's Hope—neighboring camps. I hear that the work there is pretty satisfactory. One gentleman, a newspaper proprietor, got in a fortnight's work at Delport's Hope, diamonds worth at least £300. A stone of 2½ carats he sold on the spot for £27. Of course it was of pure water. This is considered a very good price. About four miles lower down is Sifonell, where some very good finds were made soon after the first "rush" there last Spring, but I have not heard much of it lately. On many of these small camps there are hardly any stores, which is a serious drawback to residence there, as the digger must either make frequent journeys to the "town" of Pniel or Klip Drift, or must be satisfied with course and monotonous food. A friend of mine, working at Forlorn Hope, subsisted for mouths, sometimes, on meat and "mealies" (Indian corn).

I hear that a rush has lately taken place to a pot called Tsitsikama, three mile from the forlorn Hope, and that fresh ground is being opened up on both sides of

from the forlorn Hope, and that fresh ground is being opened up on both sides of the river, so that diggers going out now had better on arriving at the Fields, make full inquiries as to the state of all the riverside camps, both old and new, though I still hold the conviction that the dry diggings are by far the richest.

(To be continued.)

#### America.

"It almost makes the brain dizzy to think of the number and nature of the changes the discovery of America has created."—Alla. It does. To it, we owe changes the discovery of America has created."—Alta. It does. To it, we owe tobacco, the turkey, the turkey buzzard and the Bird-o-Freedom; corn whisky, Lynch law, the Bowie-knife and the bloody chasm; the rattlesnake, the Apache, George Washington and Lorin Pickering; the tomato, Niagara Falls, Boston and green tortles; guava jelly, General Sutter, General McCiellan and tree-toads; the whippoorwill, potatoes, Hoodlums and Rev. Dr., Jone; Lo! the poor Indian, Charles L. Low, General Jackson and the California; heater; quinine, sherry cobblers, "Goldsmith Maid." and the Pacific Railroad; huckleberries, the Yosemite, Chioroform and the Evening Bulletin; chocolate, B. Franklin, cundurange and the Morning Call; cranberries, Bret Harte, sewing-machines and doughnuts; mush-and-milk, small-pox, the Star-Spangled-Banner and Chicago: Edwin Forrest, pumpkin-pic, the Examiner and cochineal; coal oil, Wm. M. Tweed, yellow fever and Washington's Farewell Address; the ballot, the men who stuff it, General Buller and NewYoundland dogs: the Big Trees, our Colored Fellow Clizer. Bunker and Cokenal dogs: the Big Trees, our Colored Fellow Clizer. and Washington's Farewell Address; the ballot, the men who stuff it, General Buler and Newfoundland dogs: the Big Trees, our Colored Fellow Citizen, Bunker Hill and Wm. M. Lent; the copperhead, street cars, Deacon Fitch and Buffalo Bill; San Francisco, free lunches, the News Letter and Mrs. Fair. These are the things America has given to mankind, and in them we see that its discovery has proven in very deed a Boon. And it is easy to understand how an intellect enfeebled by age and drink should become, as the Alta laments, "dizzy" in attempting to think of them. Here the thought rushes on us with tremendous force, that it is to the discovery of America that we was the Alta laments, "dizzy in astempting to the weak the Alta laments," dizzy in attempting to the standard of America that was used to the Alta laments. discovery of America that we owe the Alla itself. Let us clap hands and rejoice that America was discovered. Without our Alla, how would life have been a mockery and existence a void. It is the grinning death's head to remind us of our end even while it looks a ghastly pleasantry that provoketh to present mirth.

<sup>—</sup> The Call thinks that the Colorado River Railroad Company can afford to spend two or three million dollars to carry the proposed subsidy. Then why does not the Company come down with the fifty thousand, which is the price of the entire Call establishment with Mr. Pickering's soul thrown in? But perhaps they are unwilling to incur "personal liability" for Mr. Pickering's soul.

## The Legend of Itys.

[A CLASSICKALL BALLADDE.]

There was a family in Greece
One might describe as serious;
The head, who caused much mischief, was And so, when Terens next ran down,
Denominated Terens.
She heard it though, wives always do,
From some loguacious tabby;
She heard it though, wives always do,
From some loguacious tabby;
She heard it though, wives always do,
From some loguacious tabby;
She heard it though, wives always do,
From some loguacious tabby;
She heard it though, wives always do,
From some loguacious tabby;
She heard it though, wives always do,
From some loguacious tabby;

Denominated a tereus.

In military matters be
Turned out a perfect lion,
But spooned, I'm grieved to mention, both But Procue to its false papa

But spooned, I'm grieved to mention, both But Procee to its false papa.

The daughters of Pandon.

Served up stewed kid for dinner.

Twas quite impossible for each
That he could really feel a
Correct affection. (They were named

And sought to work more injury

Live his historical wife.

Proces and Philometa.)

He'd very taking ways, just like
Some gallivanting cockney;

But Ovid's Metamorphoses
Report the facts that follow.

So soon he'd woo'd and won and wed Proche, although she'd caten nought, Was turned into a swallow.

But ere the honeymoon had waned
This military mister
Began to tire of Mrs. T.,
And firted with her sister.
To end this awful tale,
Poor naughty Philomela changed
Into a nightingale.

Then Procue had a baby, as

For married folks quite right is:

Thus all were birds; and oft I've marked

The moral which I write ve.

The name (a strange one folks may think) When once a husband a volatile They christened it as Itys.

His family turns flighty.

But then, lest scandal should his wife
About his ways enlighten,
He packed her with the infant off
To some Hellenic Brighton.

Even if not, I feel quite true
The fact I next indice is,
The young and innocent will all
Be quite cut up—like Itys.

So married gents be very sure You never get to feel as This naughty Greek; but, when you wed, Eschew all Philomelas.

#### Distribution of the Geneva Award.

The payment and the distribution among the claimants of the German award is beginning to attract a good deal of attention. The claimants are much disturbed, and find questions mooted and "feeders put out" trom authoristive quarters which may result in a long delay before payment, if not in the positive withholding from the rightful claimants of their just dues. The New York Journal of Commerce says: "One report says that four millions of the awarded sum belongs to the Government; but how or why? no explanation is vouchsafed. There is nothing in the text of the award, as we have it, to esanction such a claim. By that decision the Government receives nothing, and the other claimants for losses everything. There is another intimation from some one professing to be in government confidence that the underwriters will not get a dollar of the award, the reason gives being the absurd one that the nusurance companies charged premiums on the risks taken." This is not a new excuse for the commission of a wrong; it has been interposed successfully heretofore in the case of the French spoliation claims. About one-half of the Geneva award, it is said, is justly the property of the underwriters, who have paid the losses to the original owners, and received assignments from them of their claims. Deducting the amount that is due to the insurance companies, and reserving four millions for the treasury, on some far-fetched account, the Government would absorb about two-thirds of the whole amount awarded, leaving one-third to those claimants who were not so fortunate as to be insured. Congress will, in all probability, pass a law regulating the mode and manner of its distributions, the Government having unlimited power over the whole sum. We may be sure that the vultures will be about, and that the amount awarded, leaving one-than the others to private claimants will have to yield up to them a part of it, and the underwriters will stand no chance unless they submit to the most exorbitant exactions. This fifteen millions of obline

It is a bad plan to lie explicitly. Insinuation is better.—Alla. This fable teaches that it is better to be a Bulletin than an Alla. But then Fitch the other day pronounced MacCrellish "the most notoriously corrupt journalist in the State." That was explicit but then it was not perhaps a lie. MacCrellish retorted that Pickering's story about his bank account was untrue. That was an insinuation that Pickering is a liar, but then perhaps he is. We are confused.

### Special Brevities.

— One of the citizens of the American Republic got into difficulties at the Café de Paix lately. With the graceful, free-and-easy custom of the Americans, he carefully diffused his person upon a couple of chairs, reclining his heels upon a table on the Boulevards, and ordered his cooling drink in a peremptory tone, which elicited a brisk remonstrance from the garcon. The American citizen felt himself bound to avenge the national honor, outraged by a mean waiter, and drew forth a revolver from his pocket and leveled it at the garcon's head. The weapon was wrested from his grasp by some people at the next table, and the Yankee was consigned to custody, whence he was released after a short incarceration. A lady of the same nationality, discovering a half-caste girl seated near her at the table d'hote of the Hotel du Louvre, simply ordered the waiter to "turn out that nigger." The fawn-colored young lady, who was "black yet comely," colored even through her swarthy skin. She rose to move, but the garcon informed the fair American lady that her request could not be complied with; whereat she summoned her brood around her, and sailed majestically out of the room, declaring that she would not reside in an hotel where she was exposed to the contamination of a "colored person" at the same table as herself.

— Rome, like Berlin, has greatly increased in population since it became the new seat of Government, and the demand for house accommodation necessitates the erection of numerous blocks of houses and entire new streets. Comparatively little has indeed been yet accomplished, though very much has been planned, and every day for some months past the newspapers of the Italian capital announce that the obstacles in the way of such and such buildings, or such and such street, have been overcome and the works will be praceeded with at once. Such statements are made with a view to satisfy the impatience of the public, but large tracts of ground have been broken up, levelings made, and new streets traced out. This great disturbance of the soil has brought unexpected results. Under the upper crust, which is often pierced to a great depth to lay the foundation of soild erections, interesting discoveries are made daily. The inspectors of excavations are at their wit's ends to respond to the demands made upon them to view the new treasure trove. Not a sewer is dug nor a foundation laid without the workmen's pick coming upon objects of art or the debris of monuments.

— M. Lovel has brought before the French Academy a plan of storing wheat in portable sheet-iron granaries, in which a vacuum is maintained equal to at least from 3 in. to 4 in. of mercury, this being found sufficient to destroy all insect life (although a more perfect vacuum is preferred) and to insure the evaporation of any moisture in the grain. The apparatus is of cylindrical form, placed vertically, and with convex top and bottom. The top is provided with an opening through which the inlet of the grain is led, with a valved pipe through which the air is exhausted, and with a gauge by which the degree of exhaustion is indicated. The grain is removed through an opening in the bottom. In one experiment, where living insects were introduced in large quantities with the grain, it was found that they were all killed before doing mischlef, and at the end of six months the wheat was found to be in as fine condition as at the outset.

— Mr. J. B. Barnett, a Hebrew scholar, writing in the Jewish Chronicle, contends that the prophet Jeremiah, with the remnant of the tribe of Judah, migrated to Ireland, and was no other than the celebrated Irish reformer and law-giver Ollam Fola. The project brought with him the Lia Faii, or stone of destiny, which was subsequently conveyed by an Irish prince to Scotland for coronation purposes, and centuries afterwards removed to Westminster Abbey by King Edward the Third, since which time all the Kings and Queens of England down to Victoria have been crowned upon it. This stone, Mr. Barnett says, was that which was originally kept in the sanctuary of the first temple in Jerusalem, and was known as "Jacob's Stone," being none other than the stone directly apostrophized by King David as "the stone which the builders rejected," but which was destined for peculiar honors.

— It is not the case that the French have determined to abandon the mitrailleuse. The idea was entertained, but has been abandoned, as it is believed they
were injudiciously handled during the late war. It has been since proved by experiments that they can be employed so as to produce disastrous effects. The
President of the Republic has just signed a decree for the establishment of works
for the construction of artillery at Tarbes, where a number of new mitraillesses
are to be made on a slightly modified and improved plac. Fresh experiments, with
an entire battery, and according to a wholly new programme, are to be carried oft
immediately at Tarbes.

— Lately four English ladies, the Misses Murray, and their brother, arrived at the Grands Mulets, accompanied by four guides. Continuing their ascent on the following day, they reached the grand plateau, when the youngest, 12 years of age, feeling fatigued, went back to the Grands Mulets. The three others, however, aged respectively 21, 17, and 14 years, continued their ascent, and arrived at the summit of Mont Blanc about mid-day. At nine o'clock in the evening they were again at Chamounix, where they were triumphantly received at the Hotel du Mont Blanc. Such an ascent has not been made for several years.

— There is actually a subscription on foot in Bombay to build a pagoda in London for the worship of Vishnu and Siva. The archbishop may see the heathen cooner than was expected.

## Aspects of the Pines.

Tall, sombre, grim, against the morning sky
They rise, scarce touched by melancholy airs,
Which stir the fadeless foliage dreamfully, As if from realms of mystical despairs,

Tall, sombre, grim they stand with dusky gleams Brightening to gold within the woodland's core, Beneath the gracious noontide s tranquil beams -But the weird winds of morning sigh no more :

A stillness strange, divine, inc. able, Broods round and o'er them in the wind's surcease,

And on each tinted copse, and shimmering dell, Rests the mute rapture of deep-hearted peace,

Last, sunset comes- the solemn joy and might Borne from the West when cloud ess day declines, Low, finte-like breezes sweep the wave of light,

And lifting dark-green tresses of the Pines,

Till every lock is luminous-gently float, Franght with hale odors up the heavens afar To faint when Twilight on her virginal throat Wears for a gem the tremulous vesper star.

#### Court Clat.

Court C: at

Court G. was sitting lately in his femily circle at Paris very cosily when a stranger presented himself and urgentlessed to speak to the Countess. The visitor was an apothecary, who said he lean important communication to impart to her. The Countess ordered him to be shown into the drawing-room, whither she proceeded to receive him. "Aiss," said the apothecary on entering, "I have a paintful duty to perform. Your humband, Count G. has just deed at the house of one of my neighbors, Mdle, X., and I am bringing you home the body." The Countess looked at him with amazement. "It is impossible," she cried, "the Count was sitting at table with me a moment aro." So saying, she bada him follow her into the diming-room. "There is my husband, "she said. "But the dead ann!" sked the anothecary. "You see, he does not belong here," replied the Count laughing. "And yet, Count," remarked the apothecary, "here is your pocket-book, which I tound in his pocket; it contains 3,500 fr, besides your visiting cards." Such, indeed, was the fact, which the Count accounted for by saying it had been stolen from him the day before. The apothecary had to reture with his corpse. Next day Mdlle, X. received the following note: "I left my pocket-book apon your chimney piece; be good enough next time to take care that the person through whom you return it to me does not die a second time unexpectedly.—Count G. Soises Finnes.

— We (Count Journal) moralized on the empressement with which foreign

We (Court Journal) moralized on the empressement with which foreign visitors at Berlin are shown the Zoologieni Gardens, being always taken thisher first before they are permitted to see other sights. We learn from a private source that a scene of a curious character took place. The first carriage, with the Emperor William and the Emperor of Austria, was received by the courteous director, who begged, first of all, to show them a cage of singular monkeys, just received from South America. The Emperor of Germany was about to descend, when the Emperor of Austria made a decided gesture, and signified that he had plenty of the same kind at home. The director went next to the Emperor of Russia, who declined likewise, when the kindly Empress, not to disappoint the worthy director of the gardens, signified to him that the matter could be diplomatically arranged by bringing the cage to the carriages, and accordingly the cage and monkeys were brought to the Imperial guests. The interesting Americans were very well re-ceived by their Majesties upon their introduction, and no one could fail to amin at their antics.

A Dornoch (Scotland) correspondent writes: "Just as the Royal cortege was leaving the burgh by the Little-Ferry Road, a very amusing incident occurred. Trudging homeward with her creel on her back was an Embo fisherwoman, a droll Tradging homeward with her creet on her back was an Embo asservement, a droit, character, known as 'Little Janet.' As soon as she recognized the Royal party, she made three profound cartseys, in attempting which she toppled over on her back. Recovering herself, however, she got up, waved her kerchief, commonly made as a head-dress, and danced across the road with great give, calling out three cheers for the Queen. The Queen and party seemed to enjoy the scene amazingly, as they haughed and waived their handkerchiefs to the little woman, and John Brown, who was sented in front, and seemed most delighted of all, three wher a single of proper which also recognized with unbrounded thems. Jonet carefully as prown, who was sented in front, and scenned most designate to an, when he re-piece of money, which she received with unbounded thanks. Janct carefully re-tains her money, and delights in showing it as a great curiosity. When she saw the handkerchiefs waving from the carriage, she imagined she was beekoned to follow, but she said she could not manage it with her creel on her back."

The Emperor of Austria has forgotten Moltke. He was the only one that did not receive a decoration. This must be the first time since Sadowa that he has forgotten the man who arranged for his defeat.

- The following pleasant joke of the witty King James has just been disinterred and put into life by printing it: "In his first journey to London His Majesty was treated with a splendid entertainment by the mayor of an English town, whose liberality was such that he kept an open house, in Lonor of the new sovereign, for several days. Some of the English courtiers took occasion from this to hint that such examples of munificence must be very rare among the civic dignitaries of a certain other kingdom. "Fient a bit o' that are they," cried King James; "the provost o' my burgh of Forfar, whilk is by na means the largest town in Scotland, keeps open house a' the year round, and sye the mac that comes the welcometr." The secret was, that the chief magistrate of Forfar kept an ale-house.
- The series was, that the eigen angistrate of Prince and Princess Christian took place at the Royal Chapel, Windsor Great Park, on September 17. The sponsors were: The Emperor of Austria, the Queen of Hanover, Princess Beatrie, the Duchess of Teck (Princess Marry of Cambridge), the Grand Duke of Mecklenburg-Streiftz, the Duchess Adelaide of Schleswig-Holstein, the Countess Holk Winterfeld, and Count Gleichen. The wifant Princess was named Franziska Josepha Louise Augusta Marie Christian: Helena. The Hon. and Very Rev. the Dean of Windsor and the Rev. J. St. John Blunt, Vicar of Old Windsor, officiated.
- A capital photograph of Her Majesty has been taken by Mr. Smith, of Tain, who visited Dunrobin for the purpose lately. The Queen is scated in an open carriage in company with the Duchess of Sutherland, Prince Leopold, and Princess Beatrice. The picture, which is very distinct, was taken just as the party were starting from the Castle to visit Dornoch. Her Majesty is sitting with full face to the operator, and could not have been taken under more favorable circumstances. There are two sizes of cartes, one the common carte-de-visite, and the other nearly three times as large.
- A curious instance of "ran ning" took place at Berlin on the meeting of the Czar and the Emperor of Germany. A piece of paper fell, and both, in their eagerness not to let the other pick it is stooped and rammed each other with the points of their helmets. The courties of course, intend to adopt this as a new mode of salutation, as of course no Imperial personage could do a ridiculous thing in etiquette.
- Vanity Fair says that the private claims of the King of Hanover are in the course of settlement, and his Majesty is in treaty for the purchase of a considerable estate in England, where he will probably reside henceforth. He will retain the titular rank of king during his life, but the Crown Prince will only succeed to his title of Duke of Cumberland and Teviotadle.
- Marshal Motike's tactics are not always clever. The marshal nearly killed himself by getting out of the train in motion at the Potsdam station on his return from the fele at the new palace. He fell his whole length, knocked his head severely, but was able to continue his route. He wished to perform the part of a Uhlan and explore the country before the main body came up.
- At the deer-stalking expedition in Athole Forest lately, nearly 3,000 deer congregated in the corries in full view of the Royal party. The Prince shot a splendid stag, weighing 15st. 5fb. The wind afterwards vecred round and blew the scent in the direction of the deer, who all bounded off.
- A great deal is to be done for Rome to make it more attractive. A whole quartier is to be built in the grandest style of architecture, and two canals are to be cut to bring the salt waters of the Mediterranean to the city, so that there may be sea-baths; and a race-course is also to be established.
- This cremony of the betrothal of Tahir Bey, a younger son of the wealthy Tunisian, long settled in Constantinople, Mahmoud Bernard Pasha, and the Princess Ronkia, daughter of his Highness Mustapha Fazyl Pasha, and niece of the Viceroy of Egypt, took place lately.
- The new "Galatea" waitz, composed by the Duke of Edinburgh, was lately played (for the first time in public) by the five military bands at the Albert Hall concert.
- Count Guseppe Mastai, the eldest brother of the Pope, has died at Sinigaglia. The news has deeply affected Pius IX.
- The Echo du Parliament says that a new form of penance is now imposed upon Catholics going to confession in Germany. They are forced to subscribe to some clerical journal in order to explate their sins. Not complimentary to the newspaper.
- M. Geoffroy Saint-Hilawe has just neceived from Japan two golden fish sent to him by M. Dumas, French Cossul. They are inminous at night, their phosphorescence being so vivid that the keeper of the aquarium at first thought that a fire had broken out.
- The vintage in Champagne will this year be small in quantity, but of fine quality. The sales which have lately been made in the vineyards have attained prices rarely heard of.

#### Helpise.

The hill still reddens where we stand, The far sea still sleams blue and clear, Shall whisper rippling at the feet, In happy light still lies the land, Shall mind thee of the days of old, As in the days of yesteryear; But love is made an empty name,

Things are the same yet not the same, Between ns. Heloise.

And still the heather's red and gold The days when we were wont to meet:

But we shall never meet again, Those days were not so strange as these. By field, or woodland ways, or seas, hings are the same yet not the same. For times are altered, love is slain, Between us, Heloise,

> Farewell, a long farewell to thee. Where we have loved will others love, And view the same sweet land and sea. And move where once we loved to move; And some will love, and some forget, And part in such fair scenes as these, Without one tear or one regret, As we do, Heloise.

# "Laughter--Holding Both His Sides." -- Milton. A Sting from the Hornet.

Rosa's Stays. Rosa is Charles Reade's "Simpleton." But surely "Rosa's Stays." should be the title of this new London Society stays. Rosa's stays are written about with shilly-shallying detail this month. Her lover, Dr. Staunes, is given ap because he asserts her stays are the cause of her illness. Mark the conversation:

Rosa looked rueful and almost sullen. She said she had parted with her doctors for him, but she really could not go about without stays. "They are as loose as

they can be. See !" "That part of the programme is disposed of," said Christopher, "Please go on to No. 2. How about the raw red line, where the loose machine has sawed your skin?" "What red line? Oh! oh! Somebody or other has been peeping in at my window. I'll have the lvy cut down to-morrow!"

There is more of this delightful conversation. It is supposed to take place, notice, between a young beauty dangerously ill, her sweetheart, and her father? How much lower will writers of fiction descend? There seems to be a morbid pruriency in many novels now-a-days that makes it risksome to order any volume from Mudic's for family reading. When a vigorous writer of good, terse English, like Charles Reade, afflicts us with such details as the above (and with more eickenile). stuff, unworthy of his powers), perhaps the best thing to do is to take up the scis-sors, and cut out the pages from the magazine which they adorn.

### Quirks from Figaro.

- From Berlin we have the statement which was to have been expected, From Berlin we have the statement which was to have been expected, namely, that the Emperors of Austria and Russia recognized in the military power of Germany a guarantee of peace to Europe. It is inexpressibly touching to hear again this dear old familiar sentiment. Precisely how one nation's power for mischief is an assurance of security to its neighbors, it would be grand larceny, or its equivalent, to inquire. This cheerful political doctrine is like the healing decoction of the ancient crone skilled in simples; you shut your eyes, hold your blessed nose, and take it down at a gulp; and there's an end of it—excepting that it makes you extremely ill.

— It will naturally be expected of that faithful chronicler, Figure, that he will say something concerning the marriage of Père Hyacinthe. There was never a greater mistake.

— Richard Adams and his wife have had to pay 2s. 6d. for beating their little boy until the lody was "literally covered with bruises and wounds." The father belabored him until weariness waited upon zeal, and then mother "took it up," completing the job with a conscientious attention to general effect, and an accurate. The amount finish of detail, acquired by intelligent study and careful rehearsal. of the fine appears to represent a penalty of about one ha penny per single contu-sion. And yet people grumble at the cost of healthful recreation. It is dog cheap, that's what it is !

NAVICELLE.—The British Medical Journal says that "M. Lindeman continues his lavestigation of the parasitic bodies (gregarinidae) found on the false tresses and chignone commonly worn by ladies." Diana wishes M. Lindeman would mind his own business, and leave her hair and chignons aione. Lovely Diana, we promise that we will not touch, or even approach, the birsute ornaments of your little head, and M. Lindeman must be a brute it he is not equally respectful. We will quote the paragraph from the British Medical Journal: "The gregarinide are to be found at the extremity of the hairs, and form there little nodestites, visible, on circful examination, to the naked eye. Each of these nodestites represents a colony of about fifty porcesperms. Each psorosperm is spherical; but, by the reciprocal pressure of its neighbors, it is flattened, and discoid. Under the influence of heat and moisture it swells; its granular contents are transformed into little apheres, and then into pseudo-navicellæ—little fusiform corpusales, with a persistent external membrane, and inclosing one or two nuclei. These pseudo-navicellæ - NAVICELLE.-The British Medical Journal says that "M. Lindeman conbecome free, float in the air, penetrate into the interior of the human organism, reach the circulatory apparatus, and produce, according to its author, various maladies—'cardiac affections, especially valvular affections. Bright's disease, pulmon-ary affections.' M. Lindeman calculates that, in a ball-room containing fifty ladies, forty-flve millions of navicellæ are set free; and he concludes that it is necessary to abolish false hair, which often proceeds from unclean per-ons."

ary anections." M. Lindeman calculates that, in a ball-room containing filty ladies, forty-five millions of navicella are set free; and he concludes that it is necessary to abolish false hair, which often proceeds from unclean per-one." Quick, Cynthia. The smelling salts and Sarah Volatile, commonly called sal volatile. Yes, Diana, it is dreadful. Oh, dear, fancy the forty-five millions of navicella! Yes, dear, it is a nice word, but we know what he means by navicellae. We are not nervous or over-particular, Diana. But the idea of swallowing navicellae.

cellæ!

"Fun."

THE COMING WOMAN.—The Woman's Rights Movements, if we may judge from the following advertisement, has surreptitiously made immense strides (if we may apply so unfeminine a term) in a direction altogether unsuspected! Look here: "Wanted, a graduate of Oxford or Cambridge of some experience, of active habits and of no extreme views, for a large and much-frequented church at the west-end of London. She must be a good reader and preacher. Stipend £150, address, etc." Now this is all very well, but in the interests of the much-frequenters of that West End Church, we do solemnly protest against a female preacher! Some male preachers are long-winded enough, but a woman will never get to the end of her discourse. With nobody to contradict her, how is she to be expected to know when she really has the last word?

THE FABLES OF ZAMBRI, THE PARSEE.—A lion pursued by some villagers was asked by a fox why he did not escape on horseback. "There is a fine strong steed just beyond this rock," said the fox. "All you have to do is to get on his back and stay there." So the lion went up to the charger and asked him to give him a lift. "Certainly," said the horse, "with great pleasure." And setting one of his heels into the animal's stomach he lifted him about seven feet from the ground. "Confound you!" roared the beast as he fell hack, "So did yon," quietly remarked the steed. This fable has been variously interpreted.

People who wear tight hats will do well to lay this fable well to heart, and ponder upon the deep significance of this moral: In passing over a river, upon a high bridge, a cow discovered a broad loose plank in the flooring, sustained in place by a beam beneath the center. "Now," said she, "I will stand at this end of the trap, and when yonder sheep steps upon the opposite extreme there will be an upward tendency in wool." So when the meditative mutton advanced unwarily upon the treacherous device, the cow sprang bodily upon the other end, and there was a fall in beef. You cannot nearly always predict the state of the market.

"Permit me to help you on in the world, sir," said a boy to a traveling tortoise, placing a glowing coal upon the animal's back. "Thank you," replied the unconscious beast; "I alone am responsible for the time of my arrival, and I alone will determine the degree of celerity required. The gait I am going will enable me to keep all my present appointments." A genial warmth began about this time to pervade his upper crust, and a moment after he was dashing away at a pace comparatively tremendous. "How about those engagements?" snecred the grinning urchin. "I've recoilected another one," was the hasty reply. Fire is quickening to the intellect—so the Ghebers affirm.

Two snakes were debating about the proper method of attacking prey. "The best way," said one, "is to slide cautiously up, endwise, and seize it thus"—illustrating his method by laying hold of the other stail. "Not at all," was the reply; "a better plan is to approach by a circular side-sweep, thus "-turning upon his opponent and taking in his tail. Although there was no disagreement as to the manner of disposing of what was once seized, each began to practise his system upon the other, and continued until both were swallowed. The work begun by contention is frequently completed by habit.

The telegraph informs us that the lady managers of the Brooklyn Homeopathic (pay) Hospital dismissed their physician because he is a Catholic. They have done well. Their patients are of the Protestant faith, and this bigotd and unnatural doctor possessed a power over them which was ill reposed in the hands of a malignant Papist. Suppose he had administered to a suffering wretch sulphur of the fourth attenuation when the case demanded the second. The fourth attenuation when the case demanded the second. The fourth attenuation when the case demanded the second attenuation, as all the world knows, is a spoonful of sulphur to four hogsheads of water—one drop mixed with a lump of sugar pulverized to make eight powders administered, one every fourth hour. In the second attenuation, the spoonful of sulphur is put in only twenty-four gallons of water. That miscrable patient might never have found out the difference, and have gone and got well. Or he might have died—for all he good the medicines of the wicked Catholic physician might have done him. It is not inconceivable that this fiend should leave bottles of sulphur all about the hospital where the patients might devour their contents and put the institution to ruinous expense for drugs. We commend the Christian females of that Brooklyn hospital. Were not Borgia and Brinvilliers Catholics? All Catholics are poisoners.

# "A Night Mare."

'Tis the sunset of life gives me mystical lore, And coming events cast their shadows before.—CAMPBELL.

I stood in Sacramento's town, the day was bright and fair, And all the beauty, pride and wealth of the Golden State were there. There Culifornia's daughters, their peerless charms displayed, So fair were they, 'tweere hard to say which was the loveliest maid. And quietly the sun shone down, with mild and temperate ray, As If it knew the urgent need of chastened beams that day. The citizens and strangers have gathered in amain. The citizens and strangers have gathered in amain, From many a country market place, from many a fruitful plain, From many a country mining camp, where, h d by oak and pine, The hardy miner toils with glee at the paying placer mine. From seaseirt San Francisco, queen of the Western waves, Where ride the China steamships, and toil the Coolie slawes. From ailver-starred Nevada, the miner's asge brush home, From the green steeps where Y who leaps, in floods of snow-white foam. In Sucramento's city is met a great array. (Proud man was Leland Starford on that eventful day, For "Occident," his wonder, his trotter staunch and fleet, The Eastern mare invincible this day will strive to beat.) And now nigh all the city swarms to the racing track, And every team is out that day, and every hired hack.
And all that great assemblage is eager on the ground,
From California's capital and every village round.
Now is heard the hum of voices, and the chink of counted gold, As each voice declares its fancy, and countless pools are sold. See now the track is cleared, each heart is beating high. As swiftly moves the dial—the starting time draws nigh. And as the people bear them back, full many an anxious face Displays alternate hope and fear, for the issue of the race. Full many a thousand dollars go on the well tried mare, And quite as many backers of the little horse are there. Full many a rugged miner his hard earned gold will bet For the sake of California, on the horse untried as yet. Full many a jeweled gambler, with cold and cynic face, Hath staked his bottom dollar on Stanford for this race Now quick upon the well rolled track the rival steeds appear, Now quick upon the well rolled track the rival steeds appear, With crest erect, and flashing eye, and forward pricking ear. Calmiy the "Maid" surveys the crowd, she knows her errand well, A well known and a welcome sound to her is the starting bell. Right gailantly did "Occident" step forth before the throng. A little nervous at the first, but sinewy, fit, and strong. Cool in their slender sulkies the careful drivers sit, And gently curb the forward steeds with leather-covered bit, Budd Doble looks as though he meant to win this race to-day, But "Dismal Jeems" eye is cocked in a hopeful kind of way. But hark! the bell is ringing, a signal for the start, And the auxious throng is gazing with eager eye and heart. They see the "Maid" has drawn the pole, with "Occident" outside, They see the "Maid" has drawn the pole, with "Occident" outside, And like a pair of meteors, fast from the post they glide. In vain did gallant "Occident" exert his famous speed, In vain did skillful Eoff drive, with his utmost heed. For "Goldsmith Maid" has trotted fast, as ne'er she speed before: First by a length in "two sixteen," she passed beneath the score, And when noon the judge's board folks saw the time displayed, Some chered the great invincible, while others looked dismayed. A half hour passed, again they start, and thundering o'er the ground, Comer neather calling and the property of the ground. Come rushing on like arrows, as their glistening wheels fly round. Though "Occident" strove gallantly, he lost by half a length, But still was full of going and of unabated strength.

Then from all sides there rose a cheer that echoed to the sky, Then from all sides there rose a cheer that echoed to the sky, And some there ventured still a pool on "Occident" to buy. Now for the third, the crucial heat, the time has come at last, And to the starting post again both mare and horse have passed; They score three times and then are off with "Go'dsmith Maid" behind, And up the course bay "Occident" comes rushing like the wind; The fleet-limbed "Maid" behind him strives, but strives for once in vain—First 'neath the wire "Occident" comes in with slackened rein. The Judges called it "two seventeen," and such a should was there As though men acreamed upon the carth and spirits in the sir. "Twas plain to every seeing eye, the "Maiden's "strength was gone, But "Occident" was fresh as paint, and still like satin shone. And there was heard the mingled yells of many a puzzled aport, And there was heard the mingled yells of many a puzzled sport,
Trying to make his money safe, heedless of keen retort.
The last two heats were like the third, still "Occident" was first, And on the astonished country the wondrous truth then burst, That California had a horse second to none in speed,

With staving powers and courage high-in truth a matchless steed. Two minutes (said the Judges) and eighteen seconds more For this last heat, was bad to beat: it ne'er was made before." Congratulations came apace on Stanford, and his hand Was nearly shaken off its wrist by friends from every stand— The people yelled for Stanford, for Eoff, and for the horse; Such shouts as these have never yet been heard on any course. I dreamed all this one night in bed, but when I had awoke It seemed to me that it must be a bottle "full of smoke." W. L. E.

# Leaves from a Lady's Diary.

OCTOBER 14. - Paid an early visit to Mrs. S--. Her last hobby is the intellectual OCTORER 14.—Part an early visit to MIS. S.—. Her last nonly is the medicated improvement of her maid, so she makes her sit down by her side while she reads her some scientific book, expounding it in her superficial manner; the consequence is that poor Jane has fallen into a state of mental imbecility, and her memory is a is that poor Jane has fallen into a state of mental imbecility, and her memory is a chaos of chemistry, astronomy and natural history, at the same time she puts on airs to the other servants. Mr. and Mrs. R.—came to lunch. He, on the other hand, treats his wife like a spoilt child rather than as a companion to share his thought and be clevated by him. He fondles her delicately, like an exquisite piece of mechanism, and their married life, although quite irreproachable, is too frivolous to have any character about it. Went to see Richard the Third in the evening. The way it is played is a type of the age. The proprieties are carefully observed, the scenery is beautifully painted, the costumes are rigidly copied from the originals, and yet with all this there is a want of earnestness and soul that sends one away unsatisfied. It is like modern sensation novels; they must be filustrated by well known artists to be attractive. This is the age of illustration; it was begun by Knight in the Penny Magazine, amplified by the Illustrated London News, and to-day pervades even the region of science. Consequently Shakspeare is now illustrated, not acted, a series of correct tableaux vivants which please the eye, but without the passionate as pech or subtle bye-play that go direct to the heart. without the passionate sp ech or subtle bye-play that go direct to the heart.

OCTOBER 15 .- Was nervous and fidgety the whole morning, and felt ready to cry Women have many sorts of tears, but the two principal causes are sorrow and Women have many sorts of tears, but the two principal causes are sorrow and anger; in the one the large tears course down the checks silently, only broken by sobs, the eyes are monraful and heavy with weeping; in the other the bot tears force themselves out of the dashing eye, and the sob is choked down. Death and the weariness of disappointment cause the first; injustice and jealousy excite the latter. Mrs. C—— came with a letter from her good-for-nothing son; he is now in Singapore or Batavia. Spite of all the ill he has worked her she was overwhelmed with joy at the few cold words he wrote.

"Years to a mother bring distress,"

But cannot make her .ove the less."

OCTOBER 17.—Henry got back from the races at Sacramento; he was so silent and cross that I suppose he either lost his money or drank too much whisky, perhaps did both. Now that this excitement is over, the greedy mob looks out for another, and finds it in the forthcoming election for President. The picture shops have already taken down their sporting prints, and put up Grant and Greeley with the minor candidates. I remark that of late Greeley's portraits have been more rarely exhibited than Grant's. The sale fell off after the Pennsylvania and Obio elections. Paid my first visit to the G.—'s in their nice house, and was charmed with them. I can understand that his kind, genial heart expands as he looks on the gloriew that stretches before him from the Golden Gaute to Monte Diablo. It was full moon, and the panorama was splendid. She caught the inspiration It was full moon, and the panorama was splendid. She caught the inspiration of art in Germany, and it has expressed itself in some of her oil pinitings which hang on the walls of her rooms, and shew marks of great merit and promise. They seemed to be so happy one with the other, that I sighed as I walked home, although I hardly knew why. The Fair this week for the benefit of a church appealed to men's stomachs for aid, and the lunch table provided the appointments for the altar. Walking home with Henry after the good concert, a phantom of a woman passed swiftly across us. Henry almost dragged me away, but in the glance that I had I could not be mistaken. It was poor fallen Fanny B—— There was no mistaken the provided the special provided the seeks. Poorgirl!

"Perle avant de tomber, fange aprés sa chute."

<sup>—</sup> The appalling announcement is made that the militia lads known as San Francisco Cadets are to exhibit themselves throughout the Eastern States next Spring as examples of California youth. We speed shricking into the breach to have this thing stopped. Is it not enough that a party of our Pioneers only three years ago made an Eastern tour, and instantly immigration came to an end? Is it not enough that our most successful capitalists annually expose themselves at Eastern watering places and smite the inhabitants with speechless wondor? Must we now trot out our tailowy and scorbuite younglings bugs, encased in an unuterable garb, to make a spectacle of themselves before the world? Let the Immigration Commissioner see to it, for this thing must not go on.

#### Our Quicksilver in London.

The London Mining World of the 28th ult announces that "In the course of a few days a company will be brought before the public to purchase and work a most valuable quicksilver mine in California, the returns of which are stated to be £4,000 per month, working with only one furnace." We proceed to state several reasons why this announcement is worthy of special and immediate attention. The quicksilver produced for several years in California was obtained through the old-fashioned furnace, costing some \$50,000 to creek, working under a limit of eight tone of ore per week, and requiring an ore of at least five per cent, richness in order to leave a profit over cost of production. In order to bring the ore up to this grade, close selection in the mine was requisite, involving much labor and the throwing away of the greater part of the material actually mined. This brought up the mine cost to a high point, so that some of the selected ore fit for the furnaces produced at the New Almaden mine has cost as high as \$60 per ton. Under these conditions of production, only large and comparatively rich deposits of quicksilver paid for the working. Deposits have been discovered scattered over a large part of the State—from the county of San Lus Obispo on the South to Trimity on the North, embracing among others Contas Costa, Napa, Lake, Solano and Sonoma, and the Sierra, Diablo and Coast ranges of mountains. The deposits as found are irregular and generally too limited in extent and too variable in quality to warrant the erection of the old-fashioned costly furnaces. But the new continuous acting furnaces, erected at a cost or \$10,000 and reducing one hundred and fifty tons per week, give a profit on ores running under three per cent, quicksilver, and, under favorable conditions, even as low as one per cent. There are several points already prospected at which such furnaces will be nut up, and next year it is certain that the exciton of the cold-fashioned costly furnaces. But the new continuous action were accordable condit

The mare's nest recently discovered by what the Sacramento Union calls "the Chickadee papers" in the matter of the telegraphic Liverpool wheat quotations sent to the San Francisco Merchants' Exchange, is taken to pieces by a dispatch from J. W. Simonton, General Agent of the Associated Press, in which he says: "The Liverpool grain quotations furnished the Canforma Associated Press and the public through the Gold and Stock Telegraph Company are those of the New York Associated Press. The standard quoted is that of California average of wheat, and the prices given are sustained by the Liverpool weekly grain circulars. The higher quotations cited from the Mark Laus Express evidently give the prices of California ciub wheat, which is not regarded either here or at Liverpool as so true a criterion of the market as the average wheat." The fact is that the prices of cotton, pork, cheese, beef, lard, Western wheat, flour and other American staples, which is forwarded for the information of the whole country. The notion that he quotation of California wheat alone should be falsified for the purpose of childishness. And as we have before pointed out, the price of wheat in California faxed by the limits of English orders—not by the fluctuating daily English price is faxed by the limits of English orders—not by the fluctuating daily English price

<sup>—</sup> A short-tailed bear sitting on an leeberg—a one-eyed owl reflectively blinking at the sun—a ring-tailed baboon pensively munching his genuits and acratching himself, are respectively imperfect personations of dignity, wisdom and decency. Yet compared with the human creatures who reflect the same virtures in the San Francisco Police Court, the above named animals are as archangels of light gleaming in the glory of the throne, to a hump-backed negro in a could cellar. Illiteracy, insolence and brutality do not disqualify from the prosecution and sentencing of drunks and vagrants. Then why do we find fault with the Police Court! We do not.

# Lothario: Or, the Curate with two Strings to his Bow.

AN ECCLESIASTICAL "LAY."

There was a curate meek and mild As ever Fate made flutter Into a pulpit, or let loose
On tea and bread and butter.

He was a most crotic youth
(Like monks of old in minsters),
He flirted with his female flock, And spooned the aged spinsters.

No matter whether old or young, He grew at once ecstatic. And went ahead -- though, mind, he was

Erotic, not erratic. Two maidens owned his chief regards,

The fairest e'er you did see; The one he named his Todsy, and The other christened Tiday.

Three days per week he Tidsy spooned The other three, ecods! he (Of course the Sundays didn't count) Gave up entire to Todsy.

Things came at last to such a pitch That people thought, as I did, Tidey or Todey should be queen— He still was undecided.

In fact, he vacillated so, It nearly proved his ruin;
The aged spinsters set him down
A clerical "Don Juin."

Kind Fate, however, interposed, No more this curate's hardener: For Tidsy went and got engaged-Not to "a market gardener."

He talked about "a dear gazelle,"
Like other love-sick gabies;

But Tidsy married none the less, And had a lot of babies.

On Today henceforth he resolved To concentrate his gunnery But Today, tired of waiting, too, Subsided in a nunnery.

Lothario, left by both the girls, A sad example made is He'd nothing in the world to do But spoon the aged ladies.

So, though an Evangenear While playing games Lotharian, He finished up his earthly life As a celibate Tractarian.

MORAL.

Now, curates who with charming girls
Your being seek to bind up, Don't shilly-shally, but at once Do try to make your mind up.

Or else, while couples all pair off, Yourself you still will odd see, Cut dead—just like Lothario nt dead—just time Todsy.
By Tidsy and by Todsy.
—The Hornet.

## The Congregational Association.

This Association met again on Thursday. Rev. Morris presented the following report: "Whereas Intemperance is one of the greatest evils afflicting mankind, and flows as a flery formen."—

Rev. News Letter was sorry to interrupt, but could assure them it did not all flow as a flery torrent. He could show them some of the genuine stuff, not flery in the least, but creamy and coll as the gushing rill on the lotty—

Rev. De Jones called the brother to order. They did not come there to listen to

hev. De Johns caned the bronner to order. They did not come there to listen to his wretched attempts at poetry.

Rev. Morris proceeded "and thus becomes a powerful and Bitter enemy"—
Rev. News Letter again interrupted. He could not allow this calumny to go unnoticed. Evil-minded bar-tenders had evidently been shoving some vile Bitters on them, instead of the pure article. The words of Leviticus the Apostle were indeed verified, "I was a stranger and ye took me in." He blushed for that bar-tender if it was a man, and if one of those underground female beer-jerkers, he would like to brow the abstract of her parts.

know the first letter of her name.

Bro. Sloshhed—O, let her bel

At this cold-blooded joke, News Letter fainted. With a last failing effort he
pointed to his incide left waistcoat pocket where a black bottle was discovered,

which soon restored him.

Rev. Dwinelle called attention to some facts of fearful import. He believed the manufacture of wine was ruining the State, just as it has ruined France, Portugal, the Rhine countries, etc. It was increasing with alarming rapidity. He knew winegrowers who assert, and even make a boast of it, that they can produce a wine beter than that imported from France, and at half the price! There were actually men who preferred the native juice of the grape to good old corn-whisky! The question comes home to each one of us: "What are we coming to?"

question comes home to each one of us: "What are we coming to?"

Rev. Jones, of Benicia, related a case of a man owning a large vineyard, who

saw so clearly how the production of wine was ruining the State, that he magnan
imonsly sold out and bought a whisky distillery! (Applause.)

Rev. Willey, of Santa Cruz, gave another instance. He knew a man who sate

vineyard and manufactured wine for several years, but he found that the boys stole

half his grapes, and the bugs got the other half, and the vines were about played out anyhow, so that after giving the customary hogshead to all the parsons for fifty miles around, he did not clear a cent at it. And, brethren, that man went to work and grubbed up all his vines and sowed the field for wheat!

Bro. Holbrook complained that some ridiculous old ass had said somewhere, that we might "take a little wine for our stomach's sake." Now the man who said that were higher greatling.

Rev. News Letter reminded the speaker that the words were found in the Bible in the Epistle of Mark Antony to the Colossians of Rhodes.

Bro. Holbrook took it all back. He had learnt the Bible off by heart in his youth,

and had not read it since. He then proceeded to perpetrate the ghastly old joke about Champagne giving real pain, at which several brothers precipitately left the room. They returned in half an hour looking very pale, and complexing that they

must have swallowed a fly with their dinner.

Rev. Blakeney said it was quite a common thing in Uniontown to see girls of sixteen or seventeen staggering home drunk, so much so, that they thought nothing of it up there. He found his health giving away under the fitting of picking pretty of it up not to the difference and guitters every night and carrying them home, and appended to the Association for assistance. Instantly 105 parsons volunteered to go and work in Bro. Blakency's vineyard. Of course Rev. News Letter was among the course for the the number.

Rev. Rossboro said that his lines had fallen into equally pleasant -he should say, unpleasant -places. The ladies of Woodland were also addicted to the most beastly

habits of drunkenness.

Judge Sawyer made some deprecatory remarks, which were received with the

Contempt they deserved.

Rev. News Letter then rose. The brethren greeted him with prolonged cheering and cries of "Bully boy!" "Our Humburg-masher!" ""Rab for News Letter!" and cries of "Bully boy." Our Humbur-masher: "Rah her News Letter?" He said he had betened with pleasure to the cloquent debate. Subte and hyperborean in its reasoning, yet bubbling o'er with emphastic morth, it reminded him of the Alta in her more inspired moments. Coupling it with Dr. Stone's sermon last Sunday on the baneful influence of newspapers, he felt convinced that when our Sunday on the banelli influence of new spapers, he fell convinced that when our clergy have succeeded in uproofing every vine in the State, and can pixel their foot proudly upon the neck of the prostrate Press, Carlornia will be a very different place to what it is now! [Others ] He wondered that now of the speakers had taken occasion to give Dickens a raking down. His joby drukking scenes in Prekwick and other novels had brought tears to many an exe. Abuse of Dickens, now he is dead, had become part of the stock-in-trade of Temperance Orators, and he ne is qual, may occume parcet the source-intrace or reimperance Orators, and me marvere at its emission to-day. He had one proposition to make be force he sat down; He thought it nothing but fair that they should hear both sales of the wine ques-tion. Let the California wines speak for themselves. He would take delight in showing them where they could taste the pure and unalloyed article, and so give an unbiased opinion. After some discussion it was decided to meet at the Katusalum Wine Ce.lars at 10 P M

Bro Skalawagg then read the following resolution: That we joyfully receive the Chinese in tull fe lowship with us, and embrace them with open arms.

Bro. Extrassicil ready left it incumbent upon him to object to the words "open arms."

Bro. Skalawagg explained that it applied in a figurative sense, and to male con-

verts only.

Bro. Holbrook called attention to the decrepit state of their "organ," the Pacific. It did not pay for its sait. People compared that they found nothing to laugh at in it but his own editoria's and the funeral notices. He could not pay his cigar bill out of it. Was not going to run it for nothing. Not for Josephus. Brains are money nowadays. The brethren were shocked, and immediately assessed each church member \$5 per month for its support.

The Association met at the Katusalum Wine-cellars, Rev. News Letter in the chair. Some of California's choicest vintages were tapped and tasted. The breth-ren were surprised. Failing to catch the flavor first time, they tasted again. The brothren were still more surprised. After tasting five or six times, they passed the following resolutions:

Recovered. That the resolution on wine-growing, passed this morning, is false and r denious, and is hereby rescinded. That our old friend News Letter is a joily good to ow, and we will drink his heath in a flowing bunger. That Rev. Blakency be called upon to explain his vile slander on the girls of Uniontown.

Biskeney be called upon to explain his vile stander on the 271% of Uniontown.

Bro. Blakeney, who was under the table, was under-tood to say that the young lates there hie haid a spite against him; he did not care to explain why just them, and he was trying—hie—to get even with them. The indianant brethren dragged he mout, one sat on his head, another held his feet, while a third punneded his ribs with a decanter. This occasioned some confusion, which did not subside until a new brand of whe was submitted for their judgment.

Bro. Smiflewell then got on the table and addressed his brethren, who were scated mostly on the floor in artless and child-like attitudes, on the subject of Chemes Massions. He wanted to see more done for our Chanese sisters. He—Here Bro. Jenkins, who was gracefully reclining with his bead in the coal-box, told the speaker to "Dry up!"

Bro. Smiflewell believed he could whip Bro. Jenkins in the space of two seconds.

pro. Stemewin beneven the cond wind bit of sensitis in the space of two secondars. While descending for that pious purpose, his eye came in contact with a tambler, which was advancing across the room at a rapid rate. At the same lime be felt some Frether combine, his hair with a chair. Feest, and blood conde not send this, some tretter coming in said with a chair. Fees and office constant section in some confusion again ensued. After the police had succeeded in dispersing the combatants, the fragments of the table, chairs, etc., were swept up, and the loss roughly estimated at \$500. This was charged by the association under the head of contingent expenses, and each church-member duly assessed to meet it.

<sup>-</sup> The Catholics are to have a Provincial Council in the interest of the colored people. Baa, baa, black sheep, have you any wool -now you are free!

#### The Great Trot.

The News Letter's own poet proceeded to Sacramento to report the great trotting match. He was supplied with two pints of inspiration, notwithstanding which, it will be observed that his account occasionally drops into proce. The effect of these transitions is highly pleasing, and the entire recital is spirited, and what Mr. Thackeray once wrote "youfonious."

'Twas on a bright October day I left the city on my way To the ruce at Sacramento. started by an early train-I longed to see a race again, And so you'll bet I meant to.
The crowd was awful on the road, The cars had never such a load, And passengers as thick as beans, Were packed together like sardines. All journeys have an end at last. And ours, thank God, was quickly passed; But when we got within the city, No hack was there for gold or pity. So through the town I had to walk, And spent the time in drinks and talk With others who had come like me, To witness Stanford's victory.

For every sinner gathered there, Or drunk or sober, dark or fair, Expected, with a pleasant face. To see a well contested race. I put my money up "on time;" In general I don't bet a dime. But now I thought I'd surely win With trifling risk, a "pot of tin."

I backed the mare to beat eighteen, And hundreds doing the like were seen Far up and down the course.

The betting violent and loud Was heard on all sides in the crowd,

Backing the mare or horse Soon the noise ceased, as on the track Appeared the famous Eastern crack, Save when some backer's husky cheer Proclaimed his fancy-or his beer. Budd Doble in his sulky sat, Eyeing his mare, as does a cat Watch with her eyes (her feline soul

Intently wrapped) a mouse's hole. Three times, with light, elastic gait, With courage high and hope elate He trots her past the stand First a low murmur—then a shout Arose as Occident stepped out,
The pride of Western land,
And a loud buz of salutation Declared his backers' admiration.

The cheers that rose as he passed by Made "Dismal Jeemes" look doubly sly. The horse was fresh as any daisy, But seemed, I thought, a trifle lazy.

Now soon the Judges called them up; Each driver quaffed his stirrup cup. And drove his beast around the track. First up and down, then gaily back; Down to the starting post, and then. They all seemed ready, nags and men. That Eoff's an awful chie to beat; I knew he'd try to win this heat; But when I saw him at his tricks I thought he'd have us in a "fix."

Small chance was there to make "eigh- Budd Doble meant an honest deal,

teen. When all that scoring work was seen, By gad, the jockying made me sick, And Eoff I had rejoiced to kick; For that infernal game of his Dashed all my hopes and spoilt my "biz."

And no advantage tried to steal; But Eoff, as ugly in his face As in his action, shirked the race, And tried by every kind of shuffle Budd's temper and the Maid's to ruffie.

They score ten times before they go, And mad begins the crowd to grow: "What does it mean?" At last they know That Eoff is fined for going slow. I hoped at first the horse would win. But Eoff s old game was much too thin. I got disgusted, for fair play Is best, whoever wins the day.

They came to trot, and trot it fair, And all the crowd that gathered there

They did not want horse politics—
And dark grew every face.
The pent-up feelings of the crowd

they went. Both horse and man to win intent. At the first turn, a length ahead, The little horse like lightning sped, And at his heels the Eastern mare Just held her own with nougt to spare.

Quickly the quarter pole is passed, The gallant mare still lagging last. Wanted to see a race.
When to the half-mile post they got,
They did not want these knavish tricks; She'd lost a length and broke her trot; But blood will tell, and soon again She holds her own with tightened rein. The pent-up feelings of the crowd.

Gave vent in in one long cry, and loud: She'd put two open lengths between.

They er off!" "They re off!" and off In vain with whip Eoff piled his horse;

His race was run, he'd gone his course,

His race w On the home stretch 'twas quickly seen She'd put two open lengths between. He no'er again could reach the Maid. (He is a stayer, but he stayed In one place longer than he ought: Experience is dearly bought.)

Two lengths ahead the mare came in, And soldom had an easier win; The time, two twenty and a quarter; Poor time for Hambletonian's daughter. Some seemed to think the mare looked tired, But I did not; her blood was fired. Fover heat by Eoff's sharp play; It told against himself that day, For mongrel-breds can seldom stay

Eoff thought he'd done a clever trick-Worn out the mare and made her sick, But reckoned quite without his host,

He little knew the coming heat Would turn his fule vaunt to jest-It was the horse that wanted rest. And when he made his cursing boast, He knew it, too, and tried no more, "The mare's d—d tired, I have her beat," To waste his strength in useless score;

For at the first attempt they started So even that they scarce seemed parted, But gradually the Eastern trotter Kept gaining, as the pacegrew hotter, And though the gallant little bay Still strove to win, 'twas not his day. Both trotted well, but not the pace That all expected in this race. Two lengths ahead, with lots in hand, The Maiden passed the judge's stand: Then rose the cry, "the horse san't trot, He's doctored, ill, "and all such rot.

doctored, ill, "and all such rot. They brought the horse out at last, For the third and final heat; There was no chance of trotting fast, All hope of making time was past, Or "two eighteen" to beat. Boff told his owner he'd no chance, The horse had met with some mischance, And could not trot that day; And Stanford saye, "There's something wrong," Yestreen the horse was 6t and strong, And fresh as flowers in May.

Budd Doble, feeling light of heart, Gave Eoff the advantage of the start. Then from the crowd arose a how! AssJockey Jim tried hard to foul; (Much as they wished to

win the race. They never would their land disgrace, By dirty tricks like this. End made a brush to pass the mare, By strategy not on the square, And well deserved

But "dismal Jeemes's" trick was vain. And no advantage did he gain; Though the mare broke, Budd Doble quick Got her in hand, and going slick She passed the horse, nor was he near. She left him two lengths in the rear. Then Eoff knew well the game was played. Nor longer strove to beat the Maid; Then Doble knew the match was o'er-In fact he guessed it long before.

All hoped to see a better race, A nearerthing, and better pace; Some said the horse was far from well Perhaps he was not -who can tell? But when he Lucy strives to heat Let's hope, at least, he'll win a heat.

— "If in conversation a Japanese speaker desires to emphasize the first person when speaking of himself, he uses such humble expressions as 'this awkward person,' or 'this stupid one'; and in like manner when addressing his interlocuperson,' or 'this stupid one'; and in like manner when addressing his interlocu-tor, he indicates the accord person by means of honorary terms, as 'the noble-lord,' or 'the lonorable gentleman.'" We hasten to take a lesson from the Japlord, or 'the 'o norable gentleman.'" We hasten to take a lesson from the Japanese burbarian and apply his courteous forms of speech to the needs of our American discourse. Serne: Pickering and Fitch discovered: to them, enter MacCrellish. Firten.—How doth the honorable gentleman's bank account? I ween the noble lord hath an itching palm." MacC. "This askward person will bastinate the honorable gentleman's ribs and punch the noble lord's eye. The noble lord is a liar." Pick.—"This stupid one will perforate the honorable gentleman's carcase and shoot him in his high-born back." MacC.—"The noble lord is a runaway convicted thief. He wold himself to Stanford and then went back on him. Parithe hours him. a bribe taker and a traiter, the noble lord is a runaway convicted. Besides being a liar, a bribe-taker and a traitor, the noble lord is also a fool." nust suffice to show how the Japanese method would work in American practice. To our mind it is an improvement on the style at present in use by the Bulletin, Call and Alta, and we commend it to them.

- Here is richness again: Yea, Juiciness galore. On last Sabbath, a band of young followers of the meek and lowly Jesus, after performing their devotional exercises, retired from the sanctuary to Brannan street, near Sixth for contemplation and silent prayer. Here they beheld a Chinese. One of the larger youths at once lifted his voice to the right hand of the Throne with the brief but fervent appeal—Howly Jasus, here's a Chinee! and Wifed up a brick in his own right hand. This example of zeal was not lost upon his young companions. The Holy Ghost wrought in their awakened hearts, and they all lifted up stones. So they proceeded to make a prophet Stephen of that heathen, and stoned him good. And about the same hour, another band of Christian hope, who were on Pifth street, near Mission, found also a Chinaman, and the love of their Saviour wrought mightly in their hearts; and falling on that pagan they entreated him spitchilly. The leader of the band said they had "kieked hell out of him." It is at least sure that be was transfigured before their eyes and his face glowed in rainbow hace: for there was red and blue and yellow and green. Perhaps the reader thinks that they were godless Hoodlums who did this? Not any, they were veritable Sabbath-School lads, veritably let out from their gospelry. And of such is the Kingdom of Christ in San Francisco. Sing. ercises, retired from the sanctuary to Brannan street, near Sixth, for contemplation in San Francisco. Sing.

The Chinese having succeeded last week in driving out the devil, he again took refuge as of old in a herd of swine, viz: the Congregational Church. One hurled the Bible at him, another the inkstand, but he did not scare worth a cent this time. Pastor Pond repeated the Athanasian Creed backward, but St. Satan merely tapped his horn significantly. Pastor Stone sprang his most damnatory sermon on him, but the old boy remarked that he was used to brim-stone. At this Bernion of film, out the out of remarked that he was used to brim-stone. At this fiendish pun Pastor Stone went off into a neaf fit, which reflected great credit on his tailors. But still the "genelman ob color" did not budge an inch, but sat with his hoofs on the cushion picking his teeth with the point of his tail. As a last resort they sent for Pick. Pick arrived, refused the Devil's proffered hand, swore hid did not know him, and commenced to read the Call to the Unconverted. The only effect of this was a disholical ground from the Saturia house. and not know min, and commenced to the commenced on the holing was a diabolical snoring from the Satanic larynx. He then commenced on the Daily Call. In three minutes nothing was left but a strong smell of sulphur. All said Pick came just in the nick of time. But when Nick gets hold Pick down below, he will show him what he thinks of a man who will go back on his best friend.

## Mrs. Colonel Dunning.

BY WM. H. MAYS.

Well, Bessic, Tom has brought the news, O, my lost love! is all forgot— you've married stout old Col. Dunning; The long glad days, the golden weather, His face and acres both so broad, The drooping fig-tree by the porch

Where we read Tennyson together?
'Twas Locksley Hall. 'She was most base,'
You cried, 'nor worthy true affection!' His figured vest superb and stunning. It's rather strange, this sudden change You often said with much vexation

His visits bored you, and his head So loud you spoke the Colonel woke And recommenced on 'jail-inspection.' Was balder than his conversation.

Te used to quiz his solemn phiz, And the long summer was so sweet, His sage remarks on "moral training." When by the sea and shore entrancing, We used to quiz his solemn phiz,

And to the orchard we would stroll

I watched beneath your fringed lids
To find relief from "sub-soil draining." The lovelight and the moonlight dancing. To not refer from "sub-soil draining. And everyght and the moon gratualing hat, Bessie! bright the future seemed O. Bessie, darling! can—but pshaw! We planned beneath the walnus stately, Into what folly am I running—But then, you see, my claim was rich—I, a poor miner on the Flat.

It hardly pays the working lately. While you are Mrs. Colonel Dunning! Ah, Bessie! bright the future seemed

But then, you see, my claim was rich— It hardly pays the working lately.

I cannot curse you, Bessie; I—
God help me—I must ever love you. You've quenched the light from out my life, You bartered me for rank above you; Yet when alone you think on this,
Your memory back to old times running,
Does not your guilt seem like a knife
To stab you—Mrs. Colonel Dunning?

## Water.

When Haggin and Tevis finally made up their minds to "go for" the San Fran-When Haggin and Tevis finally made up their minus to go for the san Francisco Gas (ompany and its business, they made things unpleasant for that corporation. How much longer the present war is to continue is an interesting question not only to stockholders but the gas consuming public. These last are having cisco this various. The result was is to continue the present was is to continue the continue to the continue the continue to Company has too good a time at one feet at unablessed enjoyment of re. It is a listy giant and a muscular, but there be Titans who are minded to try it a throw. The San Francisco Water Company, an incorporation formed some five years ago, and before the time perhaps was fully ripe for it, has of late changed hands. It has and before the time perhaps was fully ripe for it, has of late changed hands. It has passed to a combination not less potential to have dealings with the Spring Valley than were Haggin and Tevis to "tackle" the gas crowd. The fullness of time is at hand. Money is about to become abundant to the verge of plethora and its profitable employment a problem. The engineers have shown that water works to yield a supply of 60 million gallons of water daily to San Francisco—equal to one-third more than the amount supplied daily by the Spring Valley Company—with reservoirs adequate to store up a whole year's supply can be completed within a cost of 5 million dollars. The reports of Prof. Davidson of the Coast Survey and Gen. Alexander, U. S. Engineers, have been heretofore printed in the News Letter. And what is 5 million dollars? A bagatelle: Pouf! The members of the reoranized San Francisco Water Company draw checks for the amount, and then anothematize because they cannot keep their balances out. Wherefore may we see that there is to be another wrestle of the coloss in our midst—with the attendant wreck of matter and crash of worlds. The last sales of Spring Valley Water Stock (quoted elsewhere), are reported at \$76 50. What the next price will be we leave the seller to find out. leave the seller to find out.

- An American Government officer in Rome writes that he is "astonished to find the Pope's authority ignored." A more astounding discovery awaits this in-telligent exponent of the American civil service when he arrives in Paris. He will find the decrees of His Majesty King Louis Philippe, contemued with scorn.

Froude says he comes to the United States to explain the present relations between England and Ireland. The toad which the elephant stood on equally required the aid of an historian to explain that the relations between the beast and himself had been of the closest nature.

<sup>-</sup> The San Francisco Chronicle talks of "the effects of unpunished crime." We point to the success of the Chronicle as a conspicuous example.

# The Diamond Diggings--General Account of the South African Fields.--No. 2

[By Charles A. Payton-"Sarcelle" of "The Field."]

THE DRY DIGGINGS, AND HOW TO WORK THERE.

The first of the "dry diggings" to attract public attention was Du Toit's Pan, to which a few diggers resorted in 1870. This place derives its name from a large "pan," or shallow depression in the ground, filled with brackish water in the rainy season, and on which no vegetation grows when the "Pan" is dry, it being then simply an expanse of hard mud, its sured in all directions by the heat. Du Toit's Pan is situated twenty-five miles from Piniel, on the road leading from the colony hroute Francesimth to the Vaal River Township. On the further or Prinie side of the "Pan," which is about a quarter of a mile in length by half that breadth, is a stoping ridge, or long "kopje," towards the top of which the diamonds are found. The work here is more easy than on the river, no water being used, moreover the big bowders are absent, the ground being soft rotten limestones, with green trap, any glavioli, etc., all of a consistency which is casely worked by piek and shovel, a large rock requiring any trouble in removing being only found at very rare intervals. Here, when the stuff has been loosened by the pick, it is thrown on to the top of the caim with the shovel if the caum is shallow, hauled up in buckets if it is deep, broken up with the shoved, then suaken in a stew of large mesh to remove all the rough stones which might injure the fine sieve, and then will setted in the fine sieve, which is generally of a very fine but strong wire meshing, sometimes of perforated zinc or iron, in a strong oblong woods in frame, some three feet by two feet, with removed handles at one end, and two deep notches at the other, by which the sever rests firmly one piece of strong rheam chidstorpe, hange between two upright posts, calzed "sieve props." The operator swings the sieve to and protten as and, dust and dirt has failen through; then the gravel, which is composed principally of minute paces of limestone, chalk, green trap, de., with a cight admixture of garnets, period, silner and tale, is emplated on to the sorting table and tr

diamonds may be found.

The natural consequence was that early in the year 1871 there was a rush of diggers to Du Tot's Pan, who commenced to work the who'c of the old clams over again, beginning where the former workers had left off. And whereas a mancould "work out" a claim charty square feet in a week or two when two feet was his limit of depth, now when we go down thrifty or forty feet, or even more, it takes many months to work out a claim properly. It is difficult to say at what depth most diamone's are found. A great many small diamonds he near the surface, some large ones have been picked up on the surface and very near to it; but, again, I have known diagers ind hardly anything tild they got to a depth of twens feet or more, and from that time to go on finding regularly one or two stones per day. From general experience I may safe's say that by far the greater proposition of large stones are found below five feet, many between that depth and ten feet, and that the quantity is often found to improve with the depth. In the feet, and that the quantity is often found to improve with the depth. In the can cashly strede claims. One will sink a perpendicular, narrow shaft, that he can cashly strede across, and descend and ascend by means of lettle niches or "tos-holes" picked in each side of the shaft. Another will have a notted rope or rheim hanging down the side, fixed to a strong post above. Where trees are plentiful, which is not at Du Tot's Pan, I have seen a big tree with convenient branches lowered into a Cammand used as a shirtcase. Others, work claims in regular stages, with a little kind of steps to each, if the ground be hard. Many make tunnels or shafts, harituarily good. But this is dangerous, first, because the ground at Du Tot's Pan, is hardly of sufficiently firm consistency for this purpose, and small "landships" are frequent, especially after heavy rains; and secondly, because a man is working, as it were, in the dark, and may aniwitingly burrow under his neighbor's claim, the hardly of sufficiently firm consistenc

stone. I have heard, it is true, of a wonderful stone of, some say 314 carats, others stone. I have heard, it is true, of a wonderful stone of, some say 314 carats, others 318; and there is certainly no reason why even larger gems should not be found, especially as I have seen a stone weighing 124 carats, which was evidently only a fragment of a much larger gem. I will speak more fully of some of the principal large stones found on our South African Fields in a special chapter on diamonds and other precious stones. There is an immense area of ground being worked at Du Toit's Pan; I should think not less than half a square mile. The claims, during working hours, present a most animated and striking appearance, each claim employing on the average, I should say, two "white folks" and three or four Kafirs, all ceaselessly busy at the various occupations above and below ground, picking "stuff," throwing it up, breaking, sifting and storting, the whole accompanied by much barbaric singing and shouting on the part of the half-maked Kafirs.

Joining Du Toit's Pan is another camp called Bultfontein, presenting similar characteristics. I must mention here that each of these camps possess a large

characteristics. I must mention here that each of these camps possess a large dam, where water collects during the rainy season, and supplies the cattle of the dam, where water collects during the rainy season, and supplies the cattle of the camp, and many of the human beings, too, with drinking water, while a smaller dam is set apart for washing, and is constantly surrounded by a chattering of washerwomen of every possible shade of color, and clad in every variety of dress, the brighter colors being naturally prevalent. Bultfontein was originally a cattle-breeding farm, and when it got bruited about, early in 1871, that diamonds had been found on the surface, the proprietors refused to allow diggers to come on their ground. A number of miners of the rougher sort "jumped," or took forcible possession of the farm; but, after too short a stay to do much good there, were driven away by some of the Free State police. Towards the end of May, however, the proprietors, fearing that the farm would again be "jumped" by so large a force of determined diggers that a handful of police could do nothing against them, wisely threw it open to the public on payment of the ordinary mouthly license of 10s, per claim. This gave general satisfaction. The day I arrived on the fields, 29th May, 1871, over a thousand diggers were busy marking out claims on the "kopje," all round the old farm house, and in a few days Bultfontein diggings were at full works. From this time all the available ground there kept thousands at work, with round the old farm house, and in a few days Bulltontein diggings were at full work. From this time all the available ground there kept thousands at work, with average satisfactory results, [19] the news of Colesberg Kopje drew many of them away. The Bulltontein diggings have been found to yield an immense number of small stones, a few good-sized ones, but hardly any very large ones. So great is the number of small diamonds, most of which are here of very good quality, that the holder of any claim in a moderately good position is almost sure of finding something every week, and a great many diggers regularly kept a claim at work at Bultfontein, on which they relied for the payment of their expenses at least, while they would work a claim at Du Toit's Pan on alternate days in the hopes of big stones. I subjoin the rules and regulations issued by the Digger's Committee for the Du Toit's Pan camp in 1871. They are not likely to be very materially changed and will be similar on other diggings :

RULES AND REGULATIONS OF THE DORSTFONTEIN (DUTOITSPAN) DIGGINGS,

The following are the Rules and Regulations framed and agreed upon between Martin Lilienfield and Henry Webb, acting on behalf of the proprietors of Dorst-fontein, and the following gentlemen, deputed by a general public meeting of dig-gers at Dorstfontein, on the 15th day of May, 1871, for that purpose, viz: James Buchanan Finlayson, Barend Woest, Joachim J. Rothman, William Devine, Wil-

Buchanan Finlayson, Barend Woest, Joachim J. Rothman, William Bevine, William Stratford Wright, as representing such general public:

1. The Committee shall consist of five members.

2. That from and after the 15th, May, 1871, a fee of ten shillings and sixpence sterling per month for claims shall be payable by each digger, in advance to the proprietors or their agents, at their office. Dorstfontein, save and excepting those who hold briefes or permits prior to the 15th April, 1871, who can satisfy the proprictors and Committee that such are bona flde permits, to be exhibited within one

3. All claims shall be surveyed and measured off by the proprietors, and the Committee shall be entitled to impose a fine, not exceeding five pounds sterling, upon any one removing or altering any beacon after the same has been finally measured

and adjusted.

4. No one shall be allowed to throw any ground, dirt or filth on his neighbor's claim. All loose ground shall be kept by the owner on his own claim. The Committee shall have the power of imposing a fine, not exceeding two pounds sterling, in case of any infringment of this rule.

5. Any person or persons, with or without a license, found working any claim

other than his own, or without consent of the owner, shall be subjected to a fine not exceeding five pounds sterling.

6. Any person or digger finding a diamond on the claim of another person, and not returning the same to the owner of the claim, shall be considered as a thicf, and be expelled the diggings,

7. The spot or locality for burial of carcases and other filth shall be selected and
pointed out by the Committee.

pointed out by the Committee.

8. No person or persons shall be entitled to select or work any claim without having first signed and submitted to the Diggers' Rules and Regulations, which the Committee shall at any time have the power of enforcing and making operative.

9. The Committee and proprietors shall have the right conjointly to amend or add to these Regulations, and such amendments or additions shall at all times be taken to be as effectual as if inserted herein.

10. Any member of the Committee absenting himself for fourteen days or more.

without intimation or notice to the other members, shall, ipso facto, cease to be a member of the Committee

11 Every deger shale be compelled to assist the Committee in giving effect to, and support in, the execution of their judgments, subject to a penalty of one pound aterang in case of non-comparance,

I very digger shall pay the sum of one shilling to the Committee on the sign-

Ing of these Ru es 1) No, person shall be entitled, under the new license, to have more than two

claims at one time

14. Any claim or claims briving been abandoned for eight or more successive days, shall be liable to be selected and taken possession of by any person or persons taking out a because for the same. The claims of members of Committee being

specially exempt from such a rule.

15. Each becaused do ger shall be entitled to pasturage on the farm. Dorstfontein for six sheep and one span of oxen, at the following rate, viz. For six sheep, the sam of threepone ster is ger month, and for each or the sum of threepones ster.

nam of flure-poince sterling per month, and for each ox the sum of three-poince sterling per month. Such size p and oxen to bethe boss is delip property of the because-holder, and such prayings being in no way transferable.

In The proprietors shall, as soon as the same becomes practicable, slut algorists, which they will, on completion, place at the disposal of the Commettee for the benefit of the dispers, who shall pay the proprietors the sum of one shifting sterling each per month, from the 15th day of May, 1851.

17. The Commettee and preprietors shall select a person or persons competent thereto, to regulate the formation of streets and squares, and the former are empowered to enforce rules necessary for the accomplishment of such purposes.

18. All disputes and difference between the disposal of contents.

18. All disputes and differences between the diggers and proprietors under these Rules shall be submitted to the arbitration of the Committee, whose decision will

be binding and final

19 Any person signing these Rules and Regulations, and having been fined by the committee for any misdemeanor or infringement, or having been ordered to comply with any order or indepent, shall be bound to pay such fine or fical!! such order or indgment, and in case of failure so to do, submits, by signing these Rules, to such process as shall be by the said Committee directed, for the carrying out of their indigment gu. The proprietors engage at the end of each month to pay over to the Commit-

fee as custodians for the degrees, to enable the latter to carry out sandary measures, pay a permanent. Secretary, and uphold the Committee, ten pounds sterling up on every one hundred pounds sterling, of all revenue collected by them from

Dorstfoutein Dugings

21 Monthly permits of occupation for establishing places of business other than 21 Monthly paintee of occupation for estandarding precess of universe order than those affected vestablished under permission, wil be granted by the propositors on terms which can be assertanted on application at their other. Parties beeding feed seen per opermission prior to the 15th of May, 1871, shall continue to had such because appoint the same terms as hitherto, and all pursons hading shop because shall be subject to the to leaving runes, viz. 1. No servant to have drank indees he have a written permission from his master. 2. No gambaing to be permitted on the premises 3 No drink to be sold on Sundays, or during the hours between ten r.m. and five A M on week days

22 Any infringement of the above rules shall subject the party so infringing to a pen div or fine of not less than £1 (one pound sterling), and not more than £5 (live

pounds sterung)

23. It is strictly forbidden to any one to purchase a diamond or diamonds from any servant, back or white, without a certificate from such servant s mister or mistress, under a penalty of five pounds sterling and expuision from the Camp, at the discretion of the Committee

21 Al transfers of claums or portions thereof shall be registered in the proprietors' books, for which the person applying for such transfer shall pay a fee of six-

pence sterling.

- Notice has been given that the new light-house at Pigeon Point, on the scacoast of California, was be illuminated for the first time on the 13th November, 1872, and every night thereafter from sunset to sunrise. The local plane is 150 feet above the sea. The lens is dioptric, of the first order of the system of Fresnet. foot above the sea. The lems is droptile, of the first order of the system of Franci, it wile show white dashes every by accordia, with collapses between, and can be seen in clear weather from the deck of a vessel 15 test above the sea, at a distance of 18s, nautheral mines. The tower is brick, comea in form, and is painted white The dome of the lattern is painted red. A steam togswhotte is established at this point, near the light house, and is sounded in thick and toggy weather at intervals alternately of 7 and 48 seconds, with basis of four seconds. This tog signal must not he mistaken for the steam-whistle on Ano Nuevo Island, six miles southerly, which has blasts of Is seconds at intervals of Is seconds. The geographical pass from f Physical Point, as shown by the United States coast Survey Chart, is as follows: Latitude 37 deg. 10 min. 46 sec. north, longitude 122 deg. 22 min. 40 sec. west.

An embassy from Panthay is on its way to England. Panthay is a King-dom which was carved out of thing by a band of adventurous Mussulmans, whose aid the Emperor of China sought to assist in quelling a local rebellion in the west of his dominions.

## Away! Away!

My love was sad and said-c'en yet I hear his voice-"You'll not forget, Half-love I do not take or give And, sweet, I'll love you while I live!" The winter's wind and clinging snow
Yet not a word my lips would say,
And then he sailed away—away.

The autumn feaves that crimson glow
The winter's wind and clinging snow
Yet never once I heard his name.

The thousand buds of blushing spring, The flow'rs that summer glories bring, The autumn leaves that crimson glow, All came and went, and went and came,

At last one day in wind and rain. I saw his ship come home again; And then I heard how nevermore My love would meet me on the shore, How never could be hear or know, That all the time I loved him so. -St. James' Mag.

## Prof. Tyndall's Lectures.

Prof. Tyndall is now in the United States, where he is to deliver a series of scientific lectures in the leading cities. He brings with him extensive apparatus for experimenting, and two assistants, and will have very different work on his hands from his literary brethren. They have but to read their opinions to their auditories; Tyndall has to demonstrate the truth of his. He has not only to talk to the public of the subtle agencies and wonderful ways of nature, but he has to bring out the facts and renities, that his audience may judge for themselves of the correctness of what he tells them. The delivery of the lecture will therefore be but a small part of his work. There must be elaborate preparation, and this involves so much care and attention that he refuses to speak more than three times a week. Prof. Tyndall's manner as a lecturer is in a remarkable degree individual and unique. He never reads, but holds his audience by the power of lucid and forcible extemporaneous statement. He is not what would be called a fluent or even speaker, who keeps up a continuous strain of agreeable utterance. He is not an elegant declaimer, whose measured cadences are accompanied by graceful and appropriate gestures. He is irregular and sometimes hesitating in speech, and unstattled in gestures and movements. His babit of speaking has been formed in connection with his habit of experimenting, and this latter is so essential a feature of his platform exercises that it greatly influences his manner of public address. Of his platform exercises that it greatly intuinces his diabration and the eloquence (Clearness, force, vividiness of description, (elicity of illustration, and the eloquence inspired by grand conceptions, are the striking features of his style. Of a postile and imaginative temperament, but with these traits under thorough discipline, he gives vivacity and attractiveness to accurate and solid exposition.

Professor Tyndall is a thoroughly trained and well-poised enthusiast in science. He is intensely in earnest, and is always as much interested in the subject and the He is intensely in earnest, and is always as much inferested in the subject and the proceedings as the audience he carries with him. He is a remarkable example of self-forgefulness upon the platform, being always absorbed in his subject. Strongly sympathetic with his audience, he seems animated by but one purpose: to make them understand the question before them, to make them see it and feel it as he sees it and feels it. As an original and skillful experimenter, Professor Tyndall is unrivaled. Fertile and ingenious in contrivances for bringing out his points, the effects are always telling and impressive. Yet the experiments are never the main things; they are always subordinate to the idea with which he is dealing—helps to its presentation. He is never ceitinged by his own pryretchyp, but holds the attenits presentation. He is never collipsed by his own pyrotechny, but holds the attention of his listeners closely to the question under examination. Professor Tyndall tion of his listeners closely to the question under examination. Professor Tyndall is remarkable for the combination of two traits which are but rarely united in a single individual. He is an original explorer of scientific truth, and a skullini and effective public teacher. Holding the truths of science to be divine, he is impelted to dedicate his life to their discovery; but holding them also to be a means of salvation to man, he is impelted also to the duty of their public interpretation. The Royal Institution, in which he is professor, is admirably constituted for the attainment of this twofold end; providing equally for carrying out systematic original researches and for expounding their results to the select audiences that gather in its lecture-room. Sir Humphry Davy first cave if a world-wide reputation in both these departments; he was a fertile discovere and an elegant lecturer. Dr. Paraday succeeded him, and probably surpossed him in both these accomplishments day succeeded him, and probably surpassed him in both these accomplishment.

The mantle of Faraday has failen upon Tyndall, and the fame of the establishment has not suffered from the change. This fact will not be without its interest to his American auditors.

The Western Morning News says that the progress of harvest in the district adjoining the Exmoor hills and on the border of Devon and Somerset counties, England, has been greatly retarded during the past three weeks by bad weather. Nearly all the corn is cut, while some hundreds of acres are considerably damaged and rendered almost worthless. Many fields are "sprouting," while others are rotting as they stand.

<sup>-</sup> The father of the King of Portugal, though seventy years of age, has recently produced a new opera.

## The Meeting of the Emperors.

The Provincial Correspondence in a leading article on the subject of the recent visit of the Czar and the Emperor of Austria, says: "The visit of the Imperial guests evidently not only signifies an exchange of mutual assurances of friendship, but is emphatically a pledge of a good understanding between Germany, Austra, and Russia. The meeting of the three Emperors is unmestakeable evidence that the great Eastern and neighboring powers have cordicily and unreservacelly accepted the new order of things which grew up on the bathe-field of Sedan, and other German victories, and that they look with confidence upon Germany. The advent of the august guests is, therefore, welcomed by the German people with doubly joyful sentiments, and they are sure of a cordial and most respectful reception everywhere. Europe may also look with confidence and satisfaction on the meeting of the Emperors. Although the visit is co-brated by military festivation, the motives which have prompted it are execusively pacific. The very circumstances that the rulers of Austria and Russia attend with friendly interest the ma-Stances that the rulers of Austria and Russia affend with friendly interest the mamocuvers of the German troops points to the fact that they perceive in the military
power of Germany a guarantee for the peace of Europe. The conceand between
Germany, Austria, and Russia is to serve no other object but the preservation of a
peaceful and settled condition of Europe. "This, adds the Provinceal Correspendence," "Is the true meaning of the three Emperors meeting, which public opinion in Europe, as well as in Germany, has already correctly appreciated." The
Czar Alexander, accompanied by the Czarewsteh and the Grand Inke Wladimer, arrived at Berlin. His Majesty was received at the Eastern Ras way Station by the Emperor William, the Crown Prince with his edect son, and the Royal Princes, Prince Bonarck was zeo present with the Ministers of State, the Generals of the Army, and the chief officers of the Imperial Court. The streats were throughly Army, and the chief efficers of the Imperent court. The streets were througed by a jubil an multifude, who loudly cheered the two Emperors. At the great Court denier which was served on September 7th, in the White Ha's, the Emperor Francis Joseph sat between the Empress Augusta and the Emperor William. The Czar set on the best of the Empress Augusta, and on his less set the Crown Princess Victoria. The Grand Burke of Rudon set next to the Emperor William, the Imperial Crown Prince of Germany string next to the Grand Burke. Next came the other princels personness. The Emperor of Austria wore a Prussian uniform and a Prussian order, the Emperor Auxander a Prussian order, the Emperor Maxander a Prussian order, the Emperor Maxander a Prussian order, the Emperor Maxander and Prussian order, the Emperor Maxander and Prussian order. a Pressian order, the Emperer Alexander a Pressian unform and an Austran order, and the Emperer Welliam an Austran annihous with the Russian order of St. Andrew. Opposite the Imperial personages sat Prince Gortschukoff, Prince Bismarck, Count Andrews, and Count Berg, next to whom came Count Besterader, General Fourt Schrowschof, General Aderburg, M de Onbreil, the Russian Andrassador, M. Wilatine, General voirt Schrowschof, General Aderburg, M de Onbreil, the Russian Andrassador, M. Wilatine, General voir Ramok, the Austrian Andrassador, M. Wilatine, General voir Room, and the saintess of the Imperial guests. The Imperor Wasam, in proposing a toust, spoke as follows. "With feelings of the most hearty thanks," thus in the Angelow with the Article Country of Austria Country (Austria Country), which played during the dimner, gave after the total the art, "Good save the Pringeror Francis, where upon the Emperor Of Austria rose, and after warmly thanking the Imperor of Germana, he responded with "May Good preserve and protent the Emperor Alexander spokessada, and the Royal house." After a short purse, the Emperor Alexander spokessada, and the Royal house. "After a short purse, the Emperor Alexander spokessada, of the Russian army." The Czur has appeared to Prince Charles and Prince Albert scenium, of Prussia, Fold Marshain of the Russian army. All accounts from Berlin agree in representing that the Gless in home of the three Emperors have gone of in the most buriarant manner. The in honor of the three Emperors have gone off in the most builtent menner monster torchight tattoo was a marvellons success. Berlin was idinminated, and the streets and squares were literally gorged with sightseers. On September 7th there was a grand parade of the German troops, amongst which were the two regiments of which the Kaiser and the Czar are the Colone's respectively and who placed themselves at their head as they marched past in presence of the Emperor Witham. This was followed in the evening with a Court dimer, attended by all the illustrious personages assembled in the Capital. On September 8th, after divine service, a visit was paid to the Zoologica, teardens, which were garly decorations for the Capital. ted for the occasion, and where a cordial reception was given to the distinguished visitors. On September 12th the Emperor of Austria took has leave, being funowed on the next day by the C2m. In an article in the *Debat's* M. John Lemonne bright and clearly points out the significance of the Imperial interview to France. He Bays it is the gravest event which has followed on the last war, that the coaction is a manifestation against France, not offensive, but defensive, and is intended to show Frence that if she wished to re-commence war she would be without allies. 800 w prestice (fill it she wylind) to re-commence war she would be written at this moment is not a fill it is a fill it i de contacted for, Against this concursion we have the statement that the Maquis de contacted from the Ambassador of France, mel with a triendly reception from the Emperors of Austra and Russa. The two Sovereigns conveyed to the French Government the most satisfactory assurances with respect to the object of the most satisfactory assurances with respect to the object of the meeting of the three Emperors. The Emperor of Russa reminded the French Ambassador that he saw M. Thiers at St. Petersburg during the last war, and, after Lawing inquired about him with marked interest, he added that he would not on any consideration have come to Berlin to take part in an interview having any object to after the France. Fet hostile to France. It is asserted positively at a well-informed legation at Berlin that Russin demands abrogation of the Tripartie Treaty and Treaty of Paris as the pure of her friendly co-operation with Austria and Prussin. The point is referred for consideration.

## Sippings from Punch.

## JONATHAN'S JUDGMENT.

Wal, now we've gained our cause, and the Award, I guess we can't act nohow but accord. It is a triumph; that's a fact: but still, They have considerably taxed our bill.

Three millions and a quarter. Come, I say, We axed three hundred millions tother day, And, if we had got half of that ere sum, Of Arbitration somethin' would have come.

John Bull. What's that amount to that old Hoss? Ourselves won't feel the gain, nor he the loss. Our claims cut down as close as madmen's hair, I guess we shan't make much by that affair.

Bound if we have to be by our own rules, We shall have made ourselves tanation fools When we are called on to, in arter years, Keep filibusters back and privateers.

But then we may repudiate the cuss; Not do what we'd have done, but the revuss. Meanwhile together in a Lovin' Cup, Columbiar and Britanniar liquors up.

On Swallowing Natives.—The Madras Times complains that any sort of native of India can make his way here into society which he would not dare to approach with his shoes on in his native country. We are like mackerel, we are caught by any bit of colored rig and tinsel. Our Madras contemporary suggests that all natives going to England should be obliged to register themselves, so that their status might be comprehended here. At present, Indian shopkeepers, it is alleged, are received in blind faith by gushing Duchesses and cosmopolitan Countesses. But, after all, what harm is done? A lady adds the colored person to her party just as she adds any other novelty that can amuse her guests and incense her rivals, and if Ram Sing Juggernant Puttallee Nautch comes in his pretty dress, and makes a feature in the group, he has earned his supper, and the party has seen at machine the complete of the complete

Aunt: Well, baby, can you speak more distinctly than when we last met? Elder brother: O, yes, indeed, aunt? He can call a spade a spade!

Why would a novel written by Charles Reade and any other fellow be like pitch? Because it would be bi-tu-men.

Answer unintelligible.) Secretary of Mendicity Society: What's your name, my good woman? (Answer unintelligible.) Secretary of Mendicity Society: Perhaps you'll spell it for me. Applicant: Shure, and how could I spell me name when I've lost all me front teeth, your honor?

The Germans have arrested—Who? (You should say whom) Monsieur About. What has he done, I ask of you? Called Germany a Bug-About.

"The new piece, 'Babil and Bijou,' is certainly in one respect a most decided novelty, for it comprises altogether above forty speaking characters." "Forty speaking characters." "Well, no wonder that the play is called 'Babble and Bijou."

— SEA-SIDE DRAMA.—Mrs. de Tomkyns [soto voce, to Mr. de T.]: "Ludovic, dear, there's Algernon playing with a strange child! Do prevent it!" Mr. de T. [ditto to Mrs. de T.]: "How on earth am I to prevent it, my love!" Mrs. de T.: "Tell its parents Algernon is just recovering from searlet fever, or something." Mr. de T.: "But it isn't true!" Mrs. de T.: "Oh, never mind; tell them all the same" "Mr. de T. [sloud]: "Ahem! Sir, you'd better not let you little girl play with my little boy. He's only just recovering from—er-scarlet fever!" Mr. and Mrs. Jenkins [together]: "H's all right, sir!—so's our little gal!"

— Philanthropic Farmer: "Well, Tomkins, after this week, instead of paying you partly in cider, I shall give you two shillings extra wages." Tomkins: "No, thanky, master, that won't do for me!" Farmer: "Why, man, you'll be the gainer, for the cider you had wasn't worth two shillings!" Tomkins: "Ah, but you see I drinks the cider myself; but the ow'd 'ooman 'll 'ev the two shillun'!"

## "Fun."

- The Athensom, reviewing Mr. Charles Kent's very interesting book. Charles Dickens as a Benter, says, with its accustomed solemnity: "Mr. Kent was with Dickens on the last suburban waik they ever had together." Could Mr. Kent have been with Dickens on their last—or any suburban walk, if he and Dickens had not been together." Or could they have been together on their last suburban wask for one of them had not been there? Perhaps "the leading literary journal" will condescend to explain?
- We learn from Nature—we presume Art is too disgusted with the Ædile to take any more notice of him that the Kew scandal is finally disposed of. Our contemporary says: "We learn that Mr. Ayrton has expressed lamself satisfied with Dr. Hooker's explanation of the "offensive" matter in his letter to Mr. West." All right, say we: But when it comes to the explanation of offensive matters, perhaps Mr. Ayrton will kindly explain why he exists.
- A child twelve years of age was choked with a toy at Oldham the other day:

  "The use to which the toy is put is to blow a tube attached til the balloon is filled
  with air, and then abow it to escape, in doing which it makes a peculiar noise.

  Some children, however, put the balloon itself in their mouths, and draw in the air
  till the balloon is as full as the mouth will allow, when it is taken out. "The child
  put the balloon to the latter employment, but was unable to extract it when if was
  full, and was consequently suffocated. Tender parents will do well to purchase
  these admirable inventions. They are much better toys for children than lucifer
  matches, with which they sometimes set fire to the house instead of themselves.
- Old Dame. "Lor, Mr. Potts, not at work to-day, and a-goire on like this!" Sorrowing Widower: "Got an 'oliday, mun been a-berryin' the ole gal!" [Hie].
- Jones: "Confound that fellow's fidding, overhead! I suppose he thinks himself another Paganini." Brown: "So he is—bar the 'Pag'!"
  - Farmer: "Well, mum, if ye want a pig o' my own breed-there he is!"

## Quirks from Figaro.

- There seems to be a public impression that the Arbitration have awarded damages to the United States. A careful study of the two hundred and fifty leagues of leading articles upon this subject, which, within the last five years, have graced the columns of our jearnals, will convince anyone that such an award is quite as impossible as the suppression of the recent American Rebeltion.
- John Duxbury Ainsworth, pedagogue, has been sentenced to a fine of 20s, for wearing outsits stud cames. It might have been unged in extendation of his offence that they were worn out upon the backs of two of his pupils, but it was not. It was unged in aggravation. You see how the best of pleas are subject to perverted application.
- About three score South London tradesmen were fined recently for having in their possession take weights and measures. It is to too bad to punish these good people. If they had not kept these dangerous articles, the same might have fallen into the hands of dishonest persons, who would have used them for unholy gain.

## About London Newspapers.

We are indebted to the London correspondent of the Exeter Flying Post for the following. "Next year it is whispered that we are to have a couple of fresh may papers, a daily and a weekly, the weekly a religious organ, under the editorship of Mr. Grant, the late editor of the Tiser, and the daily an organ of Republican polytics underthe editorship of Mr. Jenkins, the author of "Giny's Baby." To my thinking we have enough, and more than enough, of both sorts of papers; but a few M. P.'s with long purpess and a few elever writers with short political creeds think we may do with another or two, and a subscription list has been opened with amounts rance affected to E. 1600. Of course the hope is that it well pay, as a the Pall Mall, the Telegraph, the Italy News, and the Graphic are paying; but it may and in a fasteo, and the Baukruptey Court, as the Italy, the Prof. Times, the Riar and the Day inded. It is all a lottery and a lottery in which the chances are ten those and to one against success. Where newspapers do succeed now they turn out splendid encesses, paying 100 to 120 per cent, as the teraphic is now doing, or returning a revenue equal to the rent roll of the Duchy of Cornwall, as is the case of the Telegraph and the Standard. But you must sink a fortune before you look for a penus in the form of a return, and be prepared to risk a second if the first does not establish the paper. This is what the propristors of the Graphic did. This, too, was what Mr. Smith did with the Pall Mall, and what Petter & Galpin did in the case of the Keb. The Ducky were swallowed up half a doze of orders, that the papers in the third or fourth place it, the ranks of the Newspaper Presa, assuming, of course, that Mr. Jenkins' paper does not put the Daily News and all the resi of the papers into the background.

<sup>—</sup> There is some talk of starting in London a comprehensive Church, which chall admit worshippers of all sorts and conditions. They will be subject to no other test than a belief in God.

## Shakspearean Quotations.

Macbeth, act 1.

So withered, and so wild in their attire?

EISENBACH.

A killing frost Nips his root, and then he falls as I do.

Henry VIII. act 4.

## The Republic of France.

After a year of weary experiment and of discouragements not a few, France has at last introduced the true elemental form of Republican government, and the cause of humanity is safe. The mass of French voters is singularly ignorant and stupid. of humanity is safe. The mass of French voters is singularly ignorant and stupid. A large proportion neither read nor write. A representative government, in which this body of citizens has been unrepresented, is a mockery and had been left as a fraud. The eyes of the French people turned naturally to the United States for instruction and precedent. They saw the gambling ward of New York represented by a gambler in Congress. They saw that a majority of Chicago aldermen were thieves. From San Francisco they learned how Piper was run as a representative Democrat, and Mr. Rosener as a Republican Assessor. They saw that each class of the community, from the blackleg to the banker, was represented after its kind in the halls of legislation. They inquired diligently touching the "machinery" by which this thing was done, and imported a sample lot. They have put it in motion in the department of the Gironde where, we learn, "the Republicans held a convention after the American model and nominated Cadneas." If the convention was truly after the American model, the convention embraced a fair representation of the ruffians and the Illiterates of the Gironde, and M. Cadneas bought his nomination for honest money. It now only remains to introduce the American ballot-box tion for honest money. It now only remains to introduce the American ballot-box and a code of directions how to stuff it, to render the permanency of Republican institutions in France finally secure.

Gommeux and Gommeuses are the new names just given to the Parisian exquisites of both sexes.

## The Last and Greatest Exposition -- Vienna.

At a recent meeting of the Austrian Association of Engineers and Architects Baron Von Schwarz-Senborn, Chief Director of the Vienna Exhibition, gave an interesting account of the undertaking, its general arrangements and its special-ties of detail, from which we condense the facts most interesting to American readties of detail, from which we condense the nexts most interesting to same dark eres. The Barron passed in review all of the previous exhibitions, and pointed out in detail their various shortcomings. In the first great building of 1851, much inconvenience was felt by the pentration of the rain, and the same difficulty occurred in Paris in 1861, occasioning the loss of very considerable property. The graph of the property of th tonvenience was feet by the penteration of the sam, and the sale consequence of the paleries, which had hitherto always formed a part of exhibition buildings, had many drawbacks; they interposed difficulties in construction and were a constant cause of dust; besides, experience had shown that only a limited number of visitors ever of dust; besides, experience had shown that only a limited number of visitors ever ascended to them. A further remarkable disselvantage of former exhibitions was in the inadequacy of entrance and exit. It happened at London in 1851 and 1842, and in Pars in 1856 and 1842, that a great number of wazons and carts accumulated in the last few weeks before the opening at the gates of the Exhibition building, and goods could not be unboated for sax or cicht days for want of proper-assumed that the goods of one country had to be carried across the space allotted to another, and much codision, confusion, and oss was the consequence. The distribution of light was unequal. Some exhibitors had too much others were altogether in the dark. It was the intention of the Austrian Commission to prevent the recurrence of similar mustakes in the building under their charge. The Parliament had cranted three millous of guiden as a contribution and the dark. the recurrence of similar mistakes in the building under their charge. The Parliament had granted three mil'ions of galden as a contribution and three mil'ions more as a subscription to the guarantee fund, in all six million galden, or it free million dollars. The expenses of the Paris Exhibition of 1867 were 11,600,600 fr., which were covered partly by the admission foe and partly by the sale of the old building. The subscription of the Austran Government was, therefore, or a most liberal scale, and they to cover all possible wants. Mr. Scott Russell was consulted upon the plan proposed for the Venna baiding, and, after a full discussion of the site and future uses of a portion of the building, a cosean was adopted and the work at once begun. The imposing part of the Exhibition building at Vienna is a large iron rotunds or dome placed in the center, 335 feet in dumeter and 255 feet high. The total weight of the iron-work of the done is 4,000 tons, and it rests upon foundations under in concrete built in October, 1871, and, is to be finished befeet high. The total weight of the iron-work of the done is 4,000 tons, and if rests upon foundations under in concrete built in October, 1871, and is to be finished before the 18th of september, 1872. To convey some idea of the immense proportions of the dome, it may be well to compare it with St. Peter's at Rome, St. Paul's, London, and the Exhibition of 1892. The span of the capola of St. Paul's is 35 meters; St. Peters, Exhibition of 1892 of meters; Vienna Exhibition 19 meters, The retorated forms the center of the main gallery or maye, which is 82 feet wide and 298 feet long. The mayes crossed at equal distances by 16 transpits 49 feet wide and 672 feet long. Between the transpits are 21 courts, which are closed on these sides and have the same leadured as these sides and are 111 feet discount three sides, and have the same length as the cross-mays, and are 11 feet wide. These courts facilitate the bibling of the Exhibition but due by means of high side-windows, so that class roofs are earliedy mitted. The courts also affects ventilation, and 'n case of need could be covered in and incorporated in the building. Great faculties are offered by this arrangement for introducing or removing goods, and should any country be delayed in its arrangements, the section could be closed without inconvenience to visitors. The order of the nations will be according to their geographical position from East to West, and a waik through the building will be tantamount to a journey around the world. The following table shows the space occupied by former exhibitions and to be used in Vienna:

London, Hyde Park, 1851	. 94,000	square yards.
Paris, Champ Elysees, 1855		
London, Brompton, 1862		
Paris, Champ de Mars, 1867		60
Vienna, Prater, 1873.	2,788,809	66

The available area at Vienna will therefore be about five times that given to the Paris Exhibition of 1867. Without enclosing any of the courts mentioned above, the space offered by the Vienna buildings will be 189,270 square yards. It will be seen from these figures that a park of 575 acres, nearly as arge as the Central Park of New York, is appropriated to the objects of the Exhibition and that with all the halfs and pavilions and the main buildings, something like 39 acres will be under cover. Notwithstanding the vast scale upon which the Exhibition is projected, it is believed by competent judges that everything will be ready before the 1st of May, 1873. Every Government in Europe has made large appropriations to defray the expenses of exhibitors, and the number of applicants for space far exceeds anything ever known before. The only civilized nation on the face of the globe which has not made an appropriation or taken active steps to participate in the Vienna Exhibition is the Entred States. On the last day of its essesion, Congress authorized the appointment of a commission provided that no expenses were to be incurred by the Government; which, if anything, was more insulting to the Austrian Government than a positive refusal to have anything to do with the Exhibition would have been. We do not now see how this error can be retraved nor how it will be possible for the United States to be properly represented, even if the next Congress grants an appropriation and applications are made for space. The United States commissioner, General Van Buren, is doing all he can to remedy the error, but without money and at this late day his task is a difficult one, and we fear must result in failure.

### Counsel.

Come, watch with me the dead, cold-carven face, Fair-lidded and quite dumb, All shadow-girded in a dim, still place;

Nay, follow me, and come.

Why pause? Her lips can say no suppliant word, Nor any bitter thing; She lieth silently, poor wearied bird, With wearied, folded wing.

Passionate sorrow or stern sorrow alike

Were nothingness to her.
Though you should fondly kiss or cruelly strike, She will not breathe or stir.

Death's hands, to her bowed spirit having been Such rapture of release,

Are lifted o'er the memory of her sin,

And softly plead for peace.

Sanction their pleading with one sacred kiss, And after, while you live, Learn how all-perfect it is

Utterly to forgive!

-Edgar Fawcett.

# Special Brevities.

 The following is extracted from the Asiatic: "Another terrible calamity has befallen Orissa. The following extract from a private letter from Cuttack, dated the 7th inst., has been placed at our disposal: 'The whole population of Orissa passed the last fortnight in much anxiety and distress, and did no business besides praying to the Almighty. Last week the Mahanuddy and the Katjorce overflowed and caused no end of damage. This flood was preceded by incessant rains during the last fortnight; though in the Jack in the last fortnight. the last fortnight; there is not a plant in the land, in the lower basin of the rivers, which has not been laid low, and not only were the crops and villages devastated, but men, women, and children were found dead on the borders of creeks and embankments, and innumerable carcases of animals, both domestic and wild cows, delphants, horses with saddles, wild boars, and inanimate objects, such as bed-steads, tables, house-furniture, thatches, posts, large trees of sal and teak, ploughs, were seen passing like arrows in the rapid current. Many thousands of cattle are lost, and there is not a vestige of crops sown."

A letter addressed to the Victorian (Australia) Acclimatization Society, conveys certain offers as to the introduction of salmon and trout from America. Enquiries on the subject have informed us (Melbourne Hendle) that the vanited Californian and Oregon salmon cannot be compared with the English salmon for flavor, and it is said that it will not rise to a fly. Dr. Buckland considers that it is not the true salmon. The Acclimatization Society has more than once discussed the propriety of introducing it from San Francisco, but its inferior quality has hitherto led to its rejection, in the hope that future attempts to introduce over from Britain may be more successful. Should it be determined to introduce the American kind, it would be highly advisable to liberate it in localities where it would not be likely to interfere with the English kind, whenever that may become established. We understand that another attempt will be made to introduce ova from Britain during the coming season.

— Here is a glimpse into the Rue St. Honore, about one hundred and fifty years ago: "On the 20th inst., in the afternoon," wrote a correspondent from Paris to one of the English journals of May, 1721, "a gentieman on horse-back, passing through the street of St. Honore, near the Palace Royal, was got between two coaches, and, judging both himself and his horse in great danger, threatened one of the cored-may who would not story his heres. For which they are the content of the cored-may who would not story his heres. concues, and, judging both nimbert and his horse in great danger, threatened one of the coachmen who would not stop his horses, for which the coachman whipped him on the face; the gentleman then drew his sword, and run it through the coachman's body, who instantly fell dead from his box; after this, the gentleman went on unpursued, nor did the person in the coach endeavor to have him stopped. He is conjectured to have belonged to the Gardes des Corps, although he had not upon himself the time the ligant of the treater. him at that time the livery of those troops.

· At a recent meeting of the Academy of Natural Sciences of Philadelphia, Professor Leidy remarked that flies were probably a means of communicating contagious disease to a greater degree than was generally suspected. From what he had observed in one of the large military hospitals, in which hospital gangene had existed, during the late rebellion, he thought flies should be carefully excluded from wounds. Recently he noticed some flies greedily sipping the diffluent matter of some fungi (Phallus impudicus). He caught several, and found that on holding them by the wines they would exade two or three drops of liquid from the probable is which armained by the mirroscope were found to sweet my the spread of cis, which, examined by the microscope, were found to swarm with the spores of the fungus. The stomach was likewise filled with the same liquid, swarming with spores.

— Gerome's new picture, "The Fighting Gladiators," one of his grandest and most important works, has, we learn, been purchased by Alexander T. Stewart, for the sum of one hundred thousand francs. The work is to be finished during the present season.

- At the fair recently held at St. Cloud, a colossal bearded woman was exhibited who, not content with her natural attractions, which are certainly of a high order, had added sentimental considerations to her clause on pathe admiration. Having been born in Strasburg, this charming creature has elected to become a Frenchwoman. In her case, at least, no atterthought will be possible. So conspictions a subject will be irrevocably pledged by her present decision, and Germany lose the fittest modern representative of her ancient Vakwria.
- The Journal de Gand says: "The exhibition of antiquities at the Hotel de Ville, Paris, has just been enriched by a very vaduable object, belonging to M. Cockuy the scepter of Mary Stuart. It is about thirty-two inches long, and artistically carved in ivory, with portraits of the Queen and her husband, as well as the emblems, devices, and arms of Scotland. England, and Francis I. of France. It bears the date of 1558, and is composed of four pieces, mounted in brass, and adorned with medallions in silver."
- Mr. James Gordon Bennett proposes, it is said, to honor the memory of his father by erecting in Greenwood one of the finest monuments that this country has produced. The price is unlumted, but rumor places it at near \$200,000. The shaft is to be of white marble, claborately sculptured with symbolical figures representing the profession of journalism. The inscription will be simply "James Gordon Bennett," with age, place of birth, and the title he was pleased to be known by—"Founder of the New York Herald."
- Nearly every phrase connected with a railway differs in America from those in use in England. The "guard" is called in America "conductor," "lugasage" is styled "baggage; "carriage" becomes "car." "take your seats" is transformed to "all abourd; "the "rails" are called "tracks;" the "station" is termed to "dejot" pronounced dejot; and so on ad uninitam. If you want, moreover, to be understood in traveling in America, you must always pronounce "route" as though it was spelt "rout."
- Pilgrimages to various shrines have for some time formed a marked feature in the religious and social aspect of France. A grand national pilgrimage was to take place on October 8th, in the prospectus of which it is declared that the Virgin has announced, in a "vision," that she will manifest her power in a grotto over a cave. The Ladices Committee for this pilgrimage includes many of the leaders in French society.
- —At the Dundee Regatta there was a race for four-oared fishing yawls, rowed by fisher girls: "The 'Pet Lambs,' wearing straw hats and striped bodiess, who won the first prize at Broughty Ferry Regatta, won the race casily." We should be inclined to fancy that it there is much "mint sauce" in the way of money prizes going, there will soon be a making of ribs of these pet lambs.
- Much satisfaction has been expressed by meteorologists at the fact that New South Wales, following the lead of Europe and the United States, has introduced the system of telegraphing the anticipations of the weather, and established certain stations on the coast for indicating the nature of any expected storm by means of signal-mast of.
- The first heat of Peter the Great, which is looked upon by the Russians as the progenitor of the Russian fleet, has been brought from the Moscow Exhibition to its former re-ting-place by the fort of St. Peter and Paul, with ceremonies similar to those which accompanied its transport to Moscow some time since.
- Colonel Solis, the Duc de Montpensier's secretary, has been ordered to be sent to Madrid under close arrest, it being, it is said, confirmed that he is concerned in an Alphonisist-Montpensierist conspiracy, and further, that he is implicated in the affair of the assassination of General Prim.
- The American singing pilgrim, Mr. Phillips, who has been traveling all over America and England, gave one of his singing sermons the other day at Agricultural Hall, London. Several thousands of persons were present, and listened to the pilgrim with the most rapt attention.
- It is stated that the number of young ladies who have proposed to enter themselves as students in the special courses of medicine and surgery lately established for females by the Russian Academy of Medicine is about 300. Only 70 can be admitted.
- Bale has been literally invaded by a Jewish colony from Alsace. These unfortunate people wish to remain French, and to do so they have chosen Bale for their home, where they will be within a short distance of their country.
- The list of American novels announced for publication this fall comprises over fifty titles. Yet it would not be safe, says the Literary World, to expect the American novel among them.
- Buron and Baroness Rothschild have sent a donation of £400 towards the relief of the poorer members of the Jewish community who suffered by the recent disastrous fire on the Bosphorus, at Kouscoundjouk.
- A new daily paper, to be called the French Times, will make its appearance in London in October. It will be under the direction of M. Odysse-Barot, who was formerly the chief editor of a Paris journal.
- At a luncheon which followed the opening of a new Roman Catholic church at Manchester, on the 26th ultimo, it was remarked that Archbishop Manning proposed the health of the Queen before that of the Pope.

## Song of a Sot.

Clozshe a' lemon a' clock? Then I'll lay in a shtock. Cause there's no plashe like home where to go, Sirs Zshere ain't mush cause to weep, shince we gets shpirits cheap,
If we purchash sha shame at the Greecer's.

I can thit and shwig here without hindrance or fear, Whilsht to keep on my sheer I'm shtill able.
When I lose shelf-control-zshen o' course off I roll-

An' tummle down unner sha table.

An' zshere I can shtay, all sha night an' nex day, An' have nobody come to molest me;
Bur if I lose my feet—an' come down in sha shtreet—
In course zshen sha Bobbies would 'rest me.

'Tis a precious bad job to get fined forry bob, When y' are caught in a Pub, arter closin'.

Home, you drink at all hours, an' sha P'lice 'ash no powers For a poke their inquishitive nose in.

She now here I'll remain—and my bollol I'll drain— In sha shocket till cannle'sh en flickers; In a fella'sh own room he'sh a right to consume

Any 'mount of intoxicane liquors,

Now, when shwipes sha most thin I'm forbid at my Inn, Shtay at home an' enjoy wine an' wassail— Here we're free to carouse. Every Englishman's House Ish his Castle—his Elephant an' Castle.

-Punch.

## Court Chat.

A Paris correspondent writes as follows under date Sunday: "To-day is the birthday of the Comte de Chambord, who has now attained his fifty-scond year, and a certain number of Legitimist adherents have gone to Fronsdorf, caryear, and a certain number of Legiumist adirections have gone to Fronsoorf, carrying, among other presents, as tandard ornamented with precious stones and bearing this inscription: 'Mon Dien, mon Roi, ma Dame.' The birth of the Due de Bordeaux (which was the Count's first title) created a strange sensation in Paris. half a century back. By assassinating the Duc de Berry on the steps of the Opera, Louvel had hoped to destroy the last of the elder branch of the Bourbons; but seven months after the Duke's death the Duchess gave birth to a son, who was immediately called by the friends of the family 'L'Enfant du Miracle.' A great many doubts were at first thrown upon the authenticity of the Duc de Bordeaux by interested parties, but these were soon cleared up, and it was determined to baptise the heir to the throne with great splendor. Châteaubriand, who had not long returned from his travels in the East, was applied to for some water from the River Jordan, from his travels in the East, was applied to for some water from the River Jordan, of which he was known to possess a bottle, and he presented a small phial for the occasion. On this subject a writer remarked that, 'though a sceptic, Châteaubriand would never have carried his cynicism so far as to deceive any one on the authenticity of the water from the Holy Land.' The little Duke was, therefore, baptised in the water of Jordan, which his adherents considered would be more efficacious than the sacred ampulla of Rheims, which holy oil had been spilled on the ground during the Reign of Terror. Now the friends of the family hope for great things from the waters of the Grave, and pilgrims are repairing to Lourdes in large crowds. The 5th of October is to be a great day at the holy spot, and it is confidently expected that a new miracle will be wrought. Evil-minded persons at the world haugh if the miracle worked in a direction contrary to that desired, and were to turn all the Lectimists into Remublicans. The directors of the Southean they would laugh if the miracle worked in a direction contrary to that desired, and were to turn all the Legitimists into Republicans. The directors of the Southern Railway Company have thought it necessary to enlarge the station at Lourdes in consequence of the multitudes about to flock to that place, and special trains are being organized here and in various other places for the Pyrences. In Paris the pilgrims proposing to visit the celebrated grotto have been asked to inscribe their names at the Church of Notre Dames des Victoires—a church built in honor of the victories won by Luxembourg, Villars, Vendome, and other generals of Louis XIV. The ex-Empress used to patronise this church more than any other, and the Grotto of Lourdes owes much to the toleration of Napoleon III. Few of the pilgrims, however, will think of the Imperial exiles on the 5th of October.

— The late King of Sweden deserves mention as one of the few monarchs of the day who have ranked among authors. His essays on military subjects were by no means despicable productions, and he was a frequent contributor to the Swedish newspapers. The bitter tone of some of his articles gave considerable offence to the Germans. His successor, Prince Oscar, is well known as a man of talent, and was recently chosen President of the International Congress of Prehistoric Archivester and the control of the Swedish of the Congress of Prehistoric Archives and Congress of Prehistoric Archiv zeology and Anthropology, which is to meet at Stockholm next year.

- There is at Paris a manufactory of damaged china, which is marked "N." and which is soid as a part of the Imperial dinner service saved from the ruin of the Tuileries. There is quite a brisk trade done in this business. The French chinaware manufacturers would seem to have taken a leaf out of the book of the forgers of ecclesiastical relics who were discovered at Rome shortly after the downfall of the temporal power.

## The Bishop of Carlisle on "The Heathen."

The Bishop of Carlisle on "The Heathen."

The Bishop of Carlisle, Dr. Harvey Goodwin, preached in Carlisle Cathedra recently, upon the controversy which has arisen out of the recent speech of the Archbishop of Canterbury at Carlisle. He took for his text, "Ye are the salt of the earth, ye are the light of the world." Alluding to the unexpected prominence which had been given to the observations made by the Primate, he said he was allow when a subject of real living and exciting interest presented itself, as this subject did at this moment, for discussion in the pulpit. The words spoken by the Archbishop upon that occasion had, his lordship said, made more stir in the world than such utterances usually do. They had been quoted and commented upon by almost every newspaper in both town and country. Journals which live by making jokes, and journals which profess to influence religious opinion, had all had their say. Nay, the discussion had no doubt gone beyond the limits of our own country, and he doubted not but that the speech which was made in Carlisle on the subject of converting the heathen to the faith of Christ would be read with interest, and the comments upon it would be the spaces which was under an earlistic on the supplex of comments upon it would be can with interest, and the comments upon it would be canvassed and discussed, by our fellow subjects in India even more carnest than among ourselves. Plat being so, he had determined to say something that mornatory ing upon the general subject which had been thrown into such unexpected promiing upon the general subject which had been thrown into such unexpected prominence. When Bishop Heber wrote his exquisite missionary hymn, not so very many years ago, and spoke of "the heathen in his blindness bowing down to wood and stone," there were no doubt, as there are now, vast distinctions among those whom we popularly class under one common name of "Heathen." There were philosophical speculators in India and China, and there were ancient civilizations based upon moral or religious teaching then as there are now; but it was only students who knew much about such matters. The ordinary mind simply looked upon the world outside Christendom as covered over with one great oppressive cloud of durkness. But now it is impossible for any one to deal with the question in that rough and ready way. The inhabitants of distant countries are constantly among us, living with us on equal terms as members of our civilized society; and, though this does not change the great fact that they are not disciples of Christ, and, though this does not change the great fact that they are not disciples of Christ, and, though this does not change the great fact that they are not disciples of Christ, and, mongrains does not change the great has that they are not disciples of Christ, it does very much change the average popular estimation of what the work is which has to be done by Christians. Every one must see that a portion at least of what we regard as the heathen does not consist of men such as Heber's hymn brings before our minds. Moreover, not only do we see much more than we used to see of the un-Christianized portion of the world, but the un-Christianized portion of the world sees more of us. Hindoos, Parsees, and Mahommedans come and see us for themselves, and the future of the Kingdom of Christ depends humanly speaking-very much upon what these foreigners do when they visit our shores. One would wish them to go back in the same state of mind as the Queen of shores. One would wish them to go back in the same state of mind as the Queen of the South when she went back from visiting Solomon. They ought to go back almost, if not quite, persuaded to be Christians. If England was what she ought to be still more, if Christendom was what it ought to be—missionary work, so far as India is concerned, ought to be at an end—the natives ought to be their own missionaries. The spiritual influence conveyed by the constant passing and repassing of Hindoos and Englishmen between one country and the other ought to have the effect of introducing the Gospel into India with more completeness of effect than any society can stain. What, then, was the aspect which England presented—not to ourselves—but to an educated Hindoo who came to visit the country of his conquerors and rulers? He must be puzzled by the whole position of Christendom. He found England was regarded as a land of excommunicated unbelievers by about five-sixths of Christendom or more; and that, instead of united of the instead of the characteristic of the Church which be in his simplicity had regarded us strove for the upsetting of the Church which be in his simplicity had regarded us strove for the upsetting of the Church which be in his simplicity had regarded us strove for the upsetting of the Church which he in his simplicity had regarded as representing the religion of England, and the amount of trouble and labor which had to be spent upon Church detence, the Hindoo might well be astonished. Nor would that astonishment be much mitigated when he looked into the condition of the English Church itself. Surely there he might expect to find the sweet phantom of unity and brotherly love which had cluded him hitherto; but there again be found strile and dispute, hard language and uncharitable judgments, and lawsuits and parties; and if he wanted to know what precisely the dectrine of the Church was, he would find men equally earnest, who differed in their accounts of the language and an observation of the control was, he would find men equally earnest, who differed in their accounts of the church was, he would find men equally earnest, who differed in their accounts of the church was, he would find men equally earnest, who differed in their accounts of the control of the church was, he would see the control of the on one side, so to speak, if the general effect produced upon the mind of a Hindoo by the condition of our country were such as to compel him to say that God was of a truth among us. Therefore, we must ask, is this so? Is the general condition of public mora ity, is the purity of the amongst us, is the sobriety of the people in the lower classes of life, and the practical godinness of those in the higher classes such that we can take our stand upon them? The missionary's work would be a comparatively simpse one if he could say to the natives of any heather country. If you could only come home with me, you would perceive what a bissionary is that I am now offering to you; if you could see Engand you would castly understand what I want to make your country." Dare any missionary put his message to this test? Dare he hold up England as a proof of what his teaching can do? Whether he dare or not his teaching must and will be put to this test; the Hindood of come to see what a Christian country is; and if they go back a gain disappointed or macking, as some of them do, how can we be the sait of the earth—how can we be the light of the world?

Little Peanuls (as we used to delight to term the Calls has been "at it" again. Its readers this morning were treated to a tresh dose of hisehood, and low and shameless attempts to throw the proprietor's fifth upon the open, many, frank communication of the Directors of the Colorado Rai way Company to the Board of Supervisors. In this they asked in a respectful manner the withdrawal of the ordinance submitting the subsidy question to vote, and further, in order to assure the people and the Supervisors of their positive action, say that, it voted, they will not necept the subsidy nor any part of it. In short, their communication was a total and complete abandonment of the subsidy. Yet the fifthy Call is so charged with dirt that it must needs belon up a load of stun and saish, and attempt to throw it on its bitters. This process is the only natural remedy known to the turkey-buzzard and the blackgoard. The Colorado people are sufficiently beyond the reach of the vomit of the Call or Bulletin, but who expected anything better of Fitch or Pickering; Sanj'Francisco may wish that she had more such men as those of the Colorado Railway organization, who go straight ahead with their enterprises, openly and above board, who neither practice humbing nor attempt it.

— The Post and Frank Lawton have had a row over the printing of the Democratic ballots. Post said Lawton had put up a steal in the job, and Lawton printed a scorehing card demonstrating Post's mendacity. The Post reprinted Lawton's card with impotent comment designed to turn its force. This conduct of the Post would have been stupid if the purpose were to cear itself trem the charge of lying and lying foolash's; but the card constituted much the most readable matter in the issue, and was calculated to make it sought after; perhaps, therefore, there we wisdom in the Post, but it was the wisdom of a notorious courtesan calling herself Free Lovers who flaunts in sides impaid for, in order to attract attention to the person, albeit to advertise her vice.

Just escaped from his eage. A search was made for him in the Bois de Boucogne during the whole of Monday, but without result. He is so like many others, that if he will only have the good sense to obtain a hat, boots, and a descent suit of clothes, he may get a respectable hang in many ways, perhaps become a millionaire. Who would predict in these times what his career may not be?

Thackeray said of the Duchesse d'Ivry, "I fancy a fish's tail is flapping under her fine flounces, and a torked fin at the end of it." We fancy our dry goods Eros, with the golden beard, wishes he had given a wide berth to the "love and affection" of the gushing Psyche, since the transaction has turned out to be so decidedly "fisby."

The death is recorded, at the age of cighty years, of William Scott, the celebrated Tweedside fisherman. The old man has left behind him four generations of descendants, having had nine sons and one daughter, fifty grandchildren, twenty-tour great-grandchildren, and two great-great-grandchildren.

Field-Marshal Moltke is sending proofs of the work on the late war by the German General Staff to Marshal MacMahon, to enable him to correct any possible errors regarding the part taken in the campaign by the French Marshal.

# Our Water Supplies.

## Report of Gen. B. S. Alexander, U. S. Engineers, on the Water Supplies of San Francisco.

Messrs. A. B. Forbes, S. Menzies and A. Badlam, a committee of the San Francisco Board of Supervisors, addressed a communication to Gen. B. S. Alexander. of the U.S. Army, inquiring his opinion as to (1) the supply of water available for city purposes on this peninsula; (2) the future sufficiency of that supply; (3) as to the best method of introducing it; (4) as to the probable cost of the work; and (5) asking any other suggestions which the General might deem pertinent. In reply, General Alexander returned the following report:

Messrs, A. B. Forbes, S. Menzies, A. Badlam, Committee of Board of Supervisors; GENTLEMEN: I have duly considered your letter of the 22d ultimo, in which you ask me sundry questions in relation to the water supply of this city, and I now proceed to answer them. I take them up in the order in which they were propounded.

#### AS TO THE SUPPLY.

"First-As to the question of there being an abundant, unfailing and available supply of good fresh water on this Peninsula for the present requirements of this

city.

To a proper answer to this and your other questions, it is necessary to state what

To a proper answer to this Peninsula is. I do not propose to go into any
theoretical discussion as to the amount of rain-fall and evaporation on the different
the variable are proportion of the rain-fall which may portions of the Peninsula, or of the precise proportion of the rain-fall which may be made available. These subjects have been discussed before, and you are already fully informed in relations to the proposed to the propos practically, and draw my results, whatever they may be, from experience. And fortunately we are not entirely without experience on the subject. The water that the city has obtained from the Pillarcitos reservoir for several years funishes as with precisely the data we want. This is a reservoir of the capacity of 1,050,000,000 gallons, obtained from a water-shed of 3,200 acres, or of five square miles. This reservoir supplied the city during the year 1869 with 1,346,000,000 gallons; during the year 1870 with 1,547,000,000 gallons; total, 2,893,000,000 gallons; the average for the two years is 1,416,000,000 gallons. This amount of water spread out over the the two years of its equation games. This amount of which spread on vertue entire area of its equation miles would cover it into a depth which about seventeen inches. That is to say, let the rain-fall be whatever it may have been, about seventeen inches of it over the entire water-shed supplying the reservoir was made available and actually delivered in the city. It is true that some of the waters from the Pillarcitos reservoir, in very wet seasons, have occasionally run to waste, and the Spring Valley Water Company are now making the necessary works to store these and valley Water Company are now making the necessary works to store these and other waters in the large San Andreas reservoir, thereby greatly increasing the available supply for the city. My object, however, in making this investigation, was to show how much of the rain-fall over the Pillarcitos water-shed had been made available and delivered into this city; for on these data we can base safe conclusions as to what amount of water may be relied upon on the streams south of the Pillarcitos, emptying into the Pacific Geean. These streams, as we proceed south, are the Purisima, Tunitas, San Grecorio and branches, and the Pescadero, with perhaps others still further south. It is believed from the configuration of the country, though no rain-gauges have been kept there, that the down-fall of rain on the watersheds of these creeks is as great as at Pillarcitos, and that the available catchment would also be as great if proper works were constructed to store and carry away their waters, and I shall proceed on this supposition. Now, as you know, a preliminary survey has been made by the San Francisco Water Company, starting at the head waters of the Pescadero, for a line of conduit picking up the heads or available waters of the stereams, with the view of oringing all their waters to this city at some future day. We are enabled, therefore, from the maps, to estimate, approximately, the available race of catchment of each of these streams above the line of the proposed conduit. They are as follows: Pescadero, thirty square miles; and fregorio and branches, twenty-four square miles: Tunitas, six square miles; in all, sixty square miles. I have omitted the Purisima, because it is said that its waters are impure. Here we see that we have an available watershed on the streams flowing into the Pacific Ocean, north of the Pescadero, twelve times as large as that of the present Pillarcitos reservoir. If, therefore, the Pillarcitos reservoir found furnish the city with 1,446,000,000 gallons of water yearly, these times as largest and of the present Princetor reservoir. In therefore, the Princetos reservoir can furnish the city with 1,446,000,000 gallons of water yearly, these creeks could furnish twelve times as much, or 17,352,000,000 gallons; add Pillarcitos, 1,446,000,000 gallons; and San Andreas reservoir, say equal to Pillarcitos, 1,446,000,000, and we have 20,244,000,000 gallons. But this is not all. If the proposed conduit crosses the dividing ridge and enter the Canada de Raymundo, its posed conduit crosses the dividing ridge and enter the canada de Arajmando, watershed of about eighteen square miles will at once become available. The downfall of rain is much less here, and the available catchment would also be less. For the conductive of what it is on the western slope. This safety, we may assume it to be one-third of what it is on the western slope. This would then add 1,735,000,000 gallons more; making in all 21,979,000,000 gallons yearly, or a daily supply of 60,216,438 gallons. Enough, certainly, for the present wants of the city, for it is a quantity from six to eight times the supply now farnished from all sources, including that obtained from Lobos Creek.

#### SUFFICIENCY OF THE SUPPLY.

"Second - As to the future sufficiency of the supply from the same source, taking into consideration the probable increase of population of this city to 1,000,000 or

1,500,000 people.

The figures given in answer to your first question, give the data for answering your second. 60,000,000 gallons daily would give 1,000,000 of people a daily supply of sixty gallons each. If the population of the city should increase to 1,500,000 persons, they would only get forty gallons of water each daily, from the sources I have enumerated

#### WHAT THE FUTURE WATERWORKS SHOULD BE.

"Third-If such sufficient supply of water exists, please give your views as to the most desirable and economical mode of introducing it into the city, having in view at the same time a system of works that wal be of permanent character in all respects for the future."

It is impossible to answer in detail such a question as this, without an elaborate and careful survey made for the special purpose of furnishing the necessary information upon which to form opinions and base pans. Omitting specifications for the present, there are nevertheless certain general considerations that should always be kept in view, however the details of the plans may be varied. One of these is that we must have large storage reservoirs to store a very large quantity of water, if possible a year's supply, to guard against a succession of dry seasons. We must have reservoirs at the Tanitas, at the San Gregorio and at the Pescadero, in order to be enabled to hold the waters of these streams in check in times of flood, our conduit shall have time to carry their waters to the proper storage reservoirs, you will want the flood waters of these creeks just as much as the Spring Valley Water Company wants the flood waters of the Pilarcitos. 3. If such a water supply is undertaken, the works connected with it should be made permanent. In my judgment a masonry conduit wid be preferable to iron pepes. 4. I think the Canada de Raymundo probably affords the best location for the large storage reserwoirs, although there are other places that might be selected for this purpose. fact it is possible that detailed surveys may discover even better locations than this 5. Let us suppose that this Canada is selected for the sites of the storage reservoirs; then I am of the opinion that the diameter of the conduit entering should not be less than ten feet. This size should continue until it takes up shound not be less man be need. This size should continue until it makes up the waters of the Tunitas. Between the Tunitas and the first bran, he of the San Gregorio I might be slightly decreased, and go on decreasing as the several aftennia are taken in, leaving the San Gregorio Valley with a dameter of perhaps eight feet, and continued this size until the waters of the Pescadero are taken up, Although the Pescadero, in times of heavy rains, will flow much more than suffi-cient water for a conduit of this size, yet with an inexpensive reservoir there, we we can hold back the waters of even a week's flood until such a conduit could discharge them into the storage reservoirs. Besides, by having the conduit of this size it would be sufficiently large to be extended, when the increased population of the city may demand it, to the head waters of the San Lorenzo, and possibly to the city may demand it, to the head waters of the San Lorenzo, and possibly to other streams in the Santa Cruz Monntains. The preimmary survey I have mentioned fixes the level of the water surface in the reservoir at Pescadero at three bundled and nights from that shows the hundred and ninety-four lect above tide, and the distance thence to the Canada de Raymundo at twenty-five mnes. With a slope to the conduit, therefore, of two feet per mile, the water may be delivered into reservoirs at this Canada (and provide for draining all the small reservoirs on the route), at a hight of fully three hundred feet above tide, and into the distributing reservoirs in the City limits at a hight of about two hundred and fifty feet above tide.

## THE APPROXIMATE COST.

" Fourth-Although aware that the limited examinations we have made of the round and line are insufficient to form any accurate detailed estimate of the cost of the whole work, yet your long experience as an eligineer will enable you to take a

comprehensive view of the matter, and to form an approximate estimate, and we would therefore be pleased to have your views on this subject also."

Here again we are med with the want of exact information to form a correct estimate of the cost of such works. We do not know exactly the location of the conduct, nor also length; we do not know how much filling; nor do we know the number, or even the location of our storage and distributing nor do we know the number, or even the location of our storage and distributing reservoirs. Without details it is always well, in undertaking to form an estimate, to be governed by experience. We have much experience in the construction of water-works in this State; consisting of humes, directs, pipes and tunnels, but there are no works on this coast of the kind here contemplated. If we go east for information, the prices will not be the same there. However, we find that New York City, Boston and Washington, all have brick conduits bringing water into

The Croton Aqueduct, in New York, is forty-five miles long; cost, when first built, \$12,000,000; capacity, 30,000,000 gallons daily. Therefore, each dollar of capital expended will bring two and a half gallons of water per day for centuries. The Cochituate Waterworks of Boston; conduit, twenty miles long; cost, when

first completed, \$5,000,000; capacity, 10,000,000 gallons daily. Each dollar of capital expended delivered, therefore, two gallons of water daily.

Potomac Aqueduct, Washington: conduit, thirteen miles long; cost, \$4,000,000; capacity, 96,000,000 gailons daily. Each dollar of capital expended, therefore, delivered twenty-tour gallons of water daily.

We see by this that the larger the conduit the greater is the quantity of water which each dollar of capital expended will deliver. Any other inference drawn from these statements as applied to the cost of the new waterworks for this city might be open to criticism. Nevertheless, from my intimate acquainfance with these works, and with those of many others in this country, I am of the opinion these works, and with those of many others in this country, I am of the opinion—with a full knowledge of the changed circumstances out here, the increased cost of noney and of labor, and the different nature of the proposed works—that the cost of bringing the waters of the Pescadero and the intermediate streams into distributing reservoirs within the city limits, in a conduit of the most substantial construction, can be effected for a sum not exceeding \$15,000,000. When I first looked at the ground over which the proposed conduit must pass, and learned the probable amount of tunneling—some \$95,000 feet—I was startled. I feared that the question of cost would prove insurmountable. But when I learned that this was divided among twenty-seven different tunnels, affording, therefore, no less than fifty-four places where this work can be carried on at the same time, the difficulties of this portion of the work partially disappeared; and when I came to examine the character of the rock through which the tunnels will pierce the sours of the hills—a soul pierce the source of the ter of the rock through which the tunnels will pierce the spurs of the hills—a soft sandstone easily cut with a knife or worked with a pick—they were entirely removed. I believe the turnels in most cases, may be cut the exact shape required for the conduit, without the use of powder, and its, a lineage of a single brick will be all that will be required to afford complete security to the water way. The tunneling difficulty being disposed of, all the rest of the work will be of the simplest character. There will be no costly masserry constructions such as the Beacon Hill reservoir in Boston, the Harlem Bridge in New York, or the Cabin John's Bridge in Washington, the longest masonry arch in the world.

#### THE NECESSITY FOR WORKS OF AMPLE SIZE.

"Fifth-We would also be pleased to have your views and suggestions upon any other points connected with the whole question of the water supply of this city

other points connected with the whole question of the water supply of this city that you may deem important and pertinent."

I do not know that I can suggest anything new under this head. But, in justification of the large sized conduit which I have proposed, and the very large storage reservoirs—larger than any others with which I am acquainted—I will remark that nearly all the waterworks that have been constructed for supplying American cities with water, have been designed on an inadequate scale. New York, Boston and Philadelphia fear a drought of even a few mouths, although their water works are comparatively new. The growth of our cities has outstripped all experience derived from Europe, upon which hydraulic engineers had based their calculations. rived from Europe, upon which hydraulic engineers had based their calculations. The quantity of water used by each person has also gone far beyond all former acculations. People in our American cities look upon water as a necessity, not merely a luxury, and the consequence is they use it lavishly. Hence it is that the works designed by engineers, and opposed in their inception as being extravagant, have a most invariably failed, within a few years after their completion, to supply the wants of the cities for which they were built. Let San Francisco learn a lesson from this experience. If she goes after water on this Peninsula, let her construct a conduit and build reservoirs that will enable her to bring enough of it to her doors,

If it be determined by the city authorities to obtain an additional supply of water from this Peninsula, the proper course to be pursued appears to me to be: 1. To procure the proper legislative enactments on the subject. 2. To have the necessary surveys made, contouring the ground for some distance to the right and left of the surveys made, contouring the ground for some distance to the right and left of the proposed route of the conduit, and contouring the ground within and around all reservoirs. 3. To guage all the streams, and ascertain the amount of water which they would dieliver, at the point where they would discharge into the conduit, for each day of one entire year. 4. Then to have the plans and specifications of the entire works prepared and approved by the proper authorities. 5. in the meantime, the right of way, and all lands necessary to be held by the city in connection with the works should be obtained, either by purchase or condemnation. 6. The work proper might be commenced as soon as the financial condition of the city would justify it.

would justify it.

I think the first work to be done should be to construct the conduit from the Pes-I think the first work to be done should be to construct the conduit from the reservation of the great storage reservoirs, and the reservoirs themselves. If the water was once there in store, the city could draw upon it, as fast as she wanted it, without incurring any great expense to complete all the works in the first instance, leading from the reservoirs to the city. Thus: the water could be brought from the storage reservoirs to the city in iron pipes. Perhaps it will, on the whole, be better to bring it in pipes. Now, it would require as many as four pipes of four feet diameter to bring into the city all the water that might be wanted at any one incompletion has increased to a million. But one one diameter to oring into the city all the water that might be wanted at any one time in the distant future, when the population has increased to a million. But one of these pipes would be all that would be required for some years. The cost of the other three would therefore be saved for the time being. I beg leave to remark, in conclusion, that the cities of California want more water, on account of the long dry seasons, than cities of equal size on the Atlantic Coast or the Mississippi basin. dry seasons, than cities of equal size on the Atlantic Coast or the Mississippi basin. San Francisco in particular ought to have an abundant supply, in order to keep down the sands with which the streets below and the air above are infested in the Summer season. She wants enough to flush the street gutters and sewers, and remove all offensive offal from the limits of the city, washing into the bay these offensive and fruitful sources of disease and death; and then when her streets are cieansed, she wants enough water to sprinkle them daily, and hourly when necessary. Besides, she wante water for the irrigation of Public Parks and private grounds. The comforts of a city residence depend, to agreat extent, on the cleanliness of the streets and the beauty of public parks and private lawns. The growth of a city and the value of its property also depend on these things to an extent that can scarcely be over estimated. New York city felt its influence the day the Croton Waterworks were competed. Let San Francisco obtain for herself an abundant supply of good, who esome, fresh water -one hundred gallons for each inhabitant day, and the diminished rates of insurance, the increased confort of living, the new demand for houses and lots, and the increased value of property will be such, that nom of her citizens will be found willing to forego its advantages for the relief it might afford from taxation. Very respectfully, your obedient servant,

B. S. ALEXANDER,

Lieutenant-Colonel of Engineers, Brev't Brig.-Gen., U. S. A.

### Commercial Matters.

October is drawing rapidly to its close, and yet the rainy season appears quite distant, judging from indications at this writing. The weather appears more like "Indian summer "than the near approach of whiter. Thus far during the year commercial affacts have been steadily progressive and prosperous. The Pall trade has been steadily active. Business marts exhibit considerable stir and animation. Not alone have our wholesale houses done a good trade, but our jobbers have been exceedingly prosperous. Sales have been large, but owing to prompt cash payments profits have been less, yet the ott-repeated purchases and short credits, with less than the usual amount of extended country credits, have each and all contributed to general prosperity in nearly every leading department of traffic. Imports during the year have, in the aggregate, been considerable, yet our warehouses are comparatively empty of stocks of old and massively cooled, wares and merchand se which, in years past, have been a clog, an impediment in the way of general prosperity which how happiny does not exist. The central Pacific Railway management has recently taken aggressive means to secure to this coast the proportion of Utah and Territorial trade that belongs to R. It is assured that there is a arree field for profitable business in that section, which out C. normia merchants are yielding without a strugged to Chicago and St. Louis. Much of the trade is bound to go East, but statisties in our often show that we are not getting ha for what egzimately belongs to us. Our merchant traders must be stir themselves to sacture this trade of the Territories, and with minted effort it can be successfully accomplished. There is a vast amount of foreign trade that lagt match the constraints ranked to the Territories, and with minted effort it can be successfully accomplished. There is a vast amount of foreign trade that lagt match belongs to us, our office show that we are not getting har for which and Vogetables, much cheaper than they can be procarred at t

IN REGARD TO EXPORTS. Wheat movements continue to be the all-absorbing topic of the day. It is the main-pring of all business; it furnishes full employment to our large fleet of ships, giving them rich returns for the freighting thereof. It is the main lubricator of the Central Pacific and other railroads. It gives to our maind steamers and coasting fleet at the business they can do, at the same time enriches the farmer who produces the grain, and sets in motion thousands of abortes saving machines, and gives employment to a vast agmy of laborets, teamsters aborters scattered up and down the coast and throughout our varietys. Our receipts continue to be very considerable, and exports correspondingly great. No important fluctuations or variations in prices are to be noted. There are tree export boyers for all othered beyond the requirements of inflient and distillers. The Liverpool quotations for the week are all to dd lower than those previously ruling; and yet, this textraphe decline has no sensible effect upon our market rates. Since the commencement of the present harvest year, July 1st, 1872, ninety-eight vessels have been dispatched to the United Kingdom with Wheat.

Total centals	2,865,425	\$4,779,161
15 vessels since July 1, 18	1, with 432,241	1,035,693
63 vessels since July 1, 18	0, with	8,194,944

There are at date twenty-five vessels, aggregating 24,553 registered tonnage now on the beeth, all of them to be dispatched with all speed. But few discentaged ships are now in port, but the fleet to arrive within the next few months is large and increasing, and, perhaps, one-half the number already under charter. We last to preceive any actual failing off in freights, though the impression prevails that rates case of a fittle to the United Kingdom. The quotation given for a direct port in the United Kingdom is £5 is down 10s; although were a slap here ready to load, £5 12s 60 or £5 15s would no doubt be given. £6 has been paid to Cork for orders to the European continent. At Portland, Oregon, three vessels have been lead in October for the United Kingdom with Wheat, and three more are on the berth, and £6 othered for a vessel now at British Columbia, to load Wheat in Columbia River to Cork and a market.

ENPORTS FOR THE CURRENT WEEK have been as follows: Bridgewater for Cork carried 41,477 ctls Wheat, valued at \$71,600. Una for Liverpool had 22,904

ctls Wheat, valued at \$38,000. Wm. Mchuish for Southampton had 23,224 ctls Wheat, valued at \$37,550. Valparaiso for Liverpool had 67 tons Lead Ore, 34,422 ctls Wheat, valued at \$68,211. Josefa for Cork had 26,481 ctls Wheat, valued at \$43,590. Thos. Lord for Liverpool carried 35.862 ctls Wheat, valued at \$43,590. Thos. Lord for Liverpool carried 35.862 ctls Wheat, valued at \$50,500. Alden Besse for Hongkong had 600,000 ft Lumber, valued at \$2,2000. Dominga for Chimbote, Pern, carried 8,872 Railroad Ties, 100 bbls Salmon, valued at \$2,900. Mariano for Chimbote, Pern, had 23,800 Railroad Ties, etc., valued at \$4,814. Staghound for Tahifit carried 150 bbls Flour, etc., valued at \$12,551. Montana for Mexican Ports had 37,000 ft Lumber, 102 doz Brooms, Machinery, Powder, etc., valued at \$4,813,314. Prince Alfred for Victoria had 95 sks Beans, 551 ctls Barley, valued at \$26,344.

THE WHALING BARK CAMILLA, Pulver, from the Artic ocean, has arrived with 1,000 bbls Whale Oil and 12,000 pounds Whalehone to master; also, the Gold Hunter with Codish, 130,000, making the total catch for the season 300,000, against 700,000 fish last year. In 1899 and 70 the Codish catch ran up to 1,030,000 and 1,265,000 respectively. This year's catch is the smallest since 1804. Eastern competition is too great; our fishermen cannot well compete with the Yaukee boys of Cape Cod. Our Salmon fisheries are more successful, and the Boston boys are compelled to knuckle under for this superior fish. Mackerel fisheries on the Pacific ocean have never been successful and probably never will be; at all events, all that were ever caught on this ocean were thin and bony—no fat belies like those off Glocestershire and Nantucket shouls. Efforts are making to introduce Shad into our waters with a good prospect of success.

THE GERARD AND ADOLPHE, 221 days from Antwerp, to B. Auger & Co., has a full cargo of Window Glass, say 13,000 packages, to various consignees.

THE RUSSIAN BRIG OLGA, from Petropaulowski, to the Alaska Commercial Company, had for cargo 22,415 Seal Skins.

THE SHIP KINGSBRIDGE, from London, brought 1,960 tons Steam Coal, which sold to a dealer at \$13 per ton.

— THE CARGO OF JAPAN RICE, per Charley, from Yokohama, 5,800 bags was damaged on the voyage of importation and sold at anction for 90c % 100 bs, being less than the duty paid thereupon.

COFFEE FOR St. LOUIS.—We are informed that Parrott & Co. have arranged for the immediate shipment of another parcel of A 1 Green Central American Coffee by rail, say 2,000 bags—price, 190213/cc.

— OUR WHEAT RECHTS since harvest now approximate 5,000,000 cits against 1,300,000 same time last year. It has been recently asserted by the Bulletin of this city "that the Wheat in the grain districts is now all housed." This is a sad mistake; on the contrary, there are many thousand tons of Wheat and other grain yet exposed in the San Joaquin and other valleys. Cords of it piled up along the railroad track still remain, waiting for the rail-cars to come and convey it to a place of safety. This the Pacific Railroad is now striving to accomplish with all possible dispatch, retusing to convey any housed grain to tide water until all that is exposed is carried to a place of safety. It will take weeks of hard work to accomplish all that is required. It is only to be hoped that the rains will hold off for some time yet, otherwise many thousand tons of Wheat will inevitably be exposed to the elements.

ON AND AFTER NOVEMBER 1st, a change is to be made in the price of Refined Sngar. It is understood that rates are then to be advanced. The price is not fixed by the refiners, but doubtless an advance on all White Refined of fully one-half cent per pound. This expected rise has resulted in an increased demand for Hawaiian and other Raws, with considerable sales of Grocery Grades within the range of 86.01%c.

Froude, the bloody British historian, has arrived in New York and been entertained by the Lotus Club. Froude has given utterance to a new sentiment and discovered a fresh historical fact. In scarching among the lost archives of a long forgotten past, he feels warranted from certain ethnological indications, from an examination of certain ancient skulls, and from certain points of similarity in the two languages, in suggesting the probability that at a remote period the inhabitants of the United States of America descended from the ancient Britons. He also suggests that with some unimportant differences of dialect we speak the same Language; that under slightly different forms of religion, we worship the same God; that our civilization and laws are drawn from England, and that Shaks-peare is the common property of both nations. Hence we will never quarrel and go to war like peoples of alien blood, but hand in hand will travel the rosy paths of a money making future. This is a beautiful and original idea, and we never the of listening to it. Froude's great merit lies in the fact that he said this, not in a moment of pestprandial inspiration, but with deliberate purpose and cold sober.

— The Liberal Democracy, or party of reform, is by the ears over a small job which has been put up in the matter of printing their election tickets. As patriotism is the last refuge of the English scounder and loyalty of the American, so reform is the last refuge of the average politician on this side of the penitentiary.

### Our Enlargement.

With the present issue The San Francisco News Letter appears in a permanently enlarged form. In addition to the extra four page sheet the columns of the paper have been lengthened. The increase of reading matter thus afforded is very paper investment tengthened. The there are for the interference of the second more than a few and severally more of the second which we should clearly perceive in what way to do so nost advantageously for our renders and selves. Gradinary during several years past no material and business interests of San Francisco and the Pacific Coast have encroached upon the space which we designed to reserve for that pungent, bright and crocked upon the space which we designed to reserve in this pangent, or greath original master which has made the Nons Letter a lamiliar visitant wherever the English hanguage is spoken. At the Cape of Good Hope, in New Zenand and Australia, in South America, on the Isthums, in Mexico and the West India Islanda, in Japan, China, India and the islands of the Facilic, on all the coasts of Europe, in Japan, tima, main and the Islands of the Paeine, on an the consts of Europe, from the Mediterranean to the North Seas, as well as in every principal city of England and the United States, the traveling Californian can always consult complete files of the San Francisco News Letter. On more than one of the great more exchanges of the world, the world of this publication alone among those of exchanges of the world, the world of this publication alone among those of California carries weight or commands respect. By teaches truth-telling, this position has been earned and will be maintained. Bubbles have burst at the proof our lance, and there are capitansts all the world over who owe the saving of treasure to the timely bints of the San Francisco News Letter. But this attention to the growing business interests of California had so curtailed our space for other matter, that week by week we have been compelled to ay aside material punzent as pepper-sauce and bright as a gem from the new American diamond fields for lack of room to print it. Again it has been impract cable to make the best use of the unrivaled list of exchanges which comes to this office. Every week one or The univaried list of exchanges which comes to this office. Every week one of more bright of dashing or wise articles from the Saturday Rosea, the Speciator, the Pall Mall Gazette, the Economist, the Times, the New York Nation, and half a score of other leading sheets, which we would gladly have reprinted, has been forced aside. Ever with the present enlargement it wil not be practicable to bring forward all the choice matter that we might wish to, but perhaps this will be composed by the converge results of that which the confirmance and of controlly all the conpensated by the superior quality of that which the continuing need of carcul selection and regerous exclusion will permit us to furnish. As before stated, the amount of reading matter in the paper is increased every nearly one half. In the supplemental sheet will be found our Stock Lists, Record of the Transactions in Real Estate, "Biz, and other matter of an a red character, interesting and important, not to our business men alone, but to an who are connected with and dependent on the leading material interests of the country. And who are not! In the regthat sheet will be found all the accustomed departments of the puper, and its matter will cover every local and foreign event of permanent importance, and embrace a careful selection from the best thought embodied in the best periodical publications of the world.

# Temperance Logic.

It is wicked to drink wine. It is therefore criminal to make it. The farmer who cultivates a vineyard is a villain, and God Almgebly, who is supposed to have invented the grape, descrives the censure of the reverred hamburs who recently convened in San Francisco and denounced wine and grape-growing as calculated to increase intemperance and crime. That old physician of the soul and body, St. Paul, recommended a little wine for the stomach's sake. Dr. Gibbous recommendes exceed to behan, precachians, balsam copairs and Wright's Indam Vegetable palls. We prefer to follow the prescription of good old Doctor Paul, and let good old Doctor Gibbous and his masty drugs got the devil. Christ actionable a wedding: the wine gave out and he performed a miracle to restore the supply. It it had been wicked to drink wine Christ would not have provided the miracle, and he ought to know. If wine was a good thing at weddings eighteen hundred years ago, and at the last suppler, in which all the partners participated, it is a good thing now, and ought to be encouraged. We therefore encourage it. It is our observation that wine-growing countries are temperate, that there is best drunkenness in the wine-growing regions of France and Germany than elswhere, and that it Brother Lowett and Frank Whitney had confined themselves to demking pure wines they would be now but indifferent specimens of the awful example of intemperance. The Nows Letter thinks it unkind and ungenerous for the old tope of strychimic and graved lighting to key his mistortunes to pure grape pilice and it Dr. Gibbons would bear honest testimony he would admit more deaths by drowning in water than by drinking of wine.

A paper asks if it is credible that Grant should attempt to bribe a United States Senator. Which we reply that if depends much on who was the United States Senator. With one, for instance, it is extremely credible that famma mining stock might possess attractions superior to those of unreminerated virtue, but if the party were Senator Cole we should say that cash would be the more effective tender. It is credible that for \$30,000 that gentleman, as chairman of the Postolice committees, might consent to report a steamship subsidy bill. We do not know that Senator Cole got the money, but affirm without hestation that Senator Nye would be glad of a chance to do the same at half the figure.

## Bookstaver's Little Game; or, The Mournful History of the Mallard Duck.

Bookstaver was walking the markets around, Feeling very well pleased with the game he had found— For his pockets were stuffed

With the game he had bluffed

The owners of, telling them they were "unsound." He would take from the nail

All the nicest young quail,
All strewing his nose up, would simply say "Stale!"
Then quietly pop them inside his coat-tail,
And when a fine goose took his fancy, he'd cry:
"Just hand me that here, sir, your goose hangs too high!"

But our lovely Inspector still cast round his eye-For nary a mallard duck could be espy— Said he, "It's too bad

There's none to be had.

Mrs. B. is so fond of a nice mallard pie.
I'll go and see what

Friend Murphy has got-

His game is the best that goes into our pot: May be the old boy has of mallards a lot. If so, wont I go for them? O no! guess not."

One tender young mallard had Murphy to sell Which Booky just sniffed at, then let out a yell— "Je-whew! What a smell!

May I go straight to Heaven If I do not right here this old rooster corral?" So he grabbed up the duck With a grin at his luck,

And in with the others his capture he stuck.

"Hi, drop that !" says Murphy, "my precious old saint, You say there's a taint,

But I say, no 'taint, That duck is just killed; he's as fresh as new paint.''

"What, would you make game of me with your palaver?
I'll teach you more wit?" says the haughty Bookstaver; And down came his cane,

Again and again,
Till you thought that his skull must be parted in twain And a horrible mess made of poor Murphy's brain; But the cane was the first

In this combat to burst, At which Booky drew a revolver and cursed, And if not prevented by some meddling serf, he Would soon have made mighty stale mallard of Murphy.

MORAL

Now, all you game-dealers, beware how you talk To the City Inspector, when round on his walk. Not a word must you speak,

But be humble and meek;

As he pockets your ducks you must pocket his cheek—
If you don't, why he canes such offenders as you; And he carries an awful big derringer, too!

— The Chronicle and Bulletin have each other by the ears and are mutually lashing out with their hinder hoofs over this dispute: Bulletin said that everybody who attended the late trot at Sacramento, aided a public wrong: chronicle asks if, then, it was right for Bulletin to advertise the match and work it up in advance in its news columns? Allow us: It is might for a Presbyterian minister to lease a house for purposes of prostitution and receive the rental for years, without impairing his standing in the church. Rev. Mr. Williams of San Francisco did so. It is right for a church deacon to put up a corner in stocks and lure his fellow sinner into it, skin him, and present a round percentage thereon to the church. It is right nto it, skin him, and present a round percentage thereon to the church. It is right for a notorious blackleg to present the church in the name of his write with money gathered at a "hogging" faro game. It is right for a Christian grocer to sand his sugars and sell by short weight. It is right for a church-warden linen draper to sell "mixed" goods for "straight." It is right for a prayerful liquor dealer to wend compounds rank with insidious poisons. It is right for a State Printer to diddle the State out of many thousand dollars and found the Bulletin with his dividend of the spoil. All these things are right provided the doers of them fall to and pray lastily after they are done. Therefore it was right that deacon Fitch should take all the money he could get from the horse sharps and lend his news columns to work up their little game; and it was proper that afterwards he shall fall to snif-flight therest, for such is his tribute to his carefuled Redeemer. We say therefore to the Chronicle—Keep your hoofs off and get your teeth out of deacon Fitch's ears. You have no crucified Redeemer, and so it is none of your funeral,

## Retirement of the Colorado River Railroad Company.

The annex decorrespondence between the Clerk of the Bound of Stiper isons and the President of the San Francisco and Colorado River Relieves Company, filed with the Cork, sufficiently expresses the position of the Company in regard to the repeal of the \$10,000,000 sub-sidy order :

MR. RUSSELL'S LETTER TO THE COMPANY.

SAN FRANCISCO, October 22, 1872. J. Mora Mess, Fog., President of the San Friedrick in the Later the River Ranguagy Course of Survivors of the San Experience of Survivors of the San City and County, held to table risks, to-with

Resolution to alst now series

Research in volume and some selections of the Roard is hereby respected to address a communication to the Sat Francisco and Colora to River Research to the repeal of the ordinance submitted to the close of this

city and counts the question of granting to said compute a sursely of slower one. In parsonner of said resolution, I have the bonor to request the liter of ris of the San Fractisco and Coorado Ranaay Company to altern the beard of Spectylors, on or before its next meeting, to be held on Metalay, the 28th instant, whicher as in a life inferred from their published earl of the 12th estant, it is the intention or a size of the said Board of Directors that the quies of whicher and shall be granted to the Company to the extent of \$1 1,000 mm in the construction of shar be grained to be Company to the extent of \$1.000.000 in the construction of a railroad, shard not be sufficiently to the qualified or terrs; I the soft, and county at the next general contion, and that Order No. 1,000 be reposed. If such as the case, I have also be a requested to inform you it will require a resort in to be depited by the Bears of Directors of such Company and a certified cap of the same, duly attested by the proper officers, to other with the conjectal sea affixed, to be transmitted to said Board of Supervisors. Very respectfully, etc.

John A. Russell, Clerk.

OFFICE OF THE SAN PRANCISCO AND COLORADO RIVER RAILWAY CO., I

To the Honorable the Board of Supervisors of the transmit treety i san Francisco Gentle State where the control of supervisors of the transmit treety i san Francisco Gentle State and the control of the transmit treety is san Francisco Gentle State and the control of the contr honorable body, o ded 22d instant, and inclosing the following resolution, viz: [Here follows the reso ution given above

We beg leave to submit to your consideration the following card which we addressed on the 17th instant to the public, and which we ask to make a part of your

record :

[Here to lows the published card announcing the withdrawal of the proposition

from the cost on

The letter then continues: Plain, open and inequivocal as our conduct was in withdraw no from the election, abandoning for the present as the flow election to obtain the regular subside, and accepting the set atoes, vertical present of labor distributions over soft instructions of a subsiderable and the face perceptions of some natures, for of their own baseness and terming and the face perceptions of some natures, for of their own baseness and terminations. pittide, could only see in our action cause of suspector and lose.

It was, therefore, with satisfaction that we read in the proceedings of your hon-

orable body the following resolution :

" Resided. That the City and County Afforney be requested, and he is hereby requested to give his appinent to the Bound as to its power to report tester No. 1961, and it he shad be of opprious that this Board has such power. But he report the form of a prepar repeating order at the next meeting of the Board.

form of a proper repealing order at the next meeting of 20 s Hoard. We have been any seed by the commiss that appends appendent of the Company, it is in 12. I power of your Board to repeal Order No. 1, ad, not recent the creation proclamation. Shorkd the city and Count Attorney arrive at the same conclasion, and "repeat the form of a proper repeating order, we respectively ask that such order may be passed. This Company has from its organization been open and plann in its intention and requests. It asked a substity as such without disguise and without these processes of trast or stock to be asked in return or other idegal continuance, and at this time its position is as plan and intentiveness. It wishes the public to know that the question of granting a subsidie is not submitted at the commission of creating a subsidie is not submitted at the commission critic that question from the public critic that question from the polls. sary to retire that question from the polls.

We respect that's chalose a copy of a resolution adopted at a meeting of the Board

of Directors of this Company on the 23d instant, and in cone usion beg leave to add that there is now, in our opinion, a perverted public sentiment on the question of this subsity, and that the public do not clearly approxime their inter dependency upon existing monopolies, and how completely the non-subsidy dorma maintains

We are not without hope that in the near future there will be a great awakening in this city to the true condition of its railroad interests, when our efforts will be apprecia'd, and when the great public will lest that our cause is their cause. Respectfully submitted. By order of the Board.

JAS. O'NEILL, Secretary.

J. MORA MOSS, President.

THE RESOLUTIONS OF WITHDRAWAL.

The following are the resolutions accompanying the letter, and adopted by the Board of Directors : WHEREAS, On the 17th inst., this company, in a card to the public, formally withdrew, so far as it lay in its power, from the election authorized by the Board of Supervisors of the city and county of San Francisco under Ordinance No. 1,061; and whereas, a resolution was passed by said Board, at its meeting of 21st inst., suzgestive of the purpose of repealing said ordinance; and whereas, at the same meeting, a resolution was also passed requesting the views of the company in regard to said proposed or suggested repeal of said ordinance,

proposed or suggested repeal of said ordinance,

Resolved, That said Board of Supervisors be and they hereby are respectfully requested to repeal the said Order No. 1,061 and recall the election proclamation
issued thereon; and that if said order be not repealed, we hereby pledge the faith
of the company to the city and county of San Francisco, that, shall the subsidy
authorized under said order be carried in our behalf at the election to be held on the 5th November next, we will not accept the same, and in no manner hold said city and county liable to us and successors or assigns for it, or any portions of it.

Resolved. That until a corporate seal shall be adopted by this company that the
private seal of the President shall constitute the seal of this corporation.

We do hereby certify that the foregoing is a copy of resolutions adopted by the

San Francisco and Colorado River Railway Company on the 23d instant. In witness whereof we do hereunto subscribe our names, respectively, as President and Secretary of said company, and hereunto affix the seal of said corpora-

tion, the twenty-fourth day of October, A. D. 1872. J. MORA MOSS, President.

Seal: [J. M. M.]
JAMES O'NEILL, Secretary.

## The "Mail Bag" for October.

The "California Mail Bag" (for reference and preservation), October number, is issued. The feature of the number is a photograph of Professor Agassiz, one of the best works of the art ever turned out from Bradley & Rulofson's gallery. The the best works of the art ever turned out from Bradley & Rulofson's gallery. The expression of the great maturalist's face is intent and carrest, lighted by a gleam of that kindliness of nature which has endeared him to so many. The likeness is a "speaking" one. It is accompanied by a full and graphic memoir, occupying eight closely printed pages, covering the salient points of the Professor's career, with an intelligent account of his labors in the field of science, and of his contributions to scientific literature. The number also contains the complete record of butions to Sectione medium. The immediates contains the compact record of the real estate transactions for the month in the city and county of San Francisco and in the county of Alameda, and a series of views, panonumic in their succession, of interesting points on the Central Pacific Railroad. Events of permanents cession, of interesting points on the Central Pacific Railroad. Events of permanent importance happening at home and abroad are recorded; in addition to which is an interesting and valuable miscellany selected from the best of contemporary political literature. As examples of this class of papers, may be mentioned "Railroad Investments," from the Nation, "The Hassler Glacier," from the Adlantic Monthly, "A Nevada Funcral," by Mark Twain, "Baptecsement of the Bairn" (poem), "Chinese and Japanese Workmen, from the London Times, and articles on such local topics as our "Steamship Transfers," "The Fair Trial," "Theatrical Affairs," "The Diamond Fields, "etc., "too numerous to mention." The Matl Bag is the most characteristic and entertaining Californian publication that can be sent to friends abroad, while as a permanent record of current affairs, every reader of the News Letter will find himself amply repaid by procuring each number to be bound in half-yearly volumes. bound in half-yearly volumes.

- The ordinary earthquakes of California are sources of amusement rather than of fear to people accustomed to them. —Alta Editorial Note. It is difficult to imagine a more cheerful or inspiriting scene that is presented by the streets of Saa Francisco during the performance of one of these popular entertainments. The inhabitants turn out en masse in every variety of quaint and picturesque costume, at the first tremor, men, women and children start to their feet and rush pell mell into the streets to join in the sports of the occasion. Rushing up and down with a manifer thereing melting and diverge signature crise they recent. peculiar tottering motion and uttering singular cries, they present a strangely anipeculiar tottering motion and uttering singular cries, they present a strangely animated appearance. As the excitement of the festivity increases, their countenances blanch and are grotesquely distorted, wearing, to the eye of the casual stranger, an expression of trantic terror. He is astonished afterwards at being informed in chattering accents that these people were really transported by an eestacy of mirth. Several hours are then spent in exchanging experiences of a varied and delightful character. It is confusing to be assured by each of several hundred inhabitants that "he was not in the least frightened"—as if fear were the normal effect of "a source of amusement." The tourist, says the Alla, inquires after our earthquake ruins. The interlocutor may point him triumphantly to the shattered intellect manifest in the weather-beaten and crumbling "editorial note" of our contemporary as a ruth of the most desolate and overwhelming description. as a ruln of the most desolate and overwhelming description.

<sup>—</sup> Asks Mr. Pickering—Are not the people of San Francisco a patient people? We caeerfully reply, they are. When Mr. Pickering clamored for a railroad riot, a hasty or impatient people would have dipped him in tar and then rolled him in a feather bed. They of San Francisco answered him with gentle hilarity.

Local Dottings.

"We (Alla) have seldom seen so many drunken men on the street as there were last Saturday night." And there was one drunken man whom the Alla did not see, but every one else did. —Wreck of the ship Aculeo and cargo sold to Tom Smiley for \$3,700. Tom likes old wrecks. — Henry Stevens, a lad, went a-shooting and baged his jaw. —Roach and Buckley, aged seventeen, fell a-kniving and a-shooting last Saturday night. An over-zealous policeman arrested them before either was killed. —George I. Foster, a pioneer printer of 1849, dead. He had gone to work on the Chronicle, but preferred to die. —Sister Catherine Fogerty of Mercy died at Sacramento. Peace to her sowl. — The mortal tenement of John Wescott was found floating in the bay. It had a swelled front. —Seventy of R. Matthews' chickens stolen. The Call reporter attempts to avert detection by charging the larceny on Chinese. —Enshoozeasick officer arrested Michael Keegan on suspicion of insanity. He was drunk. —A terrestrial tremor was remarked last Monday evening. Reckless newspapers recorded it as an "earthquake." — Wm. Willicke shaved an unch deep on Monday, and will not do so any more. —The Call says that men who hang around wharf saloons are not "loafers." No; they are usually Call reporters. —Henry Carrington, recently appointed to fill a vacancy in the Appraiser's Department, emptied it again by falling down a hatchway.—Gen, Miller talked to Grant Republicans at Platt's Hall on the cohesive power of public plunder. —Dr. Alphonse Romatka discovered his brains and blew them out at Sonoma. —Alonzo Lockwood enlisted in the army, and then wanted to get off. Not so. —Frances Rose Mackinley is sick. The old thing. —The California Boat Club challenges the Oak-leaf Boat Club to a single and a double scull race. If a skull of double thickness will do, the Oak-leaves will respond. —The town of Mowland Flat burned up and the Flatters howl and wring their hands. —Dr. Stout and the Morning Call want a probationary insane asylum. There is no law preventing Dr. Stout trom lo

There are six hundred pupils in phonography in the public schools. Thus are our younglings fitted for a brilliant and practical career.

### Murder.

The business of filling our daily papers with the details of a half-dozen murder trials is becoming monotonous. The prospect of nine more yet to come off is nothing less than discusting. The uniformity of the take of pistoring, stabiling and clubbing is inadequately relieved by the episodes of spicete and are isolated forzers. We crave variety, and in wearness of spirit beseach one of our many parsons to execute a ferceous scandal, or the gentlemen in the mirit to concert a first-class largeony. The recitals of manishaghter might be borne with nare composure if our papers would but refrain from dropping into obtoreal idices concerning the same. We are pointed to what is called the meeting the same would but refrain the dropping into obtoreal idices concerning the cume. We are pointed to what is called the meeting the work of the property of morder in the second degree for kwang Mrs. Burkhardt. We affirm that the verdiet was consistency itself. If committed at all, the crime was deabeared numder, but for a jury to have returned a verdient in accordance with the facts, would be to reverse the current of cruencial inseparations. Then the Supreme Court comes in for seedburg, and we are remanded the of taxes a new trial to Mike Branugan and Mrs. Fair, as it has now done to Devine, "the Chicken," whereby those criminals escaped. But what is a Supreme court for, if not to grant new frinds." Is there anything new in all this? Is stand a story as old as the law. Have not the words. "Hausing placed out." become a provent whether could be brought to panishment. Has not Ohno changed to law regarding penalties in order to entire juries into rendering a verdert in accordance with their caths. "Have not Wisconsin and Iowa abolished the death penalty wholly?

Last week, the Neas Letter enumerated fourteen men who have in all variety and result of the uniform failure to punish it during years post. Then what is the effect and result of the uniform failure to punish it during years post. Then what is the head of this present hul

Last week, the Nows Letter enumerated fourteen ment with a warm trial for murder. Was all this cropp of crine anything more or less than the effect and result of the uniform fadore to punish at during years peet? Then what is the meaning of this present hullabullo because a few more marderers are escaping in due course of judicial proceedings. We go on in our old ruf and things take their accustomed course. One radioal reformer suggests that the law of Calstonia might accustomed course. One radioal reformer suggests that the law of Calstonia might accustomed rounders with flat of Ohio. Might up We are speech assent the gare of this luminous suggestion. When Balasm's animal brooks into articulate speech the prophet proceeded to mend his ways without immeassary deay. When the family papers give utterance to rational and practical remarks, it is obvious that the social fabric is in a parlous state. If it be retorted that our law reform would be very the closing the stable door after the horse was gone, we reply that it is not yet too late. Fitch and Pickering are the men for the exceency. They go in for the committees. Fitch says Mrs. Fair ought to have been dropped overboard. There are still cight prisoners under indictment. Mrs. Fair is not yet out of reach. Pickering knows something about shooting people in the back. There is no reason why a crummal should not be despatched that way. The present is those genitemen's opportunity. Will Fitch pall on "the Chucken's" tops while Pickering drop a lead pill into Mrs. Fair while Fitch heaves her overboard as he suggests? We love practical suggestions—but then too we like to see them carried out.

# A Tale for Lit-tle Folks.

This is the story of good doc-tor Lane, for other good lit-tle doc-tors to read and try to be like him. In ther Co-rey broke his arm, and good doc-tor Lane kind-ly set it for him in so skill-ful a man-ner that it was two meh-es shert-ser than the other. When he had done for Co-rey, good doc-tor Lane said to him, "If you have no mon-ey you need not pay me now, but go tell the pas-pers how I set your arm in a skull-ful manner." Co-rey did as the good doc-tor asked him, for he was grate-ful and his head and his heart were soft. So the prepers printed Co-rey's story, and this was worth a mint of mon-ey togood doc-tor Lane, because it was an Ad-vert-iso-ment. So is this take which you are read-ling. It is an Ad-vert-iso-ment of doc-tor Lane, and of price-less val-ne to him. Other doc-tors ought to hay to heart this take of the good doc-tor Lane, and send their char-i-ty pas-hents to the pa-pers, which will tell all about the char-i-ty. Then they will all be thought break his own arm he will go to good doc-tor Lane. When News Lod-fer shall break his own arm he will go to good doc-tor Lane to set it so that it shall be two inch-es short-er than the oth-er, and then we will give him an-oth-er first-class notice.

It was very interesting to read the St. Louis account of a wedding in high life between a distinguished California Judge and the daughter of a St. Louis banker, worth thirteen million dollars. The graceful carriage and stately dignity of the Judge, the modest bearing of the beautiful widow. The Judge hed his expenses paid by the Committee of One Hundred. Query: Ought he not to refund and divide the profits of the trip! No wonder the groom was grateful to St. Louis. The Judge was more than grateful, he was generous; and in the overflowing of his capacious soul he would tax San Francisco for million dolbars as an equivalent for his bride. As the young widow did not get the money for her native city, we hope she may extract from her married life any amount of countbad bliss, and receive all that she is justly entitled to by virtue of the matrimonial compact.

## What Benham Nose About Caning.

Along the street you meet a nose, Which far and wide its shadow throws, And peeping out, as on it goes, You see the tips of Benham's toes. Poor nose! it glows, couleur de rose, and shows, in rows, the cruel blows Which Hoadley in his wrath bestows; Though why, the devil only knows, For Benham swears they are not foes. And when he blows that poor old nose, And the salt tear adown it flows, Think of the woes he undergoes To pack 'round such a nose as those!

# The Great Apache Game Year.

Now doth the blithe Apache warble his matutinal hymn and skipping gaily o'er the sward, wave the scalps of Sergeant George Stewart, Corporal William Nation, and privates Edward Carr and John Walsh, all of the Fith Cavalry. Blandly doth General O. O. Howard issue his order that the inaocent creatures "shall not be fired upon unless eagaged in the actual commission of outrages." The pious General ought not to have used so harsh a term. He ought not to have said "outrages" he should have written, "unless engaged in actual recreations." For shall not the guileless child of Nature disport him on her bosom and crack the breech-londer at his blue-coat game, and laugh gaily when the quarry lieth down to bleed! Perchance Sergeant George Stewart was a gross, bald man, and dropped off his horse with a thud, and when the kalife circled his shiny sconce, and rosethipped fingers pulled the slipperty skin, can we not fancy the silvy laugh which trippled from the light-hearted Apache's lips! Mayhap Corporal Nation was old and grizzled; who knows but he had fought in Mexico and by the Potomac, and raided with Sheridan along the Shennandosh! Then what a prime lark for a noble and grizzled; who knows but he had fought in Mexico and by the Potomac, and raided with Sheridan along the Shennandosh! Then what a prime lark for a noble grize to bring down that veteral like 1 vagrom jackass rabbit. Private Edward Carr perhaps had a wife along with him who was laundress to the Company. So they took him home to her with a jolly raw head like skinned sheep's. O rare! The simple red man may well have shaken his lean sides over this rattling practical joke. But John Walsh! Walsh was an Irishman—a rollicking blade beyond doubt, and what they call "the soul of his mess," one of the dashing, dare-devil sort; he was a bird worthy of the Indian rifle; and they bagged him like any qual. Perhaps John was not quite dead when they ripped his cattele over his eyes, and gave the Apache pot-hunter a chance to beat in his skull with a handy bit of rock. H

These piping times of peace agree not with the stomach of the martial Boy in Blue. His soul is fired by tales of outrage done upon our Apache border, and all the soldier burns within him. Strategy engrosses his mind by day, and he resolves on deeds of high emprize by night. Then does he mask a battery beneath his military overcoat and devise a crafty ambush for the foe. In the early gray of morning the bloody milkman is seen stealing upon the unconscious town. Waril the heroes of Appomattox draw their lines around him. He pauses in a difficult and sandy pass to "blow" his steed. By a concerted movement, the ambushed military close upon him and unmask their batteries. Before the bewildered foeman can utter his war-cry he is overthrown, and pistol-butts rain effective blows upon his resonniding skull. Practiced hands go quickly through his pockets, and in less time than we take to tell the tale, a brilliant flank movement, executed at a double quick, lands the expedition safely within the lines, bringing with them \$200 in coin without the loss of a man. The object of the movement is completely successful, the enemy remaining on the field greatly demoralized. None but the brave deservet the fare—say we.

At the United States Naval Academy, Bob Diggs, white, knocked spots out of Conyers, black, and got dismissed. Served him right for being named Diggs: He might have come to be an admiral and made us all ridleulous—particularly such of us as are named Smith, or Scudder, or Gutz, or Piper, or Lick.

## Over the Bay.

"It has always been considered that at some future day Oakland, Brooklyn, and Alameda would constitute one vast and wealthy city." - Oakland Daily News. and Alumeda would constitute one vast and wealthy city. — Oakland Duly Noves. Already the first step toward this grand result has been taken. The populous suburb of Brooklyn by a majority of two to one—that is, a vote of seventeen to nine—has decoded to amalgamate with the metropolis. A leading motive with these massies of people was, the Noves informs us, to secure an improvement of the Harbor. Hitherto scows and dupies drawing over mine inches of water have been unable to reach the Brooklyn piers at half tide. The channel is no bear deredged to the depth of two and one half feet, so that coysterboards, and even puncties, of the largest burthen, can enter their berths at low tide. Since the union of the two cities, enhanced activity is already visible in the humming marts and thronging thoroughfares of Oakland. One day ast week three earts were counted at one time on Broadway, and the old peddiar now finds a competitor for the trafic of the suburbs. An encouraging rumor that a new swill eart was to be put on appears, however, to have been premature. It is authoritively given out, however, that ex-Mayor Felton, of Oakland, will soon order a suit of cothes and a Winter bonnet from local emporiums, which has caused some stir among competing firms. financial revusion which appeared imminent in the early part of the week, consequent on the failure of a leading merchant with habitues approximating three thousand dolars, was averted by the prompt munificence of a single citizen, Dr. Merritt. That gentleman placed the sum of six handred dolars, from his prixel. funds, at the service of the banks, and, when the fact became known, it exerted a powerful influence in allaying the excitement and restoring confidence. A statement of the affairs of the bankrupt showed that the bulk of his liabilities were due in San Francisco the total loss sidiling upon the Oakland community being under rather than over, \$180. On Wednesday and Thursslay burstness flowed in accus-tomed volume, and quite a line of peanitis and of dired peaches was taken by trade from first hands. Building enterprise received a momentary check, and the only important transaction in building materials was the sale of one bandle of only important transaction in building materials was the safe of one bundle of shingles, on terms reserved. An enterprise fraught with important consequences to the future of Oakiand, is the proposition to change the title of the Farmers (Inb to that of Chamber of Commerce. This has been opposed, on the ground that the two saloon keepers and the peddlar might assert a right to membership, and it would be indebtate to exclude them. The bootmaker and kitchen gardener, who are prominent members of the present organization, have threatened to risign if the three new men are allowed to join. The discussion continues to excite a good deal of feeling in commercial circles. The other proposition to meorporate the spaceous city of Alameda with Oakiand, as has been already done in the the case of threathy will can be acted on this proposition. Brooklyn, will soon be voted on. It is proposed to overcome the inconvenience of the two metropolises lying four miles apart by giving a comple separate set of local the two increopenees and pour mines apart of gring a comple separate set of local and deputy officers to Alameda. Should this union be cheeted, so that, in the language of the News, "Oakland, Brookan, and Alameda would constitute one vast and wealthy city," the aggregate population of the consolidated metropolis would be upwards of two thousand souls—exclusive of Indians not laxed. New York would then, indeed, have to look to her laurers as the chief city of the United States.

### Diamonds.

In another page of the Mail Bag will be read the second installment of the admirable series of papers on the South African diamond fields, by Charles A. Payton, of London. These papers, which are reprinted exclusively in the United States by the Mail Bag from a copy procured direct from London, contain more practical information of value to American diamond prospectors than all the other printed matter put logether which has fallen under our observation. Mr Payton describes in a lued and intelligible way the methods of sitting and sorting the diamond-bearing gravel, both in the wet and the dry diggings. These details possess an especial value to our own prospectors. It was the general impression at first that the gravels could only be profusably worked by the aid of water—washing them, as is done for gold. This is seen to be a mistake; and a particular description of the apparatus for mampulating in the dry way, together with the method of proceeding, is given by Mr. Payton. He describes the appearance of the country and the composition and appearance of the gravel, which reads as if it might have been written from any point of the high interior plateau lying cast of us, extending from Arzona north to Wyoming Territory. Even the famous "ant hills" are found in South Africa, and the busy insects bring up the glistening stones. The Kafirs work much as our Indians may be expected to, and steal what stones they can with invigorating industry and perseverance. The regulations adopted by the diggers are given in full, and abound in suggestion which should be useful to us. There is no further news from the week from Omana of a party that had left the railroad at a point called the Red Desert supposed to be on route for the diamond fields. The particulars of the expedition are meagre, but we attach a particular significance to the story.

<sup>—</sup> A Chinawoman is pronounced crazy for worshiping a tin bucket. Let her adore a silver crucifix and be pronounced sane.

## Leaves from a Lady's Diary.

OCTOBER 21.—With some people traveling only means locomotion. Henry and I were going this morning to the postoffice and stopped at a picture store below Montgomery street. There are two colored lithographs of Genoa and Turin exposed in the window, and a well diressed hoosier was looking intently at the latter. He turned to Henry and said, "Where's that Torino! I've been home and looked in the encyclopedia and can't find it." When Henry explained that such was the Italian way of spelling the name of the city, he repided, "Well, I thought I'd seen that place somewhere in Yurnup." Mr. M—— came, to say farewell. He has scraped and gamed and squeezed money out of California, not, if report speaks truly, by the most creditable methods, and now is zoing home to live cleanly for the rest of his days. Not that he repents of the past, nor would hesitate to repeat it if necessary, but he is simply tired, and would fain believe that cessation is atonement.

There are who think to cast a life's accumulated burthen And cleanse their leprous sins by one plunge in the Jordan.

So he has given a handsome donation to the various charities and departs, with a crowd of leave-takers and honorable mention in the daily papers. I could not help thinking last night, when Mephistopheles and Faust were killing Valentin in the opera, that it was typical of the late war, two Germans against one Frenchann, Muller and Eisenbach slaughtering Monsieur Charles, as he is always called. Ocr. 22.—Happiness after all is but comparative. Bright little Lilian S— came bounding into my room early this morning to tell me that she had got a situation as governess at twenty dollars a month, and she danced for joy. Half an hour afterwards I saw a gloomy millionaire walking down from Taylor street, looking as black as thunder; something had gone wrong, whereby he missed another layer of gold. Spent the atternoon in Mr. L—'s fine library. There is a rare edition of Albert Durer's etchings and wood engravings in it, rough enough when we compare them with the finished prettiness of the present day, but yet what earnest sincerity there is in them all. I could not help comparing his virgins with those of Raphael. In Durer one sees the sorely tried, auxious Mary, whose early life had been one of suffering, even of privation, whilst the Italian is all sensuous beauty—a mother fondling a remarkably healthy child, herself the picture of health and happiness.

## The Holy Club.

We have all sorts of clubs—American, French and German: military, social, and political; the Union and Pacific Clubs, the Bohemian and the lawyers' club, and they are all wicked places where poker is played and wine is drunk, and songs are sung, and questionable stories told. The husband with his night-key does not always go directly from his club to his home, nor the bacheior to his virtuous sheets. Clubs are institutions of the devil, and ought to be prayed against. The pious man of God should set his face against and forever reprove them. But alast or the godlessness of these our days. The congregationalists have established a club, and the Reverend Burton is President—the Reverend Stone is Vice-President thereof. Of course, these fat and oily men of God only met nights at their club to commune together in spirit-unl affairs; they meet to uphold the card-inal virtues. They will not poker each other, and no females will be admitted by the front door. Of course they will sing psalms and go straight home, avoiding all the dangerous places. A little wine for their communion table, perhaps, but to be drunk in great a tedious afternoon, no hot whisky punches for a rainy evening; nobody admitted to membership but the long-faced, suiveling he idiots who have professed religion and embraced Jesus. It must be enticing. We thank our Heavenly Father we are not eligible to membership.

## Cold Meat.

The cold carcass crop off Meigg's wharf is plentiful this season. Some sentimental young ladies went there last week to muse (how doyou muse!). They bade the ocean "Roll on, thou deep and dark-blue ocean, roil!" and it rolled, Then said Auserina, "Lo, Selina, yonder object on which the haughty gulls are wheting 'their talons ere they soar to the lotty empyrean! Methinks 'tia a lifebuoy." But it turned out to be a dead youth—not a life-buoy—whose domestic economy the gulls were interviewing. "Verliy," saith the Scripture, "where the carcass is, there will the sea-gulls be gathered together." Next day a dog could not take a quiet swim without a masty baby bobbing up against his nose. The pampered animal, reared in luxury's and Mrs. Jellybag's laps, refused the profered meal, and even indicated by his elevated smeller that it was too "high" for him. When vitiated dogs thus despise good, wholesome, well-cured baby, it is time to clamor against the price of butcher's meat. The little stranger was fished out, and found to be carefully enswathed in an old clout. Around its waist was tied a rope, to which some affectionate hand had attached a grindstone. A hole in its forchead attested the carcesce of a poker, perhaps the last fond token of a mother's love.

"O what was love made for, if 'twas not for this?"

## Important Steamship Announcement.

We are authorized to state that the preliminaries have been arranged for the formation of a strong-hip company in London, in cooperation with the Fangina Railroad Company, to run a line of spiciodal directorss, test screw scenichips, between San Francisco and Sydney, N. S. W., rin Honoldin, Navigators Island and Merton Bay, Que us said. A brained steamer is intuited to be run from Navigator's Island to Anakand, N. Z., to carry the New Zonand mays and possessivers. The poan of the company is to therter the necessary number of steamers at one, to "mangarate" the enterprise. They also commence the construction of three and probably a fourtal step so of the class of the famous "White Star" line, between New York and Lirebard. These ships constitute the linest floot of merchant steamers about. Pluy are of the argest cases, burd of aron, with compound circures, having the prime pal cabin annelshaps, and combining at the abest improvements in ship but due. They are the fastest ships in the world, and will work castly within the schedule time fixed by the company, as to low. Between London and Sodarey, 14 days, between London and Anakand, Sodars. To san Francisco, the unportance of the new line and the advantages it we bring to the post, cannot be compressed into a sentence. An American current but the design of the families of England. The next step, which meeting is likely to cavert, with the literate of Asia. And for this he has to thank his Congress.

## Let us be Lectured.

We print this week an iteresting account of Professor Tyndabi's lectures. The Eastern people have also seemed flux ey, Carpenter and Fronte for the present season. Why should san Francisco not have them all four? It is a matter of money and she has pointly the cornect change to he can have the based we we have for the based. It is considered that the cornect change to he can be the sort to secture. To do so s to be continued, and as the treatment of the money of the sort to secture. To do so s to be continued, and as the treatment of the sort to secture. To do so s to be continued that the cornect change of the sort to do so the above of the sort of the sort

The county clerk, in pursuance of statute, has executed a 13,000-dollar joke which has a sea forcat frequency. A arge clement of our population, whose names were never thought worth printing before, are reconsided in it. For a considerable extent at its a record of the dead, and to a much greater extent downt, for nearly two thous and manes of its a record of the gentlemen's names whech have attempted put on the pay for, at Marie Island Navy Yard. A few thous and individuals who have moved here residence from San Francisco to Oak and district the past six years are advised in entering opportunity to vote in both peaces. As a shield for transfer in voting, the Great Register is rather too clumps to be eight a clear segment to the second register in the paying the respective positions estimate of cach other, mether cares much for a since. Each party appears prepared to make the most of its opportunity, and, maneavering behind the treat Register, that most positives to be something considerable. The county clerk protests that it is not his faint: We are not aware that any one has said it was.

The native of the Old Bay State,
A loud laugh laugheth he—
One hundred and thirty thousand codfish
Arrive from the Okotsk Sea.

<sup>&</sup>quot;The wayward creatures who inhabit Pike street" is Alia not English) for prostitute. It is easy to understand that paper's sensitiveness to the use of the plain word. "Journalistic prostitute" is a coarse term of reproach.

# Treasure Recovered from the "America."

A portion of the treasure recovered from the remains of the steamer America, by divers persons, and brought to San Francisco on the Colorada, was trucked to the office of the San Francisco Assaying and Refining Works, No. 416 Montgomery street, yesterday morning, and exposed to the gaze of a few reliable persons. The scene was novel beyond conception. Twenty-three boxes of melted coin, weighing from two to four hundred pounds each, were scattered about the floor of the room, and besides there were piles of bars and irregular masses of valuable metal lying around loose. Two pieces of the melted mass, with a length each of about three feet, a width of eighteen inches, and weighing one hundred pounds, looked like a section of frozen clay bristing with oysters. These oysters were twenty-dollar pieces, Mexican dollars and half-dollars of American coinage, with dimes and half-dimes for young oysters, and irons spikes, bits of brass and steel to represent the shell-fish that are wont to burrow in the bed of the ocean, the whole forming a valuable specimen of crustacea. In some instances the coins are only welded together in rolls, and at other times they form one lava-like gob. The melted matter and the coins are of a deep green color. The large bars of bullion were less affected by the fire than the coin, and do not appear to have lost much in weight. The metal is to be recoined. Two twenty-dollar pieces in the lot were kindly donated to the representatives of the press, who were among the reliable persons present, and had not the coins been welded to a bar, they would have been taken away. Three hundred theus and dollars worth of treasure, half-melted, colored by fire and the action of the water is a curiosity that few people have ever had an opportunity to see. Even the audacious and enterprising Barnum could not give such a show.

William Donovan shot George Minchell for \$14 two years ago, and was convicted of murder. The State Supreme Court naturally gave him a new trial, at which he has been convicted again and sentenced to be hanged. Donovan pleaded delivium tree ms, but pleaded in vain. Let not the breast of the pittful reader be wrung by Donovan's awful doom; he will not be judicially made into a demnition cold body, with a swelled, black face and his eyes popped out. First, he may appeal again to the Supreme Court; he may get a new trial and not be convicted. And second, Gov. Booth may pardon him. In fact, the Governor is expected to do so the papers inform us, because Donovan was drunk when he killed Minchell, who was not. If Minchell had been properly drunk, also, he might have killed Donovan. The killing is thus seen to have been really Minchell sown fault. In this view, he got no more than he deserved, and Donovan is an injured party. We commend him to Gov. Booth for a pardon, and, as some small reparation for the incarceration he has sustained, suggest that he might be appointed Notary Public.

The industry of Mr. Kettell of the Alta, in writing letters to himself and answering them in the commercial column, is only equaled by that of Mr. Williams of the Bulletin, in appending the signature "Citizen" to rejected editorial paragraphs. The impersonality of the press must be better preserved.

Wm. A. Piper says his speeches "come right from the heart." Mr. Piper's speeches may come from that necessary organ, but having been within range of his breath during the delivery of one, we should say that it came from a necessary of a different description.

—— Citizens residing near North Beach remarked a very peculiar odor in the atmosphere on Tuesday evening.—Daily Paper.] We have to explain that Mr. W. A. Piper was washing himself on the beach in that vicinity. Large numbers of flash were killed and came floating to the surface.

— H. R. Kendall writes to the Alla that he can discover nothing flattering in the moral and social prospects of California. We can: It is the flattering tale told by Hope—of a prospect of the early demise of H. R. Kendall, and the eternal moral and social gain of California thereby.

The dailies call attention to an "alarming" horse disease prevailing in the East, and which may reach California. The dailies need not continue to flap their ears in that agitated manner. The disease is confined to animals which neigh—not bray.

Jos. Beale has got killed by a hunting party who mistook him for a deer. If all Californians who wear antiers were served like Jos. Beale, the corpses left unburied for lack of laborers to plant them, should breed a noisome pestilence.

4

# A Rhyme of the Maple Tree.

A brown-winged bird is sitting
High up the maple tree;
Out load, with a pretty bravery

Out fond, with a pretty bravery,
To his sole self-singeth he,
While the reddening caves are falling

While the reddening caves are fallin Fast down from the maple tree.

A brown-haired girl is sitting Low under the maple tree; In a voice like smitten silver

To her sole self sigheth she, And her tears are falling, falling, Like the leaves from the maple tree.

The sunshine comes to kiss her All under the maple tree; Her cheeks are like wood roses—

She's tair enough for three!
But she has no heart to listen
To the bird in the maple tree.

For she has shamed her sweetheart
All under the maple tree;
"And yet, there's not another
Who, like him, loveth me—
We shall ait no more together.

Who, like him, loveth me— We shall sit no more together Under this maple tree!" He listens close beside her,

A'l under the maple tree; He's jea ous of the sunshme, He will not let her be—

On two the leaves are falling Fast from the maple tree.

She's shy, but he is master, All under the maple tree; First tears, then smiles and kisses— In sooth 'tis fine to see!

In sooth 'tis fine to see! And her heart goes singing, singing, With the bird in the maple tree,

- Howard Glyndon in Appleton's Journal.

## The Diamond Diggings--General Account of the South African Fields.--No. 3

[By Charles A. Payton-"Sarcelle" of "The Field."]

THE COLESBERG KOPJE.

Early in July, 1871, a "new rush" was prospected about a mile beyond De Beer's, and many diamonds being found on or near the surface, a great many claims were and many diamonds found from on the least the service, a great many comments at once taken out. It is only a small "kepte" or bill, about 250 acres in area, surrounded by a reef of hard rock. In about a fortunght after the first besovery comments exceed the second of bought any at those prices, luckier still those who originally marked out claims, and paid only the 10s beense, for little more than three months after the opening of the "kopje" a whole chain in a good pos ten there would not be send for less than £2,000 to £1,000 and had or quarter claims in proportion. The dair finds there are something marvelous, fortunes having already been realized by single in-dividual shelween July and the end of October, when I left the Coasburg Kopje. A friend of mine having taken out a claim there, sold had of it to a Mr. A ros. Smit, a Dutchman, for, I think, £50. In two nonths 1 me Smits found dramends the value of which is estimated at from £15,000 to £20,000. The other had of the same claim has also turned out very well. The daily increasing riches of this wonderful place soon attracted crowds of diagers, diamond, buyers, store and hatel keepers: place soon attracted crowds of diggers, damied buyers, store and hotel keepers; and, within three months from the first discovery, the Defeer's New Rush, subsequently christened "Cecesberg Kopje," has become a busy, thriving town, with regular streets, handsome buildings of every mater a "except stone, and an immense encampment of tents and wayous all round the "kopje." As to the appearance of the "kopje," itself during working hours, no words of mine can give an adequate idea of the immense activity which is here displayed. In consequence of the high price of claims and richness of the ground, most of the claims have been divided into halves and quarters, the latter being the most general, and every digger being anxious to get through the ground as quickly as possible, puts on as many Kaftrsas be can get hold of, so that such a number of men, white and black, are con, regated on this little space, all working with ceaseless energy, that the place is like a magmilied antibult, with a combination of bechive. Each claim has to allow 7ft for the road. Roads run parallel through the whose of the keppe, the refuse staff, rock, etc., being rapidly removed by nutle-earts, the drivers of which are at work all rocks. long, and make a fair thing of that innepence or one shifting per load, which does not take long, as the stuff is shot out on to the "veldt," just outside the kopje. This refuse stuff consists of large pieces of hard innestone and other kinds of rock, too hard to be easily broken either by the shovel or in the rough steve, but diggers are now careful to break as much of it as they possibly can, using mallets and sledge-hammers, for many diamonds have been found embedded in the shard stuff; and hammers, for many diamonds have been found embedded in the hard stuff; and some people who can d not afford claims were, and probably still are, in the half of making a living, and sometimes a very good one too, by going about and break-ing the refuse stuff carted away from the claims. In one instance, a piece of dis-stance to do not the front o's cart, the hinder wheel passed over it and crushed it, when out came a 20-carat diamond. A 33-carat stone has lately been found embedded in solid quartz

The noise, dust and heat at the Colesberg Kopje are intense and most trying. Thirst is keenly feit, and the canteens drive a roaring trade. In consequence of the small portion of ground each diager has to work on, there is no room on the claims for most of the sorting-tables, and they are generally placed on the "weldt" outside the kopje; and here, under awnings of various kinds, rugs. blankets, etc., placed on four props round the table, sit men, and many ladue too, with the "scraper" in one hand, and sometimes a horse's, cow's, or wildebeest's tall in the

other, for flicking the flies away, while their partners, or the more than half naked black laboters, bring down the precious stuff from the claims in carts, wheelbarrows, or very commonly in a bullock's hide sewn to two poles, and sift it therethes eiter the sieve props being also erected near the sorting-table, so as to leave the bit of claim clear for working. Diamonds are found here at all depths; in some claims they find every day from the surface downwards; in others a man will find hardly anything till he has got down to 20ft, or more, and will from that time be richly rewarded for his perseverance. As a fine diamond of 10 carats was lately found at a depth of 96ft, in sinking a well, it is difficult to say to what limit the diggers of the future will go. The curious visitor to the Colesberg Kopje will be frequently startled by a loud and gathering "hurrah" or confused shout. He will see many diggers running from their claims to a certain spot, on reaching which he will probably find that a large diamond has just been "turned up." It is difficult to form an estimate of the number of stones daily found here, for a very great number of the diamonds actually found which appears in the weekly list published by the Diamond Xens. But even this small proportion is sufficiently exciting. Here is, for instance, the summary of one week's list of diamonds found at the Colesberg Kopje: 657 stones, from one, 103 carats, found by one Piet Otto, downwards, including stones of 102, 81, 83, 82, etc. The uniformity in size of many of the stones found in one week is often very curious: Another week's list contains 477 diamonds, including stones of 182, 81, 83, 82, etc. The uniformity in size of many of the stones found in one week is often very curious: Another week's list contains 477 diamonds, including stones of 182 arts, 42, 35, 31, 30, 20, etc. At the time I left be Fields, viz., in the middle of November, 1871, it was estimated roughly, but I think with no exaggeration, that from £40,000 to £50,000 worth of diamonds

## CLIMATE, WEATHER, AND HEALTH.

The climate of the district in which the Diamond Fields are situate is, though not absolutely unhealthy, in many respects extremely trying to newly-arrived Europeans. For the purpose of becoming gradually acclimatized, it is best to reach the fields, if possible, in Autumn, or beginning of Winter. The seasons may be put down as follows: Spring—August, September, October; Sumuer—November, December, January; Autumn—February, March, April; Winter—May, June, July, The spring weather is bearable conough—pretty hot during the day, but not oppressively so, with a good many cold nights and mornings, now and then a slight frost, but very little rain or storms. The summer at the Fields is excessively hot—I think more so than in most other parts of South Africa. While I was at Pniel, early in last November, the thermometer frequently registered 100 degrees Fahrenheit in the shade; while the heat and glare of the sun acting upon the white ling-stone and uniform light color of soil, tents, and almost everything at the dry diggings, try the head and eyes most severely. In the summer time there is almost always a strong wind blowing—this is very often a hot wind—in addition to which it keeps the whole of the camp enveloped in a cloud of the horrible dust mentioned in a previous chapter. And when the wind does not blow, the stiding, oppressive, sultry heat renders breathing difficult, and the slightest exercise almost impossible. Moreover, from the middle or end of November to the end of January thunderstorms are of frequent, in fact almost daily, occurrence, generally bursting over the camps about sundown. They are terribly violent, and many strong men grow nervous when they see the lurid, coppery clouds gather ring up to windward. Lightings so vivid and thunder so painfully loud I have hardly ever experienced elsewhere, but I am happy to say that fatal accidents are comparatively rare. Most of the diggers place glass bottles on the iron spikes of their tent-poles as a security against the fathing thems. The set hunderstorms

It will easily be understood that, during the summer, very few Europeans feel inclined to engage in the more active operations of picking, shoveling, hauling, breaking, or sifting. It is quite sufficient for them to sit under an awning and sort, leaving the Kafirs to perform all the other stages of the work. After the tempered heats of autum, comes the really delightful weather of a South African winter. Truly the frosts are frequent and sharp. I have found thick ice in my water buckets outside the tent, and even half the cold tea frozen in my kettle inside, and have looked out to see the whole of the surrounding "veldt" white and glistening with thick hour frost; but all this only reminds a man of Old England, and bids him take a stiff "night-cap" before he "turns in," and put on plenty of warm

blankets. And, soon after the mighty South African sun rises, all is changed-the blankets. And, soon after the inignty South African son rises, all is changed—the frost despipers as a swiftly as if by magic, and about two hours after sunrises the is as warm as that of a fair Finglish June day. This is the time when diagrees work "with a will," and enjoy their work too—when we gaily handle pick, shovel, or sieve, with light hearts in our breasts and merry songs on our lips.

As to health, it is generally good at the camps, except in summer. During this summer lever, diarrhou and disentery have been alarmingly prevalent, and I have

had my share of them, but I believe they are to be attr-buted not so much to the heat, had my share of them, but I believe they are to be attributed not so much to the lear, or natural atmosphere of the district, as to the scarcity of good water, and the anominable deliciency of all sanitary arrangements. If cleanliness is neglected, and so large a congregation of people, in a crowded camp, the public hes them and softer; but I believe that now, under British rule, both these fertile causes of diseases will be removed, and the summer of 1872 will, I trust, be less fatal than that of 1871. The principal attends of this symmer have been a very trying low that of 1841. The principal administration of this large beth a very triang low fever, acute distribute and dysenterty, colle, inflammation of the langs, and a very mild form of secury. Some deaths have resulted from mismperance—of which amay be expected, thereis a good deal. Owing to the heat and drynces care in a may be expected, thereis a good deal. Owing to the heat and drynces care in a cessant thirst, the temptations held out by the innumerable canteen keepers, and Cessan this, and collar restraint, a young man who drinks in totally lost on the Fields; many aman of good connections, who might have gone home in a year or two in health, and with wealth too, to class, which the control of her friends, now lies in a nameless grave, beneath the black flag, having killed himself by hard drinking, which is totally incompatible with this climate.

As to the flies - they had become, by the time I left the fields, a tearful plague, for they filled the air both outside and inside the tents, and they are far more aggressive and irritating than the European insect. They come at you with a lond threatening buzz, and their contact is excessively irritating, producing almost the sensation of an actual sting. Moreover, they are particularly fond of plunging into the corners of an action sing. Subject, and are particularly mind a ming and more account of your ceres, and sticking there if you will let them, or into your ceres, nose, etc. It is the eight by many that they communicate ophidalms, which is provident in many jarts of the colors in a mid form, though excessively painful, generally lasting a month. I suffered terribly from this affection of the eyes, which came on after I had pretty nearly got rid of fever and diarrhesa, and had left the dry diggings. A solution of supphate of zinc and rose water makes a good lotton for this gings. A solution of supprace of zinc and rose water makes a good following in the painth alment. To return to the dies. During the summer they swarm in the tents, rendering the afternoon siesta impracticable, and spoding every article of food or drink that is left uncovered. I found it almost impossible to keep meat from them, for even if I adopted the precaution of putting it into a large close-hidded im box directly I bought it, I generally found that one or two of the horrible insects had managed to slip in with it, and the next day the meat would be found if y blown. The files are of two kinds: a little black felsor, like the common house if y of Europe, and a rather large bright green felsor; the latter the common distributions of the common distribution in the insect of the two, because he very seldom settles on the person or attacks the face, in which the little black beast is most pertinacious. It is common on summer days to see a large number of degers going about armed with long tails of different animaes, which they constantly flick before their faces. A chapter freeding of health at the diggings would be incomplete without some notice of the very appleasant sores to which we diggers are liable. We frequently find that the slightest scratch, on the hand especially, will fester, and become an open, discharging ore, which often prevents a man from using his hand, and takes several weeks to heal. I have heard these sores attributed to lime dust getting into any scratch or cut; but this is not an adequate explanation, for I have frequently known-even in my own case-these sores to come spontaneously in places where the skin was perfectly sound. I have had them often, and sometimes many at a time, a ways on the hands, and have known innumerable other diggers who suffered in the same manner. They can be treated either with carbolic ointment, after the discharge has ceased, or with frequent applications of cold water, or even left entirely alone, and I found that they got well just as quickly if I took no notice of them whatever. But I think they got well just as quickly if I took no notice of them whatever. But I think they must be attributed to an impure state of the blood, being, in fact, a mild form of scurvy. There is a certain large bulb found on the Fields, the thin skin of which is considered very efficacious in healing all kinds of cuts, wounds, and sores, and it is certainly a useful thing to have by one, and costs nothing. Any old digger will describe the bulb or root to a "new chum," or give him a piece.

"Kel "pronounced k oppic, is a Dutch word, meaning literally "little bead," but generally used in the sense of "littleck" or small agenerally circulary elevation of ground. It is a dimensioned "kep" or "head," whereh is used for a larger hill. The De lever's New Rush is sotten also called "Colesberg Kep," but I do not think It is quite large enough to merit the designation. The diamonds are generally found it rather clevated ground (ridges or hills), so that plenty of "kopjes" will be nouced on the different diggings.

The King of Spain entertains quite Royal notions of the duties of a King, and is during even to rashness in his daily open association with people who regard assussination as a justifiable means to a desirable end. The King was one the first to drive to the Escurial when it was known that that building had taken fire. Now that the extent of the damage is known, it will take upwards of £10,000 to cover it. The King is the first to forbid a national subscription to make the necessary repairs. He has insisted upon paying all the expenses out of his private purse.

# The Sea Serpent of the Period.

AFTER HOLMES.

Have you heard of the snake of the sea, of the sea, Do you know of the behemoth snake ! If you haven't been taught, you must be, you must be,

For our common intelligence' sake. He doesn't disport on the wave, on the wave,

As of old in the terrible tale, But deep in his watery grave, in his grave,

He's a joke for the sportive old whale.

And there in the deep of the ocean, the ocean, He swings and he rolls on his side,

Ever swaying with pendulum motion, with motion, Imparted by throes of the tide.

And his tail is secure on the shore, on the shore, And his head on a far-distant strand;

And so he must swing evermore, evermore, A giant and wonderful band.

Daddy Neptune may hang out his clothes, hang his clothes In his garden far under the seas.

And the mermaids may dance, goodness knows, goodness knows, And go in for the flying trapeze.

No artist's our snake, yet a painter, a painter, A nautical painter of nations.

May his utterance never be fainter, be fainter, Though speaking from transmarine stations.

And now that he visits Australia, And buries his head in our sands,

We welcome the sea serpent's trail here, his trail here, To link us with fur-distant lands.

# The Japanese Experience of Our Civil Service.

A curious illustration of the indirect but baleful influence of our vicious and absurd civil service system has been recently brought to light in the history of certain experiences that have befallen the Japanese in their intercourse with our Government. Thus, it is well known that, from the time when the American under Commodore Perry broke through the seclusion of Japan and negotiated the first international commercial treaty, the Japanese have evinced the most friendly regard for the Government and the people of the United States, and in their efforts to "conform"—we will not say "clevate themselves"—to the standards of Wostera civilization, have made no secret of their intention to accept our methods and experiences as their models and examples, rather than the methods and exe-periences as their models and examples, rather than the methods and experiences offered them by the people and governments of Western Europe. To the United States came accordingly the first Japanese embassy, and subsequently their first foreign resident representative or diplomatist. With this latter personage came also, for the purpose of acquiring an American education, a considerable number of young men, selected with care from the noble or higher classes; and laten, and for the same purpose, a carefully selected corps of young women. But as the services of all these young nersons were prospective, and as the occasion for servivices of all these young persons were prospective, and as the occasion for service with the Japanese in dealing with foreign nations, their methods, tools, machinery, and other agencies was immediate, a movement was made by the Japanese Minister, soon after his arrival, to obtain in behalf of his Government the assistance of such citizens of the United States as, through abundant knowledge and experience, were especially qualified to impart just that information and assistance which the several departments of the empire feet that they needed. He accordingly applied to our officials in Washington for advice and co-operation; and tasking it for to our officials in Washington for advice and co-operation; and taking it for granted—in unhappy ignorance of our civil service—that the same burbarous customs that exist in China and Japan, of calling only men of great attainments to high public office, prevailed equally in the United States, he naturally expected to find in our Federal officials occupying stations corresponding to the requirements of Japan exactly the material that was wanted. And in accordance with this hypothetical but erroneous view of the situation, the Minister appears to have made his selections—no one in authority at Washington taking sufficient interest in the matter to advise or influence him to the contrary.

The first requisite of the Japanese was a man learned in international and civil law-one skilled in the foreign policy of the United States and other nations, and who, as a high attacke of their Foreign Office, would assist in the drafting and newho, as a nigh attacke of their Foreign Office, would assist in the drafting and ingotiating of treaties, in the settlement of foreign claims, and who, above all, through wise counsels, would guard the empire from international difficulties and liabilities. The salary offered was understood to be \$15,000 gold per annum, with a gnaranteed term of service of several years. For this office a subordinate of the State Department was selected—a man brought into the Department through the favoritism of a former Secretary, past middle age, of no social position, of dissipated habits, and who could not hopefully have aspired to the smallest office of dissipanted regrousibility under his corn Convergent.

plomatic responsibility under his own Government.

for the welfare of their country. Of this they are not now convinced, nor will they be until United States officials exhibit a disposition to measure their own countrymen and the natives with whom they come in contact by the same standards, politically, commercially and socially. The Japanese diplomatiss are as clever as any of ours whom they are likely to meet, their mechanics are just as shrewd and quite as honest, and their people generally are as respectable for intelligence and humanity. Yet in all intercourse, an assumption of superiority is maintained on our side for which there is no warrant, and which certainly would not be tolerated or attempted in European communities. And in commercial transactions, the Japanese have too often reason to suspect us of trampling upon their rights. The position of the United States Minister is extremely delicate in this respect. As there are no Courts here for the settlement of foreign accounts, all disputed claims on the part of Americans are turned over to him for presentation to the Japanese Government. It of course becomes his duty to ascertain their validity, but such investigations are naturally distasteful, and it may be that a Minister cannot always give the time to consider them very minutely. It need hardly be said that no punishment or disgrace could be too severe for a Minister who should present a claim known to be fraudulent; but who can tell with what skill the irregularity or injustice of some of these accounts may not be concealed? It is certain that false claims on Tor vast amounts have hitherto been submitted to our Minister for presentation, and I believe it is indisputable that some demands have actually been urged and settled which could never be justified in equity or honor. Mistakes like these are very dangerons. They directly impair our influence and imperil our reputation, and they should be guarded against by measures so peremptory as effectively to prevent their recurrence."—New York Nation.

## English and American Impressions of Travel.

NEW YORK.

Mr. E. S. Robinson, a wealthy English capitalist, is visiting the United States, and communicates his first impressions of some American fellow-travelers and of New York in a published letter as follows: "The cabin passengers were nearly all Americans. Amongst them was a retired judge, a consul returning home with his family after eleven years' service, a New York banker, a Presbyterian minister from Brooklyn, etc., etc.; all were extremely contreous and agreeable. There were not half a dozen English there, though all spoke English. Many were Germans, who have settled and become American citizens. Little wine or other liquor was drank, but a large number smoked. The practice of visiting Europe by Americans is much more frequent than that of visiting America by Europeans. Many of the passengers have been in the "old country" several times. I hear a good deal of talk about American politics, but I cannot fathom their mysteries yet. The judge means to vote for Grant and the banker for Greeley. Where the substantial difference in the politics of the respective candidates is I cannot quite see; both are Republicans, both insist upon the integrity of the Union, both were anti-alwayer men, Greeley always has been a strong advocate of protection, but says on that point he will bow to the decision of Congress—Grant has shown no strong proclivities either way. However, I may, before I leave the States, understand the matter better. Upon going upon deck on Mouday morning I found we were in New York harbor, with Long Island on one side, and Staten Island on the other. The houses and scenery, right and left, were more English in character than I had expected to see them. A steam tender came alongside and took the mails, but not a passenger or package was allowed to go on board, and we waited for hours before we could land and have our bazgage examined. This delay is quite inconsistent with the reputations Americans have for the dispatch of business. On landing I put my baggage in charge of an 'express,' and preferred myself

#### LONDON.

Mr. Stillman, the American art critic of New York, writes an open letter to his countrymen on how to live in London, and giving his estimate of the shopkeeper of that city. He says: "You may find a house ready for occupation, with every thing you care for—pictures, linen, plate (electro)—for from two guineas to ten a

week. I have actually lived in a house in a pleasant part of Kensington parish, with pariors, diminizaroom, six bed-rooms, etc., etc., for which furnished, except with linen and plate, I paid two guineas a week, taxes, etc., included—less than a similar house, in an equally favorable situation, costs in New York in the bare walls. The drawback here is getting of servants. Lots of them, and not very extravagant in wages—£16 to £20 per year, here and ten found; and the worst that can happen to you is, if they will stay with foreigners, that the cook gots drunk and combines with the butcher to pass his meat for twenty-five per cent, more than he sends, and gets candles at the grocer's, with snear, etc., which she gives to her friends and has charged on your book; and that the chumber-most or parlor-maid lets in her 'walker' or 'follower' evenings when you are out, and drunk and eat up your fragmentary substance. Yet somehow it has generally happened to me that I have met with houset servants. I think that honesty is more common in the lower classes in England than almost any other virtue, and is certainly far more common with them than with the little tradesman. Here the worst toes are not those of your own household; for of all the warshing wetches I have ever encountered, in a life of travel and residence in divers parts of the earth, the wired and most sconndrelly have ever seen are the shapmen of London. I have lived with and dealt with those of France and Italy, and of the Eleventh Ward of New York, with Turks and Greeks, 'vankees and Datchmen, but of all hiving creatures for shameless, extortionate, and mendacions swinding give me a small shopheeper of London. The Roman is conscientions and the Greek an honest man compared with tem. His incennity in finding ways to cheat you is a exchanations as that of the Chinese and as nente as that of a Yankee inventor. He lies with the grace of a fine art, and damns his conscientions and the Greek an honest man compared with tem. His incennity in finding ways to cheat y

## Polygamous Complications.

As illustrative of the domestic life of the wealthiest Chinese, the Shanghai Control of the following episode which has lately occured to a leading native silk merchant in the settlement. Six or seven months ago he saw at a brothel a young woman with whose beauty and attractions he was so captivated that he resolved to make her his second wife. It may here he mentioned that even to the eye of a foreigner the damsel was unquestionably passing lair. So the silkman found out her mother on the cooling grade of society, and after the usual chadering, paid her \$700 for her daughter, who was thereupon day mysalled in his house, in the position of second wife. Six months rolled round, during which the hu-band dealt liberally with his lair companion, giving her jewery to wear to the value of over 18, 400. But suddenly she was missing, and it was quickly found that she had taken all the jewery along with her. After search, she was discovered hiding herself in a house soine distance in the country, and was taken back to her lord and husband. There it was ascertained that the second wife was aggrieved by the superior dismits and privileges accorded to wife No 1 More particularly she wanted an amali to wait upon her in the aame way as the choic wife had; but this the latter wond not beten to, whereupon she field like Hagar to the widerness, the latter wond not beten to, whereupon she field like Hagar to the widerness and favor, and grant her the covered hand-maiden? or will he misst on his right of purchase, and compel her to stay with him with less need rather than increased privileges or will be hand her back to her mother and insist on her giving up the juvely and returning the purchase money? In view of the proverbial foodness Chinaman shows for a qual pro quo, one would be rendy to say that the last plan would probably hind favor. But, no. Chinase castom is quite express on the point. Here, too, the maxim prevails: Noblesse oblige. Any one of the suggested har mould probably ind considered respectable. The sikman has t

An Italian professor has made researches, says the Garden, which leads him to assert that vegetable perfumes exercise a healthful influence on the atmosphere, converting its exygen into ezone, and thus increasing its exidizing influence. The essences that develop the largest quantity of ozone are those of cherry, laurel, cloves, lavender, man, juniper, lemons, fennel and bergamot; those that give it in less quantity are anise, nutmer, cajeput, and thyme. The flowers of the unreissue, hyacinti, micronette, helbotrope, and lily of the valley, develop ozone in closed vessels. Flowers destinte of perfume do not develop it, and those which have facets, the prefessor recommends the use of flowers in marshy districts, and in places infested with animal emanations, as the powerful cardicing influence of ozone may destroy them. The inhabitants of such regions should surround their houses with beds of the most dorous flowers.

# Precautionary Hints on the Threatened Approach of Smallpox.

Alfred Power, Esq., Chief Commissioner of Poor Law, Ireland.]

No. I .- THE SKIN,

There's a skin without and a skin within, A covering skin and a lining skin, But the skin within is the skin without Doubled inwards and carried completely throughout. The palate, the nostrils, the windpipe and throat, Are all of them lined with this inner coat; Which through every part is made to extend— Lungs, liver, and bowels, from end to end, The outside skin is a marvelous plan For exuding the dregs of the flesh of man; While the inner extracts from the food and the air What is needed the waste in his flesh to repair. While it goes well with the outside skin You may feel pretty sure all's right within; For if anything puts the inner skin out Of order, it troubles the skin without. The doctor, you know, examines your tongue To see if your stomach or bowels are wrong; If he feels that your hand is hot and dry He is able to tell you the reason why. Too much brandy, whisky, or gin, Is apt to disorder the skin within; While, if dirty or dry, the skin without Refuses to let the sweat come out. Good people all! have a care of your skin, Both that without and that within;
To the first you'll give plenty of water and soap,
To the last little else beside water, we'll hope! But always be very particular where You get your water, your food, and your air; For if these be tainted or render'd impure, It will have its effect on your blood-be sure! The food which will ever for you be the best Is that you like most and can soonest digest; All unripe fruit and decaying flesh Beware of, and fish that is not very fresh. Your water transparent and pure as you think it, Had better be filter'd and boil'd ere you drink it, Unless you know surely that nothing unsound Can have got to it over or under the ground, But of all things the most I would have you beware Of breathing the poison of once breathed air; When in bed, whether out or at home you may be, Always open your window and let it go free With clothing and exercise keep yourself warm, And change your clothes quickly if dreuched in a storm; For a cold caught by chilling the outside skin Flies at once to the delicate lining within. All of you who thus kindly take care of your skin And attend to its wants without and within, Need never of smallpox feel any fears And your skin may last you a hundred years !

#### No. II .- THE BLOOD.

Six thousand years after his ora began
The astonishing fact was discovered by man
That the blood in his body does not remain still,
But rushes along like the race from a mill.
Certain vessels call'd arteries hidden within
The body conduct from the heart to the skin;
While others called veins throughout every part
Of the system conduct from the ekin to the heart.
The heart every instant gets filled with new blood,
Prepar'd, as you'll see, from the air and the food;
And this new blood is driven through the whole frame
As from a force-pump by the force of the same.

The blood in its passage leaves everywhere Some of what it has got from the food and the air, Which is all taken up, ere a moment be gone, To replenish the tissue, the fat and the bone. Ti roughout the whole structure bone, muscle, or skin-Where the arteries and the veins begin And changing its colour from red blood to black, The blood enters the years and is so carried back When the old blood arrives by the veins at the heart It is mixed and crarned up in a chamber spart, With a thick make fluid, a drittons and good, Which the stomach and howe shave drawn from the food. It is then driven off by a similar force To the lungs, where the air-cells receive it in course, Where at every breath t takes up through the skin The material parts of the air within. Thus regenerate, vigorous, lusty, and red, And once more forced back upon its fountain-head, To the artery chamber it rushes amain, And is ready to start upon service again. What we get from the air is equal in weight To what we derive from the food which we cat, But what we breathe out, I must be I you once more, Is of possons the worst, as I tool von before. In a much clearer light you now may perceive What it's hoped you'll hold fast and devoutly believe, That for health and encouncid the very best fare Is the soundest of food and the purest of air. Then show that you value your blood and your skin, Remove every nuisance without and within; Oher all the laws that are made to that end And regard the inspector of health as your friend. If your house has a taint, employ in good time Either carbolic acid or chlorid of lime.
But of all disintect and the earth is the best -Smells cover'd by earth are forever at rest. With all these precautions don't fear any harm. And yield to no panic or foolish alarm; When the enemy comes he brave but prepared Survey your defences and stand on your guard!

## Ruskin's Last Trouble--American Girls.

We cannot but feel deeply for Mr. Ruskan in his new trouble. To be compelled to travel from Vendee to Venona with two American grils, who concerned the subsets more about the flues and dust than auxiliary else, must have severe a tree the sensitive realize of the sensitive realize of the grid art crite. In the solid of their parents, too well toolo, money of poop of when it is those young afters of fifteen and a latent parents, too well toolo, money of poop of fifteen and a latent parents, too well toolo, money of the presence of Mr. Ruskan, and wholls mult herent to the secrees through whech they passed. If any spot in the world should have too heed their hearts it was flux. "Exquisite midsuamer sunshine, with lone rays, gained through they include a first all the Alps were coar, from the lade of tearth to Cadore, and to the farthest Tyrio! "Airs' the woing American grils appeared to care for none of those things, and as the veriest trule in ones execus upon the most chriming vision, so these firviolus young lados entirely destroyed Mr. Ruskan's pressure as he trivered to Verona. If is to be hoped that we shad all profit by the exposure or fir in improper conduct. Mr. Ruskin is doing good service in drawing affection to the serious educational defects thus it is strated. We are all not read on it traveling to burk ourselves in a newspaper or a book, it not, to be absorbed with a kinon and white sign, and let the vision of the hills and vales pass autocic of. Mr. Ruskin say, "by infinite seif includence reduced themselves simply to two pieces of white putty". It is, after all, but human nature to be occupied with the twist, and let the transcendently subtime pass. The administron of the moralist is all the more valuable.

It was Mrs. N's — their birthday vesterday, and we brought her what could not fail to be a welcome present—a selection of Bradley & Ru obscuis be until uphotographs. There was These Faibri the lat voiced, Anna Fizer the denty. Baccet the silver-toned, Musher the magnificent. Then there were the stars of a most distant firmament—Luces the paparit, believing the son thrilling. Nieson the merithdays. Mrs. N was demoted, and highly componented Mesers Bradley & Rusofson on their skill. We assured her this ancient thru turns out portraits of every slay folks like ourselves with as much deficate thish and artistic grace as those of these notables present.

#### Court Chat.

- Those of us who are interested in Court gossip are looking forward with considerable curiosity to the forthcoming biography of Baron Stockmer, by his son. The Baron was a native of Coburg, and attached to the King of the Belgians from the time that he came to England in order to marry our Princess Charlotte. He watched over the youth of the two young Princess—the present Duke of Saxe-Coburg and the late Prince Consort—and was one of those who did most to promote the marriage of the latter with our Queen. Subsequently to that event he resided for many years at the English Court, and only when old age overtook him did he retire to Coburg, where he outlived the Prince Consort by about eighteen months. Court Journal.
- Recently a number of wooden cases, containing portions of the very beantiful sarcophagus which is to adorn the interior of the Albert Memorial Chapel, arrived at Windsor Castle. The marble sculptures composing the sarcophagus were forwarded by Baron Triqueti at Paris, and immediately upon their arrival were deposited in the Albert Memorial Chapel, when the sarcophagus will be erected upon the floor of the interior, at the east end. An effigy of the Prince Consort will surmount the sarcophagus.
- President Thiers has purchased at Sevres manufactory two magnificent vases, worth 11,000 francs, which he intends to send to Dr. Brunarius at Stettin, Prussus, for his humane treatment of the French pri-oners. The President has also received from the Japanese Ambassador a sans pareit powder-flask carved in ivory and mother-of-pearl.
- Jupun has now a regular Ambassador at the Court of St. James, as will be seen from the following notice in the London Gazette: "This day had audience of Her Majesty, Terashima Muncnori, Envoy Extraordinary and Minister Plenipotentiary from his Imperial Majesty the Tenno (Mikado) of Japan, to deliver his credentials," etc.
- More works of Royalty are reported. The Queen of Holland has written a novel entitled "Egmont and Horn." And the Princess Alice of Hesse-Darmstadt, daughter of Queen Victoria, has written one entitled "Lords and Junkers." Junkers is a nickname for poor Prussian noblemen.
- According to the Munich gossips, the King of Bavaria refuses to marry any of the numerous Princesses whose hands have been offered to him, for the simple reason that he is already married. His morganatic wife is said to be an actress, considerably older than he.
- The Emperor of Russia on his visit to the Russian Cemetery at Sebastopol, planted two acacias before the grave of Prince Michael Gortschakoff, the last Commander-in-Chief of the Russian troops during the siege, and crowned the bust of the General with flowers.
- King Amadeus of Spain has his father's predilection for botanical and ento-mological studies. He can be frequently seen hunting for beetles in the gardens of the royal palace in Madrid, and no present is more welcome to him than a rare insect.
- The Emperor of Germany has presented a valuable bracelet to Madame Peschka-Leuther, as a sourcentr of the grand Court concert in which she performed during the recent stay of the Emperors in Berlin.
- In Marseilles, recently, a young girl, named Irma Gras, a very handsome brunette, assassinated her lover because he refused to buy her a gold watch. To the general astonishment of the court and audience, the jury acquitted her.
- At the Paris Opera the Imperial loge has been let at last, after remaining unoccupied for two years; but the prudent manager stipulates that the lease shall be annulled if ever a monarch of any sort should claim the box.
- The Empress Elizabeth of Austria has written to the Woman's Rights Club in Vienna: "Ladies, take my advice and keep away from politics. There is nothing but misery in it."
- A dry goods dealer at Copenhagen has seed the Queen of Denmark for one hundred and four dollars. The Queen said the bill was exorbitant, and refused to pay it.
- The King of Saxony has published eleven sumptiously-printed works, mostly translated from the Italian and Spanish. None of these books paid expenses.
- The Marquis and Marchioness of Lorn will, it is expected, have Frogmore House, Windsor Great Park, Windsor, allotted them as a residence by the Queen.
- The Sultan of Turkey is very fond of light French literature, and he is as familiar with it as most educated Frenchmen.
- Prince Richard de Metternich has recently added largely to his vast fortune by speculations in real estate at Nice.
- The Queen of Sweden is writing novels for the Stockholm press under the nom de plume of Annie Arden.
- M. Thiers has just received the present of a pair of bull-dogs from his friend the Marquis of Winchester.

# "Laughter--Holding Both His Sides."--Milton.

[From the London Satiric Papers.,

## A GOOD-NATURED MAN.

If I had been consulted, when I happened to be born, My place among my fellow men Had been refused with scorn:

For now 1 find I must enjoy
The life, which I began
At first as kind, good natured

At first as kind, good natured boy, As kind, good-natured man!

I loved—as every fellow does— But women treated me As roses treat the bees that buzz Around them in their give.

'Twas nice to keep me round about, Their vanity to fan; And then it wasn't hard to flout

And then it wasn't hard to flout A kind, good-natured man! I've not a friend who wouldn't sell
My friendship any day.

And yet all love me passing well,
And like to "come and stay."
I to: for every crown I touch;

But this time tish clan Will his last twopence share with such A kind, good-natured man!

Nav: strangers find me out at once, And comfortably graze On one who is a hopeless dunce In world's whopless dunce

They take my vitual from my plate,
My liquor from my can:
And I well, I submit to fete,
A kind, good-natured man!

And yet, at times I seem to feel
There's something semelow wrong;
Conviction o'er my mind solid steal
And tell it, us not strong!
Experience teachers it is school
That but a narrow span
Divides from the contended fool
The kind, good-natured man!

VERDICT—SERVED HIM REDIT: We don't always believe in "crowner's quest law," still less in crowner's quest verdicts. But tor once we admit the perfect applicability and tenth of the ceture made by a Westimbeler jury in the case of an old Crimean so dier, who died the other day of desistation and starvation at splease note the paice, for there is a who e hostery of endurance in it at the door of the workhouse! This veteran had been discharged from the service in consequence of the workhouses, and the shandant pension of sixpetice a day. He was "a soler, industrians man," says the evidence, "and his poverty was soley due to it besither in tot solely, say we, be cause the three and stypetic a day. Be to it besithered in his death. The verdict was "Death from neutral crusses," and, we repeat, it was perfectly appreciable and strict time. If a man is fool enough to enter the army, devote the best years of his fit, and sacrifice his has then the cervice of his country, the "mature!" result will be that he will be condemned to starvation in sixpence a day. Intoxication is not much more fata, then this scale of patroistin, and the death of a man who adulties the rein is "death from natures causes." Rt. Hon, E. Cardwell, please mote, if not, it is likely that untending recruits will.

COCK-STRE. We are solemnly assured that "a checken was batched on the farm of J. W. Kelley, of Sheby County, Kontacky, the other day, which commenced to hap its featherness wings and to naddly crowtton horse after commiften the shell." If there is one thin, we hate worse than another it is a story that breaks off, like this one, just as you are coming to the most interesting part. The end of the anochot is this. The chicken in question was on the point of going up theirs into Mr. Keitey's hed room to wind up has watch, and employ his hed surface rapid. The cause of the interruption was this. The nutbor of the paragraph found that the postion we quote was enough to fill up the vacant space in his column, so be didn't flownt the rest.

— Inosical. A man, John Todd by name, has been deservedly sentenced at the Central Cruninal Court to ten years' penal servitude for a brutal attack on the woman with whom he lived, and who, asthongh he nears, killed her, of centra tred to shield the inelfable brate. The defence before the magnetrate who committed him is deducible from the following cross-examination of the medical man with attended the woman: "Dr Barton and the wound could have been caused by a kick, but falling on the beg of a chair or a bar of iron wound not have produced by a We only wash we were a bar of iron? We would then expand clearly to Todd the sort of injuries he would meet with from failing across us. S. B. In gancing over the above pracageaph, we observe that we have called the incare-rated Mr. Todd a brate. We haven to withdraw the expression, and to apologise at once—to what is commonly called "the brute creation."

Screwbious has stumbled—he frequently does stumble—on this paragraph:
"Mr. Wideman, of Boston, announces that he employs ozone on a large scale in order to deprive whicky of its fuscioi!." Old Screw says that he can now "undelsta" (Aic) what it is that (hic) con-(hic)-fuscis him so after a few gass' (hic) whisk' (hic):"

FOR THE MARINES.—In a table giving the principal dimensions of Her Majesty's gun vessel, Ready, we read, "Length between perpendiculars 155 feet." This is a trifle too "saited." We delight in a life on the occan wave, we revel in a home on the rolling deep, but never in any sea-going craft have we seen a perpendicular!

Enquiring Mind.—"And do all the good people go the good way to the good place,  $Ma \vdash Ma$ .—"Yes, darling!" E. M.—"And the bad people by bad ways to the bad places!" Ma.—"Yes, pet!" E. M.—"Then do all the cross people go where the cross-rouds lead to!" Ma.—"1"

— The Lancet deserves all praises for reminding the public that old newspapers are eagerly looked for and welcomed in the wards of our hospitals—but spare the poor sufferers the Lancet I

Gent.—"Your parents must have been very fond o' you, Miss." Stont Barmid (flattered).—"Law, what ever makes you think so, sir!" Gent.—"Because they made so much of you!"

#### A Sip of "Punch."

SWEET INNOCENT.
There was a young lady of Tenby,
Who wrote to her confidence, "N. B.
I don't want to wed,
No such thought's in my head;
But—where can the eyes of the men be?"

## Quirks from "Figaro."

— The Civilian learns with pleasure, and the rest of us with shame, that "the gentlemen in office" in the postal service are about to hold an "indignation meeting," to protest against the employment of female clerks in their departments. The Controller of the Savings Bank office is particularly mentioned as feeling with painful acuteness the dangers, moral and official, which are likely to follow, etc., although the entire staff have also a lively sense of the peril to which they are about to be exposed. This being the case, would it not be as well for the "gentlemen in office" to seek some more secure occupation—something in which the female hand hath no cunning, and the female heart no pleasure? So shall their blessed morals be unspotted, and their souls as white wool thrice washed. They might go shovel sand, or something of that kind.

Por Mr. Osborne, of Kansas, I cherish the most temperate possible respect. This Osborne person was recently asked what he had in his wagon. (Mr. Osborne was driving a wagon.) His reply being esteemed unsatisfactory, his vehicle was searched. Five dead bodies awarded the curiosity of the seekers. These people, it transpired, had been murdered about a week before by a friend of Mr. Osborne; and the latter had volunteered to rid the world of the remains. He was taking the two Nobraska. All this Mr. Osborne affirmed and was prepared to prove to the men who held the other end of the rope. A good deal might be said against Mr. Osborne, but one does not care to speak ill of a man deceased, because it can do him no harm. Nice man—Mr. Osborne!

## The Influence of School-Life on Sight.

Dr. Liebreich, opthalmic surgeon and lecturer at St. Thomas' Hospital, London, has been making investigations on this subject in English schools, and finds almost everywhere arrangements more or less injurious to the organ of sight. The changes in the functions of the visual organ developed under the influence of school-life are three in number: 1. Decrease of the range of vision. 2. Decrease of the acuteness of vision. 3. Decrease of the endurance of vision. Those three anomalies all arise from the same circumstances, viz.: insufficient or ill-atranged light, or a wrong position during work. In order to prevent these evils, the light should be sufficiently strong, and fall on the table from the left-hand side; and, as far as possible, from above. The students should sit straight, and not have the book nearer to the eye than ten inches at the least. Besides this, the book should be raised twenty degrees for writing and about forty degrees for reading. The proper light is most casily obtained if the class-room is of an oblong shape; the windows being in one of the long sides, and the desks arranged parallel to the short walls, so that the light falls from the left side. The desk of the master should be placed near the short wall toward which the scholars look.

A Mrs. Gardner, of Ottawa County, Mich., returned to consciousness six hours after she was supposed to be dead, and talked freely with her attendants. She stated to those around her that she had been to the better land and had seen both of her departed sisters, with other friends; that it was a most beautiful land, beyond all description. She said she had permission to tell living friends of what she had seen, but that she was anxious to again return. She passed away soon after making her statement, says the paper which gives the intelligence, and seemingly overflowing with joy and happiness.

<sup>—</sup> Guizot, aged 85, lately attended an art exhibition and saw a beautifully sculptured Venus. The showman, with a view to flatter the old statesman and author, told him that the artist who made the Venus was over 80 years of age, "What a memory he must possess!" answered the venerable Frenchman—French to the last.

## Guendolen.

She is so fair, I thought, so dear and fair!

Maidenry heautiful from head to freet,
With pensive profile delicate and sweet,
And Titian's color in her sunny hair.

And Titian's color in her sunny hair.

So fair, I thought, rejoicing even to note The little flexible, transparent wriet, The purple of the gold-clasped amethyst That glittered at her white and slender throat:

The tiny car, curled like a rosy shell;
The gentle splendor of the wide brown eyes,
Deep, instrons, tender, clear as morning skies:
The full, sad lips,—the voice that like a bell

Rang thrilling with a music sweet and wild, High, airy-pure as fluting of the fays, Or bird-notes in the early summer days, And joyous as the laughter of a child.

Dearest, has heaven aught to give thee more!

I thought, the while I watched her changing face,
Heard her fibe tones and marked her gesture's grace,—

Yea, one more gift is left, all gifts before.

We go our separate ways on earth, and pain, God's shaping chisel, units us as the rest, With nobler charm thy beauty to invest, And make thee lovelier ere we meet again. —Scrib

-Scribner's Monthly.

# Special Brevities.

The rooms in which play goes on at Homburg are now comparatively quiet and uninteresting, as M Bugeja, the famous Maltese player, has taken his departure. Not being above to obtain perfussion to stake as much as 25-foot at one time (in place of the usual maximum of 12,000f), and the larger amount long absolutely necessary for the success of his system, be declared paying any more. Therefore occasioned by that course to the gaming-table people, when he was positively running, must be intense, as he won over 1,000,000f. Extense in twenty-two sittings. For some days before he decided to discontrate his play, a number of letters reached him from various places, implicing him to desist while the re was stall time, and not to forget that Gurcia area had, on several occasions, won extremely argo sums, and yet he die d a beggar. There does not appear to be any great apprehension that such a take will ever fall on M. Bageja, as a more product man does not exist. The moment he bad made up his mind not to play any more, he forwarded all his large capital and winnings to Parisa and other passes, and once prefered heapital, and thence to Madrid, intending to proceed to Gabraltar and there embark for Malta.

— In view of the alarmingly high price of coal, we (Rock) would again call attention to a plan for economizing the consumption of that article which we have successfully tried for several winters. Most grates, especially in old houses, are too larger and too open. Obtain from the nearest iron foundry or gasworks a quantity of "clinkers," the residum of the furnaces. They will usually be given to you, as they are of no value to the producers. Place these at the sides and back of the grate; a bittle wire may be used to hold them in position, if necessary, that having thus reduced the dumen-ions of the grate, light the fire with wood and coals in the ordinary namner. In an hour or two the "clinkers" will become reducing the difference of the center. The advantage of using "clinkers" instead of brick for other material is that the dire is more sightly. Whether simply "iad" or lit, the grate has the appearance of being filed with coals. It is easy to save 50 per cent, of coal by this process. Small coal readily burns throughout fires so constructed, being held in the interestices of the "clinkers."

M. Davaine read at the meeting of the Academy of Medicine, Sept. 17th, a paper on Septicarma, some of the statements in which startled the attention of the few anditors who at this time of the year still continue to attend. He described, remarks the Medical Times and Gazetle, the various experiments he had been making by the subcutaneous micron of septicamic blood 1 e., bracel derived from an animal poisoned by putrited blood. He has practiced twenty-five of experiments on rabbits and gainers press, thus duding that the vitus acquires increased intensity of power and activity by passing through the animal organism. This becomes so tremendous that, to quote the effect of vis last passage, "the bloom of the rabbits indexes of the one-hundred-millionth, part of a drop was mije ted into rive rabbits indexes of the one-hundred-millionth, the billionth, the ten-billionth, the other of the rabbits indexes of the one-hundred-millionth in the billionth, the ten-billionth, the other of the rabbits indexes will surely prick up their cars at this announcement from ao staid an experimental physiologist.

- "Ebba," writing to the Queen, says: "In my opinion a lady can manage exceedingly well on £50, especially if she does not visit a very great deal. There is one principle to start with—at least I have found it hold true in my own experience—namely, that good things are the cheapest. It is a good plan every year to make some handsome permanent addition to your wardrobe, such as a complete gamiture of lace, a seal-skin jacket, or possibly a black velvet dress. Real lace is always a safe investment. Cheap trimmings are a sare, costly trimmings are nearly always extravagant, and good taste often proclaims them to be superfluous. Bounets and hats are not very expensive now; and many ladies make their own bonnets, as an agreeable exercise of taste. Boots and shoes are not necessarily dear, unless the wearer persists in fashionable extremes. Body linen is now made both well and cheaply at many of the depots for ladies' work, where your own materials can be employed. In the shops these things are generally over-frimmed, and hence costly."
- The British cabinet practically takes the place of, and performs the duties which were formerly discharged by the privy council; but although from long usage it has come to be considered as an essential part of the institutions of the country, yet ite existence is not recognized by the law of the land. There is no official notification of those who compose it, nor is there any record of its meeting, or of the business it transacts, and no mention will be found of it in any act of Parliament. Its deliberations are always secret; and no one is allowed to enter the room where it is held during its deliberations. It is the duty of the Prime-Minister, after each cabinet, to inform the sovereign of what had passed, but now of those who compose it may, for any purpose, make public what has occurred in the cabinet without the express sanction of the crown. Cabinets are usually held twice a week during the sitting of Parliament, and they are summoned by the Prime-Minister in the following way: "Sir: You are requested to attend a meeting of her Majesty's servants on ......... day, at ... o'clock, at ....."
- A communication from the Forks of the Saskatchewan, from Captain W. F. Butler, arges a plan for the establishment of a telegraph between Europe and Assa via Behring Straits. Taking the points now connected by telegraph to Asia and America, he divides the intervening space into two portions. Fort Garry in the new Canadian province of Manitoba and Nicolaevsk at the mouth of the Amoor river in Eastern Asiatic Russia. They are distant, according to the proposed route, about 5,000 miles. The first part of the line, from Fort Garry to Behring Straits, is about 3,000 miles; the second, from Behring Straits to the Amoor is 2,000 miles. Captain Buller proposes to take advantage of the rivers and lakes that are calmost in a direct line from Fort Garry to the Straits of Behring by laying a river cable in those waters. The scheme is a vast one; but nothing can be pronounced impossible in the realm of telegraphy at the present day.
- There are at this time four chemical laboratories in Japan, where the science is taught, three of them being presided over by Germans and the fourth by an American. The chief one is at Osaka, where there are nearly 100 students. The rest are at Kaga, Shidzoka, and Fukuwi. A fifth will soon be opened at Jeddo. The students are said to be fairly intelligent, but their minds are at present encumbered with astrology and other kinds of spurious philosophy.
- The wealthiest woman in England, in point of real estate, is the Hon. Mrs. Meynell Ingram, a widow about 24 years of age. She is the daughter of Lord Halitax, and matried two years ago Mr. Hugo Meynell Ingram, of Temple Newsam in Yorkshire, and Hoar Cross in Staffordshire, who at his death bequeathed to her \$250,000 a year in land absolutely. She has no children. Speculation is already rife as to the man on whom her second choice will fall.
- In Paris the mothers of two actresses were lately disputing as to the excellences of their respective daughters. "Yes," said the one, "you may say what you like, but my daughter has far more 'chie' than yours; she has already ruined five Counts!" "Ruined!" re-echoed the other with an air of disdain; "why, that's nothing at all! My daughter has not only ruined her Counts, but driven them to commit suicide."
- It has been found by Lient. Abney, of England, that photocarbon prints need only to be exposed to the light one-fourth of the ordinary period, and if then put away in a dark place they are found on development to have been fully exposed. The short time of actual exposure seems to start an action which continues and perfects itself in the darkness.
- Repeated earthquakes are alleged by Russian papers to have taken place lately in the Eastern Cancasus. The inhabitants of the town of Schemacha have been so dreadfully frightened that they have left the city, and are encamped in the country. Some are under tents, but a large number, it is said, are unprotected.
- George Augustus Sala says that he has proposed the toast, "The Ladies," in sixteen different languages, and in different countries. Mr. Sala has proposed toasts too often.
- The Rev. Stephen Gladstone, son of the British Premier, is rector of Hawarden, with an income of fifteen thousand dollars.
- -- Sasoumi Satou, son of the Japanese Mikado's chief physician, has graduated as an M. D. at Berlin.
- "Willing to Die" is the shivery title of a serial novel just begun in All the Year Round.

#### Cast Out to Die.

"About one o'clock this meruing two Chinamen were seen to lay a bundle on the sidewark of Menagemery street and move rapidly off. On investigation it was found to be an old Chinase weman. She was a mere skeleton, and in the last stage of consumption." Dualy Paper.

They laid her down, an old wan gray-haired woman; No strength had she to atter plaint or cry, Sick and alone, they left her on the pavement, Cast out to die.

Alone. No one was near to whisper " mother." No one to their her slowly fading eye: By her own kildred in the land of strangers Cast out to die !

Can these he men ' Forget the one who bore them ! Men and despese a he'pless creature's sigh ! Spurn at a dying woman? Cast her coldly Down there to die ?

Monsters, not men! O God of Vengeance strike them! Ab, gentle ( brist, whose tears feet privingly For woman's sorrows, look on this poor lone one, Cast out to die!

# New Books from A. Roman & Co.

EBB TIDE. A Novel. By Christian Reid, author of "Valerie Aylmer," "Morton-House," etc. Published by D. Appleton & Co., New York.

A very tenching story, told with all the author is weightshown pathos and tenderness, and beautifully illustrating the old saying. "The course of true love nexas did run smooth." The same is and in Charleston before the war, when that, now rained, city was the gayest capital in the South. We are afterwards transported to rining, city was the gapear and in a south. We are another than porest to the Lake of Como, where the end comes all too quicky. In addition to "Ebb-Tide," this youthe contains three of the author's short stories— Miss Ing. esby a Sister-in-aw. "The Story of a Scar," "A Doubt"—all agreeaby written and worth reading.

THE BROOKES OF BRIDLEMERE. By G. J. Whyte Melville, author of "Cerise," "Globators," "Screbedon," etc. D. Appleton & Co., New York, pub-

The present volume is written in Mr. Whyte Me'ville's well-known, admirable and entertaining style. It us bright, dashing and full of incidents, and has all the freshness and vigor that have made the author's former neves so sought after. He draws capital pictures of society among the higher casses in Engand, and gives vivacous sketches of life in country quarters. Tex hunting, shooting on the moors, a firstation or so, and a fivetacrount of the grand county bad at Middlesworth. In fact, the story deals with peasant places and pleasant people, such as Mr. Melville generally introduces in his books

THE PIONEERS By J. Fenimore Cooper. D. Appleton & Co., publishers, New York.

Messers, Appleton & Co deserve the highest praise for the creditable manner in which they have presented the edition to the public. "The Dear Slayer, "The Pathfilder" and "The last of the Mohicans have arready made their appearance, "The Pioneer" being No. 4 in the series. They are handsome octavo volumes, finely illustrated, well printed and nicely bound.

The remains of a man and a shark have been found together on the beach near Santa Cruz. Whether the man drowned himself by going into the water after near Santa Cruz. Whether the man drowned himself by going into the water after the shark, or the shark and ate it, or the shark by coming ashore after the man, or the man killed the shark and ate it, or the shark bit the man and poisoned itself, are questions which distract the peaceful village of Santa Cruz. For ourselves, we regard the question as an altegory. The shark is the Atlante and Paesife Raifrod Company, the man is Mr. Pickering. The Company came to these Pacutic shores and Pickering by tit. That did not hurt it much, but then it but at Pickering. That killed it. Pickering's mouthful of Missouri shark has soured on his stomach, but he is not yet dead. He only wishes the shark had been in hell before ever he got a belief full of its indivestible carcass. belly full of its indigestible carcass.

- One by one the classic nuisances who rendered our infant career a life of blasphemy and woe, evaporate before the march of civil action. Two English sarries have swym the Hedesport, and Leander, supple Greek, now a sorry commonplace, may go drown him in the Styx, while Hero shall be on her adulted no longer glorified by a glamour of romance.

## Lake Tahoe--A Simile.

BY FRANK.

"The mountain shadows on its breast Are neither broken nor at rest; In bright uncertainty they lie, Like future dreams to fancy's eye."

The day-god's glances ardent break In rosy dimples o'er a lake. In gentle murmurs kiss the land;
"Tis where an angel's foot has pressed
A hollow in the mountain's crest, [snow,
Where ruged mountains, capped with
Are mirrored in the lake below;
While lofty pines and fir trees high
Grow downward in the nether sky;
A lovely spot, from Eden strayed,
A moment on its way delayed,
To nestle on the mountain's top,
And mirror Heaven in every dron—
Where Beauty, Faith and Hope combined. Whose cooling lips, on either hand, In gentle murmurs kiss the land; And mirror Heaven in every drop-So perfect all, so free from art, 'Tis radiant Nature's counterpart, And seems, while standing by its shore, So like the maid whom I adore. By all the warmth of summer's sun, San Francisco, November 1st, 1872.

Its bosom owns no warmer glow Than that of the reflected snow While tiniest cloud that flecks the sky, Where he may find, in joy or wo,
The sweetest solace man may know—
Where Beauty, Faith and Hope combine
To build the inmost soul a shrine For truest homage hearts can bring And pure affection's offering, Shall find ere yet his voice is dead Its echoes from her heart have fled: A chilling breath has swept the spot. She vails her eyes-and Heaven is not.

## Another Mining Scheme in London.

From London we have an inquiry concerning a scheme of which the following are the interesting particulars: A company, to be called the Newport (Oregon) Coal Company, has been formed with a capital of \$1,600,000, to purchase for \$600,000 cash the well known Coos Bay Coal Mining property and work it. Half the capital is to be preferred stock, entitled to a preferential interest of 10 per cent. per annum. The prospectus states that Coos Bay Coal sells in San Francisco at \$9 to \$12 per ton; that the coal can be delivered on board steam lighters (which are \$9 to \$12 per ton; that the coal can be delivered on board steam lighters (which are to be constructed) at the pit for \$1.25 per ton, and delivered to purchasers in San Francisco for \$3.50 per ton, "affording a minimum profit of \$5 per ton;" and that contracts can be made in advance for sale of the coal "at a price that will yield not less than \$250,000 a year net profit." Agents of the London Company will, we are advised, soon leave for this coast for the purpose of examining the Coos Bay property and will call upon the News Letter for any information we may possess. We are fortunate to be in position to prove useful to them. We are in possession We are fortunate to be in position to prove useful to them. We are in possession of a report on this property made several years ago by one of the most competent mining engineers on this coast, whose facts and estimates will at least be instruction to the gentlemen from London. This opportunity appears a proper one to suggest that it the News Letter were consulted concerning all Pacific Coast mining schemes that are offered in the London market, investors there would be in a fair way to save many thousand pounds sterling. During sixteen years of initiate connection with the material interests of California, the News Letter has come to a knowledge of those interests, and of the character of the individuals connected with them, which no care or money can proque to a stranger. The degree of Coast. knowledge of those interests, and of the character of the individuals connected with them, which no care or money can procure to a stranger. The degree of confidence which Englishmen are warranted in reposing in some of their own papers, is fairly set forth by a writer in the Anglo-American Times, who has a word to say of English swindling, and of the habitual course of the London Times in regard to such transactions: "In London," says the writer, "they point to New York and say there is the greatest scandal. But unfortunately for New Yorkers, they are comparatively ignorant of what goes on in London, and in their innocence accept the charge as true. The reason that London knows more of investment in Applications in Security English. the charge as true. The reason that London knows more of investment in New York knows of investment in London, is because Englishmen employ their money in America, but Americans do not employ money in England. The American system, too, is to make such a noise over every defalcation that the attention of the world is attracted, while the scandal is, comparatively speaking, hushed up in London. The same column of the Times which has been unsparingly devoted to the exposure of every fraud in the United States was used for covering up the Overend-Gurney affair, the Joint-Stock Discount Business, and the getting out of jail the only man sent there for the most gigantic fraud of the age." Both the Anglo-American Times and the Spectator have recently been giving battle to the Times on the subject of the goodness of American securities.

<sup>—</sup> Pretty Misses Eijo Yoshima and Tido Moogneda, of Japan, are on their way home because the climate of the East did not agree with them. Beastly place, that East. The Japanese must send their young women to California for the higher education. Our girls can put them up to all they need to know, and a deal more than their heathen mothers ever dreamed of.

# The Diamond Diggings -- General Account of the South African Fields .-- No. 4.

(By Charles A. Payton-"Sarcelle" of "The Field."]

DIAMONDS AND PROSPECTING.

The reader who expects a scientific chapter will be very much disappointed here. I am not a scientific man, and newer shall be. Harry Emanuel, and many other authorities, have written fully on the subject of diamonds and other precions authorities, have written fully on the subject of diamonds and other precions stones, and I have no desire either to pirate from them or to emmate their example without a chance of success. With regard to Cape diamonds, as compared with Brazilian, it is an undisputed fact that in South Africa a very much larger proportion of large stones is found than in Brazil. Stones over 10 carats are comparatively rare in the latter country, where in "West Griqualand" as I suppose we must now call the diamondiferous territory; those over 10 carats are exceedingly must now call the diamondiferous territory; those over 10 carats are exceedingly numerous, and generally several stones within a few carats of 100 are among the weekly fines. Marvelous would be the riches, and immense the fortunes made in South Africa, but for the lamentable fact that the vast majority of our large diamonds, i.e., of stones over 10 carats, are "offeciole," being, instead of pure "white" or rather transparent thicked, apparent throughout, with a yellowish tint, varying from the palest strawes or to that of the topaz, or pale sherry color. Already, when I left the Fields, "offecdored" stones would barely command one-third the price of pure "white" gems, and it is to be feared that by this time cowing to the news of the missicabeness of these stones, they will be still further deprecated. Consolation for the diagraphs, however, to be found in the fact that a organ number of the smaller senies, are of perfect shares and color, and such stones. depreciated. Consolution for the digacer is, however, to be found in the fact that a great mamber of the smaller genes are of perfect shape and color, and such stone will command high prices for many years to come. I saw a 12 g carat white stone, found in the fact cain to men at Dir Toit's Pan, which should have been worth at least 2004, on the fields, but, also: there was a horred brack spot nearly in the center of it, so it was only worth 600 or 700. Many off-coord or yellow stones are of perfect shape and of great lastic, still they are not the lasticines on open faire of Accept the low prices and be thankful. De Toit's Pan is famous for large stones, Accept the low prices and or markin. But looks pair is tamous for arge stones, and they arry very much in shape, color, and brigancey. But from the hest a great reputation for numbers of small stones; most of them white, and of good quanty. Tmy little genus of from \( \frac{1}{2} \) to 1-40th of a carst are very numerous there, especially near the surface. Most diggers used to pay their expenses at Buttoutem, but a great many did not do much more, so it has never been penses at Buttontein, but a great many did not do much more, so it has never been a very lavorite camp after the first few days, when the numerous small surface diamonds gave it a temporary good name. At be Beer's the stones are generally very good, many of them being white. At the Colesberg Koppe there is an immense abundance of all sorts, from the pure white lastrous octahedren, or dedecated too, to the irregular fragment or clap of faint his tre and mky dullness, caned The river stones are generally good, but apparently not so numerous as on the dry diggings

A few sapphires have been found at the river diggings, but they are scarce, and A few sappures have been found at the river diggings, but they are scarce, and not apparently of the very best quickly. I have been told, at different times, of the finding of real rubies at the dry diggings, but I will not wouch for their genuineness, having seen myself nothing but garnets and spinel rubies, generally small, fragmentary, and comparatively valueless. I saw one small stone which I pronounced to be an emeraid, but I have not heard yet whether my opinion was correct, and some of the fragments of bright transparent green periods, called by some diagraps. "Agreen varieties," are of such the color-as could be decrease green. rect, and some of the fragments of oright transparent general parties, called up-come diagers. "green garnets," are of such the color as easily to deceive a novie Here is a description from a colonial paper, of a strange stone, which I should

very much like to have found

EXTRAORIBINARY STONE - Mr. Thornbury, who has just returned from the Dia-mond Fields, has shown us an extraordinary stone which he has brought down mond Fields, has shown us an extraordinary stone which he has brought down with him for the purpose of sending it to England. At first sight it looks like a large ruby of a pecuniarly beautiful color. Looked at from two different points it presents two different colors one of the light amethyst and the other the deep, lovely purcon-blood. The stone is of 17°c carats, and has been tound at Hebron Mr. Thoms, the lapidary, has stated it as a most unique stone, that he has never seen the like of it before, and that he would comer have it than two diamonds of 2°c carats cach. He says it is a combination of crystals of the Oriental amathyst and the pigeon-blood ruby. The stone is supposed to be of great value. It certainly must be a heautiful stone, but I cannot quite agree with Mr. Thoms, and I think I would very much prefer two diamends of 7°c carats each. If they were pure stones, their price would make a handsome fortune. One or two clusters of diamonds of different sizes, apparently partly fused together, have been found, and have excited much speculation among the savans who have pet theories as to the matriz or origin of diamonds.

as to the matriz or origin of diamonds.

as to the matriz or origin of diamonds.

With regard to prospecting, I shall only speak of the dry diggings, the gravel and surface indications on the river being different, and having already been alluded to under the heading "Early History of the Freist." What prospectors like on they diggings is as follows: A small hillock, large mound, or ridge, is the favorite conformation of ground for prospecting. Grass does not, as a tule, grow much over the known diamondiferous patches, they are more generally covered with a low, stunted, rough scrub, slightly rescubling heather. Rotten white limestone cropping in through the surface is considered a good sign, though in majorulage. low, stunted, rough scrad, signify resembling meature. From white inheritance of cropping up through the surface is considered a good sign, though in many places, and notably the Colesberg Kople, the surface stratum is composed of red sand, varying in thickness from one to sixteen feet. If a minute examination of the surface soil reveals the presence of small fragments of garnets, transparent green stone or peridol, and of the shiny metallic back substance known as "carbon," but which is really limenite, these signs are considered to denote "promising stuff," and the digger will do well to dig down a few feet and sift and sort the stuff. A pick and shovel, small fine hand-seve, and smooth board or sheep-skin for sorting, will suffice for ordinary surface prospecting, and may be easily carried. But, if prospecting be done at all it is worth doing well; and it has often been found that at a new place no diamonds have been seen till a considerable depth was reached, cometimes even 16 feet, so here the surface-prospector might have missed a "good thing." Under old regulations the prospector of a new digging was allowed two extra claims free, and could mark out others for his friends. A good deal of time is often wasted in fruitless prospecting, and it is better to let others do this, and he marked out, or bought cheap. I have seen hundreds of diggers at work prospecting on one small hill; little sticks with papers on them marking the position of claims; white men and black men, all working with intense eagerness with pick and shovel; a few sieves and sorting-tables put up, and people poring most anxiously over their contents. This was some four miles from Du Toit's Pan. It was a likely looking kopje, but I believe nothing was ever found there. Trees are much favored, and their immediate vicinity, in likely-looking ground, is always most carefully examined. Some of the claims close to trees, at De Beer's for intensing the received of the contents of the claims close to trees, at De Beer's for intensing the position on the "veldt" the white or gray heaps of stuff, and neatly-dug holes, signifying that a prospecting party has been there; but generally they appear to leave off too sono, for it is quite possible that just on that spot there may be no diamonds at less than exteen feet deep, and then plenty. In some parts of the Colesber

— S. R. Throckmorton has presented the Academy of Sciences with the first California lobster, described as "a small fellow." We warmly repudiate the beast, and denounce this wretched Eastern fraud, by which the stainless glory of California is attempted to be dimmed. The real Californian lobster has not yet been enticed from the cavern of Pigeon Point, where he lurks in wait for heedless ships. Two months ago the writer of this paragraph, while angling for the gigantic mackerel which infest that locality, beheld this marine monster capture and devour a shoal of whales. Seizing the cetaceans by the waist, he would, with the other claw, twist off their heads, and bolt the bleeding carcas. His eyes, when protruded from the water, appeared to be the size of the full moon, and shed a lurid glare upon surrounding objects. Their flashes at night are said to have been often mistaken for those of the lighthouse in that vicinity.

We never fatigue of chronicling the triumphs of Californian vegetables, from the hollow and resounding gourd which decorates the shoulders of our editorial brethren, down to the ambitious corn that cripples the feet tripping our streets encased in dainty No. 4 shoes. Unwearied have we warbled unto the September strawberry, first made immortal in these columns, the song for which you might have bought the 50-vara lot on the corner of Jackson and Montgomery street, when the water came up thereto. With an emotion too deep for tears, we now record California Ahead Again—"A young Miss residing on Post street, in this city, weighs 439 pounds."—Daily Press.

O! ever thus since "forty-nine,"
My fondest hopes have grown apace;
I never owned an Occident
But thought could win a "twenty" race;
At over twice two hundred pounds.

— Bradley & Rulofson have issued a photograph of Mrs. Joaquin Miller. Mrs. M. has our sympathy in the fact that the likeness is good. We congratulate her on her new hair, which nearly, but not quite, conceals the tell-tale car. The draper falls gracefully over a copy of Hanper's Weekly, and successfully conceals the outlines of an amatomy which goes far to explain the restless flight of Joaquin. Mrs. M. has also considerately tucked her hands out of sight, and but for one defect, the picture would be altogether pleasing. We allade to the attitude of the head, which is erect, exposing the face. If Mrs. M., at her next sitting, will but that the head under her arm, we think that the general effect would leave nothing to be desired.

#### Summer Days.

A little nook of wilderness
Batwa the monday and the river,
Whene you arewines together came,
And one will come no more forever.
The rustic bridge, the narrow road,
The set upon the twee pone.
The way spee of the sammer woods,
So sweet, but not so sweet as thine.
A little wild flower long ago
Are the targed years grew.
So many things are dead since then,
How stoord not that be withered too.

Here where we sat I sit alone, Wat been until the said goes down; For though 'tis summer-time to-day, Tempertow wit the woods he brown. Year after year, the pent said; Year after year, the pent said; And same will set in summer akke; But to it, shown of we dermes Between the meadow and the river Will any come because we came, And say, They come no more forever?

# A Sporting Lord.

No man over sacrificed so much time or so much property to practical or speculative operand as the bord fair of Ortoid. Among his oxige function was a deformulation to drive four reachest stage in a phaston, included of features and those be had reduced to perfect us juste for the expersions and short corners spen the road, but, entort mate y, as he was one day driving to Newmarket, their cars were Your many the cry of a pack of norther who h soon after crossing the road in the rear, on 20 sects of the four means, and commenced a ten was of classes, with "mean 1 20 " absenty. The novely of the scene was run beyond descripwith "ateas, I go "dear", The howay of the scele was fith beyond descrip-tion, in varied at his creasing exert a his charactering as in varied his well-trained groups elsergettanly endeavor for the before finent routs bear made and the weight of the narriage were of no effect, for they went with the coversy of a whirtwend and this medican Phaeton, in the most of his certain vibrations of fear, back in the experiment the late of his measures have a convert to a claim had been accustomed to drive this set of "firey-eyed steeds" to the "Rate lund" at Newbork t, which was most happ vist hand, and to this his most fervent prays are ejaculations had been ardeally directed. Into the years they saddenly bounded, to the diseasy of outers and atabachers, who seemed to have lost every phaeton and his order, p were all astantaneously hadd on together in a bar just as the non-designment in his cryattle gain. This acks was the theories had very first the Kar, et a speaked for deer driving, but he zea for cours ug, and he rage for improvement, remained to the last. No day was too stag, to weather too severe for non. The surpainting of his appearance used to excite universal aminement. Montred on a stump of a prebaid pony as broad as he was .ch., . at a fc . suit of Mounted on a stump of a probably party as broad as he was eng., it a fir, sulf of black w count either greater and or groves. His hards and he are consoned with cold, and in a force consoned with cold, and the probably consoned with cold, and the probably consoned with the Earl under restraint. One morning during the continuance of the second attack, his lords up, with that atentarities which is often the associate of mentar windering, court ved, by some passes as protext, to get his keeper out of the reson, and instantly samped out of the window, ran to the stables and saddled be quantified. pony, at the very moment he wer knew the grooms were an er greed. On that day his favor to greyhound, Czarina, was to run a match of considerable unportance. The gate keepers had a ready taken her to the field, where a view party were assembled, equally lamenting the absence of the har and its meant boy cause, when, at the very moment of condo ence, who should appear at for speed on the well known pseuald, but the very object of the field a comm scrat.on None had power to restrain him, every attempt, every entreaty was in vain; the match he was determined to witness, and there he resourtely remained. At ength as efforts falling to induce the poor invasid to forego the decight he anticipated in his favorite Simulations, the greyhounds started, and Czarina wor, but the excitement of the some law ardor in the contest, and the eagerfiest of training were too much for his state red nerves. He fee, from his peny and since mines missing varieties were considered with the ruling passion strong in death." Sir Bernard Burker, "Romance or Str. Invest the ruling passion strong in death." of the Prerage:

"Harmony is casential to good government, but harmony is impossible where there is discord of opinion. — 140a On behalf of the press of Caufornia, we repair ate this atronous sent ment, and denounce the author of a measurement without, as Atronous was been at a professional cut-throat and an incommunitie. The man who will open y maintain that "harmony is impossible where there is a known," will not hesitate at the next step to decare that conce? I imposs he where there is a Pitch. Ratter than admit these monstrous doctrines, we should control that diver a time possible where there is an Atta, which is a self-evident contradiction of terms.

#### How the Queen Goes to Church at Balmoral.

Crathic Kirk is one of the chief attractions to tourists at Balmoral, and Sunday might be mistaken for a gala day, with its overflowing vehicles and crowds of gaily-dressed pedestrians trooping along by the banks of the Dec to the little white church on the hillside. The church is crowded to overflowing long before the service commences. During the interval that elapsed between the clanging of the belt and the Queen's arrival, a running conversation was kept up in audible which pers, and John Brown's ears should have tingled from the frequency with which his name was introduced. There seemed to be no thought of Sunday decorum in the heads of the restless sight-seers. Fans fitted, and open glasses were taken the neutro of the restless sight-seers. Fans firted, and opera glasses were taken out and adjusted with deliberate coolness, to be in readiness to point at the royal family, and people seemed to have come to a spectacle rather than to worship the Lord of the Sabbath. At length the bell ceased, and the hush of expectancy "made pause" in the tunnit as the royal household began to file in. About the first to appear on the seen was the Queen's piper—a fine-looking Highlander—who beling miscalars for Lehn Brown hardeness the description industries. first to appear on the scene was the Queen's piper—a fine-looking Highlander—who, being mistaken for John Brown by some, was stared at with unflagging interest until a ludy in black noisclessly entered and proceeded to the royal pew to bow her head in silent prayer. "The Queen' in a hushed whisper passed from lip to lip, and simultaneously every face brightened as if that presence touched a tender chord in the warmly-heading hearts around her. Pretty Princess Beatrice, simply dressed in white, came next. The little royal lady is growing up a beauty, and promises to be the fairest of the Queen's daughters. Then came the Duke of Edinburgh, brown and hardy-looking, in his Highland costume: the youthful Prince Leopold following, also in kilts, a dress that suits him well. When the royal furnity were seated there was a freak accombile for places, and the passages were crant. by were seated there was fresh scramble for places, and the passages were crambed down to the client of the royal man down to a sort of check to their fellow-worshipers, and when the minister rose to begin the service, it is but fair to say that he was followed with attention throughout, although sometimes prying eyes would wander to the royal pew and forget to turn away when their persistent stare became visibly annoying to the gracious lady who had come to worship in common with her subjects their common Father. The old forms are still respected in Crathie Kirk. The congregation six during the singing of the psalms and rise to prayer, and the Queen set the example of conforming to the ancient rule as still observed. With the aid of her "glasses" she looked up the places in her psalm-book and joined to the singing, which, by the way, is conducted by a well-trained choir. She rose to her feet with the congregation and remained standing during the long prayers to the end. The collection is "lifted," at the conclusion of the service, by means of long handled haldes. The Queen quietly drops the royal offering, which I am afterwards told is a £10 note; in amongst the jingling brown coppers. The Princess then drops in her "collection," and the ladle goes on its way to arrive at the other end of the royal pew, and due time for the Princes' offering, and those seated next to them in their order. During it e lifting of the collection, the choir sang a Doxology. On leaving the church the Queen stood with her head bowed in silent prayer for a few moments. Then her daughter threw a black mantle around her, and, as quietly as she had entered, her Majesty departed. There can be little doubt that the crowd pressing so tered, her Majesty departed. There can be little doubt that the crowd pressing so closely upon her, together with the ill-bred staring to which she was subjected, must have been discomposing to the Queen, but she bore it all with an unruffled countenance, and with gentle graciousness. Of course the instant the Queen's back was turned there was a mad rush to see her get into her carriage, and the getting out was about as fraught with peril to life and limb as the getting in. In the hurry scurry, little children were topled over and old lolks were nearly driven off their legs; but there was not a moment to lose, for the royal carriage was drawn up at the door, and the impatient snow-white steeds were panting to start. And now John Brown mounts the box, the order is given home, and, like a flash of lightning, the Queen is whirled away to the peaceful shades of Balmoral, and there it into the reaches and to smooth out crumpled forms and to feel the extent of damage done to ribs and ribbons, and to fold fans and shut up opera glasses, and look out for the special vehicle that belongs to your party, and to congratulate yourself that you have seen the Queen at Crathie Kirk. As to the cost, that is of course a matter for future consideration. - Glasgow Weekly Mail.

— Good Governor Booth has issued his Thanksgiving proclamation, slightly varied from the original draft supplied him by request from this office. The original rans: "Whereas, The President of the United States has a pointed November 28th as a day of thanksgiving to his prototype in Heaven for the blessings vouch-safed this people, especially his own re-election, now, therefore, I, Newton Booth, Governor of California, recommend to the people of this State that they abstain from this usual avocations of overreaching and profane swearing on that day, and devote it to grateful acknowledgements of swindles already perfected, to religious exercises on the Cliff House Road, to dispensing charities to the unfortunate whom they have successfully fleeced, in hospitality to strangers who will afterward be the more readily taken in, and to the innocent recreations of wine-bibbing and gluttony. In testimony whereof, etc."

Greeley papers vituperate the "stay-at-homes." Mr. Piper will consider himself vituperated.

# Befooling an Amerous Farmer.

The Carrick-on-Shannon correspondent of the brish Times tells a strange story. The says: "It appears that a Mr. Taylor, a Luncoin-blire farmer, a widower, and the father of any children, has been for some years in the health of employing on his farm working in the neighborhood of Dr. anshanbo. Mr. Taylor, being badly in want of a wife, communicated the fact to his Irish working, who said they knew a hely in Frekant that would suit him. Two of these working in conspired to all the poor widower, and described to him an imaginary Mass Wiccon, residing at No. 5 Dramshanbo, the owner of property worth something over £1,000 a year. The Englishman was commerced of Mary by the description of her gold and good looks, and determined to write to her on the subject of matrimony. The conspirators having got a party at Dramshanbo to do the part of Miss Mikeon, a correspondence crisical. After some time Mr. Taylor determined to visit the Green belance the started, taking the two Irish working with him, paying the infarce, too, and arrived at Carrick-son-Shannon station, where it was represented the hady's corrupt worth award his arrival. Of course, no carriage was there, and having induced him to welk some distance from this town, the men made a nurderon attack on the deluded man, and robbed him of his portmantean. Mr. Taylor made his once the ballot, One of the accused, named M'Grath, has been arrested, and the police are certain of capturing the others."

<sup>—</sup> Minister Bancroft, inetted thereto by the gentlemanly government at Washington, offered to repay Emperor William the bire of the joints who decided the San Juan Island question. The Imporial Chancellur currity snubbed Munister B, with the information that his government had no bill against the United States. We trust Congression Clayfon will bring in a bill creating a commession of Diplomatic Deportment, whose functions it shall be to imbase the Executive Department with the elementary instincts of a gentleman.

# Pernickitty People.

"My dear wife," he began the very first sentence, "my dear wife carries her vitues of neatness and carefulness to—I had almost said—the verge of vice; truly, she is 'cumbered with much serving.' It is much too serious to be a jest; it prevades all hours of the day and night. In her really affectionate solicitude for my comfort, she awakens me out of my first sleep every night with 'Dear, are you comfortable?' 'Quite so?' 'Won't you have another blanket?' 'Oh, no.' 'Perhaps you are too warm: shall lopen the window a little more?' 'No, thank you, my dear,' 'Shall I get up and give you a drink of water!' 'I am not thirsty, my dear; good night.' 'Are you quite sure you are perfectly comfortable?' and so on, until I have to use almost superhuman exertion to keep my temper, because I know she loves me with all her careful heart.' "I have met with such people before," I observed. "They are called 'pernickitty people' in Scotland." and I gave him an account of my visit to the old ladies, at which he laughed heartily. "It is a wonderful exception," he said, "when I can eat a meal in peace. This morning my plate was snatched away just as I had put a crisp-brown sussage on It, because my wife saw some marks, myisible to me, which showed that it (the plate) had not been washed in boiling water. My study chair is kept at a rigorous right angle with the writing table, and I am afraid my sermons are, from affinity, as rigid as a poker, and dull as a door-post. Bless her kind heart! if she would only kake Mary instead of Martha as a model—if she would only cultivate a little carelessness—we should be the happiest couple in the world." Poor fellow! a decent man greviously tormented with too much pernickity vitre in his wife! Before I left the village the good man was invited to an anniversary meeting of college friends in London, and joyfully made blis preparations to go. His wife also made preparations, and Gath's sister helped her. "Now, dear," she harrangued him the previously tormented with too much pernickity vitre in his

# Ship-Building in San Francisco.

In a conversation had by a prominent citizen of San Francisco and Mr. Webb, the celebrated ship-builder, and now running a line of steamers between this city and Australia, he suggested to Mr. Webb the matter of establishing a ship-yard in the harbor of San Francisco for building vessels and steamers. It was at one time believed that iron ships would drive wooden vessels from the ocean, and because England had iron, coal and cheap labor, that the workshops of the Clyde would monopolize ship-building to a large extent. Mr. Webb gave it as his opinion that owing to our immense forests at Puget Sound, and the necessarily large demand for ships in the Pacific commerce, there was no better place for the establishment of a great ship-yard than San Francisco. The State of California has given to our city water-front lands to be used for commercial purposes. As an inducement therefore, to Mr. Webb or any other enterprising individual or firm who will give guarantees of their carrying on ship-building, we suggest that the city should appropriate, say five acree for this purpose. In the encouragement of such enterprises as this San Francisco would find great advantage, not only in the immediate employment of her mechanics, but in the encouragement of her Pacific trade. Congress will be called upon as soon as it convenes to pass laws to restore lour shipping business and to build up an industry which has languished since the war, and to enable our country to get back her just proportion of the carrying trade of the world. In this business our coast should largely participate.

— Nathan Keenan tumbled off a wharf and was fished out by Mister Davis, Davis' impulse was no doubt good, though his action was thoughtless and precipitate. He ought to have remarked the recent falling off in succulence and flavor of the schrimps on sale in our city markets. He will kindly leave the next chubby boy that falls overboard to be devoured by our favorite crustaceans.

<sup>-</sup> New York ladies pronounce California blankets "splendid." If they would but try a husky old live Californian along with them, now !

#### Songs of the Season.

BEFORE ELECTION.

With fingers weary and worn,
With eyelids groggy and red,
An editor sat in old-womanly rage
Lying to living and dead.
Fitch, Fitch, Fitch, In Infamy, slander and dirt,
Still with a voice of Methodist pitch,
Hemphill or Cox, you couldn't tell which,
Ile sang a song in his shirt.

#### ELECTION DAY.

On the morn of Election, 'twas Bulletin spoke,
Ere Clayton gets in there are crowns to be broke,
So all those brave boys who love Picky and me,
Let them up with bold Piper and "No Subsidee."

Come fill up the cup, come fill up the can,
Call up your horses and scare up each man,
Uncork the best Port and let it gas free,
For its up with bold Piper and "No Subsidee."

#### AFTER ELECTION.

"Off with his head—so much for 'Bulletin.'"
RICHARD III., slightly altered.

Home came Clayton, at the head:
Fitch nor ground nor uttered sigh;
Fitch nor ground nor uttered sigh;
Give him whisky, or he'll die."
Then they cursed those voters all—Called them hase, a servile herd,
Recreant to his beek and Call.
Yet Fitch neither spoke mor stirred.

Up rose Pick and whispered low,
"Stanford,—he might buy us yet!"
Soft and low Fitch groaned "No go;
Tried him long ago, you bet!"

#### The Cat and the Cane.

It appears from the prison records of India that in the year 1870 over eighteen thousand convicted persons were flogged throughout the different Dresidencies in due course of law, the son were flogged throughout the different Dresidencies in due course of law, the sough-and-ready penalty acting the state a large amount of money in prison maintenance, and apparently acting in a most efficacious mainer upon the maletactors. The flogging is inflicted, not with a care, the superior advantages of which instrument of torture is, that under the indiction of the former the curiety soon becomes indurated and insemble to pain, whereas the sting of a good caning, while it does no permanent injury, remains for some days in decronent. The ultra philanthrops of the present century, revolting from the merceless severity of our old criminal discipline, in this country has had a tendency to err in the other extreme, as we are beginning to find out, and recently justice has been obliged to revert to the lash as the only deterrent which bruta, ruffianism is capable of appreciating. But the experience of India almost suggests its exhesion, both as a reformative process and in regard to prison economies. Considering the enormous sum laid on the country rates for the maintenance of our criminal population, it is only fair to honest men to see whether a wholeson, dozging may not at the same time save their purses and make the erripaland there is nothing so much dreaded by brutal ruffians (who are almost invariable cowards as the "cat," and with the bulk of criminals fear is the only effective games to the Magistates, it appears, have a morbid herror of sentencing a man to be flogged, not from any pecuniar soft-heartedness, but because the hospical control of our whole the ways. It has been proved that in Empland there is nothing so much dreaded by brutal ruffians (who are almost invariable cowards as the "cat," and with the bulk of criminals fear is the only effecting a man to be flogged, not from any pecuniar soft-heartedness, but b

The London Standard thinks the American Administration has done nationally what Tammany and Fisk did locally. Thus doth the British editorial mind expose itself to the derivision of intelligent American opinion. The Standard's rediculous comparison fails when we remember that Fisk did not pack the bench with Judge Barnard ans Justices Strong and Miller were put in the Supreme Courts. He only bought him when he found him there. Nor does the Administration run the treasury searche at Washington in emulation of Mr. Fisk's Grand Opera; the ladies are nominated by Congressmen. Finally, Tammany got beaten, while the Administration got quite the reverse. The Standard is an ass.

# "Laughter--Holding Both His Sides."--Milton.

[From the London Satiric Papers.]

## Stings from the Hornet.

THE REFLECTIONS OF COWLEY.—One cold, wet night, I was walking pensively down the Blackfriars-road. My waterproof coat, leggings and umbrella alone prevented me from being drenched. The steady rain, indeed, seemed to have directorybody from the street, and I fancied myself alone, when suddenly I perceived something standing in the gutter. It was a little boy trying to sell matches. Age has in nowise dimmed my keen perception of the Indicrous—and I paused before this little boy. As he stood there, looking in my face and holding out a box of lights, I thought I had never seen anything so absurdly ridiculous. He seemed about nine years old; yet what clothes he had were evidently made for a full-grown man, and there was hardly a square inch of their surface without a rag. The rain about nine years oid; yet what clothes he had were evidently made for a full-grown man, and there was hardly a square inch of their surface without a rag. The rain ran in at his hat and out at his boots. I had witnessed poverty-stricken misery very funnily made up on the stage; but this beat everything, and I positively shook with laughter. Gradually the fun of the situation grew upon me. Impunity is a strong point with the true practical humorist. Here, thought I, is a chance rarely met with. I held out a penny, and as the child shambled towards it, I returned the coin swiftly to my pocket, remarking, in my funniest accents, "No, you don't." Seeing, too, a wisp of something white protunding from one of the holes in his nether garments, I pulled it out still further, with the jocular query, "How much ayard for your linen." The urchin's confusion at this treatment was irresistibly amusing, and, after enjoying another hearty laugh, I passed on. In about half a minute I felt a smart blow on the nape of my neck, and then a sensation as of something oozing down my back. I turned sharply, and there stood the boy. I saw his arm shoot out, and the next instant my eyes and month were filled with the vilest mud that it is possible to conceive. A shrill laugh followed, and when I had partially wiped away the filth, the child had departed. My return home that night was bitterly uncomfortable, and my reflective serenity for days afterwards seriously disturbed. My musings on this incident shape themselves into the following golden

#### REFLECTION:

It is not always advisable to treat with contumely the apparent helpless. We never know what harm it may be in their power to do us.

#### STANZAS FOR MUSIC.

Oh never bid me smile again ! Oh leave me still to pine; In vain the effort—all in vain— To soothe a grief like mine. Let other hearts with rapture beat, Where fate hath never frowned-I cannot smile-when butcher's meat Is fifteen pence a pound, Ah me l

Is fifteen pence a pound.

As once I sang of yore! The blithesome lilt, the joyous strain, Shall leave my lips no more. The chords whose touch entranced my
Are broken, one by one—
I cannot sing—when household coal

Oh never bid me sing again

Is just two pounds a ton, Ah me! Is just two pounds a ton.

Oh never bid me love again! Alone I tread the gloom, Content should some sweet glance remain An instant on my tomb. No more shall Beauty's soft caress My broken spirit cheer-I cannot love-when maidens' dress Costs sixty pounds a year, Ah me! Costs sixty pounds a year.

# Sippings of Punch.

Gent, in Knickerbockers—"Rummy speakers them 'Ighlanders, 'Enery. When we was talking to one of the 'ands, did you notice 'im saying 'nozzing' for 'nothink' and 'she' for 'E?'"

Superior Being—"Now then, Effic, why don't you jump?" Effie—"Cause if I jumped I might tumble down; an' if I tumbled down I might break my nose!" Superior Being—"Pooh! What's the good of a nose to you! You never blow it!"

COLOR EST DETERRIMUS ALBUS.—Schoolmaster—"What color, according to Virgil, is the worst in a horse?" First boy—"Brown." Second boy—"Cheshut." Third boy (favorite)—"Bluck." Schoolmaster (meditatively)—"Well, black! Yes, light black; yes, grey. Well, lightish grey, in fact, white. Yes, go up!"

Who is the Parry?—Mr. Butt has made a speech in which he compares Ireland to "blind Samson in chains, making sport for the Saxon Philistines." Dear Mr. Butt, how came Samson to grief? Was it not through abject devotion to a certain Delilah, Mr. Butt? Who is your Samson's Delilah, Mr. Butt? Has she an alias, and is it the scarlet lady?

## "Fun."

EASILY EXPLAINED .-- A misguided contemporary puts an absurd question at the EASHAY EXPLAINED.—A misguided contemporary puts an abstraquestion at the coll of the paragraph we quote below: "M. Pymaert, in the Bulletin d'Arbanyoul-ture, says that the perfame of the flower of Lilium Auratum is obnexious to flies, which are rendered inert by it, and which disappear from a room in somewhat less than half-un-hour after the introduction of a bloom of this noble bly into it. Will some one try it?" Well's the use? Exceptedly knows it, and understands the reason of it. The flies, attracted by the scent of the yellow life, go and sme, it and get their noses smudged with yellow, and then their friends leach at them. I Land and Wetter places court it. laugh at them. [Land and Water, please copy.]

THE BARK IDEA.—An American newspaper correspondent describing Miss Vinnie Reum in her studio speaks of her as: "With her arms bare to the shoulders, and her ankles likewise." There is only one recommendation attaching to a toilet where the ankles are bare to the shoulders, and that is that it cannot involve heavy milliners and dress-makers bills. At the same time, and with a knowledge of what present fashion ironically calls "full" dress, we should be inclined to think that a Ream ought to have at least four hundred and eachty sheets, and might gracefully dispose of one between the shoulders and the ankles in question.

A SOUP-POSITION. -- A Poor Law Gnardian the other day called the attention of is colleagues to the waste of soup in the workhouse. He said: "The waste was his colleagues to the waste of soup in the workhouse his colleagues to the waste of some in the workhouse. He said: "The waste was caused not so much from too large a quantity being made, as from persons refusing to eat it. He had noticed 15 or 20 persons who left it." As the quantity is not in fault, does it not occur to the parochisi mind that there may be something wrong with the quality! You may take a horse to the water surge-handed, but a dozen of you can't make him drink; and we presume you may take a horse-pond to pauper, but a whole heard of Guardians cannot compel him to accept it as soup.

An American paper tenderly records that: "A young lady of wealthy parentage and superior intellectual colture, Miss Agnes Cooper by name, has devoted her talents to professional larceny in St. Louis." We hoped at first that this only meant she had taken to stealing hearts; but in that case there would be not a larceny, but a fellow nigh.

Rev. Mr Snuffleworth, who hath called to solicit contributions towards the ex-Rev. Mr Smillneworth, who have carried to solicit controlling covarious towards with the chapted debt, seeketh to ingratiate bimself: "How wonderfully all your little treasures resemble their lather, Mrs. Gol'oper ! This durling now especially reminds me of Mr. 6; "Mrs. G.; "Mrs. G.; "That's not my child avail, Mr. Smiller. worth; she belongs to a neighbor of ours, and is only here spending the day." [Rev. Snuffleworth maketh his exodus.]

Liza's Mother: "I've come to know, mum, what my poor 'Liza's done, mum, as you should give 'er notice." 'Liza's Mistress: "I have explained to Eliza that it is for no fault of hers; but see is so extremely short-sighted as to be really of no use at all!" 'Liza's Mother: "Well, mum, if she is, she must he caught it here. She hadn't got it when she left 'ome!"

An American paper says that a noted Southern politician, A. G. Allon by name, is annoyed because printers and telegraph clerks will insist on writing him down We don't blame him, as the obvious deduction is that he is frequently A. Gallon. drunk.

## Gunpowder Experiments.

Grapowder Experiments.

Some experiments have been conducted in Paunstead Marshes, by permission of the Secretary of War, to test the value of Milner's fire-proof gaupowder magazines, in the presence of Major Majorndie, R. A., Captain Noble, R. A., and other officers. Fierce wind and rain prevailed at the time. Four safes were filled with different charges of powder. The first contained only a few onnees of powder, the second, only the pounds of powder in a canister and five pounds loose, and the fourth five pounds of powder in a canister and five pounds loose. The safes were put into the middle of a fire-grate composed of bricks placed one on top of the other, with intersices between them, forming a sort of blast furnace. Three tons of coal were put on top and ignited with petroleum. The fires blazed with great violence until three o'clork, when they were rasked out and the safes removed. All of them had been heated to a white heat, and so intense had been some of the fires in their action that two of the safes were partially melted. The gampowder, however, was in the same condition as when it was put inside the The gunpowder, however, was in the same condition as when it was put inside the The gampowder, nowever, was in the same condition as when it was put usede the safes, with the exception that it smoked a little. These measures are nade of half-inch wrought iron, and are two feet six over all. Inside the outer covering there is an inner one, measuring two feet each way. Between these two coverings, direct each twice the same coverings, direct each twice the covering there is an inner one, measuring two feet each way. Between these two coverings, direct entitled the same coverings, direct each two papers to have answered their purpose in an astounding manner. The barometers which were placed in each safe registered no less a heat than 560 degrees.—Overland Mail, October 11th.

The King and Queen of Saxony have had a golden wedding. The heir apparent to the Saxon throne ought to be secure of a glorious immortality. He has had a purgatory of waiting in this life, which, to call "transitory," is in his cars a heartless mockery.

#### Nini and Ninette.

There's a quiet Breton village 'Mid pine trees sweetly set And the queen-maid of the village Is christened love Ninette. Ninette! Ninette! Our hearts were sad and heavy When we parted, love Ninette.

There's a quaint old Norman village, White-housed beside the sea, Where dwells a little maiden. Love calls her my Nini.

Nini! Nini!

Our eyes were wet with weeping, When we parted, love Nini!

And though far away in England I seem to see them yet Nini comes back at morning, At noon-tide comes Ninette. Nini! Ninette! Here's a song for you, Nini love, And a rose for love Ninette!

London Society.

## California Stage Driving.

California having licked the world with a "Luck of Roaring Camp" and a trotting horse, proposes now to snatch it bald headed in the matter of stage driving. Clark Foss, who is known to more Eastern tourists than natives as the man who tools the coach down the long grade to the Geysers, has issued a challenge to any man to drive against time down said grade, and Baldy Green and Hank Monk, old hands on the Pioneer stage line across the Sierras, have taken the dare. In the days when Washoe was Washoe, when Charley Strong ran the Gould & Curry and Bob Morrow operated the Savage ground, when skies were bluer than they are now and champagne possessed a twang which we shall not taste again till we sparkling springs of heaven—in those days News Lefter frequently crossed the mountains on the box seat along with both Monk and Baldy Green. One moonlight injet (Green was driving) we were skirting the shore of Tahoe. News Lefter was night (Green was driving) we were skirting the shore of Tahoe. News Letter was gentlemanly drunk—no more than melodiously so—and bis voice was lifted in harmony. Strains of his much applanded "Bottle Song" floated on the still cold air. At once a sharp crack broke the flow of melody, and with a heavy lurch to starboard, the coach piched forward. Baldy and N. L. described two converging parabolus, and as they struck the ground, the coach, containing fifteen passengers, two thousand pounds of lugzage and upwards of one ton of har silver, toppied over upon them. Mr. Julius May rolled out of the window, and proceeded, with great presence of mind, to cut the traces. Poor John Henning, extricating himself from the bind boot, set himself to pull at News Letter's leg. At that moment the entire weight of the coach (which had turned over upon its top) rested upon News Letter's chest, who in turn lay upon Baldy Green's abdomen. The six horses had also ter's chest, who in turn lay upon Baldy Green's abdomen. The six horses had also gone end-over-end and were strung on their backs on the road, hoofs pawing the air. What did Baldy Green do! He gathers his lines into one hand, goes down into his pocket for a bite of tobacco, swings his whip clean under that coach which was balancing on top of us, catches the near leader a flick in the tender place below the tail with a snap like a rifle that sends the whole team ten feet into the air, they come down on their hoofs, make one jump for it, the old coach rights like a round-bottomed Chinese joss.—Baldy a-sitting in his place, and News Letter hanging on to the hand rail on his side, and as he climbed back inside the apron, Green says—"Bully: Goon?" "Goon—what?" answered N. L.: "Ain't there no more o' that song?" says Baldy, and he pulls off his hat to mop his billiard ball. Another time we were going down the Kingsbury grade just after it had been opened, along with Hank Monk.—But perhaps one anectote is enough to illustrate the quality of the men who have taken up Clark Foss' challenge to drive against time down the long grade to the Geysers.

#### The English Cricketers in America.

The sixth match of the English Twelve was played at Hoboken, New York, where they arrived, flushed with an unbroken series of successes in Canada, with Twenty-two selected from the St. George's and other New York clubs. The Twelve scored a decisive victory, beating their opponents in one inning, with Jaruns to spare. There was great enthusiasm displayed by the inhabitants, and more than 3,000 persons congregated to witness the game. C. Ottaway, c. Jones, B. Brewster, 29: W. G. Grace, c. Brewster, b. G. Wright, 68: A. N. Hornby, c. Keiler, b. Jones, 17; C. K. Francis, c. Keiler, b. Greig, 28: A. Lubbock, c. Bowman, b. G. Wright, 51; F. P. U. Pickering, b. Greig, 3; E. Lubbock, run out, 15; W. H. Hadow, run out, 3; Hon. G. Harris, c. Lamond, b. Hatfield, 9; A. Appleby, c. Jones, b. Torrance, 4; W. M. Rose, not out, 0; R. A. Fitzgerald, c. Hatfield, b. G. Wright, 0; B, 9; I-b, 4; w, 8; n. b, 1, 22; Total, 249.

— The Illinois press is arraigned for invading the prerogative of the State Su-preme Court and holding it in contempt. We arraign the California Supreme Court for invading the prerogative of the News Letter and holding the State press in contempt.

#### Court Chat.

A gentleman who rejoiced in the title of King of the Bagmen has just departed this life, after a long-and rather prosperous reign. He arrived at the purple in a manner which the Americans would call "smart," And filled his throne on the elective principles. Casumr Morand was the mame of the deceased monarch, who began life by travelley for a large house at Bordeaux. Many years ago be suddenly quitted his humbledwelling in the Fanbourg 8t. Denis, and installed himself in the Fanbourg 8t. German, where the cholern was then raging and carrising off the nobility of the quarter. Casumir used to winder about the streets, and directly he found a house where a Duke, Marquus or Canat had departed the ife. he would go home and write a letter to the dead man, to the effect that, in compliance with his instructions, he had the honor to inform him that the wone he had ordered had arrived in Paris, etc. The heirs never objected to receive the liquor, and to console themselves for their loss, and in two months Casimir disposed of £10,000 works of whe, and was elected King of the Bagmen.

— M. Thiers is fond of being told how well he looks. He even makes political capilat out of his good health. Let us suppose we are at the Essec, enter a doctor. The doctor: "How well you are looking Monsieur be Press dent." A Thiers: "I have to thank the science of which you are so distinguished an ornament for that." A friend. "How well," etc. M. Thiers: "The good wishes which are constantly reaching me from the department, and particularly from the one you so ably direct, are to be thanked for it." A bishop. "How well," etc. M. Thiers, who mail probability cannot make the sign of the cross, with unction: "Indeed, Monseigneur, I thank God my health is good, and I know that it is to the prayers of the clergy that I owe my good health."

Prince Albert of Prassia, whose death is announced, was the youngest brother of the Emperor King William I. His dimeas dates from the meeting of the Emperors in the first week in September, and so hopeless did his recovery then appear that it was positively stated by more than one of our we beinformed contemporaries that he was dead, but that the death was conceased in order not to interrupt festivities to which so much political importance was attached. Prince Albert was born in 1866, and was connecupently twelve years younger than his still how and vigorous brother, the Emperor. He leaves two children, a son, Prance Albert, who held a high command in the late war, and a daughter, married to Duke Widiam of Meckleinburg-Schwerin.

— When the dead "king," shot by the Prince of Wales at Chillingham Forest, was brought to the neighborhood of the castle, her Royal Highness the Princess of Wales came out, accompanied by Lady Tankerville, Lady Skelmersdale, Lady Whernelitle and Lady Sandwich, to in-spect him, and, by command of his Royal Highness, Mr. Downey, of London and Newcastle, took a series of photographs of the dead but'l, with the Prince standing over him, rithe in hand. Her Royal Highness commissioned Signor Burlett, who has been engaged for several years in carving the wood-work of Ahwick Carlle, to make a drawing of the bull. The Prince and Princess of Wales passed through Newcastle recently.

Another International Association has been formed, but one of a very different character from that which, if it only had its will, would abolish property, class distinctions, and, in short, everything but used. This new International Association will have for its object the protection of the rights of women. That noble woman, the Princess Louise of Hesse, who during the late war tended the wounded with an associative which has won for her the affections of thousands and the esteem of all, has been appointed first President. The resolution to term such an association was come to at the last sitting of the Society for the Promotion of Fernale Education, at Darmstadt.

— the French papers have invented a little biography of Sir Sydney Waterlow, the Lord Mayor of London elect, who is stortly about to visit Peris. They growed state "the is an old sportsman, who has renounced the pumps of Satan to give himself up exclusively to stationery. But it will be remembered that some Years ago he was one of the leaders of the turf, and was seen regularly at all the Franch courses. He caused humself to be called Captain Stanley. Captain Stanley has lost something like 1,500,000 france,"

— Their Royal Highnesses the Prince of Wales and Prince Arthur, attended by General Probyn and Mr. Fittagerald, had a deer-drive in the forest of Mr. Mackenzie of Kinkail at Glen Muick, and notwithstanding the day was cold and there were severe snow-storms, they hunched on the hill. On the 14th uit. Mr. George Porbes of Asloin went out staking and killed seven fine stages to his own rifle, one a Royal. This completed the deer-staking for the season at Glen Muick, sixty-four stage having been killed in the forest.

— It is reported that a gambling table will be eatablished at Vaduz, the capital of the little principality between Switzerland and the Austrian Tyrol, which has never been mediatized, owing to its geographical position being safe from any annexation. The reigning Prince is said to have interested a powerful railway company in the construction of a railway from Feldkiorch and Bludenz to Liechtenstein, on the banks of the Swiss Rhine.

"How have you been able to escape all the catastrophes of the Commune?" said the Russian Ambassador to Baren Rothschild. "Because we Israelites have the privilege of crossing the Red Sea with dry feet."

- A speech has been delivered at Langres by the Prince de Joinville, at the in-auguration of a monument in memory of the Mobile Guards killed in the late war. The Prince said that he should like to see a simple statue of a French soldier on the Vendome column, and stated that he longed for the time when national concord should prevail, which alone could conclude the era of revolution in France.
- The Sultan sent some very splendid presents to the Pope lately, consisting of precious embroidered hangings for a room, but, as they were consigned to the Turkish Minister, at the Italian Court, for presentation to his Holliness, it is said that Cardinal Antonelli intimated the impossibility of their reception at the Vat-
- It is stated that the Emperor Napoleon will leave England for Madeira in the Spring, the Royal yacht Victoria and Albert having been placed at his disposal by Her Majesty. The Prince Imperial has passed his examination as a candidate for admission to the Royal Military Academy at Woolwich.
- Baron Nathaniel Rothschild, the eldest son of Baron James Rothschild, of Paris, is engaged on the compilation of a family history of the Rothschilds from 1806 to 1871. The history will contain several interesting letters written by Napoleon I., and hitherto unpublished; also of other eminent statesmen.
- The Nouvelle Presse Libre has an advertisement which runs as follows: "A young man of twenty-five, well brought up, and of good family, wishes to be adopted as a Prince by a foreign or native Prince. Address, Fils adoptif, à M. Rodolphe Mossu, Vienne Scilerstrasse, No. 3."
- The young Countess de Montfort was returning recently from a drive in the Bois de Boulogne, when she was suddenly seized with the pains of labor, and before she could reach home gave birth to a boy in her carriage. The mother and child are doing well.
- The Pope has added to the list of Catholic saints the late Queen Maria Christina of Naples, Nicholas von der Flue, the French priest Jean d'Ars, and Pope Eugenius III.
- Mr. Gladstone and Mr. Disraeli have been created "baronets" by the Emperor of Brazil. Surely not warranted to run well in double harness as thus announced.
- The Queen has contributed £150 to the funds of the "Association for Gaelic-speaking Students from the Northern Synods in connection with the Church of Scotland."
- Prince Hassan, eldest son of the Khedive of Egypt, who has finished his Oxford career, will, it is understood, make a three years' tour round the world.

# Special Brevities.

- For many years Paris has not been so full of Americans as at present. Every hotel is full to overflowing, the larger number of the guests being our compatriots. At the Grand Hotel as many as two hundred people have been turned away in a single day; and, from the Grand, ranging down the list to the modestest pension, every inch of room is occupied, and has been so for several weeks. Not only Paris, but all Europe is full of Americans. The dozen great steamship lines plying between the two continents have been taxed the past season as never before. Every vessel has come out loaded. It has been difficult, and in some cases impossible, to suppress their arrival. The stream of Americans promises to continue during the winter, despite the hundreds who are already beginning to plume themselves for a southern flight. Many families have taken apartments for the coming season, and many others will remain in the hotels.

  So intellect is any nature of the part of the coming season, and many others will remain in the hotels.
- So intellect is only phosphorus on the brain, after all! At least thus reasons a Paris medico in forty quarto pages of a report to the Academy of Sciences. According to him, you have only to introduce phosphorus into the skull of an idiot, and you at once transform him into a man of genius. We are not told, however, how the phosphorus is to be introduced. The theory is founded upon observations on the battle-field, where at night the writer has remarked phosphorescent vapors issue from the mouths and noses of the killed. If we might be allowed to make a issue from the mouths and noses of the knied. It we might be allowed to make a suggestion, we should think that the needed phosphorus might thus be inhaled. In this manner talent would never be lost to the world, and a man might bequeath his "mental faculties," as he now does his money bags or broad acres.—Graphic.
- Messrs. Alfred Brett & Co., of Leadenhall street, say in their last monthly circular: "The carrying trade of the world is increasing so constantly and developing so rapidly, that no very permanent depreciation of shipping property need be apprehended. At present the most serious matter for concern on the part of the be apprenented. At present the most serious matter for concern on the part of the steam shipping interest is the encomous cost of fuel, which threatens to eat up all their profits. In the case of steamers loading to some of the Indian ports, the expenses of fuel and canal dues together must, in several instances, exceed the total amount of the outward freight. It is to be hoped that the worst has been passed, and that we may shortly be able to get this important article at a more reasonable price. price.
- A Chinaman in the station house got married. Thus the restless fish, reposing uneasily in the frying pan, leaps heedlessly upon the glowing coals.

— At the Belfast Police Court, on Saturday, a number of persons were summoned for having taken forcible possession of houses belonging to Sir Charles Lanyon on several days during the riots, and for refersing to leave the same. It appeared that these people, who were Roman Catholies, had been hinted from the Shankhill Road, and had taken possession of the houses, from which the Protestant tenants had previously been ejected by an opposition mob. The cases were adjourned to see if Sir Charles would accept them as tenants. About one thousand houses changed tenants under similar circumstances during the riots.

— Twenty-two thousand pounds for a ceiling! The statement, fabacous as it looks, is true. The Marquis of Westminster has just been farmshed by Mesers. Cubitt, builders and contractors, with a ceiling costing the enormous sum of \$22,900. It consists of the best Spanish mahogany, which is two teet in thickness, a foot deep of which is claborately carved around with the letters W. G. The cornice to the ceiling is of polyshed chony of the finest description, and is three feet wide. Upon this are magnificent paintings, copies from the great masters.

A rather solemn scene was witnessed at Clerkenwell Green lately. Archishn Manning had been addressing a crowd of about 5,000 (atholics on tectotalism, and in the carnestness of his appeal he asked his andenne to knied down and pledge themselves, by all they held sacred, to abstain from intoxicating drinks, Immediately vast numbers of those present knelt down on the hard and drity stones, and solemnly declared themselves to be total abstainers thenceforward.

- Advices from Rochefort state that the Rhin steamer, just arrived in that port, has accomplished one of the most rapid voyages known. She left Toulon of rewe Cladfords in the beginning of February, and has thus made the tour of the world in seven months and a few days. The Jara, which preceded her by six weeks, is still at sea. If the Rhin does not stand in need of repairs, she will immediately recommence her service in conveying convicts.
- In pursuance of a request issued to the clergy of his diocese some months ago by Arcubishop Manning, the employment of adv cosalists in the choirs of Roman Cathobe places of worship is now dissort nucl. The change took place lately, and notwithstanding that in many cases additional male voices in the shape of tenors and satis have been substituted for the ladies, the result was by no means satisfactory, so far as the ear is concerned.
- It is recorded in some of St. Maiachy's prophecies that twenty one Popes are to succeed Puis IX., and that the last will be called St. Peter, even as was the first. St. Maiachy, who was an Irish sount of great repute, foretold some attribute to each of the Popes; for instance, to Peis IX., \*Criac del crux\*; and to his immediate successor, \*Lumen del calum. Qui vivra verra.
- "I can say papa and mamma" represents perhaps the newest thing out in the form of artistic mendacity. A child of very tender age is deposited on a pavement, and this is written in chalk by its side. When any coppers are dropped into the child's lap they are removed by the impudent knave who set the trap and remains on the watch.
- The "Howling Repentants" is the name of a new sect which is said to have made converts in London. Their practice is summed up in this pithy sentence: "They how lat all convenient periods during the day, and at two periods during the night." They in effect regard the world as a howling wilderness, and use it accordingly.
- The monopoly of manufacturing lucifer matches has been put up to contract in France. Five tenders were made, and it is said that there was more than one offer to pay the State twenty million frances a year for the monopoly. As the result was not to be known until the 12th inst., this sum must not be accepted as official.
- are able to show that no expense has been mentred by the Hodorn Valley improvements, that they have been paid for with £100,000 to spare) by the improved value of the land which they caused to be vacant.
- Many fine paintings by leading French artists have gone to the United States during the present season. The Hon A. D. Borie has been a large purchaser, also Mr. N. C. Gibson of Philadelphia, the latter gentleman paying, as we have heard, 40,000 france for a Millet.
- A manufacturer in Bristol made a monster umbrella for an African chief. It is 65 feet in circumference, the lancewood fibs being 9 feet long, and there are 140 yards of material in it. It is covered with red, blue, and white chintz, and takes two men to expand it.
- Various French provinces have now named their wines. Some call their vintage "the Loan wine;" in Province it is "the wine de la Dehverance;" and in Dauphiny, "the wine of Cyclops," in allusion to M. Gambetta's recent visit and his single eye.
- At Bow street police court, lately, Mr. John Hampden—the gentleman who maintains that the world is flat—was accused of libeling Mr. Alfred Wallace by means of a post card sent to the editor of the Field. The accused was committed for trial.
- It has been ascertained that all the French nouns representing work and luxury are masculine, while the seven capital sins are feminine.

# A Domestic Dialogue.

The London Comic, Fun, has the following upon the "hardness of the times:"

He .- What is the grief that clouds my Chiee's brow,-She.—Why do her lips such angry phrases utter?
She.—Oh, pooh! I don't know where to turn, I vow,
For eggs and butter!
He.—Nay, heed not eggs and butter, Chloe! beef
And lamb and mutton are rather patronizing.

She .- In that suggestion I see no relief, Since meat is rising !

He .- Then let fat bacon hiss on embers hot,

Or sausage, which cheap food for hungry soul is.

She.—A good suggestion, dear !--considering what The price of coal is !

He .- Alas, each scheme I urge has met defeat,

Adown my cheek despair's chill teardrop trickles.

She.—We have one refuge left—Australian meat—

Tinned meat, and pickles!

# England and Her Colonies.

At the recent Annual Meeting of the Social Science Congress at Plymouth, Mr. Edward Jenkins, the author of "Ginx's Baby," read a paper on the Colonial Question, its present position and the policy of the future. The author hit right and left, and in vigorous terms denounced the existing system as one of misrule. one seemed to know what he was about. The Colonies were a great trust; but
the nature of their relations to us, or of our responsibility to them, had never been
clearly defined. Then the Colonial office had been a gigantic failure. Some of our
most distinguished statesmen had taken up the reins of the Colonies at the Downing street bureau, only to develop conspicuous failures. We could not lay our ing street bureau, only to develop conspicuous failures. We could not lay our finger on a single statesman, however eminent, who had occupied the post of Colonial Minister within the last twenty-four years, and there were thirteen between 1884 and 1870, who may not be charged with glaring blunders of polecy of administration, so inherently vicious was the system, so impossible was it for any man to master all the details of government thus extensive and diverse. If all this be true, and I do not care to say it is not, what up-hill work our Colonies must have had to make headway against such impediments. Speaking of federation, he says: There are two forms, one or the other of which must necessarily be adopted: 1. A There are two forms, one or the other of which must necessarily be adopted: 1. A Federal Union of separate States or governments, each preserving its autonomy and sending to a tederal council, empowered in general matters to act for the whole, representatives selected by the governments. 2. A Federal Union of different States into one people, each State possessing a certain amount of power and autonomy, but conceding to a central government chosen by the whole people of autonomy to the states composing the federation, certain powers and authorities, either coordinate with, or superior to those of each State, over all the citizens in common; such federation are those of the United States and Canada. In the first case the federal authority deals only with the separate governments, which send to it their representatives; and it is clear that such a federation may at any time be endanrepresentatives, and it is clear that such a federation may at any time be endangered by the simple refusal of the State government to perform an act enjoined by the constitution. Whereas, in the second case the federal administration deals directly with individual citizens, and has a collateral authority with the government of the State. Mr. Jenkins was followed by Mr. Labiliere, with a paper on "The Permanent Union of the Empire, and How Maintainable." The author had a difficulty in maintaining the hypothesis upon which be stated and he clearly "The Permanent Union of the Empire, and How Maintainable," The author had no difficulty in maintaining the hypothesis upon which he started, and he clearly demonstrated that permanent union was desirable. United in a great British Federal Union, we should stand in the position of equality beside the American Union or any other power; divided, neither England nor the Colonies, for generations, would be able to do so, and we should be forced at no distant date to resign the leadership of the Anglo-Saxon race to our American cousins. Mr. Wergarth concluded with a paper on the "Policy of Extending the Empire." A marked feature of the meeting was the interest which was taken by those who had not previously estudied the questions moored.—Evropsen Mail. studied the questions mooted .- European Mail.

Most plants in vigorous health, it is stated, will bear an application of water heated to 140 degrees Fah., and most insects infesting them can be killed by water heated to 120. Hot water is easily applied to house plants, and hence a ready means is furnished for destroying large numbers of plant vermin. A thermometer thrust into the water will quickly show the degree of heat, and by immersing the plants in it for a minute or two, the insects will be cooked into harmlessness.

The Post says it will now "browse on pastures new." Should not this read "on Pipers new!" "Browsing" on Piper is good, tho it should require a party who had educated his stomach on boiled crow to do it.

#### Peeps at the Parsons.

The Brick Lane Branch of the United Grand Junction Young Men's Christain Association is conveniently and commodiously situated on Sutter street. The stranger beguined into visiting their rooms finds his care attracted, one entering, by a notice to "keep an eye on your lats!" and he remarks that every one present keeps a light grip on them too. The newspapers are brooked down, the magazines are branded and ear-marked profusely, the tim drinking cup is chained to the hydrant, and over all there is a chill, frigid, pauper-like atmosphere that is enough to make one's teeth charter, a chill, frigid, pauper-like atmosphere that is enough to make one's teeth charter, a chill, frigid, pauper-like atmosphere that is enough to make one a teeth charter. It irresistibly calls to mind Dicken's work-klouse scene. Grim-visaged Christam young men are on the watch for the offender who dare district the older of sanctity pervading the place by tipping his chart broke, or whispering. The visitor may perhaps be fortunate enough to see a bestle-browed, swag-helied saint in broadcloth, who tries to hide the unfortunate expression of his face under a stereotyped smale. This is Parson Cox, better known as "Halle-ligh Cox," who, after making himself odious to several congressations in this city, has at last worked himself into the Presidency of this Association, with a fat salary and little to do. The too confiding stranger will soon discover to his cost that this parson is familiarity is of the insufferably vulgar type, that his manners are of the snobby, and the emanations from his stad-fed person are not sweeter than the ende snobby, and the emanations from his stad-fed person are not sweeter than the snobby, and the emanations from his stad-fed person are not sweeter than the snobby, and the emanations from his stad-fed person are not sweeter than the snobby and the end of the control of the scaped crimina's, although a glance at the snineter expression of his face and the "forchead vilamous low" certain the snineter expression of

Rev. M. Ward, missionary to India, has been spying out the makedness of the land and its inhabitants, and imparting his experience to the Columbia-street Baptist Charch. These benighted Hindoos believe in a Trinity. They descend to lower depth yet. They worship an incarnation of Deity, casied Krishna, and a Sacred Bull. The speaker proved to demonstration that this Krishna was a feele copy of Christ, by showing that he flyed somewhere about 2000 B.C., and had 16,000 milk-mands to attend to his divine person. The speaker then took the Sacred Bull by the horns and brought it home to each one of them. How many of them in this enlightened band were secretly hugging a Bull to their breasts? Some worshiped Memmon—what was that but a Golden Caif? Others adored woman—what was that but a Sacred Cow? Jupiter Joved the ox-eyed Juno—Ah, brethren, is there not an ox-eyed you-know who is playing the dence and all with your piety? Is not the worship of the Sacred Cox? Applier Joved the ox-eyed Juno—Ah, brethren, is there not an ox-eyed you-know who is playing the dence and all with your piety? Is not the worship of the Sacred Cox? I have seen the sacred waters of the Ganges. It was deplorable that this custom was also gaining ground among as, for he had heard that devout mothers often immolate their offspring in the sacred waters of North Beach. But the nost interesting part of the address was when the speaker imitated the Indicrous anters and ribunding spectures of the Brahmins while praying. He turned up the whites of his eyes, wagged his head from side to side, smiffled through his nose, and ground and bellowed till the audience were fairly convulsed. Poor Brahmins, if they could only see what donkeys they make of the medieve!

Ascension robes will not be required again for twenty-five years. Elder James White and his wife predict the long-expected toof in the year 1848, positively without fail, and Elder White is "editor of a religious periodical, so it must be so. He is a Seventh-Day Adventus. Everybody knows what they are. They have creeted a large tent on Market street for a protracted meeting. Elder James and his elderly wife are the chief protractors. The ungody mistake it for a cruea tent. Yea, verily, and confound the venerable Elder with that son of Beliat, Yankee Robinson. Thus do the heathen rage, and insult the Lord's anointed.

A paragraph is going the rounds recommending clergymen to shave, as one important adjunct to eloquence, the play of the features, is obscured by a beard. "Play of the features" is good. We hope our pursons will follow this advect. They are not without need of "adjuncts to eloquence." Rev. Carpenter acrapes his face every day till he looks as chile-like and bland as Ah Sm. but somehow it don't help his eloquence. We suggest they shave the tops of their heads also. The Christian Young Men all do, and it makes the dear old things look so holy.

<sup>&</sup>quot;Rev. Cox can preach a halleluinh-jingle sermon lead a sanctification prayer meeting, or sing "John Brown" Body" at a Ward Club." - Parisin Methodist. Now see how the spirit of ency burns in the bosom of this Pacific Methodist. Because a worldly political committee will not bire him to twangle "John Brown" through his evangelical nose, he is fain to misprize the gifts of his brother in Christ.

#### A Curious Taste.

I've met a Russian Prince, and he Preferred 'long sixes' for his tea; I've also known an Esquimaux Who of raw vitriol loved his "go:"

I've likewise seen a party, whose Delight it was to bet—and lose: Moreover, I have heard of men Who like to go to bed at ten:

Besides, there are some folks alive Who say they love to rise at five: And there are some who doat on Tupper: And some love pickled eels for supper:

Others a predilection show For tea composed of birch and sloe: And some express a downright wish. To have train oil as sauce with fish.

But there's an individual yet Whom, I confess, I never met; That man—outside of Bedlam's walls— Who takes delight in Morning Calls.

# American Enterprises in England.

There are always, especially in England, a number of journals ready to pounce upon anything calculated to cast discredit upon American enterprise, and, unfortunately, at the head of this list is the greatest of all newspapers, the *Times*. It would now be impossible to estimate the injury these papers have inflicted on Englishmen, for it is one of the stupid fallacies widely held, that a man who wants money for a legitimate and profitable object, and cannot get it, is the only one injured; as if the man who has money, and is driven into bad investments, because jured; as if the man who has money, and is driven into bad investments, because the is diverted from good investments by false information is not also injured. It is admitted that the United States form the grandest field open; but it is asserted fraud is there so prevalent that the advantages Nature has bestowed are in a measure neutralized. Were we to compare the jobbery and corruption of railway construction in England with the jobbery and corruption of railway construction in America, the stealings in England would be found far to exceed the stealings in the United States. Without going into detail, there is this broad proof of the fact: Of all the countries of this globe, England ought to be the most profitable to the rail-way proprietor; of all countries of this globe, England has been the least profit-able; because a large portion of the capital raised for railway construction has been jobbed away to land owners, to contractors and railway directors, Parliamentary agents and solicitors, etc. There is always this excuse (and it really has been the salvation of England's name, which would otherwise, for dishonesty, be notorious throughout the world), that it was their own money they thus stole from each other; whereas, if English capital has been embarked abroad, and dishonesty has resulted, is is foreigners who steal their money, when the denunciation of those "rascally foreigners" is general. But reverse the position, and imagine foreigners to have stolen that of each other, and a dismal howl would have arisen from all parts of We know of one Financial Association—a cormorant in theft—professthe earth. the earth. We know of one Primarchi Association a common their processing to deal only in good English railway securities; only, too, with such men as Sir Morton Peto, to whom its Chairmen some years ago proudly pointed when addressing its shareholders, and heavy with the weight of respectability. Let any pressing its sustrementers, and neavy with the weight of respectability. Let any foreign corporation run such a career of spoliation and mismansgement as this well-known Financial Association, and there would be no words sufficiently strong to denounce that ring of robbery and corruption. But it is in English, purely English, with all its investments in England, and, happy for it, all its victims, too; so not a word is said. We maintain, then, that not only is the United States the best field for investment, but that, in honesty, it is a safer field than England.—Anglo-American Times.

## New Photographic Achievements.

New Photographic Achievements.

A method of printing from photographs adopted in Prussia consists in the employment of a sensitive film of gelatine contaming bichromate of potash. The film is spread upon thick glass, and after exposure in the camera in the usual way, the photographic image is fixed by liquid ammonia. The picture is invisible until the inking roller has passed over the glass plate, which may be printed from in much the same way as a lithographic stone. About five thousand impressions have been taken from a glass plate prepared in this way, the plate being in all cases strong enough to be capable of being passed through the press without injury. The process has been adopted at Krupp's works at Essen. Again, not the least among the important achievements of Photography is that by which the naturalist is enabled to obtain directly upon the engraver's block perfect copies of any desired specimen, the form of which he may wish to illustrate or preserve. Not only does the camera replace the designer's pencil, but the skillful and laborious services of the engraver are also dispensed with; for, by the aid of chemically-prepared surfaces, sunlight is made to do the work of both copyist and engraver. As illustrating the practical value of these new methods, we learn that Professor Agassiz has made use of both the Albert and Woodbury processes in the illustration of his forthcoming 'Revision of the Echini.'' "Revision of the Echini."

# Our Supreme Court.

Some of our newspapers seem determined to convince the world that the Supreme Some of our newspapers seem determined to convince the world that the Sapreme Court of California is other incompetent or dishonest. This is a poor encouragement for people to come and live in California, or to send their capital here for investment. The fact that the Supreme Court granted new trials in the cases of Pair and Devine, has itermished the occasion for these attacks upon the credit of Our State on the first trial of Mrs. Fair for murder, the prosecution offered testimony to show that previous to the homeories she was of unchaste character. She had not offered any testimony upon that point. Now we state without hestation, here of confirmation by all second lawyers wherever Angle-Saxen juraprudence prevails, that the rule on this subject, in its condensed form, is simply this. "Good character is always presumed, and evidence on that point cannot be received mises. the party invoking good character introduces evidence on that point. Now Mrs. the party invoking good character infroduces evidence on that point. Now Mrs. Part did not prepose to introduce evidence of good character. She was perfectly, content tests upon the presumption of the law. She objected to any evidence being given as to reputation. The Supreme Court were therefore composed to award here new tests. In the case of Devene, a witness for the prosecution testical that Devine to the that he had known as a Way View, the place where the field that Devine tout her that he had ki ed a man at Bay View, the place where the body of the murdered man was found. It was then proposed to contradact the witness by reading her testimony taken before the Coroner's jury, to the witness by reading her testimony taken before the Coroner's jury, to the establish to be not be that he had killed a man, but due not say where. This effect that Devine tout her that he had killed a man, but due not say where. This testimony was executed by the Court We appeal a can to all Angle-Saxondom, to many the the Supreme Court were not compelled to grant a new trial in the case. Bay windfur the superior court obeyond the law, rather than the wishes of a And yet, because the Superior court obeyond the law, rather than the wishes of a community whose feelings had been outraged by two atroctors murders, its judges have been wantonly abused, accused of caprice and even of sympathy with the markers and the state of the matter, for the judger, in both cases, murderes. There was no caprice in the matter, for the judger, in both cases, appured fixed principles, established by long and unbroken line of decisions. There was no sympathy with the murderers, for both were wanten, treat crons and atwas no sympath, with the morderers, for both were wanten, treac crows and attrocoms in all cour datacles; and, in Mrs. Fair scase, four of the judges were strong friends of the mordered man. And yet such a sympathy for the morderers, even if friends of the morderers are not been more subversive of pulsac justice than a decision warped by principle against the prisoners. The acquittal of a morderes like Mrs. First is a public calamity, yet, after all, must be cassed among those activities of the more distants the current of justice, but do not interrupt its general flow, But when the reputation of our court of last resort is desired by unjust apprecious, But when the reputation of our court of last resort is desired by unjust apprecious. But when the reputation of our court of last resort is defined by implied aspersions, our State suiters in all its material interests in a degree greater than would be caused by setting liouse an hundred assessins. We assure our readers that all these assessing are wholly without foundation. They are either the children to as of personal speem or the panderings of unprincipled editors to a thought ess semipersonal special of the panderings of implified enhance and administration ment, who it along by a portion of the public, which cannot recognize in the regular proceedings of courts, or in the rides of evidence, a shield of imposence and a proproceedings of confee, or in the roles of evidence, a such of inforcace and a pro-tection to me and property without which society cannot exist. Unfortunately there is, and probably a ways will be, a class of people to whom the right of trial by jery, the right to cart witnesses, the rules of evidence, and the right to have counsel, are all the limit alones, if they stand in the way of hanging, out of hand, Courses, are all, "to lime at thes." If they stand in the way of hanging, out of hand, every person who is strongly suspected of murder. Such persons condemn lawyers for a feating. Such that they can make, it being understood, of course, that every person who is a case of crime is guality. Such as persons do not reflect the semiment of the people of tarioura. We have a Supreme Court of which we are proud. Its judges are an earlied experienced, soher and industrious men. At the present time, from some improvements which have been effected in the methods of consultation, and a consequent expedition in the decision of cases, the court is more popplar than ever. These foolesh attacks do not affect the estimation in which the const is held be read home; and it they create a prejudice against Canfornia abroad, and tend to restrain population and capital from coming bother, it was not be the first time that those who ought to be the guardians of our interests have betrayed them. At the same time this affords occasion to repeat a word of caution to the them. At the same time this affords occasion to repeat a word of caution, to the legs profession, whech have already been were uttered by the Supreme Court in their decision of the case of the Peopo's. Devine. Our lawyers are too prone to take every chance it they can only win their case. They try to stretch the russ of law, and particularly its ruses of evence, and thus, as the best of judges are not infallable and the burry of trials before juries, errors often are committed for which the judgement must be reversed by the Supreme Court. Then the Supreme court and the presenting judge are visited with a causaire, which, if it is due to any one, becomes to the waver who his mished the court. It will be opening a new era for our State when such experiments are abandoned by the profession.

San Francisco at the Vienna Exposition.

The Kimbaic Maintiacturing Company of San Francisco Live a ready forwarded to the Visina Exposition.

The Kimbaic Maintiacturing Company of San Francisco Live a ready forwarded to the Visina Exposition one of their patient Wood C Spring Buggies, and have now in precess of censtruction for this object one light friedting wagon, to weigh but one handred pointed. The gear wil be of secreted brekory, and varnished to show construction, the body plan back. Also, a Wood Spring Top Buggy, to weigh two brested and fifty pointed; and a double Placton, to carry four, to weigh three landered permiss. The body of the trouting buggy was be of caure, veneered in boxwo d and jolished. The seat will be trimmed with cloth from the Mission Woolen Mills. Woolen Mills.

# A Fancy.

I suppose if all the children Who have lived through ages long Were collected and inspected They would make a wondrous throng. Oh, the babble of the Babel!

Oh, the flutter of the fuss ! To begin with Cain and Abel, And to finish up with us!

Think of all the men and women Who are now and who have been, Every nation since creation That this world of ours has seen ; And of all of them, not any
But was once a buby small;
While of children, oh how many

Never have grown up at all!

Some have never laughed or spoken, Never used their rosy feet; Some have even flown to Heaven Ere they knew that earth was sweet; And, indeed, I wonder whether,

If we reckon every birth, And bring such a flock together, There is room for them on earth? Who will wash their smiling faces? Who their saucy ears will hox :

Who will dress them, and caress them? Who will darn their little socks? Where are arms enough to hold them? Hands to pat each shining head !

Who will praise them? who will scold Who will pack them off to bed? [them?

Little happy Christian children. Little savage children, too. In all stages, of all ages, That our planet ever knew ! Little princes and princesses, Little beggare, wan and faint,

Some in very handsome dresses, Naked some, bedaubed with paint.

Only think of the confusion Such a motly crowd would make ! And the clatter of their chatter. And the things that they would break!
Oh, the babble of the Babel! Oh, the flutter of the fuss! To begin with Cain and Abel,

And to finish off with us !

# The Planets and Disease.

A physician resident in Mexico, Dr. M. S. Knapp, has put forth a curious theory of the influence of the planets upon disease. The powerful effect of the sun's light and heat upon all life is, of course, a truism. Dr. Knapp maintains that its attractive force, when reinforced by the attraction of the larger planets, is almost equally powerful. Changes in that attractive force would then produce changes, good or bad, in the conditions of life. The same result is reached in a different way. Health depends, in great part, upon the gravity of the atmosphere breathed. On a mountain-top, respiration becomes difficult, the head begins to swim, the On a mountain-top, respiration becomes utineau, the head begins to swim, the limbs lose their strength. A great pressure of air produces much the same resulta. Therefore, again, anything that affects the gravity of the atmosphere affects life. The attractive force of the planets does this. The consequence is clear. If this theory be true, we should find that the greatest sickness occurs at the periods of greatest disturbance of the air, that is, when the planetary attraction is greatest. This happens when the planets are nearest the sun. Their forces of gravitation This happens when the planets are nearest the sun. Their forces of gravitation are then combined; a sudden change takes place in one of the most essential conditions of life; and animals and plants die. The supposition explains the blights in vesectation that usually precede and accompany epidemics. Some curious statistics are submitted, in an attempt to show that the facts of the past verify he new theory. Jupiter is nearest the sun, that is, reaches his perihelion about every twelfth year. His late dates have been 1868, 1856, 1845, 1843, 1821, 1809, 1797, 1786. Every one of these has been a cholera year for India, and a time of pestilence throughout the world. It is also claimed that every twelfth year, as far back as 1572, has been fruitful of epidemic sickness. Saturn revolves in a little less than 1992 years. He passed his perihelion in 1856, 1826, 1797, 1767, ctc. His disturbing influence, although less than that of Jupiter, must greatly strengthen the latter, whenever their perihelia coincide. Every 59 years this happens. It happened in 18-6 and in 1797. In the former, the yellow fever did its deadliest work at New Orleans. In 1845, at the time of Jupiter's perihelion, the Irish ship-fever began its rawages. It was sunceeded by the cho-cra, which culminated in 1856. Going back to 1797, we find that the yellow fever then visited every sea-port of the United States, while the cholera raged in Hindostan, and sickness was prevalent everywhere. By such statistics, Dr. Knapp essays to prove his theory. He comes near enough doing so to make us wish that he had suffered us to keep the blies of ignorance instead of revealing the fact Jupiter will reach his next perihelion in 1880; that Jupiter and Saturn will meet in 1881; that Uranus and Neptune will have coincident perihelia in 1882; and that the next perihelian passage of Saturn will be in 1885. The prospect for continual change in our factle atmosphere and consequent continual disease is certainly fair, if (a very important if) the theory is consequent continual disease is certainly fair, if (a very important if) the theory is true. There has seemed to be small danger of the days of star-worship coming back again. But every religion is, according to Lecky, founded on fear. If we must perforce be afraid of the planets' perihelia, we at least lay the foundation of the long-forgotten faith.

The new code exempts only druggists, imbeci es and gamblers from Cores jury duty Herein we detect the craft of the framers of the new code: They ner s jury daty Herein we detect the craft of the framers of the new code: They provided for their own exemption under the second head, while carefully reserving their qualifications for the office of Coroner.

#### Little Men.

Little people are decidedly placed at a disadvantage. There is a general disposition to laugh at, or, failing that, pity them. Now, to be bughed at is a graveting in the extreme, and to be compassioned except at a coptions periods, very mertifying. So it is not surprising that the small individuals, in suffedence, develope a number of decidedly objectionable characteristics. Such is the case. They are invariedly toward, perky and frage. Their during its very precome, and so they endeavor to assert it upon all possible occasions. There is an universal find acy to smith them, consequently they try to humiliate other people. Their opinions are array listened to with much outward show of respect therefore they loady shout them whenever they have the opportunity. Certains there have been great mention have at the same time near little, right the first Nandson but it is more definite. who have at the same time been little ride the first Napoleon - but it is more difficult for ministure persons to assert a position than it is for comparative geants. Much respect was undoubtedly paid to Dr. Johnson, but that worthy, besides by ng blessed with a ready tongue, from which wisdom flowed spontaneously, was a very hig fellow, whose muscles were calculated to attract attention and command repig rect. Possibly the learned pedant had to thank his physical as much as his manufacture and present and the following the following the following the pedes for a little fellow to attempt to assume the role anatometh by the great decrease. He would only set laughed at for his pains. Let any ord pary individual be accosted by two gentlemen equally well attired and of equally good address, the only account of the general equality and arrest and equality agont and rest. The support of the other of limited size. Which we're attended to first, and which we need to make homage! Why, the big individual in nine cases out of ten. This will be without there being the slightest intention of womening the other's susceptibilities the choice is made unconsciously and spontaneously. But the little man is, on that account, none the less morbified, and none the less disposed to resent in the most foreibe, and at the same time most polite manner, the slight put upon him. Or supposing a similar pair are speaking at once, which will gain the ear of those who are addressed. The query really requires no answer. As a rule, the opinions of little people except by a vast display of pertinacity and the exercise of real ale ity http://popee-except va.vast.display of pert bacity and the excress of real activities have acrued a reputation—are received with something approaching contempt or indufference. At the best the speakers are patronized. A theory promutgated in a room-full of company by a little man, though supported by opinity as sound arguments as a proposition advanced by a more bulky advocate, wit not be nearly so favorably received. Personal influence, even in this philosophical age, is a tremely potent. The more fact that a certain man esponses a certain cause indices considerable support. People do not like being convinced or taught by people they deem inferior to themselves. Thus there is a prejudice in some men's minds against being instructed by a being they feel they could treat as the school-master was wont to use them in their boyish days when they played truant and were detected. They do not like to own that such an one possesses more wisdom than themse we hay, that he is even owner of as much, although such may be the case. But they stand reproof from a man bigger than themselves with tolerable composure, and tacitly acknowledge that he possesses more personal influence than they do. We have only to look at the current literature of the day to hearn what a bard time title men have of it. Did any one ever read of a here who was very small. On the contrary, the hero s are mostly immense beings, who perform deeds almost calculated to make Hercules himself blush with envy. The little men are generally the to make Herence units odds with envy. The little men are generally the manghty characters of the books, and addicted to every description of monoses. At the best they are called upon to sustain the breadty-comical parts, and their many eccentricities are produced merely for the purpose of engendering middle. The usurous money lenders of the novel notorious for their ulter villary are The instruction model remarks of the movement of the many respect individual little creatures. All this is simply because, though authors may respect individual little man, they do not by any means evenerate them in the abstract. The novelists merely minister to the popular taste. They know perfectly abatract. The noverness merely indirect of the popular cases. They know presently well, that there is a strong probability that their heroes would not be taken kindly to if they were under the average hight, and that it would need powerful witing to induce readers to take any interest in them. Why, wemen never picture themselves marrying small men. Probably most of them would not like the idea. Many do so, undoubted y, but then few people's day dreams are remixed in their after lives. It must be admitted that little men have a hard time of it. It is not surprising that they become sarcastic and cynical, noney and domin ering: feminine and irritable. Constant dropping will wear away a stone; asvertending self-assertion is apt to make a man a concested prize. Nor is it easy to see how little men are to help themselves. If they remain quiet and unobtrusive they sink into obscurity, if they act in a decided manner they probably become checky and importment. But yet it is somewhat trying for a little man to play second fiddle to a big fellow who has not got any more brains than be has himself. It is more than that; it is humblating. What are the luckless beings to do, then? Cultivate their objectionable qualifications? Become more noisy, pushing, impertinent and conceited, etc. Or quietly submit to what really appears to be the inevitable? We leave other people to answer the questions, for it is certain that those most interested would dee une of the content to act upon any suggestions we might see fit to offer. At the same time, while owning that we are occasionally moved with real compassion on their account, we often feel angry when witnessing little men's self-assurance and ridiculous antics. There is really no just reason why they should dislike those who are bigger than themselves, and imagine them their natural enemies. It is a great pity that a few, by their actions, plainly indicate that they do this.—Liberal Review.

#### Forever.

Forever! 'Tis a single word! Our rude forefathers deemed it two; Can you imagine so absurd We bless thee! Whether far or near Thy dwelling, whether dark or fair Thy kingly brow is neither here Nor there.

Forever! What abyams of woe
The word reveals, what frenzy, what
Despair! Forever (printed so)
Did not.

But in men's hearts shall be thy throne, While the great pulse of England beats; Thon coiner of a word unknown To Keats!

It look, ah me! how trite and tame!
It fails to sadden or appal
Or solace—it is not the same
At all.

And nevermore must printer do
As men did long ago; but run
"For" into "ever," bidding two
Be one.

O thou to whom it first occurred
To solder the disjointed, and dower
Thy native language with a word
Of power;

Forever! passion-fraught, it throws O'er the dim page a gloom, a glamour: It's sweet, it's strange: and I suppose It's grammar.

Forever! 'Tis a single word!
And yet our fathers deemed it two:
Nor am I confident they erred;

Are you? - Flyleaves, by J. C. Caverley.

## The Position of the Horse in Modern Society.

In spite of the inconvenience, as yet on the whole slight, caused by the "horse epidemic," there are but few persons interested in public health and morals who will not be glad of it, if it calls public attention in a serious way to the necessity for some change in our treatment of horses, at least within the limits of great cities. What is the exact nature of the difference between our duty to our fellowman and our duty to the lower animals, or whether there is any difference at all; whether there is any difference in kind between cruelty to a horse and cruelty to a servant; whether the one can be practiced without serious injury to the moral nature any more than the other; and whether, in short, "the beasts of the field" are not entitled to a higher place in systems of morality than has yet been accorded them, are questions which are now at last beginning to receive i good deal of discussion, but we do not purpose taking them up here. We merely wish to point out the striking illustration the prevailing horse disease affords of the importance of the part which this animal has come to play in our commercial civilization, and of the close relation there exists hetwen his physical condition and our material interests. Our talk has been for so many years of the railroud and steambeat and telegraph, as the great "agents of progress," that we have come almost totally to overlook the fact that our dependence on the horse has grown almost pari passu with our dependence on steam. We have copied up great lines of steam commitation all over the country, but they have to be fed with goods and passengers by horses. We have covered the ocean with great steamers, but they can neither load nor discharge their cargoes without horses. We have collected at the mouths of our great rivers and at the intersections of our railroads vast bodies of people, covering miles on miles of area with their dwellings and factories, but they can neither load and clothing on horses. More than this, we have within the last few years made horse la

This increase of our industrial and commercial dependence on the horse has, however, been so gradual, as quiet, and has issued so naturally from the state of things prior to the introduction of steam, and has been so completely overshadowed by the great applications of science to industry and iocomotion that little or no thought is seen between the stangers. Indeed, most of us have well-nigh forgotten that the horse was an animal like ourselves—liable to pains and aches and death. We have come to think of him as a machine, on whose endurance we could calculate as on that of an engine, and for whose mortality we could make ample allowance in our business under the head of "wear and tear." We really ough, therefore, to be thankful that the present epidemic has brought us face to face with the startling fact, that the sudden loss of horse labor would totally disorganize our industry and our commerce, and would plunge social life into disorder, would threaten the lives of hundreds of thousands of human beings, especially if it occurred in winter, and might expose our great cities to destruction by fire. In short, we are now for the first time foreibly reminded that a plague might break out among horses, as plagues have broken out among men, which would sweep them away by the hundred or thousand every day, and which would momentarily baffle ecience. What we would now bring to the notice of the public is, that in our large cities horses are exposed without let or hindrance on the part of saultary authorities to just those conditions from which the great pestilences among human beings have sprung and do still occasionally spring. We take precautions in the public interest against overcowding, filth, and absence of ventilation in tenenent-houses, but we take no precautions against the overcrowding, filth, and want of light and ventilation of city stables; and yet every one of the large stables may fairly and properly be called a hot-bed of horse-disease.—The Nation.

# Extracts from the Pekin "Gazette."

The Pekin Gazette of the 7th moon 9th day (12th August) has four memorials from

Li Hung Chang to the Emperor.

The first - Reports the completion of some important extension and repairs of the embankments, stone walls and dykes of the water courses near and at a distance from Tientsin, and asks that the officers (whose names he sends to the Throne in a separate document) who superintended the work with such masterly skill, diligence and dispatch may be suitably rewarded. The Emperor replies:

The names are before the Board which presides over appointments to an efficial rank FROM THE THRONE.

In the second dispatch Li sends up to the Throne a minute account of the expenses of said work. 1st, of the workmen's wages. 2d, of the cost of terials. 3d, the expense of each (a measure of ten feet), and of each (foot). 2d, of the cost of the mais added a drawing of the country and the exact course of the rivers, canala, etc., that pass through it, with a graduated scale that shows at a glance how many feet,

maris and miles of embankment, walls, etc., have been made and repaired. The Emperor replies: The Board of Pubne Works will take cognizance of it. In the third petition Earl Li begis the favor of the Emperor in behalf of a crystal button mandarm, who in the 8th year of the present reign was sent by Chung How, then superintendent of trade at Tientsin, on a responsible and arduors mission to Manchuria. He discharged the duties of his important and difficult position with the property of the state of the second section of the such wise foresight, such unturing and ever increasing diligence- was exposed to so many hardships and dangers in going from one military post to another, that his health and strength failed, and he died suddenly at an encomposent just as he had arranged some measures of moment to the civil and nelltary interests of the counsel. Li, therefore, begs His Sacred Majesty that he will graciously look upon this by E. Heretore destricted at a service, and though only a civel officer, died at a distant military encompanent; and award to him all the high honors of those who die on the field of battle, and also look after his family and premote his soms. The Emperor replies [as usual when Earl Li sues for a friend]: Be it as the memoria ist Wills FROM THE THRONE

Thus it appeared that there was Imperial fair weather for La-Hung-Chang (Earl Li), but in the succeeding Gazette of the 7th moon 19th day 122d Augusth, contains an edict from the Emperor, in which is embodied a memorial from one of the Imperul censors (Pe pau-dze) sharply rebuking Li-Hung-Chang, and severely criti-

cising some of his late dispatches to the Throne.

The Emperor quotes from the memorial, and speaks of Li as a Viceroy who sends "auspicious omens" to the throne in the shape of "drawings" and "twoheaded wheat stalks," and that lest this kind of flattery should be considered acceptable to the throne, the names of the mandarins lately handed up by Li-Hung-Chang for promotion are marked off and destroyed as the Emperor truly loves his people and desires for them prosperous and truttul seasons, and believes that their happiness and prosperity will be best advanced by the rulers looking carefully after the lands and seeing that the water courses are kept within bounds and the fields well cultivated, Attempts to flatter the throne by sending up "auspicious omens" and predicting felicitous influences, can do little to accomplish these great ends.

The Emperor then adds in his own words: "We have just heard that the districts Pao-ting-fu and Kwang-ping-fu, that were so prodicing of "anapicrous owners,"

are now under water—and that other districts are devastated by locusts—L.-Hung-Chang is, therefore, ordered to examine with all possible dispatch the present state of the walls, embankments and dykes just reported in perfect order, and to state the true reason for their present dilapidated, useless condition; and also to report why, when the walls were just now said to have occur built up with 'great strength and thickness,' and the whole work completed with such 'masterly skill and dispatch" that the names of the superintendents were sent up to the Throne for promotion; the first heavy runs have overthrown these strong walls built with such "masterly skill?" The proper Board is ordered to mark out or destroy the names of the mandarins for whom Li-Hung-Chang has asked preferment.

FROM THE THRONE.

<sup>-</sup> To the liberal mind the wife of Joaquin Miller, the poet, is a new and en-Mrs. Mi ler is a joy to a considerable part of the population of San The mercurial hoodlum gratifies a refined and elegant tiste in obscene backnage, while his animal spirits find a graceful vent in throwing the adhesive mud-ball or the pat of garbage. The more solid quality of the editorial mind demud-ball or the pat of garbage. The more solid quality of the editorial mind de-mands the graver employment of composing the thoughtful epithet and the exercise, not quantended with during, which hurls the earnest lie. The ready and practical not inattended with daring, which hurls the earnest lie. The ready and practical Intelligence of the general reader, which partskes at once of the native joxous-ness of the hoodham and the studious culture of the editor, finos equal delight in the labors of either, and bestows impartial applianse upon the blackened character or the bespattered person of a victim. Hence it is quite as much in accordance with nature and numan nature that Mrs. Miller should have remunerative and inness to listen to her lectures in abuse of their busband, as that she should have procured a trained editor to compose and invent them, or that others of the craftshound reprint the composition at extended length. The News Letter, which is a blackguard deprefession, and rather prides itself upon being unapproached in its specially, confesses to baving read these reprints with much the same relish that a bog displays when kneed-drep in a swill-pail, and takes the opportunity to extend a fraternal hoof. when knee-deep in a swill-pail, and takes the opportunity to extend a fraternal hoof to the rest of the herd.

# "Laughter--Holding Both His Sides." -- Milton.

(From the London Satiric Papers.)

Sippings of Punch.

Overworked Pointsman (puzzled): Let's see—There's the "'scursion" were due at 4:45, and it ain't in; then, afore that, were the "mineral"—no, that must ha' been the "goods"—or the "cattle." No, that were after cattle's shunting now. Let's see—fast train came through at—— Con-found! And here comes the "express" afore its time, and blest if I know which line she's on !

The conduct of the mavy does not appear to be altogether unexceptionable. A report has reached as within the last twenty-four hours of an officer high in the service—in fact, an admiral—so far forgetting himself as actually to strike his Mag!

Oh, please, miss, will you give us two 'a pennies for a penny, and gi' me a drink of water, an' tell us the right time? An' father wants a pipe; and lend mother yesterday's 'Tizer!

Angustus (poetical): Look, Edith! How lovely are those fleecy cloudlets dappled over the — Edith (prosaic): Yes; 'xactly like gravy when it's getting cold—isn't it?

Quirks from "Figaro."

A vagabond contributor says he inscribed, or ought to have inscribed, the following lines in the visitor s book at the "Shakspeare Hotel," in Stratford-on-Avon, October 17th, 1872. He probably did, or ought to have done, nothing of the kind:

It nothing boots exchanging "saws" With canting dunces who proclaim The lightness of the world's applause— The worthlessness of human fame. Fame valueless !-they'll have it so,
And still will teach and preach the same, Until they chance to undergo The cheating done in Shakspeare's name. And own there's profit in renown.

- If we are to believe the news from the States-and I, for one, would as lief doubt the integrity of Columbia's nutnegs as the verity of her news-if we are to doubt the integrity of Columbia's nutnegs as the verity of her news—if we are to believe the latest advices from the States, I repeat: "Mr. Horace Greeley has returned to New York after an absence of ten days, having traveled 3,000 miles and delivered 200 speeches. He believes he has conquered in Pennsylvania, Ohio, and Indiana." Well may they call Greeley "old hoss" after this feat of 3,000 miles and 200 speeches in ten days—which is 300 miles and 20 speeches per day, else I don't know arithmetic. Well, too, may "old hoss" believe he has "conquered Pennsylvania, Ohio, and Indiana." Twenty speeches a day, for ten consecutive days, cannot but have left the electors of these unfortunate States quite prostrate.

#### " Fun."

Blame not the organ-grinder, Spurn not his humble lay; It would be gentler-kinder, To send the man away Give him a groat to pay his fare, And bid him seek his native air.

A SENTIMENTAL APPEAL.

nder, Think you that Hatton Garden's gales No memories will bring Of odors of his native vales

In sweet Italian Spring? [more, Then give yes, give him twopence And bid him seek Italia's shore.

The monkey, round his neck that clings, Must memories inspire, Of his own distant toddling things, The pictures of their sire!

Aye, ask him what he'll take to go,
And bid him seek—well, Jericho!

THE FABLES OF ZAMBRI, THE PARSEE.—During a distressing famine in China a starving man met a fat pig who, seeing no chance of escape, walked confidently up to the superior animal, and said: "Awfni famine, isn't it? "Quite dreafful," replied the man, eyeing him with an evident purpose, "almost impossible to obtain meat." "Plenty of meat, such as it is, but no corn. Do you know, I have been compelled to eat so many of your people I don't believe there is an ounce of pork in my composition." "And I so many that I have lost all taste for pork." "Terrible thing this cannibalism!" "Depends upon which character you try it in—it is terrible to be eaten." "You are very brutal." "You are very fat." "You look as if you would take my life." "You look as if you would sustain mine." "Let us' pull sticks,' eaid the now desperate unimal, "to see which of us shall die" "Good!" assented the man, "I'll pull this one." So saying, le dew a fence-stake from the ground, and stained if with the brain of that unhappy porker. Moral: An empty stomach has no cars. - THE FABLES OF ZAMBRI, THE PARSEE. - During a distressing famine in Moral: An empty stomach has no ears.

"I hate snakes who bestow their caresses with interested partiality or fas-tidious discrimination," boasted a boa constrictor. "My affection is unbounded; it embraces all animated nature. I am the universal shepherd; I gather all man-

ner of living things into my folds. Entertainment here for man and beast!" "I

ner of living things into my folds. Entertainment here for man and beast!" "I sebould be glad of one of your caresses," said a porcupine, meckly: "it has been some time since I got a loving embrace." So saying, he nestled singly and confidingly against the large-hearted scripnt, who fied. A comprehensive philanthropy may be devoid of prejudices, but it has its preferences all the same. Another sinke, a nile long, having drawn himself over a roc's egg, camplained that in its present form he could get no benefit from it and modestly discied the roc to aid him in some way. "Certainly," assented the bird, "I think we can arrange it." Saying which she snatched up one of the smaller Persian provinces, and poising herself a few leganes above the suffering reptile, left of drop upon hit os smash the egg. This fable exhibits the felly of asking for aid without specifying the kind and amount of aid you require. the kind and amount of aid you require,

- The medical report of a surgeon in Kentucky (so says the Nashville Journal) records the birth at one time of no less than six children. We haven't got the report by us, but we think it likely that about a page and a half further on will be found the post mortene of the self-destroyed father, or of the mother, murdered by her spouse, in a state of-what the French call "extenuating circumstances.

#### CROSS QUESTIONS.

O, tell me! Hast thon ever been Where circumambient lodestars dash, Where evanescent whirlwinds creep, Where head ong torrents pause to dream Where leaps the solid lightning-flash, And wash their waistcoats in the steam, Where sombre palls blume the scene, While vnitures unrepentant weep Mid quivering cliffs of hippocrene. And echoes in French bedsteads sleep?

Yes, tell me hast thon seen on high The armor-plated frigates soar, While comets sat upon the shore ? For if thou says't so, my reply Is simply that thou tells a-misstatement.

— Short. Sighted Scholar: "Is that you, Tonald?" Second Ditto: "No, it's nac me!" First Ditto: "Is that you, Sandy?" Second Ditto: "No, its nac me!" First Ditto: "Is that you, Lachie?" Second Ditto: "Aye, it waur me every time!"

First Scotchman: "Hae ye bin to see this International yit, John' it's a bonnic sight, mon, well worth the money!" Second Scotchman: "The inside of it! on aye! I bin once. The sight was bonnic! but aye, mon, it was sume game ye ken! and so was the shillin'! an', to think, too, I could ha' seen it noo, for sarpence! heigh!"

## Our Financial Quicksand.

The public schools of San Francisco swallowed up nearly \$700,000 a year, and the fact is notorious that not two handred pupils a year are graduated who are soundly grounded in the elements upon which all higher education—whether acquired in advanced schools or by self-culture—is to rest. The graduates of the high schools advanced sensors of by self-culture is to rest. The translate of the load of the do, in one single branch of study mathematics appear to acquire proper knowledge; in others they are inexcusably deficient. A graduate's knowledge of history is a pitcous thing, and his ignorance of physical scance a marvel. A few boys, gifted with a natural hunger and thirst atterknowledge, teach themselves according to their opportunities, but of the remainder it cannot be said that they are taught, A graduate of the grammar schools has acquired nothing which will prove of prac-A graduate of the grammar senious has acquired nothing which will prove of practical usefulness in his further progress beyond the three R's—indeed, the knowledge of arithmetic is grossly detective. We think we are nearly right in saying that the mind of a child of average intelligence will be better cultivated by allowing it to read at its pleasure for the stated number of school hours daily in the books of a carefully selected library, than after the same term of attendance in the grammar selected library, than after the same term or anemone constraint some of our readers may remember a series of three papers on our pubsome of our readers may remember a series of the papers of our pubsome one of the functional Monthly. The schools lic schools communicated about three years ago to the thirland Monthly. writer pointed out the emptiness of much of the instruction attempted to be given, and the radical tai nre of the school course as a means of mental training. He traveled through the subject as one treading upon eggs, but eking out his comment by hint, wink and immendo, he disclosed in sufficient debit is blo comes so the sys-tem. We are not now to point out its specific defects nor to suggest a remedy. Any intelligent parent or tax-payer can discern the one, and belongs the duty of maturing the other. But we do point out that for this inefficient belongs the duty of maturing the other. But we do point out that for this inefficient and unsatisfactory system, the ety is paying \$700,000 a year—or \$20 per annum per pupil. New York pays about \$25 per annum per pupil; Phindelphia, Cincinnati, St. Louis and Baltimore, from \$22 down to \$19; while only Boston pays more—or about \$410 per pupil—1 or which, be it observed, she obtains a course of teaching which we affirm to be of more real value at the end of half the course than that of San Francisco at the end of the whole of it. It remains to add that whatever reform is to come, cannot be looked for from within the system, because the teachers are either wedded to its routine or bound by esprit do corps to defend it. Reform cannot be expected at the hands of the Board of Education, because its members are too ignorant of the subject matter to deal with it at all. Retorm can only come from wighout -but it is greatly to be feared that we are all to busy to take it up. Meantime tax payers are really being swindled at the rate of \$700,000 a year-which is a great deal of money to waste.

#### The Last Smile.

We have all seen in print, and most of us perhaps on real living lips and faces, what is called a sardonic smile. Not all of us may be aware of the alleged origin what is clinical a sarronic smile. Not all of us may be aware of the aneged origin of that expression. The sardonic laugh of the ancients was an involuntary distension of the muscles of the mouth, occasioned by a poisonous plant grown in Saradinia; and persons who died of this poison had a smile on their countenance whence came about the meaning of forced, or affected, and grimacing smile. To a mere muscular mechanical movement is referred, by physiologists, the smile, so sweetly the reverse of sardonic, which is to be observed so often on the face of the dying, and of the dead. But under the spell of that suggestive aspect, one is in-clined to scout at a physiological reduction of it to its lowest terms, in the style of Horatio's objection to a certain post-mortem examination on the part of the Prince of Denmark that "'twere to consider too curiously to consider so." Rather one suffers one's feelings to find scope and devout expression in Keble's teaching, that

No smile is like the smile of death, When all good musings past Rise wasted with the parting breath, The sweetest thought the last.

Edgar Poe adverts somewhere to what he calls "that suspiciously lingering smile upon the lips which is so terrible in death." Between Poe and a Keble there is, in all things, a distinction with a difference. How differently from Gibbon would Keble have described the dying smile that unnamed here and marty—the quidam of Lactantius—who was burned, or rather roasted, before a slow fire, for tearing down the didict of historians. of Lactantius—who was burned, or rather roasted, before a slow fire, for tearing down the edict of Diocletian, and upon whom the executioners, zealous to revenge the personal insult which had been offered to the Emperor, exhausted every refinement of cruelty without being able to subdue his patience, or to "alter the steady and insulting smile," so the historian of the Roman Empire calls it, "which, in his dying agonies, he still preserved in his countenance." For, such of the bystanders as sympathized with the sufferer had not to wait till that tyranny of pain was overpast before the smile that sealed his bliss should be seen and felt; it was there from the first, and it was there to the last. No waiting for it as for that of the promised smile in Mrs. Browning's poem:

Weep not. I weep not. Death is strong.
The eyes of Death are dry.
But lay this scroll upon my breast When hushed its heavings lie, And wait a while for the corpse's smile Which shineth presently.

Nor is the last smile so uniform in its expression and expressiveness as some would contend. Not too literary is Mr. Proctor's stanza to be rendered, which save that

> All faces melt in smiles and tears, Stirred up by many a passion strange (Likings, loathings, wishes, fears), Till death—then ends all change. Then king and peasant, bride and nun, Wear but one!

Without, however, essaying in the least to differentiate among the specific varieties of the one generic smile, let us glance at a few recorded examples here and there, whether in the records of actual life, or as transferred thence to the uses of

poetry and prose fiction, to point a moral or adorn a tale.

The last glimpse Edmond About allows us of Tolla is when the whole town assembles to admire, for the last time, that flower of virtue and beauty. "Her face was calm and smiling; death had effaced all the ravages of disease: Tolla was again, for one day, the prettiest girl in Rome." Like Elaine, in the "Idylls of the King." King,

And that clear-featured face Was lovely, for she did not seem as dead But fast asleep, and lay as tho' she smiled.

Or the like Fidele, found by Arviragus within the cave.

Stark, as you see; Thus smiling, as some fly had tickled slumber, Not as death's dust, being laughed at.

Admired as one of the very happiest epigrams in the English language is Sir William Jones' translation of a penzee of Hafez:

On parents' knees, a naked, new-born child, Weeping thou sat'st, while all around thee smiled: So live that, sinking in thy last long sleep, Calm thou may'st smile, while all around thee weep. - Cues from all Quarters.

If George Washington, after backing the apple tree, had turned with his little hatchet upon his father, what city in Japan would have been called to mind? Answer: Hackodada. Jesso.

#### Court Chat.

Accounts were recently given of the marriage of Emmanuel, Duke of Doggio Cniano, son of the King of Italy by his morganatic marriage with the Countess Marfafori. On the other hand, the death is announced of Prunce Albert of Prussia, brother of the Emperor Wilsiam, and who formerly contracted a similar albane with the Countess de Hoheman. Those two facts call attention to the left-handed marriages which take place in Germany between members of nobre families and women of an inferior condition, and which do not confer on the children issuing from them a right to the rank and nit e of the father. The following persons are among those who formed such unions: Frederick Wilbam III., Fither of the present Emperor of Germany, with the Princess of Liegaritz, mee Countess Harrach, who stell lives, respected by all the royal family of Prussia; Leonord I, late King of the Belgians, without Barrons-Mayer, King Fredinand of Portugal, widower of Maria II and regent during the minority of his son, with Mie Hensler, created Marquese Ed a: the ex-klector of Hesse, with Gertrade, Princess of Haman and Countess of Schmumburg, the Archduke Henry of Austria, with Mile Hotman, a singer, made Countess of Waldeck; Duke Louis of Basaria, with Henricht de Wallerse; and Prince Adalbert of Prassia, with Theresa de Barnim, mee Essler.

The Sydrownska Displotad, in an article on the death of the King of Swelen, says: "The King reserved that with a simple, manly composure, and then desired to take leave of those about him. Tearss-far too genu he to be courtly feel upon his emacasted hand es the circle of friends and servants kissed it. Charles cazed at his own hand and remark d: Look: in fingers are growing whit, already. "Your Majesty must not unbespate: there are probably pains yet to come, repeat the doctor. Thereat the King remained quark, with his caze steady, "as if he himself followed with his eye the advancing steps of death. Presently he strached out his arms, and asks." What is my pulse, Lundberg? "Forty, your Majesty," was the reply. "Still so many, marmained the King; but his voice was now so feeble that it was only a broken whisper. Then the voice of prayer was softly raised by the chaptain Orin, and afterwards the doctor mostened the King's brow with cologne water. He spoke once again, saying: 'I do not feel any chill in when das yet, but then instantly sank back, and, after a long sigh, passed away so tranquilly that only the skelful Lundberg perceived he was gone, and exclaimed, 'Now is your King no more!'

— The diploma of the princely rank of the Chancellor of the German Empire has just been completed, and 4 is said to be a truly flue work of art. It consists of three pages, the list of which is occupied with a bazon of the Prince's amortial bearings, the text being contained on the two remaining folios. In the center of the first mage are the arms of the House of Bismarck's namely, a trefoliot oak leaves. To the right and self stand two heraids bearing the arms of Alsace and Lorrance; in the surrounding border are portraived shewes of Danish and Austran flags, a chear of French standards being placed above. The crosses of —lsen and of Koeniggratz are suspended from the Danish and Austran standards, and the Iron Cross from those of France. This cross bears the portrait of the Emperor of Germany. The border is formed of columns and on a triumphal arch, representing the Air de Triumpha de "Etolic in Paris, and the basen ints of the columns are decorated with the Iron Cross and illuminated in the colors of Prussia and the German Empire.

Brighton never was fuller than it is at this present moment, and the elite of the fashion appear to be there congregated. The King's Road, Marine Parade, and the unrivated promenade of four miles inlength, is a signton a fine atternoon that can be seen nowhere esse. The aquarum continues to be a great attracting and persons are flocking from all parts of the country to see this most heautiful building, containing as it does so many "treasures of the deep." Several concerts are announced for every week for the next three months. In short, Brighton is more resplendent than ever.

Some excitement has been created in Rome by the elopement of a young lady of noble family with a waiter in a cafe. The fair truant was exceedingly beautiful, and is, or would have been possessed of a dot of 100,000 france. We have before now heard of Eurlesh ladies of rank making like meadliances, says our foreign authority, and fiving a wretched life afterwards, but that such an occurrence should take place in Haly is really astonishing.

The Familia tells us that Pio Nono has enfirely recovered his strength of body—and of language, too, judging by his late oration—and ascended, without assistance, two fights of the staircase leading to his apartments. Arriving at the last step he turned to the sediarii, and smiling, said: "I have made you cut a sorry figure."

A stained glass window, as a thanksgiving for the recovery of the Prince of Wales, has just been placed in the north side of the nave of Faversham parish church. The cost is about £50, which has been subscribed by the parishoners. The subject of the window is the raising of the widow's son.

The average number of field marshals of the British Army has been time out of mind four. By the death of Sir John Burgoyne and Sir Gorge Policek in the present year, the list has been reduced to two, and it is not there fore surprising to hear that the Prince of Wales and Lord Strathnairn are forthwith to be raised to that rank.

#### Leaves from a Lady's Diary.

November 11.—It was Victor Hugo, I think, who said "cect thera cela." that the now kills the then, that the present exults in its destruction of the past. I could not help moralizing thereon, as I looked back on the world since my youth. This, which is love of dress and precociousness of knowledge in young girls, has killed that, which was simplicity and mirthfulness of innocence. Among men, this, which is love of pleasure, has killed that, which was enjoyment of life, and this, which is love of pleasure, has killed that, which was over of pleasure; and again, this, which is brutal debauchery, has killed luxnry. Sadder than all, this, which is the wentures, has killed that, which was the mother; and worse still, this, which is the butting out of infants, has killed the nurse and kills the child as well. Still deeper in the scale of wrong, this, which is the mistress, kills that, which was the beloved wife; and this, which is the vile woman, kills even the mistress. I could go on moralizing forever, this, which is the founding hospital, has killed that which was the cardle; this, which is an exhibition of pretty faces and well-shaped legs, has killed that, which was the utterance of the noble thoughts of the great masters of tragedy or comedy; philanthropy has destroyed charity, which, in its turn, is supplanted by institutions where tickets take the place of impulse. I cannot but think that the theory of the age is the conquest of good by evil, and of evil by something worse. The fact is, I am not well to-day, and have a nightmare of society and black dreams of humanity.

Nov. 12.—The sun is shining and I feel better. Went to Collie's garden and got a large bunch of violets, which I took as a peace offering to Mrs. B.—, as I had been so long without going there. Met Henry and he volunteered to go and lunch there with me. Lunch with that dame is the meal of the day, one of the objects of existence, a thing to study and to take pains with. She superintends its preparation, and when it is served falls on the good things in silence. Not a word is uttered until the appetite is more than satisfied, and certainly the condiments are very tempting. Henry said it reminded him of Wheeler & Wilson's new style of sewing machine, called "the eilent feed." In an hour's time, when digestion is effected, no one is more charming or more replete with intellectual conversation. Went to a small party at the H——s in the evening, the only feature of which was, that asthetic motoses in the bonbon crackers replaced the doggrel of the ordinary ones. Instead of—

"My heart with flame doth inly burn, I see your face wher'ere I turn."

I received an aphorism by Alphonse Karr, as follows: "When people fall in love, there is no great harm in their mutually seeing perfection one in the other; but if they seriously contemplate marriage, it is as well they should study one another faults, in order 10 know whether they could endure them for a lifetime or not." This idea of imparting doctrines with sugar-plums, savors a little of the moral pocket-handkerchief school; but still, is an improvement on the utter nullity of the old motto.

Nov. 14.—The weather was so lovely and the afternoon so warm, that I spent it on Kearny street looking in at the picture shop windows. I began at Show & Roos', where Brooks has got two paintings of grapes hanging on a wall. Brooks is like some children; when they have been praised for saying a good thing, they are continually repeating it. He painted some plums on a brick wall, and every-body was delighted with the picture; now we have the same brick wall, with grapes and leaves in relief, but the sense of freshness and surprise of novelty is gone. It was the same with his other pictures; he overstocked the fish market. I might say the same of Golly, much as I love Kaulbach, yet one even gets tired of looking at Gretchen's sweet fuce as she enters the church porch. There was nothing in Currier & Winter's, except those multiplied Prang's, and those colored photographs, which I dislike, however beautiful they may be, because child form is made voluptuous. There was a fruit chromo I saw spoilt by a fac simile of a large tumbler of beer; the lager was well copied, but the very idea of apples and peaches and plums and beer made me ill. In Niles' window was a beautiful piece of California fruit painting by Hahn; the coloring is very tender, and the light well thrown, but I question whether a peach would cast a reflection like that on a marble table. A painting by Wandesforde took my fancy very much on account of a group of trees in the right band corner. I have seldom seen pine trees better handled; the water is also good. Of the engravings I saw to-day I did not like any. I don't admire the modern school of long sweeping drapery, like those women in Currier & Winter's window; I think photography has ruined the grand old line engraving of good pictures. Looked at some pretty China ware, and went home, having idled away the whole soul is an offensive mass of decay. Yesterday afternoon, at the Mercantile Library, Mrs. C— handed a book to Frank M— with the remark, "Here a somehing that will do you good to read." It was

<sup>—</sup> Why is a Harbor Commissioner like the good boy in the Catechism? Because he reads Marks—learns, and inwardly digests.

#### Little Guinever.

"When Queen Gwinever of Britain was a little wench."
-Love's Labour's Lost.

Swift across the palace floor Flashed her tiny willful feet; "Playfellow, I will no more, Now. I must my task complete."

Arthur kissed her childish hands, Sighed to think her task severe, Walked forth in the garden land, Lonely, till she reappear. -LOVE'S LABOUR'S LOST.
She had sought her latticed room,
Overlooking farry seas

Overlooking fairy seas.
Called Launcelot from a bowery gloom,
To feast of milk and honey of bees.

"Had we bid Prince Arthur too, He had shaken his grave head, Saving 'My holidays are few!' [said, May queens not have their will!' she

Thus she passed the merry day,
Thus her woman spake and smiled:
"All we see we need not say,
For Guinever is but a child."

#### The Antipodal Telegraph.

To an age which has lost its sense of wonder, the horse distemper easily overshandows the event of the week which is by all odds the most marvelous and inspiring. A news despatch from Australia, ria the Oversland Telegraph and its connecting cables, dated Melhourn, October 24th, was printed in our Saturday morning papers all over the country, from New York to San Francisco. The possibility of this achievement was of course contained in the successful working of the first Atlantic Cable, but it will still be long before we can find it perfectly natural that twenty-four hours only, or fewer, separate us from the antipodal continent which steam communication has just becam to make seem neighboring. The remarkable feature in this case is the building of a line eighteen hundred miles long across the wilderness, and almost desert, of which the English settlements in Australia form merely a tringe along the coast. It was an under taking certainly not unparalleled, but probably unsurpassed of its kind, and in its consequences is likely to resemble more our Pacific Rairread than our own overland telegraph. It has already made useful additions to the geography of the interior of Australia, and has becam to be used not only as the thread along which to string new settlements, but as the base of departure for several exploring expeditions in the waste on either side. It offers a fresh illustration of the value to mankind of the solitary labors of men devoted to science, when the perilous transcontinental pil-grimages of Burke, Stuart, and MacKinlay are followed within ten years by a telegraphic service that binds the colony to the mother country and the island to the maintland, and adds one more link to the solidarity of nations.—The Nation, Oct. 31st.

## American Lady Doctors Interviewed.

The Ellinburgh Courant publishes a very curious account of an interview with two American hady doctors, which gives a high idea of their perseverance, courage, and energy in carrying on their practice. The interviewer very naturally asked how they bore the physical labor connected with the procession. Dr. Blian replied that they had no work to encounter so bard as that done day after day and year after year by women who hold and amuse a fretful baby all day, who murse it all night, and then get up in the morning to wash and scrub, or sweep offices. Br. Blackmar said the extent of her rounds was on the average twenty moles a day is and this lady). Our dispensary patents are chiefly hoor foreigners, and one requires to have great moral courage in dealing with them. I have attended drunken women, I have walked over the belight in the building greasy and dirty from top to bottom. I have been met by insance women, and ordered off; and sometimes, in order to reach my patients, I have had to call in the police to take their husbands away. My life has been often in danger. Notweth-standing all that, I was never injured. I was taught from my childhood never to know fear, and to know that moral power was greater than physical gover. The Dischars raid she often found the husband drunk, the wife frantic, the friends frantic, those who were not friends more frantic still, but had never lost a case of that kind.

o mr. John Wise complains that boarding house keepers are ever on the scent for sailors' money. Mr. Wise may preserve his bosom unruffled: After Jack gets through the hands of Mr. Shipping Commissioner Stevenson, the boarding bouse keeper shall get as much out of him as the Barbary Coaster may glean from the drunk whom a policeman has already rolled, which equals the amount of whole-some nourishment remaining in a pint of shrimp shells from which Mr. John Wise has abstracted the succulent crustacean.

#### Special Brevities.

- Rev. George Rodgers, a leading Independent or Congregational minister of Dorsetshire, South of England, accompanied by a number of tenant farmers, has recently made a four of inspection through Minnesota for the purpose of selecting lands for a colony of 2,000 persons, well-to-do farmers, possessing a capital of from \$2,000 to \$10,000 each, and who are among the most successful agriculturists in the world. The delegations selected eight townships in Clay County, Minnesota, on the line of the Northern Pacific Railway. A railway town, to be named Yeovil (in honor of the district from which many of the colonists came), has been set apart near the center of their track. Two hundred families will leave England in April for this colony, and the remainder, with their pastor, will follow during the season.—From the Glasgow Mail.
- The Pleasant Creek News (Australia) writes: "An unaccountable feature in connection with our deep quartz mines is being developed daily, which much surprises those well experienced in mining matters. It is the decrease of water as the greater depths are reached. In the Magdala shaft, at 950 feet the water has decreased to a minimum; in the Crown Cross Reef Company's shaft at 800 feet, a decreased to a minimum; in the crown Cross Reef Company's shaft at 800 feet, withstanding the two reefs recently struck, no extra water has been met with, and in the long drives of the Extended Cross Reef Company, at a depth of over 800 feet, the water is lighter than it was nearer the surface."
- The aeronant Eugene Pasqual, from Paris, last week went up from Hamburg with a colossal bulloon, measuring 118 feet in circumference and 65 in vertical diameter, and containing 35,000 cubic feet of hydrogen gas. At the hight of 500 feet he aeronant was seen descending by a trap in the basket, and hanging by one foot on a trapeze and performing several feets worthy of a Java bat. Both travelers handed safely on the other bank of the Elbe, after an hour and a half's navigation. Such exhibitions ought to be encouraged in a country which considers its population too numerous.
- An Indian paper prints the following as a bona fide copy of a letter from a Punjanb schoolmaster to an English gentleman who took an interest in him: "Hon Sir-I am most anxious to hear you are sick. I pray to God to get you soon at R— in a state of triumph. The climate of R— is very good and proves unhealthy. No Deputy Commissioner complains ever for want of climate. If you also come here, I think it will agree with your state. An information expectant or reversionary respecting your recovery state is expected, and I shall be thankful to you. I am, sir, e.c."
- The Norwalk Reflector says: "One of our citizens had occasion to kill, for her own use, a chicken belonging to her flock, which for some weeks, although doing the usual amount of "singing" that incicated a laying hen, had failed to supply her table with a single egg. On opening the careas, however, the singing and the non-production were fully explained: a chick nearly full grown was found hatched inside! The egg had probably been obstructed in its eggess from the body at the proper time, and being detained, had hatched in the manner indicated."
- The Birmingham Morning News says that the Rev. Arthur Mursell seems to be the "funny man" of the Baptists. At the meeting of the Baptist Union heread an extract from a letter of a poor minister: "I have a wife with one leg [laughter], seven children, and £65 a year, and it is close work." Mr. Mursell added that the thought the "wooden-legged wife was not a matter to laugh at, though he hoped it would be an argument for them to 'stump up' liberally," whereupon the meeting laughed again.
- A Paris correspondent says that the city looks very gay, and that trade, it appears, was never more prosperous. Great preparations are already making for New Year's Day, and Articles de Paris are being largely exported to foreign countries. Large orders, too, for ready-made articles of ladies' dress come from St. Petersburg, Odessa, New York and San Francisco. Australia, since the opening of the Suez Canal, has become a large purchaser of cheap Paris jewelry and boots.
- A bule of human hair has lately been abstracted at a railway station of Hamburg, en route for "Albion." The bale, ponderabile dictu, weighed no less than 141 pounds, and it came out that the capillary produce was chiefly derived from lunatic and other asylums, reformatories, penitentiaries, etc., and even some of the prisons of the highest class, as far as penalty goes. What a theme for a spirited chat with the ladies in the drawing-room!
- A correspondent says he has just overheard a prayer at Notre Dame. "Oh, beloved Joseph," murmured a rosy little laundress, on her knees before a flaming taper she had just lighted in his honor, "grant me a good husband, plenty of ironing to do, shirt-collars without starch, and charcoal without smoke; and to my dear old aunt an easy death. All these blessings as speedily as may be."
- An Indian Punch—the Indian Charwari—is announced for Calcutta. It is to be owned and edited by Colonel Percy Wyndham, is to be issued fortnightly, illustrated by "artists of acknowledged ability," and is to escherg everything savoring of personality, the great aims being "to laugh at and with our small world around us, and we hope they will return us the compliment."
- We learn from the annual report of the Registrar-General, issued recently, that marriage is more popular than ever among the population of England. In the year 1870, no less than 383,310 persons were married of nearly ten thousand more than in the preceding year.

#### Peeps at the Parsons.

The Parific is an organ which views. Christianity from a Congregational standpoint. In us hast issue its editor administers a few back-handed slaps at Methodism. He-says that in it there is "room for improvement in the derection of modesty." The is right. The Congregationalists are covered with modesty as with a garment, absolutely loaded with it. One of their very modest preachers—his man might be Stone, and it is gets his flock to relate to him at their little pecked load and big ones too, and then returns them to the church next Sunday. He "don't ment or to names." In which respect his stories fall a little behind those in the Day's broings. This delicate modesty of the Congregational type does not go unrewanted and many gather to the fold. Our editor continues: "Methodism is of comparatively recent origin." Challe of Methassach! how od is Congress of other contractively recent origin. Challed the Hothest of all things too quickly grown and a little overstrown. "Ha 'Now let Method sim wince. Not only the atrocons crime of being young and partenu, but overgrown. They grow faster than we do; they are more numerous, the "pillars" of their churches can junge more con that ones can. He goes on: "Many are its saints and few have been its martyrs." It sounds cur ous to hear one Christian denomination accusing another of having "many saints." Perhaps the writer used the term irronically. To the outer word, the word "saint has come to signify an obe hypocrate, a smooth-tongoed hawker of holy thougs, a canting "wesse," of the Chadband type. Which seet has the majority of this kind of saints it is not easy to say, but in the matter of martyrs the Congregationalists come in an easy first. It is oden these martyrs were thumberewed or broken on the wheel, now the refluement of a torture is attended by listening to the sermone of a Pond, a Holbrook or a Stone.

Where are the police? An outrageous lark was perpetrated on one of the little band of self-devoted Christian Young Men, who make a rittle heaven below, opposite the What Cheer House, Sunday mornings. They assembled as usual and sang that glorious old hymn commencing—

" Amazing Grace, what a time you had To save a wretch like me!

O, the foretaste of Heaven in their subserial strains! The effect was maryologs geveral thristory windows were thrown up and a corresponding number of faces protraided with alarm depicted their on, while the back-horses at the Paza snorted in amoze. Then the presiding brother, placing his hat on the present below him, did wrestle manifully with the dead in prayer. How-best, hereapon some carrier mided person, with makes aftershought, and without the fear of God before his vis, did place in said and corragit eggs to the number of lour, and after pressing them down with half a brick, did basely absent. The brethren's sair to the presiding brother, who, in the agitation of said wrestling-match had been observed to work his toes inrivously. On turning to go, the brother discovered that his new tendo lar that had a brick in it, and ah! worse behind the brick! He meekly brushed hear from his eye, and after praying for the obdurate heart that hatched this rotten-egg business, this eggselient man departed.

Rev. W. Briar informs us that he wants \$200,000 for the San Francisco Theological Semenary, and must have at least \$20,000 none. The alternative is apparing, for should the money not be forthcoming, a hundred straight heared, day-peptis-looking young Briars or Stones or Has elojah Coxes will be turned adult upon the coloring would be earn an honest liveshood. God forbut? All we who love the Lord are to reput to him dirar, not the Lord, at the Alameda Post Office. This sounds all very sweet, Birst, but don't you think your demand is a little wid, Briar? Think of Pickering, who also made a modest title demand of \$10,000,000 on the city, and who is now senk so low in the estimation of all honest extracts. Look at time as he sanks up etly along the street like a beaten cur, and take warning by him. It is not possible that the world must trundle along at right if that Theological Seminary should go to smash. If it was a Theological Cemetery now, in which all these theological county from the uttermost depths of our breeches' pocket.

The Daily Noon Prayer Meeting is saidly on the wane. The laboring men, for whom I was instituted, have failed into such apacing apathy that they are sunvising to give up even two-thirds of their didner hour to thint. The admensional arrangement of holding it from 1215 to 1 gave them a felt quarter of an hour in which to wask home, cat their didner and get to the rooms of the Y. M. C. A., and yet they prefer to waste the moon-tde hour in the basson of their families, when Abraham's bosom and Brother Cox's button-up waistcoat are both partiag to receive them. They would rather did voter over their own dimers than come and partiake of the Christian Young Men's love-feast. O, thut beares' same in the very bond of sin and gail of imaging! The least is prepared. Brother Cox stands waiting to dish it up, the Oil of Gadness is poused out, the lamb of God is on the table, and still no guests! O for an Aminadab Sieck to strup a revival-among as it.

The Christian Advocate announces that "a supply of new Discipline has been received. Brethren will please send in their orders." This is about the best brand of Discipline ever othered in our markets. It is going like culorided cakes. It forms an excellent article for curl-papers, shaving papers and various other family bases.

#### "Ashes of Roses."

Oh sweet and shadowy woodland, By that early home of mine, How I reveled in your leafy bowers, Where glinting sunbeams shine. Ah! the Occident s proud towers

May steal the evening's smiles, But lovelier far the tintings are Of your memory-pictured aisles.

Oh fair and fragrant blossoms. Lowly lilies of the lea, How I loved your beauty in the hours

When hope was fresh and free! Now the sultry life-storm lowers, How each world-worn jewel pales, [mar, Which the earliest pass away, Where heart-dreams are that nought can And leave us far as the "gates ajar"

Of your tranquil wild-wood vales!

Oh hopes and haunts of childhood ! Why is it that we meet No after bliss that ever dowers Our lives with joys as sweet? Is the springtime with its showers So much holier than Earth s prime.

That life's pale star beams loveliest far In youth's untrammeled time?

Or is it as we wander Farther on our pilgrim track, That the world-worn spirit cowers And with fond regret looks back To those rarest earth-born flowers

That enshrine Eternal Day. ISABEL A. SAXON.

#### A Gird at Priests and Other Swindles.

[Extract from a London Letter.]

London, November 3, 1872.

I have just returned from a four months trip through Spain, France, Switzerland I have just returned from a four months trip infough Spain, France, Switzerland of and Germany. \* \* In Europe the "clergy" all wear some peculiar kind of toggery. There is less of this in Germany than anywhere else. We have got rid of sorcerers, when are we going to get rid of priest-? In some places the streets are crowded with ecclesiastics. In Spain we have monks; in France priests, with long-tailed coats - with a point turned up to the waist and then banging down like the state of the priest form priests are desired to the priest of the p a tail; in Switzerland they have decency enough to keep from making an exhibition of themselves; in Germany the streets are full of soldiers; in England full of tion of themselves; in Germany the streets are full of soldiers; in England full of parsons, and in Ircland full of young pimply priests and policemen, \* \* \* In London the Devil dodgers dress up very smart; some have have "cocked" at the sides; some wear silk aprons and gaiters; some wear long black coats, and shave as clean as a British soldier of the olden time; all wear a white rag about their throats—the only clean thing about them. Not one of them all can look you straight in the face—not one solitary man. The only attempt they make at this is when they are speaking to old maids, or to those bald-headed mental bats—the members of the Young Men's Christian Association. The hang-dog look of these lazy gospel grinders is to me intolerable. They have all, more or less, that peculiarly sour, unmatural crime look, that is characteristic of "the cloth," no matter to which of the rescally little seets that afflict mankind they may belong—all are contaily danthe rascally little sects that afflict mankind, they may belong-all are equally dangerous to the liberty and welfare of mankind.

It seems to me that since hote's were first licensed, affairs have greatly changed. It seems to me that since hole's were first licensed, affairs have greatly changed. The present generation have to travel, and that fresh legislation is required some protection against unscrupulous landlords, \* \* \* I arrived in New York and went to the Hoffman House, on Broadway, where I slept two nights. We had a double-bedded room, and took our meals in the coffee room, where the cooking was very good and the charges very high. The charge made for the beds, or, as it was put in my bill, "room," was \$12. I asked how I had best get down to the Cunard Steamship Algeria, and was informed that they would provide me with a hack, and that the charge would be \$5.60. In my bill I was charged \$6, and had to pay slaxty cents for the ferry, both ways. The detestible way in which a traveler wader color of feating the twistors are being and the color of scattering the twistors are some of New when color of scattering the twistors are some of New to the color of scattering the princes. hack, and that the charge would be \$5.50. In my bill I was charged so, and had to pay slxty cents for the ferry, both ways. The detectible way in which a traveler is—under color of legitimate business—robbed by the brigand hotel-keepers of New York, call sloud for police interference. A traveler on ht to have the right to command a clean bed, in a good room, at a fair charge. We have no such goinging and swindling as this in San Francisco. When I return West it is my intention to do so by way of Quebec, as I have done before. It costs less and you avoid New York.

- Englishmen naturally think that there is no true laughter outside their own "tight little isle." Especially just across the Channel is there an utter incapacity "tight little isle." Especially just across the Channel is there an utter incapacity for the art. France, in return, thinks Enghand laughs like a horse, while the opinion of Cockneydom is thus summed up in one of the magazines: "I never saw a Frenchman laugh. They smile, they grin, they shrig up their shoulders, they dance, they cry "Ha!" and "Ciel!" but they never give themselves up to boisterous, unlimited laughter. They have always a rein upon their lungs, and their muscles are drilled to order. Their mirth does not savor of flesh and blood. It has no resemblance to the good, broad, humorous English laugh, such as belongs to a farce or fair. The Germans laugh sometimes, the Flemings often, the Irish always; the Spaniard's face is based, the Scotsman's thewed into a laugh; but a Frenchman never laughs. They smile, indeed; but what then? Their smile is like their song maicre, thin; their merriment saucezed and strained; there is in it some of the maker, thin; their merriment squeezed and strained; there is in it some of the acid of their salads, something of the pungency of their salaes; but nothing substantial; it is neither solid nor ethereal, but a thin between which and water, not of earth or heaven, good or bad, but villainously indifferent, and not to be admitted as mirth."

#### Immigration.

The subject of immigration has been sadly neglected by our State; in fact no attention has been paid to it. Trusting to the natural attractions as inducement for immigrants to seek us, we have expended no effort even to discominate a knowledge of the inducements of our soil and climate. Absorbed each in some selfish and personal object, we have permitted golden opportunities to durit by to induce from Europe and the Eastern States an immigration of industrious working people. We have foregotten that men and women are wealth to the State, and that the can demonstrable by figures that every laborer is worth to the State, and that charge industrious working people, demonstrable by figures that every laborer is worth to the community one thousand dollars, and that he adds so much to the aggregate wealth of the State. His value increases from year-to year, and is his inclustry he adds to the taxable value of increases from year-to year, and is his inclustry he adds to the taxable value of increases from year-to year, and is his inclustry he adds to the taxable value of increases from year-to year, and is his inclustry he adds to the taxable value of increases from year-to year, and is his inclustry he adds to the taxable value of increase of population. If there was any known animal that could be found in Europe and brought here at a cost of \$100, and upon arrival to be of the value of \$1,000, individual enterprose would be studied to an extressive importation. A working man can be brought from Europe at a cost of \$100 m gold; he is worth \$1,000 upon his arrival, yet because we can have no tangible property in him as a cleattel, we fail to see the profit and make no exertion to induce him to make his home among us. Let us suppose that the State should issue her twenty-year six per cent, bonds for ten misions of dollars as an immigration fund, paying to every able-bodied man or woman of good character and industrious habits half the expense of their passage to Caiformin, say \$50,001 paying to the transportation compa

### Bagmen in the Pulpit.

At a dissenting chapel not a hundred miles from London Bridge, there is much tittering on the part of the young and strangers, and some annoyance on the part of the older members of the congregation, at the peculiarly stoppy style in which the church announcements are rattled out by one of the ciders, being somewhat in the following style: "A concert will take place on Thursday by the United Apostolic Harmonies, nided by the Bond of Local Doxologists. Your early attendance is desirable, and you will act judiciously by bringing all the triends you can, as it is in aid of the chapel debt. Apply to me for tickets after the services. Or, "Our Make and Female Bible Classes will meet as usual after dinner, to which except/body, irrespective of age or condition, is respectfully invited. Those seathedbars who have not paid their last quarterly subscriptions are reminded that for the conduct of public worship in the place, their money is needed, so that they will greatly oblige by paxing forthwith. The ladies of the Dorcats society will meet for the conduct of public worship in the place, their money is needed, so that they will greatly oblige by paxing forthwith. The ladies of the Dorcats society will meet for the conduct of public worship in the place of the Dorcats society will meet for the again, "I have been requested to annotince that dissolving views, to pay off the debt on the school-room, will take place to-morrow evening. Tickets three-pence each; nearryed scats sixpence. Penny reading on the following night. Our passion of the conduction of the conduction of the debt of the a shallot for poying off the debt olan shares. Only £10 are required to complete the usual drawing. 'Rock of Ages cleft for me, let me hide myself in Thee!' "South London Press.

Literary gossip relates that the Imperial Library of St. Petersburg has just obtained an annual subscription of 300,000 france and been enriched by several donations of great value, among others a Koran written by the hand of O-man. Them MS, is more than twelve hundred years old, and the memas of Samurcand call it "the sacred pen." Some of its passages are still stained with blood, according tradition. Osman, it is said, was reading the book when he was killed. This MS, is the only one remaining of the literary treasures formerly secreted at Samurcand by Tamerlam, and forms consequently one of the most ancient and precious monuments of Mussalman literature. Among the other MSS, presented to the library is an autograph piece of poetry composed by the Empress Elizabeth Petrowna, and twenty-elight letters of A. de Humboldt to the Count Cancrine.

#### Conflagratory -- Unsafe Insurance.

The average annual loss by fire in the United States during the past ten years (exclusive of the Chicago fire) has been about sixty millions of dollars. These losses embraced risks of all grades—first-class, hazardous, extra hazardous, etc. losses embraced risks of all grades—rist-class, hazardous, extra hazardous, etc. But among those accounted first-class are the particular risks—fire-proof buildings and their contents—which have involved a loss of two hundred millions in Chicago and one hundred millions in Boston; in other words, this first-class risk has involved losses to more than double the amount of all other losses, including the hazardous—so-called. This is proof that these good risks are in fact many times more hazardous than those rated as such. The country has proceeded during these many years past upon the hypothesis that buildings constructed of bricks, stone or iron—no matter what their size, how closely or how largely aggrega ed, or how or iron—no matter what their size, how closely or how largely aggregated, or how great their aggregate contents of combustible material—were safer than buildings constructed in a manner less obviously "fire-proof." Our reasoning appeared sound, but experience has demonstrated its fallacy; demonstrated it, because the conditions for the same sort of fires as those which have devastated Chicago and Boston, exist in New York, Philadelphia, Brooklyn, Baltimore, St. Louis, Cincinnati, Pittsburg, Cleveland, Buffalo, Albany and other large American towns. The essential condition creating this risk is, that an enormous volume, embracing millions of cubic feet contents, of combustible material are so stored that fire can be communicated throughout the entire mass after it shall first have got under sufficient headway, that is, has come to generate sufficient beatway, that is, has come to generate sufficient beatway. communication transfer that the enter mass after a small rest have got miner cohesion of or to transfuse the material used in the walls crete to resist it. In the breath of a blast-furnace of this magnitude and activity it is seen that the material commonly called fire-proof acts as it would in smaller blast-furnaces—that is, crumbles, or heats to redness, freely transmitting the heat to its contents, which are first raised to the verge of combustion, and, ignited in that state, consume with a rapidity allied to the instantaneous combustion which is familiar in the phenomenon of explosion. After this gigantic blast-furnace has once been got at work, the part played by water in the extinguishment of smaller fires is seen to be no longer operative. The only check is attained by blowing up the buildings (fire-proof operative. The only check is attained by blowing up the buildings (fire-proof ones) which contain further stores of combustible material, and, falling with their contents into a more heap, will no longer burn freely. It is evident that in creating these vast masses of combustible material, we have created a risk which we have failed to provide any means of controlling. It is not sufficient to attribute the the whole disaster to a particular form of roof. That is to mistake one of the accidents of the danger for the real source of danger. We have seen enough to know that were there no such thing as a Mansard roof, yet if one the modern great mercantile blocks of buildings, filled to the fifth story with dry goods cartellly arranged upon shelves and in cases for ready combustion, were to get fairly afire, no material or form of construction would prevent the contents of adjoining blocks from bursting into flame. The fire of the first block creates a rush of air, that rush of air drives the flames as in a blast-furnace, creating a heat of some hundreds of degrees Fahrenheit, which is impelled against the fron or stone of the adjacent buildings; this material becomes heated to the verge of redness, and the contents burst into a sea of flame by the moment that the first flame from the woodwork of the building is observed. It may be true that the form of the Mansard roof is tents burst into a sea of name by the moment that the first name from the woodwork of the building is observed. If may be true that the form of the Mansard roofs radically defective; it is certain that the absence of proper fire-walls may be at least as mischievous a defect. But present evidence begets a strong suspicion that the abolition of Mansard roofs and the construction of fire-walls, would not alone extinguish the "extra hazard" which lurks in the present enormous volumes of combustible material which are placed in one mass divided by walls, whether brick or stone or iron-with narrow streets running through the whole which serve as lines to create the draft and "blast," in the heat of which, we are toid, granite blocks split with detonation and iron heats to the verge of reduese. This serve as flues to create the draft and "blast," in the heat of which, we are fold, granite blocks split with detonation and iron heats to the verge of redness. This condition for the occurrence of a conflagration exists in every American city having a population of sixty thousand and upward, with one exception—Sun Francisco. In Sun Francisco there are no circumstances creating risks, other than those which have been successfully dealt with in all time, and for which we possess the appliances which have never failed to prove adequate to these demands. To-day San Francisco is entitled to insurance upon her first-class risks (so called)—her "fire-proof" buildings and their contents—at lower rates than any other American city. There are no such five-story blocks, piled to the roof with goods and covering many contiguous squares, as those which caused the destruction of Chicago and Boston. There will never be such blocks. The practical conclusion from an insurance point of view is not, perhaps, that rates in San Francisco ought to be lower, but that those in Eastern cities must be higher. Eastern companies are telegraphing their agent, to raise the rates on us—a raise made to cover their own "extra hazard," not ours. Our own insurance interest is in position to take advantage of this newly discovered state of things (for such it is in effect), and expand tiself at home. We believe, and the facts experienced thus far support the conclusion, that San Francisco Insurance Companies can do profitable business in San Francisco at rates with which Eastern companies, carrying their duncerous Eastern city risks, cannot permanently compete. The practical conclusion is that the particular form of investment likely at this moment to be in some disfavor—the local insurance stock—is really one of the most promising that can be taken up. Those who preserve the clearness of their head and read events aright, are stocks now.

#### Changed.

My office cell is close and dim,
With dinzy lights, and shades profound;
And giant ledgers, grave and grim,
Like surly jailers hem me round:
And dreamy flies are humming low
The single time they seem to know.
I've tried—how long I cannot say—
To get this wretched column right;
But when I've got a little way
It slowly vanishes from eight:
And then the page becomes a gray—

And then I seem to fade away.

This bright without; it seems a sin
To seek this cell and think of gain;
To see the sun reflected in

The ripples on the window-pane.

My prison doesn't seem to fit

A summer's afternoon a bit.

I feel that fact with pain, 'tis true; But still the feeing's not so clear As when, at booyant twenty-two, I carned my sixty pounds a year: Within this office dim and low— And that was thirty years ago! To cheer this gloomiest of grots,
The beams in which I longed to bask
Would steal between the chimney-pots,
And catch me dozing o'er my task;
Aud, borne along the friendly ray,

And, borne along the Iriendly ray,
I'd glide, in fancy, far away.
One "fairy form" would meet me—one—

In whose society I d stray,
Through meadows go den with the sun,
In such an interesting way,
Astonishing the very boughs

With sweetly incoherent vows.

And even now - though I'm aware
That thirty years since then have past,
And horribly reduced my hair, [vast -

And made my boots and waistcoats Yet, even now, that kindly ray Will often carry me away.

My wayward fancy has began
To seek another gold, that needs
No unspiration from the sun.
I do not check my tancy's range—

years ago! I fear I rather like the change!
Moreover, now I never rove
With "fairy forms" beneath the trees;
Nor tell my sorrows to the grove;
Nor whisper sonnets to the breeze—
There is a dame at home, you know,

- Fun.

#### Truly Scientific Punishment.

Who might not like my doing so!

As a substitute for the "cat" as a punishment for garotters, the demoralizing effects of which have been so much commented on recently, a correspondent of an evening London paper suggests the use of electricity. What we evidently want the says is a means of inflicting deterring pain, unaccompanied by physical injury, and this the cat does not afford us. It has a further defect that its indirect consequences are adduced to mitigate or suspend the punishment entirely. Thus Cohen received only half his deserts because the precious creature had got acoid. Now the phenomena of electricity or gaivanism put in our hands the very agent required. Every one knows that a gaivanic current of any force can be passed through the human frame from a degree which is hardly perceptible to one which resembles the breaking of the bones; or the sensation, according to the mode of application, may be a gentle tickling, or one nearly simulating the touch of hot iron. But this is only a part of its merits: it is absolutely harmless, nay, positively beneficial in many cases, as its frequent medical use testifies. Further, it can be used and applied exactly in the required degree, and no more, it is indeed that the criminal has suffered enough he can be inherated from all trace of pain that very instant. No lacerated flesh, no livid weals will be left to make Mr. Peter Taylor or any other gentleman sicks no brustalizing of warders or officials will take place under my system. Let no one hastily say that this is a prostitution of science to purposes of forture. The torture I assume as granted that needs no defence; but I contend that the galvanic battery enables us to apply it in a way somewhat corresponding to the progress of the age. I do not see why science should not assist us in punishing our criminals as well as in the thousand other things it does every day for us. If may be objected that the schemes a mere fance shoundly thrashed for their misdeeds—as I flevoutly hope they will soon be sunless, of course, my gaivanic torture he a

It is not often that the generous mind finds food for gratification in the record of judicial proceedings. But to ourselves a fund of tender contemplation, diere free from sadness, is derived from the following announcement: On Sadroday, during the trial of a case before U.S. Commissioner Sawyer, D. T. Sullivan, Esq., whaled U.S. Dist Arty Morrow. Even the joy which these words breed is not without alloy. Had we read that the counsel then joined arms and whared the U.S. Commissioner, it should have seemed that the eternal fitness of things was justified and the kingdom of heaven indeed at hand.

Non-Punctuality of the Fair Sex.

No lady is ever punctual; no lady ever yet had the remotest idea of the duration of five minutes, or an hour, or any other longer or shorter space of time. Indeed, the supreme indifference of women in a matter which men are taught to regard as of vital importance, at once stamps the superior sex as above and beyond the control of mere conventional rules. Men's actions are governed by time; it is the most importance at lement which enters into business calculations. The whid rush of the locomotive is governed and its safety assured by attention to time. Time for the male animal denotes the position of a ship upon the ocean, or it tells the truveler his path in the trackless desert. But a woman is always above the vulgar aids which are found indispensable by the mere animal man. Time never enters into her caiculations, or occupies a single moment of her thoughts. She is always late when she keeps an appointment; she devotes precious hours to dressing, and will any day lose a train for the sake of putting on her gloves. The odd thing is that she never thinks of the irritation which she causes by her disregard for the rules of punctuality. A gentleman who grumbles because he has to wait an hour while the fair object of his affections is putting on her bonnet is "a brute." Time indeed passes with wonderful quickness while the fair one is displaying her ribbons before the glass, or trying the effects of color or the grace of fold of some new addition to her wardrobe. We are quite willing to allow that the fault of non-punctuality, if the indeed a fault, is one of a very venial character. The aberrations of the feminine mind, like the movements of the spheres, admit of some approach to calculation; and although the most experienced observer may sometimes fail to tell what portion of her orbit a lady may occupy at any given hour of the day, he may make a pretty accurate gueses sometimes by the aid of the useful rule of contraities. An allowance of an hour or two to admit of the fair co may make a pretty accurate guess sometimes by the aid of the useful rule of contraries. An allowance of an hour or two to admit of the fair comet coming to her right place in the social firmament in the evening will usually be a sufficient margin, provided she has not particular reasons for being very much behind. You may always predict with absolute certainty that she will be quite ready to go to the theater when the play is half over, and that you will blunder with her into the concert-room just in time to disconcert or annoy the finest soprano on the platform. If the reader has ever had the pleasure of going shopping with his wife or sweetheart, he will understand what we mean. You are always dressed and ready a few minutes after the fatal expedition has been arranged, and you stroll about the room, killing time as best you may, until the lady appears. It is useless to read, for she has promised to be ready in a moment; you will not write that note which ought to have been dispatched to Jones by last night's post, there would not be time to scrawl half a dozen lines. You kick your heels and swing your umbrella until the fatal truth springs upon you that you have sacrificed the best portion of an hour. When the fair one appears she always has to put her gloves on in the lobby while you stand with the door half open in your hand, and if you gramble ab uit delay, she protests that she has not been five minutes over her toletic. The best part of the morning has gone before you stop of doors; but the worst portion of the business is to come. You sit in agonies in the draper's shop while your companion, apparently in pursuance of some profoundly wise principle, is giving tion of the business is to come. You sit in agonies in the draper's shop while your companion, apparently in pursuance of some profoundly wise principle, is giving the assistant all the trouble she can. Silks and ribbons are tossed in picturesque confusion on the counter, and as the heap grows larger the fair one finds it proportionately more difficult to make up her mind. You expect every minute that unhappy assistant will lose his patience and begin to tear his hair from sheer vexation, or that the proprietor will vote you both a nuisance, and request you to leave the shop. The purchase, when it is made, seems shamefully disproportioned to the trouble which has been given, and you leave the establishment with the conviction that you have sacrificed a morning and contributed to sour the temper of an amiable that you have sacrificed a morning and contributed to sour the temper of an amiable draper's shopman, and all for the sake of a roll of ribbon or a half-dozen handkerdraper's shopman, and all for the sake of a roll of ribbon or a ball-dozen handkerchiefs. Perhaps you have some business of your awn to attend to, and you find
yourself, at the appointed time, a mile or two from the place. Your companion
you find is terribly excited by the various bonnet-shops which you pass in your
walk; you are continually stopping, and are compelled to atter a number of meaningless adjectives in praise of the gems of fashion which are exhibited behind the
plate-glass. You, of course, are hopelessly late for your own appointments, and
the delay has disarranged your business for a whole day. But no argument of yours
conviction was the first companion that time is of wast investical in wide of the property of the place of the pl the delay has disarranged your business for a whole day. But no argument of yours can convince your fair companion that time is of vast importance in mundane alfairs. She regards people who are constantly consulting their watches as old fogies, and those arrangements of life which depend upon punctuality as relies of a barbarism which will wholly disappear when she and her sisters take the vulgar affairs of life into their own hands. Oddly enough, the strong-minded sisterhood display quite as much contempt for time as their weaker and charming rivals. A woman of business will make an engagement at eleven and keep it at three. She will procrussinate until the opportunity for concluding a transaction has gone by; and, wonder of wonders! if she be as plain as a Gorgon, she will talk for hours of the fashions, and of such trifes as the best style of trimming for her new dress. At it is quite useless to expect any reformation on the part of woman in reference to punctuality, we would recommend all newly-married men to adopt the scientific punctuality, we would recommend all newly-married men to adopt the scientific method, and study the diurnal aberrations of their better halves. There is some times a method in madness, and law may be evolved out of the apparently hopeless chaos of the workings of nature. The course of the domestic orbit must first be studied, and the position and place of the fair one noted in every portion of her daily path. Exceptional affairs, such as theaters, dinners, balls and kindred matters, require special study; but when the law has been evolved out of the chao; it may be possible for the wise spouse to indicate, at any hour of the day, the probable place of the fair one. - Civilian.

#### Requiescat.

More was buried with you, love,
Than just the beautiful clay
You left to chill the passionate kiss,

You left to chill the passionate kiss, When you passed from our life away. More was buried with you, love, Than golden hopes and dreams, Than all the glittering halo hung Round a true heart's noble schemes.

More was buried with you, love,

For, O, when the heavy sods lay straight,
Than the spring of your young renown. In the black December weather, a life
And the glow of the fresh green laurel leaves The light of a home and the strength of
That were weaving to make your crown. Were left 'neath their weight together.

There were many around your grave, love,
With an honest tear and prayer,
But one, as she knelt beside, knew
Her youth, too, rested there.

—All the Year Round.

#### Polish Customs.

A Polish funeral strikes an English eye as being a very disorderly affair. In England all is done "decently and in order;" the coffin with uts flowing pall, the mourners walking "with solemn step and slow "behind the corpse. Here, on the mourners walking "with solemn step and slow" behind the corpae. Here, on the contrary, the bare coffin is placed on an open hearse, on each side of which walk the undertaker's men, dressed in a long black cost bordered with white cord debt sign of mourning, and hats of an indescribable shape; neither round nor square, neither straight nor crooked, unique of their kind. The funeral procession I speak of a Catholic funeral—18 opened by a boy hearing a large crucifix; he is followed by the priest or priests; then such male friends as choose to bear tapers; then the hearse, followed by the female mourners and a miscellaneous crowd, pushing and jostling, praying or quarreling, according to their disposition, all ranking and striving to be nearest the body. Arrived at the grave (the corpse Is rarely taken to a church), the office for the dead is said or sung, and then the nearest relative present throws the first handful of moid on the coffin, saying. "May the earth rest lightly on thee." It will easily be imagined, that when performed solumly and reverently, this action is profoundly touching. That the first earth which fails on the coffin of a parent should be placed there by the trembling hand of the son, and with that earth should fail the tear of fails grief, is a custom so full of the son, and with that earth should fall the tear of filial grief, is a custom so full of real feeling, that we could wish it were adopted by ourselves. But, alas! no of real feeling, that we could wish it were adopted by ourselves. But, alas, no sooner has this first handful been thrown in, than the crowd push forward, each scratching up a handful of earth and throwing it pell-mell into the grave. The scene is too disgusting to describe. The last time I assisted at a funeral. I saw men, women, and children, beggars by the score, all pushing and screaming around the open grave. The grave-digger, fired of waiting until those had done jostling and fielding, at last jumped into the grave, and stamped down with his feet the superincumbent centrh. This curious mixture of reverence and disorder is not confined to funeral solemnities. To spit on the church floor, or to dispense with a pocket-handkerchief during mass, is a usual habit, not only with the poor peasants, but with persons who ought to know better. Yet, in spite of this, noting strikes a stranger's eye more forcibly than "the exterior devotion of the Poses." It is an everyway occurrence, and especially during Lend. to see women lying flows. ing strikes a stranger's eye more forcity than "the exterior devotion of the Poles." It is an everyday occurrence, and especially during Lent, to see women lying flat on their faces in the middle of the church with their arms stretched out so as to form a cross, during the whole service, a long sermon included. Or course people are obliged to step over them to reach their places. The exceeding indelicacy of such a proceeding requires no comment; but to those who inquire why the Poish peasantry of this nineteenth century are still as ignorant, as superstituous, as eved-ulous as those of the sixteenth, it affords a clue to the answer. The peasants are not allowed to have any self-respect; they still consider themselves as beings innot allowed to nave any self-respect; they still consider themselves as beings inferior to their masters, and, in consequence, not permitted to aspire to a higher degree of civilization. All their relations with their employers tend to foster this sad state of things. Their cottages are holes such as no English farmer would permit a laborer to inhabit. Their bed is straw, sometimes stuffed into a piece of sacking, but more often spread on the bare earth. The tables and stools are of the rudest description; and as to household comfort, it is unknown. It will hardly be rudest description; and as to bousehold comfort, it is unknown. It will hardly be credited, but it is a fact, that many of the peasants prefer this state of pagery (pardon the word, reader; it is the only right once, because it is an exact contrast to the condition of the German peasant. Once let a Pole imagine that anything aensible or practicable is German, and he will refuse to use it. As a case in point, I may state that the German children have light and yet capacious knapsacks strapped to their shoulders in which they carry their books, copy-books, etc. to school. I once ventured to suggest to a Polish lady the utility and comfort of this knapsack. The child holds himself straight, his hands are free, in case of rain, to carry his umbrella, and his books are spared many a timble into the mud or snow. Never shall I forget the air of disdain with which she sad, "My son is not a German." A few minutes afterwards, "my son" passed through the room with his hooks and slate tucked under his arm. Before he reached the hall-door, two very distinct cracks told the fate of the slate, and back came the boy for a piece of string to the the whole together. It is patriotic not to use a knapsack.

#### New Books from A. Roman & Co.

THE FORMS OF WATER IN CLOUDS AND RIVERS, ICE AND GLACIERS. By John Tyndall, L. L. D., F. R. S., Professor of Natural Philosophy in the Royal Institution. Published by D. Appleton & Co., New York.

This is the first of a series of works on a comprehensive range of scientific subjects, to be edited by the leading thinkers of all countries, and known as the International Scientific Series. In this volume Professor Tyndall introduces himself particularly to the young, avoids technicalities, so as to adopt his style to unscientific readers and render it explanatory and easy of comprehension.

THE PRAIRIE. A Novel. By J. Fenimore Cooper. Published by D. Appleton & Co., New York.

This is an old acquaintance in a new garb, the last of the ever-popular "Leather Stocking Tales," and far too familiar to our readers to need any further comment than to say that it is handsomely gotten up, with striking illustrations from the pencil of F. P. C. Darley, and published in Appleton's best style.

A WAITING RACE. By Edmund Yates. Published by D. Appleton & Co., New York.

To say that a work is from the pen of Edmund Yates is to say that it is well written, well planned and well sustained. This, his latest effort, is hardly up to the author's usual standard, but it will amply repay perusal.

We also find at A. Roman & Co.'s, Appleton's Publishers, "The Dove in the Eagle's Nest," by the author of "The Heir of Redelyffe," and "Half Hour Recreations in Popular Sciences," being No. 5 of that series. This number is by Prof. H. Schel en and others, and treats of nebulæ, comets, meteoric showers, and the revelations of the spectroscope regarding them. "Coral and Coral Islands" is by Professor Dana, of Yale College.

The Dominion of the West. A brief description of the Province of British Columbia, its climate and resources—the Government prize essay of 1872 by Alexander Canefield Anderson, Esq. J. P. Printed by Richard Woltenden, Government Printer, Victoria, B. C., 1872.

This work has been laid on our table by W. R. H. Adamson, the Immigration Agent for British Columbia. It is a book both interesting and instructive, and especially ada ted to the purpose for which it has been issued—viz drawing attention to the province as a field for emigration. The author says: "To sum the qualifications of British Columbia as a field for settlement, I may succinctly state that, though it may never become a large exporter of cereal products, like the Western States of America or California, it possesses within itself all the requisites for success, and the power to support, in connection with its varied industries and its external relation, a population, at least, of several millions in ease, happiness and comparative affluence." As a work of indisputable literary excellence and varied information, we commend it to the perusal of all classes. Copies will be supplied gratis by Mr. Adamson on application, or by post, from 315 California street.

California - For Health, Pleasure, and Residence. By Charles Nordhoff, Author of "Cape Cod and all Along Shore," etc. New York: Harper & Bros.

This work, which purports to be a book for the guidance of travelers, settlers, and invalids, is one of the most interesting volumes for the general reader which it has been our pleasure to peruse for some time. Or all the States in the American Union there is none, no matter from what point of view it is regarded, to which a greater amount of interest attaches itself than California. All the romance which a more enlarged acquaintance with its resources revealed. Its products, its magnificent scenery, its chunate, and its inexhaus-libble resources, are at the present day exciting the greatest wonder and astonishment among those who are acquainted with its peculiarities. From the author of the volume which now lies before us, we learn that if there is one place on earth in which climate and natural products combine to constitute a terrestial paradise, it is California. Our author is never weary of dwelling upon the climate, its adaptation for the cultivation of fruits and farm produce, and its healthulness and wonderfully restorative effects upon invalids. The triple purpose of the work as a guide to tourists, settlers and invalids, furnishes as with much information of a technical character, but it is all given in such a manner as to read like an attractive romance, so wonderful, not to say incredible, is the greater part of its substance. The author tells us first of the journey out from the East, and of the many points of interest on the way, and having arrived at the end of the journey—that is, the commencence of the Californian tour propermuch useful information is presented for the traveler's guidance. Afterwards come in succession the discussion of questions agricultural; and on others, including that regarding "John" the Chinaman, advice is given to settlers and invalids. In the last chapter we get a glimpse of the old Sparish Californian like on, in other words, a peep into the carlier Californian history. In all the last chapter we get a glimpse of the old Sparish Californian like on, in other words, a

- The medicine-chest of one of the abandoned Arctic whalers was broken open by some of the Esquimaux natives, who, thinking they had found a prize, proceeded to swallow the contents of the bottles. The survivors describe the result as startling, for the doses were too large for the constitution of even an Esquimaux. Several of the partakers died, and others wanted to, but couldn't.
- A sale of Messrs, Lamborn, Cock & Co.'s music copyright has just taken place at Messrs, Puttick & Simpson's rooms, Sir Sterndale Bennett's "May Queen" realized £1,837; his "Woman of %amaria," £590. John Thomas's "Welsh Melodies" sold for £1,537, and Callcoth's "Sacred Half-Hours" fetched £408. The three days' sale produced nearly £15,000.
- The Turkish Metropolitan press has been increased by the publication of a new paper in Stamboul, called the Bedr (or "Full Moon"), which aspires to be at once a political, financial and literary organ of Turks of the more cultivated class. It is to appear daily, except on Sundays and Fridays.
- There are in Great Britain and Ireland about 2,600,000 horses, which represent a demand of about 998 millions of nails (or 5,574 fons) per actium. More than 2,000 tons are made for exportation; and, at an average of £60 per ton, the annual value of the trade is little less than half a million sterling.
- "One who has been flogged" writes a very sensible and agreeable letter to a contemporary about the sensation and result of flogging. Of course he is against that practical proceeding, but it it only brings out such excellent writing it is an argument for the continuance of the practice rather than the contrary.
- The French markets, writes a correspondent, are literally gorged with provisions. In Normandy and Brittany the purchasing power of a franc is considerably greater than it was last year. In Paris there is also a sensible reduction in the price of food.
- A Sheffield manufacturer informs us that he was offered the contract for the army razors—5,800 dozen a year for three years, at five shillings a dozen—and a good profit he could have made out of it, if his workmen would have worked.
- It is not what people eat, but what they digest, that makes them strong. It is not what they gain, but what they save, that makes them rich. It is not what they read, but what they remember, that makes them learned.
- The London Mirror of October 19th records eight anonymous donations of £1,000 each to London charities, making a total of forty-two donations of similar amount during the current year, in addition to one of £10,000.
- By the death of Mrs. Taylor, the divorced wife of Mr. John Henry Gurney, half a million of money comes into the hands of the liquidators of Overend, Gurney & Co., for the benefit of the sufferers.

#### Court Chat.

- Before Mr. Home's famous seance in Paris, which caused the Emperor to turn pale and leave the room, and which cuded the sojourn of the spiritualists in Paris at that time, there was another negotiator with the spiritual world, whose remarkable prophecy is now being much talked about in the French city. The lady who tells the story is the wife of an American General of some distinction. She was on a visit to Paris during the days of the second R public, and was accompanied by another girl, a young lady from New York, who was very eccentric and also a somnambulist. One day the letter said to her friend, "Notice the first three persons of distinction whom you meet during the next week. They will be a Prince, a writer and a soldier. Twenty years hence they will have played a most prominent part in history. As for France, Republican now, she will have again become Republican after ceasing to be so for a score of years." The young American smiled incredulously; nevertheless she determined to note the persons she met. At the first ball she went to she remarked a rather short man with a wooden face and moustache. She asked who he was, and was told that his name was Prince Louis Napoleon Bonaparte, and that he had just taken the oath of fidelity to the Republic. The next day, at a grand dinner, she found herself next to an officer of rank, who took her fancy, and on inquiry, she learnt that his name was MacMahou. A day or two later the young American and her father took their places in the train, and a short, middle-aged man sat himself next to them. He turned out to be M. Thiers. The young lady of twenty years ago, now the sedate matron, is once more in Paris, and finds the prophecy of her somnambulist friend thus far fulfilled. But there was a further prediction which Mrs. General is too discreet to reveal, for it might make some persons very sad, and she does not wish to be "invited" to leave France.
- For a long time the jewelers' windows have glittered with Alsatian rings, crosses, buckles, ear-rings, pendants; whatever gems the artist could manage to shape into patriotic symbol found an instant and ready sale; the milliners adorned their magazines with Alsatian scarves and dresses; the stirring song, "Alsace and Lorraine," is to-day in the Parisian theaters, cafes, and streets what the "Marseillaise" was at the beginning of the war; and now, crowning triumph of all, femiline fashion has declared itself for once and always on the side of patriotism, the leaders of French society, the dames du monde, having, by common consent, decided to be photographed in Alsatian costume.

- The intended tiger fight at Johore was favored with very seasonable weather. The P! is left for Johore early on the 28th of August, with a mandor of gentermen from Sangapore, and having taken on beard some officers from the Risson man-orwar, preserved to the scene of action, arriving at Johore, after a fine passage, about eleven a w. The Maharajah had made every preparation for the record on of Prince Alexis, who are ved at about eleven. For the projected tiger and baffalo contention there had been created two rung fences of stout libiona trees, one within the other. At one end of the space between them was the tiger, and at the other the buildo, the latter backind a drop-scene of sadeloth, and the former behind one of plank. Over the center place was a platform manned by natives, who were appointed to raise the certains in front of the two leading performers of the appointed signal. The Prince having arrived, and the antience air expectation, the two centures were drawn up or raised, and stripes and built stood cis-signs. The tiger see mid only wishful to immediately sneak away, but the buildio charged the upget at once, knocking it about dreadurily. Every endeavor was made to arouse the cannage of the tiger, but it was soft no avail. At last, by means of rope and prices, the tiger was raised by the neck and let fall upon the back of the bufful, and after making a last grasp at his neck, fell off, and was minediately butted and pounded to death by the energed bufface. It is reported that a bottle of arrack was previously given to the bufful, and some opain to the tiger, in order to raise the metal of the one and tone down the fercetty of the other.
- A Chancse ide, as a work of art of much value, having been presented to his Royal Highness the Prence of Waas, the Messrs Battee and Kett, woodscarreers, Cambridge, have been engaged and have now nearly completed a pageda in which the idea is to be placed. Shortly the pageds, which is eaborately carved, will be forwarded to Sandrugham, and will stand near to the entrance to the manifold with the visible through attree-work, and doubt ess casely inspected by visitors. The idea is made of metal, and is a great carnesty.
- The State having clasmed from the Emperor Napoleon a sum of four million frames, advanced on the Cavil List at the outbreak of the war, notice has best given to MM. Postri and Rouher that the house occupied by them would be considered as Imperate properly and seized on that account. This, however, it is said was prevented by the Emperor Napoleon resently sending a check for the four millions, accompanied by orders to self the house to the highest budders.
- A momerial cross has been erected in the grounds of Sir Percy Shelley, at Boscombe Peace, to mark the intended burial ground of the family. The design is by Lady She bey, and consists of a semiptured base of rock work, from which springs a rough fit tree, naded in the form of a cross. The insertation on the rockery is unseed lead letters, the words being. The restriction of The work has been excented in white marble, under the personal superintendence of Lady Shelier.
- It is gratifying to know that her Majesty the Queen has addressed to Lord Shaftesbury an autograph Is the expressing, in the touching language aspiral by experience, her deep sympathy with the distinguished phindiffereps in his recent heavy domestic affliction. It is particularly pleasing to find the Throne echoing the sentiments of the uninstor, the factory and the cottage in such a case. The functal of the Countess took place at St. Gives s, Wimborne, Dorset.
- The coming visit of the Shah to Europe is confirmed. In Spring next he will first visit the Russian Court at St. Petersburg, from thence pass on to Berlin, after which he will proceed to London. He will prove avisit to France also, and will go to Vienna at the time of the Universa. Exhebition there. The Emperor of Austra, has invited him to be present, and a special envoy will start from Vienna to Tele ran shortly bearing the official invitation.
- There is a story going the rounds that M. Thier's tailor sent him a dressing gown some inches too long. Madame Thiers, her sister and a lack fround were present at the tryingson, and noted the number of inches necessary to shorten it. All three ladies, severally and unknown to each other, effected the afterstren, and when the head of the State next essayed it he found it had been improved into a jacket.
- The splendid steamship constructed in 1850 by the Thames Iron Ship-Building Company for the Pontall and named the Immunoluta Commencione, so a passage to Engand for disposa, by private sace. This is one of the nost beautiful sent yachts ever constructed in Impand. She carries s briss 18-pounders—the total cost being £21,560. She will be offered for easi in London.
- Baron Rethschi'd has so'd "King Alfred," who was second to "Blue Gown" in the berby for £ 000. He goes to Sweden. The Baron also sold "Brother" to Martyr for £300 to go abroad. Baron Rethschild will run no more horses till April next year.
- "Madame," inquired Leibnitz of Queen Sophia Charlotte of Prussia, "can your Majesty conceive the unfinitedy liftle!" "Of course I can," was the royal repartee, "what a question to ask the wife of Frederick the First!"
- Some one who has been westing about royally lately, says that Quoen Victoria's horses were worth £10,000; Kai'ser William's £13,000; the Austrian Emperor's nearly £39,000; King Leope of \$218,000, and the Sultan \$£100,000.
- The New York clubs are adopting the European custom of putting their servants into gorgeous liveries. They are getting round the corner fast in the Republic land.

#### Robert Leighton, the Scotch Poet.

E. J. Leighton, widow of the late Robert Leighton, the Scotch poet and author of the "Bapteesement o' the Bairn," recently printed in the News Letter, writes from Liverpool enclosing a copy of "The Laddic's Lamentation on the Loss o' this Whittle," and other poems by the same author. In their notices of Leighton's death the Liverpool and Scottish papers vie in praise of his beauty of character and loftiness of mind, and the Mercury quotes four of his lines upon William Rathbone as his own best epitaph:

> Mourn not for him-his finished acts applaud; He did not merely play, but lined his part; And now—his immortality in God And in the human heart-

In 1869 Routledge and Co. published in New York Leighton's "Scotch Words, etc." and a second edition of his volume of "Poems." The Scottish American (New York) said of Leighton, on the occasion of his death, that his worth had but begun to be known. It may be remembered that a memorial volume on the death of Lincoln was published under the title "The Tribute of the Nations," which incorporated Leighton's lines concluding

"And, dying, leaves his name without a stain."

Mrs Leighton writes, "This brought him a copy of the volume. I never saw him so proud of any distinction as receiving that book and showing it to friends afterwards," Mrs. Leighton expects to publish the remainder of her husband's poems. this winter through Strahan & Co. As a future taste of his quality, we print the subjoined graceful poem entitled-

THE NEGLECTED CANARY.

Overhead in the lattice high It saw the crumbs swept from our door, Our little golden songster hung, Feeding the sparrows in the yard. Singing, piping merrily, With dulicet throat and clipping tongue; And were it only free as they!

Singing from the peep of morning To the evening's closing eye, When the sun in blue was burning,

Or when clouds shut out the sky; Foul or fair, morn, eve, or noon, Its little pipe was still in tune.

Its breast was fill'd with fairy shells That gave sweet echo to its note,

And strings of tiny silver bells
Rang with the pulsings of its throat;
Song all through its restless frame. Its very limbs were warbling strings;

I well believe that music came E'en from the tippings of its wings; Piping early, late and long,
Mad with joy and drunk with song!

O; welcome to thy little store,

Thy song repays it o'er and o'er. But playful June brought holidays, And bade our city hearts prepare To leave awhile our beaten ways

For sandy shore and breezy air, Some busy days the needles flew And, though no special heed it drew, Our warbler up above us there
Was each one's joy—but no one's care.
The noise of preparation rang

Until our little minstrel sang

Almost unheeded, and-unfed; Singing on with trustful lay Piping through the livelong day.

But how it spared its ebbing well, Or how eke out its lessening meal, We may but guess, we cannot tell— We only think, and sadly feel. It saw the kittens on the floor

Regaled with plenty from our board;

Weknow not if its song grew weak
As thirst and hunger gnaw'd apace; And when to the accustom'd place, It came its food and drink to seek, We cannot tell if bleak despair Rose in its breast when none was there!

Or whether springing to its perch, It piped again the merry strain, Alighting to renew its search-Search and sing again, again. We cannot tell, our busy brains

Unconsciously drank in its strains; Nor miss'd at morning, noon, or night, The sweet unrecognized delight.

But when the day to leave came round, "Ah, who will tend the bird?" we said. 'Chirp, chirp! sweet, sweet. Alas no sound
Of wing or note! And is it fled?"
We look d into the cage and found

Our little minstrel cold and dead ! And scattered on its little floor The chaffy remnants of its store; The last drop in its well was drain'd, And not a grain of seed remained.

We laid it in a little grave, And wondered how so small a thing ntil our little minstrel sang

All were piped the merry stave
That made our hearts and household ring.

That made our hearts and household ring. Surely it was not this that sung. But something that has pass'd away-The life that rang thro' limb and tongue—Ay, call it spirit if we may; Which haply in some other sphere Repeats the song that charm'd us here.

For life is sacred—great and small—And he that notes the sparrow's fall May keep a higher home for all.

Near Mylor Church, there has flourished and fought for the last three years a jealous and aggressive gander, who has spared neither man nor beast in his office amongst his geese. In one of his attacks he got a broken leg, and, though partially recovering, he was condemned for sale at the market on account of his had temper, and so taken by a neighboring farmer. For all this he was a favorite, and proving tough and muscular to the touch of his new master, he has been provided by him with a wooden pin or leg, and he still stumps about as vivacious and pugnacious as ever. He has a "list to port," but this adds dignity to his gait.—Land and Water.

#### Carlotta's Daily Life.

A correspondent of the Liego brazelic souds to that paper from Brussels a description of the constituous and manner of life of the Empress Carlotta in the chellen of Tervmeren. Her physical state is represented as being as good as if ever was, and much better that two years ago; but there is no change for the better in her intellectual condition. She has degenerated to a sort of consecus child-shows, but without the cast tends by a sone in the rooms of the challent, where she has described in a sort of consecus which shows, but without the cast tends by a sone in two rooms of the challent, where she her self-attends to at the cares of her small monage. Her doctor is the only person to whom she seems attached, and who exercises a decayer influence over the receives him every marked, for helf an hear, and appears quieted after these interviews. The two division of their individuals of all ranks who composes ber houses hold are for from enjoying such tayor, the Empress accepts their attentions with regularization, and frequently representations that the survey marked for held an hear, and appears quieted after these interviews. The two division of her had any other things using so left to attendants. She spends the greater portion of her day individuals of all ranks who expenses accepts their attendions. She spends the greater portion of her day individuals to legraphe dispatches to X spoleon III., whom she still supposes is at the Tulicenes, and in conversing with spirits which haunt who says the upper stories of the caste, and of which she alone, as she boasts, understands the anguage. She is found also of spirading out rice to file the first of her time. Strengs to tell, she seems to have lost all affection for her kinsfolk, even for her bracher, and the second represent represent the ledies of France and Mexico. She flatters one, and speaks harshy to another, and thus spends portions of her time. Strengs to tell, she seems to have lost all affection for her kinsfolk, even for her bracher, and they some the pos

#### British Museum Photographs.

The British Museum is no longer stationary. Practically, the unrivabel collection brought by Great British from the ends of the curth is now discrib table again throughout the world, and in a form that you may sit down in yair drawing-room and introduce to your trends the treasures of the British Museum. It is only as the great work which Messes, W. A. Manself & Co., the well known fine art publishers, have undertaken is completed, that its extraordinary proportions and value are perceived. Messes Mansel are publishing, in suitable portfore cases, magnificent photographs of the contents of the Museum. Mr. S. Thampson is the aftist, and the set of nearly one thousand photographs on cards, measuring is in by 14 m., is classified and cata caused so that it becomes a unique and, in a sense, perfect histories, collection. We can hardly imagine anything more serviceable to the student of art, one seeking to fill his mind with the highest conceptions of past ages, than to possess these plates. It is impossible, however, to suggest a find to their utility and significance; and their general attractionies, except to studieds, is certainly general than that of the misseum itself. The price of each photograph of the marker bust of Hercules, 825; or 832, mable bust of Homer; 200 or 202, views of the Exyptian gulleries; or 730, fifteen engraved stones, or 365, the winged man-headed from from Numond, or of any other object that may occur to bim, and he will be startunely surprissed at the perfection of the representation. The seven sections of the work are as foolows. Part I, Prechistore, Ethnological and christy collection; 2, Ezyptian Antiquities 3, Assyrian Antiquities; 4, Gracian Antiquities; 5, Erussian and Roman; 6, Autquittes of Britan, 7, Seass of Sovereigne, Corporations, Monasteries, etc. Any portion of the photographs can be procured separately.

## The "News Letter" in a Literary Row.

Some day, when it is all over, a very amusing chapter neight be written on the Twain-Hotten controversy. So far, we think, the smart publisher of Piecadilly has got rather the best of it. "Twain's "letter, some weeks ago, in a contemporary, was not at all up to his usual "Mark," and Mr. Hotten a nawor was very elever indeed. The dean of the author of "The Jumping Freg." going down to Piecadilly incognito, to have a lock at Mr. Hotten, and Mr. Hotten, seeing at once through the device, and hailing hom effusively much to the humorist's chagrin as "Mark Twain." is intensely amusing. And this really happened. He was introduced to Mr. Hotten as "Mr Brese," but Mr. Hotten told him, "If you are not "Mark Twain," you are so uncommonly like him, that the soomer you get home the better, for the people will be expecting lots of good things from you, on account of your likeness. "The ostensible cause of the difference is, that Mr. Hotten availed himself of a privilege which, rightly or wrongly, undoubtedly exists, and gave "Mark Twain's "scattered writings to this country without his consent; but we are told the real secret of the soreness is a chaffing paragraph the Piecadilly publisher sent to the San Francisco News Letter. Whatever it may be, it is good fun for the lookers-on.—London Figaro.

#### "Laughter -- Holding Both His Sides." -- Milton.

[From the London Satiric Papers.]

64 Fun."

FERDINANDO AND CHARLEMAGNE; OR, THE RIVAL CURATES .- A CLERICAL "LAY." There were two curates, mild as lambs,

Who feed in pastures shady, And both of these they fell in love

With just the same young lady.

Their godpapas, 'twas very plain, Had tried to do the grand O, The name of one was Charlemagne, Of the other, Ferdinando.

But pretty district-visitors, Who came with each to parley, Abbreviated one to "Fred" And the other one to "Charlie."

The lady's name—but stop, my muse, Andidon't go any faster— She was a nymph well worth the love Of either reverend pastor.

She might have been to either one

Affectionately lenient;
But, when they wooed her both at once,
She found it inconvenient.

Now Freddy was a dreary soul, Just like funereal hearses; While Charlie was a lively youth, And wrote her pretty verses.

So down amid those rustic glades, And "all among the barley. The lady frowned on Ferdinand, And cherished chirpy Charlie

And Charlie took long walks with her, Admiring rural beauties,

While Ferdinando stopped at home And did parochial duties.

You'd scarce expect in cleric breasts To find such sad gravamen; [roused, But, bless you, curates, when they're Are just as bad as laymen.

But even lambs-net lambs at least-Have spirits, people tell us, And Ferdinando, when cut out,

Grew furiously jealous.

He spread through all the parish round Reports exceeding sinister,

And letters wrote anonymous About his brother minister. And still this lofty lady was

To Ferdinando snarly; And still she beat the parish bounds, Day after day, with Charlie.

So Ferdinando, bent, you see, His rival upon hurting

Went to papa and said that she With Charlemagne was flirting.

He also sat him down and wrote
To Reverend C. a letter,
And said, "Just stop your walks abroad
With—So-and-so—you'd better."

Then So-and-so, she cut him dead, Said C., "I tell you what, sir, I'd bring an action, were you worth The powder and the shot, sir.

"If we were laymen, you would be Corporeally licked, sir; But, as it is, I beg you will Consider yourself kicked, sir."

They parted thus. And Charlie soon With "So-and-so" was mated; While, to convert the savages, Sour Freddy emigrated.

MORAL

And warning take, both clerks and lay, With rivals don't get heady, Or you may have to emigrate Like misanthropic Freddy.

## Sippings of Punch.

CATECHISM UNDER DIFFICULTIES.—Free Kirk Elder [preparatory to presenting a Tract]: "My friend, do you know the chief end of man?" Bagpiper [innocenty]: "Na, f dinna mind the chune! Can ye no whustle it?"

MRS. MALAPROP says wonders will never cease. She hears that there has been a letter in the paper about sending "money by telegram;" so she supposes the next thing will be that people will send the clothes to the wash, and the dinner to the bakehouse, and the children to school by the eccentric telegraph.

AN AWKWARD COMPLIMENT.—Mrs. Flirtington [coquettishly]: "I'm afraid you are bored, Mr. Amoret! You would sooner be walking with some young lady!" Mr. Amoret [with native readiness and gallantry]: "O, no, indeed, Mrs. Flirtington. I.—I much prefer the older ones!"

GENTLE PATERNAL SATIRE.—Irate Parent: "O, yer don't want to go into business, don't yer! O, yer want to be a clerk in the Post-horfice, do yer! Post-horfice, indeed! Why, all you're fit for is to stand outside with your tongue hout, for people to wet their stamps against?"

PITY THE POOR GAROTTERS!—Joe Huggins: "O, please, sir, don't! Mr. Peter Taylor says as I'm delicate, and a coward, and didn't ought to be flogged!" Mr. Bull: "Ah, indeed! Your friend, Mr. Peter Taylor, should have reminded you of that before you throttled the old gentleman. Let him have it soundly, warder."

LIKES HIS MONEY'S WORTH.—English Passenger [by the Night Mail North]: "Confounded tedious journey, this!" Scotch ditto: "Tejious! Sae it ought to be! [With a groan.] Two pun' twalve and saxpence, second class—manustr's!"

THE SAME—WITH A DIFFERENCE.—Scene, a shop. One of the "Young Ladies" shows a costume. Brown thinks it lovely. Stout Mrs. Brown tries one on. Brown is not so sure about it now.

Fixed Ideas.—In the Mind of Man.—That he is overworked; that his constitution requires stimulants: that, if he had them, he could not this moment most a few hundreds to the greatest advantage; that smoking is good for his nerves, his worries, his literary pursuits, his toothache, etc.; that he ought to belong to a club, that he could retorm the army, do away with the income tax, manage the railways better, and make a large fortune by keeping an hotel; that he knows agood class of wine; that he could win a heap of money if he were to go to Homburg; that medicine is alchumburg; that he could preach as good assermen himself, that he should soon pick up his French if he went abroad; that he mist win on this year 5 berby. In the Mind or Woman.—That she has nothing fit to put on; that things ought to be bought because they are cheap; that there is company in the kutchen; that she is not allowed sufficient momey for housekeeping; that she never goes out anywhere; that her best black slik is getting awfully shabby; that she requires a change about the month of August; that the railowance is too small; that she never looks fit to be seen; that cook drinks; that there is always "a glare," that there is somebody in the house; that Mrs. Orphinston is dreadfully one off, or dreadfully made up, or not so early good leoking after all.

dreadfully made up, or not so very good leoking, after all.

SHORTHAND NOTES:—Mr. Button tap again. We are beginning to fear the bung must have come out.—Mr Tay for has been denouncing the cat. No color ultra creptalum; i. v., bet the tailer stick to the goose!—Stanles has been admisted a member of the Worshipfi Company of Tarners. What quasification?—ob. he did Livingstone a good turn? He got his lathe there, and his peaser subsequently from the Geographical Society's a pologetic dinner.—Mr. Massey, at Tiverton, cailed a "London Correspondent" who had libeled him in a local paper a "liar." He might have been satisfied with calling him a "London Correspondent" It would have sounded better, too!—Min and Wick will be preduced at the Prence of Wales's, on the withdrawal of Massey. After money, matrimony.—A deputation is reported to have been "correlaty received" by Mr. Ayrton. There rea it is no believing the papers nowadays?—Compaints of the slow progress of the Purchase Commission. Purchase seems rather a sell?—The Author of the new farce Charles the First writes a long screed of garbied extracts to the Sametond to prove that his partnari of Cromwell is correct. If so, why put out at first that plea of dramatic necessity!

THE HEAD AND FRONT OF HIS OFFENDING.—Fond Father (who has taken his little boy to Mr. Fitzs ick's studio, to see his fine painting of a saint's head, decidedly of the sire's and conventional school; "Web, Charlie, what do you think of it? Did you ever see so fine an old head as that before?" Charlie; "Other "Charlie, of the sorter." Father: "Where "Charlie: "Why, on the pomatum pots, to be sure!"

INCORREGIBLE.—The Meenister, who comes across Donald beating his better half. "Hech me, Dannald! and what's this ye're up the? Hoot, toot, mun! Dinna ye ken that wunnum is the weaker vessel!" Donald: "Then mair's the need o' givin' her a guld hoopin!"

A CONEXERCY. We cannot understand why the sapient magistrates who refused a license to Cremorne and granted one to the Argyll are described as "of Middlesex." We should say they were unmistakable old women.

Poprise.—At Chicago there are shooting galleries for the exclusive use of ladies. Although it is not stated, we conclude that the ladies are unmarried, and that their weapon is the "pop" yeu.

Julius Schubette has arrived in San Francisco " for the purpose of acquainting bimself with the mussed affairs and art curitvation of Carifornia." Julius Schubette has come to the right place. He will strike it rich—he will. In art California pans out the biggest kind. In musse, she is on it all the time. When our girls square away at a piano, they make ivory howl. When they begin to wardle, the saw-fi er puts away his diminished instrument. The way our painters tackle the canvas and sing hinseed would make the old musters squeal. When a California equipiest waitzes in with his troved, he just sendps the old Greek cocks' heads off. Art and music are our strong point. On these cards we order it up an the time. We rather flatter ourselves we hold over maning Europe, and raise her out of her boots. We are on it bigger than a house. If Schubette wants music and art, he need not go browsing around outside of this ranch. He can just put up his shebang and freeze to us, and we will not go back on him. Justics is a bully bey with a glass toy, and bet your life we will treat him white. When a man comes from Europe to hunt art cultivation in California, he is our pard. We are not the boys to let the bully son of a thiref find any slouch about us. We put that man through nifty—you bet you. Julie—put her there!

The blow which has long threatened the commercial supremacy of San Francisco is about to fall, and the rival city on the right side of the bay looms hideously in the future. Oakland has taken the preliminary steps "to dredge out San Antonio Creek to a depth of six feet, and thus open up its harbor to the commerce of the world." The evil is upon us. Through the despening groom there beams but one ray of hope: The estimated cost of this colossal work reaches the sum of \$15,000. Oakland may not be able to raise the money.

#### Laissez Faire.

"Prophete rechts, Prophete links, Das Weltkind in der Mitten."

To left, here's B., half-Communist, Who talks a chastened treason; And C., a something-else in ist, To right declaims on Reason.

B., from his "tribune," fulminates At Throne and Constitution, Nay, with the walnuts, advocates Reform by Revolution;

While C.'s peculiar coterie
Have now in full rehearsal
Some patent new Philosophy
To make doubt universal.

And yet—why not? If zealots burn,
Their zeal has not affected
My taste for salmon and Santerne.

My taste for salmon and Santerne, Or I might have objected:

Friend B., the argument you choose Has been by France refuted; And C., mon cher, your novel views Are just Tom Paine, diluted;

There's but one creed—that's Laissez Behold its mild apostle! [faire; My dear and honorable confreres, Although you push and jostle,

Not your ephemeral hands,—nor mine, Time's Gordian knots shall sunder,— Tom laid three pipes of this old wine: Who'll drink the last?—I wonder?

-Austin Dobson in St. Pauls.

#### Coquettes.

While a girl is young, and all her powers of fascination are unimpaired, the game of coquetting is a very enjoyable and engrossing one. It tickles her vanity to be surrounded by a group of gentlemen, all of them anxious to obtain a smile or a word from her, to the ignoring of the others. It is very entertaining to her to see the half-disguised mortification and jealousy of the majority if, for the time being, she favors one more than she does the rest. She feels naturally elated at the thought that she can bring those to her feet who make such a stir in the outside world. that she can bring those to her feet who make such a stir in the outside world. That is an acknowledgment of her influence which no one can ignore; and if it is a matter of considerable difficulty to bring a man to her feet, when at last success crowns her efforts her triumph is very sweet indeed. There is the pleasure of spurning him, and boasting to her friends that she bas made one more conquest. Besides, the labor itself is an agreeable break in the dull monotony of her life. In order to display her many points to the best advantage, she has an opportunity of exerting those intellectual powers which might otherwise lie dormant. She is troubled by few twinges of conscience on account of the misery and heart-burning she causes, for she regards the whole tribe of men as her lawful prey, who are to be treated just as her own sweet will directs. If the stupid creatures choose to betreated just as ner own aweet will directs. If the stuput creatures choose to become gloomy misanthropes because they are played false by a coquette, that is their lookout and no concern of hers. Besides, she has an undefined impression that men's hearts can only be wounded temporarily; they are such big, burly, coarse creatures that it is not likely they should possess such acute sensibilities as frail woman. One or two rebuffs will do them a great deal of good by knocking some of the superfluous conceit out of them. And so at the outset of her career the coquette plunges into the amusement of dirting with infinite zest, and does as much damage in a short time as possible. But as she grows older her triumphs become fewer and her disappointments many. Her powers of attraction grow less; unconsciously she acquires an overbearing demeanor, the natural result of her victories. She gets the notion into her head that men are bound to admire and pay victories. She gets the notion into her head that men are bound to admire and pay their homage to her; that, as a superior creature, she has a right to demand their openly expressed admiration. And so she does not take the trouble to make herself very agreeable to them. She assumes a half-defant attitude, and snubs and ridicules them most unmercifully. Strange as it may (and does) appear to the coquette, they do not like this sort of thing, and are not attracted thereby. The consequence is that they rather avoid than court her society. She becomes, too, as fittal and changeable as an April day; one moment she will be gushingly sentimental and confidential, and the next cold and distant and bitingly sarcastical. Then, again, her reputation gets impaired: for at last the truth leaks out that she is a coquette, People docting to also the property in fluence for they ship in page of they here the decime of the page of they are for they ship in the page. ple decline to place themselves within reach of her baleful influence, for they shrink be decime to piace themselves within react of ner oakent limitence, for they strink back from the probability of being trifled with. Her voice is to them as that of the syren, and her eyes as the light of the will-o'-the wisp, luring poor mortals on to a miserable fate. And so, if she is not altogether avoided, her society is courted only by those who mean just as little and are as heartless as she is, who are proof against all her assaults, and who have no objection to carry a flirtation to its most extreme limits, and end the matter there. They will press her with meaningless compliments, and praise her in defly-turned sentences; but the compliments have no charm for her because, she knows they are meaningless, and ser very different ments, and praise her in defly-turned sentences; but the compliments have no charm for her, because she knows they are meaningless, and are very different to those which were addressed to her in earlier times by clumsier but more sincere admirers. And the delights of a true friendship are denied her; she is deserted upon the first opportunity; for in dealing with her men have few qualms of conscience. She is only getting paid back in her own coin. The end of the matter is that she, too, frequently becomes really crossed in love; the man upon whom she has set her heart ignores her as a heartless coquette, nor can all her devices bring him to her side. Then is she miserable, and feels what a mistake she has made, But her humilisation is not computer. As years roll on, admirers grown scarces and. But her humiliation is not complete. As years roll on, admirers grow scarcer and scarcer until there are none left. She becomes soured in disposition, and ultimately develops into a waspish old mail or contracts a loveless marriage. Granhic.

#### Peeps at the Parsons.

We purchased our little gir. a Noah's Ark the other day, and she is never tired of secting the anima's wask up the gangway two-by-two, the cat arm-in-arm with the camel, and the elephant bringing up the rear. She artlessly inquires what they found to eat in the original Noah's Ark, and why the tiger did not devour the sheep.\(^1\) We ted her she must understand it in a figurative sense. Rev. J. B. Staart, a Cincinnati clergyman, says Noah's Delinge was impossible, and must be received "in a figurative sense." He is evidently arriving at the cenclusion put forth by Bishep Coleuse ten years ago, who battered with his mexorable logic so ruthlessly upon the first five books of the Bible that to all independent flunkers, both among our clergy and laymen, those old legends are as dead as the story of the Labors of Hercines. Coleuse was vituperated, standered, hooted at, everything but answered by those who advocated the compact verbar inspiration of the Bible. They conspired to oust him from his diocese, they attempted to geet him from his church by violence. But the seed he sowed is bringing both fruit, and every now and again some cloreyman wakes up, like our Cincinnati trend, in scared to find binself behind the times, asserts that this or that Biblead story is unreasonable and must be taken in a "digrative sense," steals the Bishop's thunder to prove his assertion, and then looks round with a self-satisfied air and says:

"Are we not liberal" See how we keep pace with the march of thought:" The modest grace with which they make a virtue of necessity, the cool check with which they turn round and accept the situation when they find themselves hopelessly cornered cannot be equaled outside the pale of the church. One of them will start up soon and give us permission to consider the notion of a milion bracket. They also off from the questions of the personality of God and the whereabouts. The destries shore of the first hardy a maining problems among preachers. They shy off from the questions of the personality of Go

The patrons of the Christian Advecate must be a hard lot. The reader on opening this sheet finds scattered broadcast over it warnings to "deanquents" to "pas up without delay." He turns to the next page and finds instantations that he is no gentaeman unless he has paid a year's subscription in advance. Looking inside he is startfed by "True's cr. Resurt." He is by turns cajoled, denounced, threatened, implored, bribed, entreated to send on his money. He is advised to travel from house to house until he gets up a club of thirty: whether this is a sort of penance to be performed with peas in one's boots does not appear. The re-ward is not a penary indulgence, but a family sewing machine. He reads with ambigament that any one who sends a pear's subscription in advance will receive gratis a photograph marriage certificate, beautifully runninated with a wedding ring in the center in the innocent beaks of two turtle doves. Everybody ought to have one; it is worth more than the paper if you took it for twenty years. There are lines ruled at the foot for the names of your children to be recorded, and the motto. "B essed is he who birth his quiver full of them?" There are fourteen mes in all, which is evidently the number of children an able-bodied Methodist is expected to contribute. If his quiver runs over that number, he can turn over to the banks.

"It would tench a heart of stone to witness the Sunday morning religious service at San Quentun," says Dr. Gibbons, Secretary of the Prison Commission. This pions ferror among the convicts. Is a truly gratifying result of missionary habor in our presens. In the East our brethren of the pulpit are so eaten up with zeal that they commit amaterial remains in order that they may be sent to labor among the poor eminish. Rev. W. Wilson, of Asheville, N. C., has just started on a nine-years' sojourn in the Penetendiary for lighway robbery—ali zeal of course, but the jury could not see it in that aght. The Rev. Mr. Green was so consumed with zeal for the spiritual welfare of the poor convicts that while in charge of a dourst-bring Baptist congregation he committed forgery, and is now serving a five-years term in the Indiana State Prison. Ministers of San Francisco, "Go and do likewise!"

"The use of tobacco, except medicinally, is unbecoming to a Christian minister." The San José Conference says so. Now parsons, as you are the best triends we have in the world, here is how you can fool these old counterblasters no profamity intended—as often as you chews, without going up on the roof for onely contempation. To be sure it may involve a little lying, but gentlemen of the cloth are allowed to do evil that good may come. Well, then, swear you have an attack of larguagitis electrorum—elergyman's sore-throat—and the doctor, it be known anything, will be sure to preservine nicellinar funnigatio, a pipe of tobacco for it. Twing' Don't say who told you. No thanks. It you want a hair of our head in memory, to bequeath as a rich legacy to your children, call and examine our hair-brush.

Bishop Pierce says: "Faith is not a paroxyam, but a habit." He never saw Haltenjah Cox foaming at the mouth in the attempt to "convert" some poor weak-muded grit. His faith in the expectation of standing in the immersion-pond and pawing her wet body with his fat hands creates in him a very raoid and dangerous paroxyam.

#### Old Servants.

Old servants are not always unmixed blessings. Their virtues are, no doubt, numerous. Their devotion is unquestionable, their integrity above suspicion, and their industry undeniable. The fact that they have grown old in the service of their employers is sufficient evidence of this. But then they have counterbalancing defects. As a rule, they are not particularly good tempered, and, invariably, they are fond of meddling in affairs which concern them not. After a certain time has elapsed they think they are quite justified in constituting themselves members of a family, and speak as if it is out of the power of any one to sever their connection with it. This, as a proof of their faithfulness, is very cheering, but occasionally it leads to unpleasant consequences. They are too often of a garrulous tendency, and nothing pleases them more than to gossip confidentially with kindred cronics about those whom they serve. Occasionally, by these means matters are made public which those most interested would rather remain private. If a young hopeful reaches home "screwed," or if there are occasional domestic disagreements, the fact becomes known, and, as usual in such cases, loses nothing in the telling. They consider that they ought to be consulted—in an indirect way, at any rate—before a matrimonial, alliance is arranged, and deep are the murnurings if such an They consider that they ongs to be considered—in an indirect way, at any rate—before a matrimonial alliance is arranged, and deep are the murmurings if such an one is not to their liking. They will not be withheld from circulating unfavorable criticisms in reference to the wolf who is invading the fold; and their impotency only makes them the more bitter. In short, there is no department of the domestic system into which they do not consider that they have a perfect and indisputable right to enter. Over their fellow servants they exercise what is, perhaps, a whole-some terrorism. Stern is their discipline and inflexible their rule. There are few domestics who fail to quail before their stern glances, or to move with alacrity when they command. Whatever indulgencies they claim for themselves, they are when they command. Whatever indulgencies they claim for themselves, they are inflexible in their determination that their underlings shall take no liberties, but on the contrary, be made to know their places. These old servants do, sometimes, stand in a certain degree of awe of the absolute head of the household, and yield them an implicit if not an unquestioning obedience. It is the sons and the daughters whom they have, perhaps, nursed as children, that they attempt to tyrannize over, and whose authority they scornfully reject. They are at once the good and evil geniuses of youthful beings. Though quick to scold an unlucky culprit themselves, they are the first to comfort him when he has incurred the marked displacance of father or mother. In his hours of tribulation the young rascal may safely fly to them for consolation and substantial comfort, when he will be called all the endearing names which a human tongue can be expected to utter. But if he interferes with their cherished arrangements, violent is their wrath, and though shortlived, to the youthful mind it is terrible while it lasts. They are instrumental in shielding many older offenders from the effects of their wrong-doing. But, long after the children have grown up, they treat them with much affection but I little respect, shielding many older offenders from the effects of their wrong-doing. But, long after the children have grown up, they treat them with much affection but little respect, and upon the former attempting to exert authority are wounded to the quick. They have certain ideas as to what the sons and daughters of their masters should do, and are pained to see them acting in opposition to them. Occasionally, of course, old servants quarrel with those whom they serve, but they resemble a worn-out dog inasmuch as their bark is worse than their bits. It is in vain for any master or mistress to think of sending them about their business. When told to take warning they intimate that they will do no such thing; they have stood by the family up to the present time, and are not going to desert it in their old age. they number that they will do no such thing; they have stood by the family up to the present time, and are not going to desert it in their old age. But when they see things as they ought not to be, they must speak; and the poor creatures depart mumbling and grambling to their own territory. They quickly forget that anything has been said about their leaving, and go on just as if nothing had happened. In-deed, it is questionable whether some of them could be taught to regard a notice to tees, it is questionable whether some at ment come to Edignt's Greater a notice to leave in any other light than a ponderous jobe; and it is certain that many would have to be positively ejected before shey would depart. The house is there any definition in both they have a vested interest as long as they live.—Liberal Review.

— N. Burr, for having in his possession certain cold chisels and other burglarious instruments, has been held in bail on the charge of intending to use them criminally. A merciful presumption of innocence would suggest that Mr. Burrhad secured these tools in order to prevent their coming into the hands of unprincipled parties, and his heart is probably now wrung at the thought of his scheme of simple philanthropy thus wrenched from its purpose. Upon equally plausible grounds Mrs. Fair might be dragged to the dock upon a charge of intending to commit adultery. We clamor for the release of Mr. Burr.

During the Italian flood a party of travelers were water-bound in a railway station, and appeared in danger of drowning. "We have all deserved it," exclaimed burly Father Duruani, "we are all evil," and he seated himself in the only arm chair, which he retained during the night, although there were ladge among the passengers. The self-possession of Father Duruani in lace of a danger by which he was obviously not born to die, is less admirable than the tact with which he illustrated his simple confession of depravity. We cheerfully admit the reverend father's claim to be a fellow sinner and fellow hog.

#### Leaves from a Lady's Diary.

November 18. Mrs. C— fetched me to see her new semi-country house. It's awfully Elizabethan, which does not snit with the extreme newnoss. When flowers have clustered round it, and a few weather stains and winters have mellowed it, then the aspect will be more in keeping with the architecture. She has one pretty Summer house in the garden, which is lighted by stainet-glass windows. I could not help thinking, when sitting in it, that the world sees the same taings through different colors. Through the red window pane, the excitable, the passionate, poets and lovers, see Nature all affame, and, as it were, with fire in the hearts. Through the cold shades of gray, matter-of-fact men look upon the dulp prosaic sides of a subject; the green inspires one with hope; through the deep colors, almost amounting to black, look the philosophers, the passimists and the men of reason, who only perceive the littleness of all things and the small values of great men, as well as dry bones in all that is lovely and beautiful; whilst in direct contrast to them, the flushed pink or rose color is for the optimists, who regard everything in its brightest aspect. Henry always looks through the latter pane, whilst I more naturally turn to the sombre. He is ever suffering disappointment.

Nov. 19.—Went to a meeting of the ——Society. W. B.——was there for a short time, and as I looked at his stern, yet henevolent face. I thought how the world and money-making change a man. Here is a type of our earnest forefathers, as we see their hard, firm-set features in the old engravings, and that same intellect which founded States and made laws, is now engaged in combinations to create a monopoly or forestall a market. Of course one cannot expect in this age the austerity and assecticism of past generations, but atill one cannot but complain of the increasing number of wind-bags, who make all the noise at a meeting, who take up all the time and bore one to death without being imposing. These oily, smooth, smiling, yielding, gliding frauds, without force of character, self-esteem, principle or conscience, without energy or any redeeming point, except excessive impudence, are to be found in all communities, and there is a striking specime of the animal in our society. He interferes with us, and I verily believe would put on petticoats to be made an honorary member of the committee.

Nov. 20. Went to see Mrs. Chanfrau. The play is stapid enough, but she acts and dresses like a lady. Mrs. Bowers is the only one I loke better. Reterring to the title of the play, Marriage and its Shadous, Henry made one of his bad jokes. He said he supposed it meant mothers-in-law. He had been to a funeral in the morning, and always comes back cross from them. This is the age of funeral, Formerly a few sad mourners followed the coppse with unfeigned grief. To day a crowd, who would not have walked out of their way to help a man, attend his funeral with summated sorrow. A lawyer, who is looked upon with suspicion, or a fool without a client, thes, and forthwith the Courts adjourn out of respect for his memory. A child is born, and there is slight fuss; its life is a berce strie, but when it dies it is universally complimented. There is neglect at the beginning, opposition during the term and glory at the end. If the dead could but hear! Some people always take off their hats when they meet a hearse. It's the same sentiment. If the soul could but stay in the body until the last speech was made at the grave in order to take up the culogitums as certificates or vouchers to the judzment seat, it might at least put them in as justification or qualification of the sentence.

Nov. 22. Glad that the horrid Mrs. Pair could not lecture: glad that she could not get into the hall. Men, when their passions are roused, especially when they have previously been weak, are as cruel as she was, and the slightest spark might have added more shame to the community respecting the woman. And yet I cel curious to know what she would have said and what she meant by "Wolves in the Fold." Had she lectured, afthough I would not have gone and rany circumstances, yet I would have liked to be there to see the various passions that would have been roused. At the same time Henry tells me that the mob which surrounded the doors was a pretty rough lot. Let her go to the "Sunny South" and repent. Here the world will not let her be sorry for her sins.
